3205. (*Sir John Wolfe-Barry.*) I suppose it is an open question whether in 1799 vessels did not lie much more in what is called the upper pool and whether the accommodation for vessels lying in the river itself—at buoys and moorings—has not been extended largely down the river since that date?—I think that is so.

3206. (*Lord Revelstoke.*) Now will you proceed with your evidence?—I next turn to another aspect of the matter. London's growth and condition must start from its trade. Its shipping has long been of the greatest importance in relation to the shipping of the United Kingdom and of the civilised world. If accommodation has been inadequate, it may affect the trade of the port to such an extent as to constitute a menace to the prosperity of London. It may even do more, for the trade lost to London may not be transferred to a British port, and if it is transferred to a foreign port, the matter becomes one of national importance. I propose, therefore, to ascertain, as far as possible, what are the facts to assist in solving this problem. The first point is to ascertain the course of the volume of trade in the Port of London. I begin

with the period when the system of docks was first introduced into London, namely at the beginning of this century, when the river without docks was found totally inadequate to accommodate the trade of the port, and the merchants of London had raised so strong an outcry against the want of accommodation. The information is not easily available, as the early returns were not based upon the same principle as the modern ones. But much information can be given by reference to extraneous reports, and other sources. In all cases, in the tables I am now about to hand in, I have indicated the source from which the figures are obtained.

(*The Witness handed in two Tables showing the shipping entering and clearing the Port of London in each year from 1798 to 1899 inclusive. See Appendix, 9th day, Nos. 6 and 7.*)

3207. (*Mr. Ellis.*) Where have you derived these figures from?—The sources in every case are put in the columns here—"The Port of London Committee of 1799" and so on. In the last column of the table the source of each set of figures is given.

3208. (*Sir Robert Giffen.*) After 1850 all the figures are from the annual statement of Trade and Navigation?—After 1850 that is so.

3208A. That is from the same source all through?—Yes. It will be useful to summarise the figures for the years 1799 and 1899 in a comparative form. First, as regards the foreign and colonial shipping:—

	Foreign.					
	Number of Vessels.			Tonnage.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.
In 1799 - - - -	3,414	2,518	5,932	673,473	521,311	1,194,784
In 1899 - - - -	10,868	6,831	17,699	9,244,593	6,042,050	15,286,643
Proportion of 1899 to 1799 -	More than 3 times.	More than 2½ times.	3 times.	Nearly 14 times.	Nearly 12 times.	Nearly 13 times.

3209. Can you explain for the information of the Commission the cause of the great difference between the entries and the clearances?—A large number of vessels enter with goods and they go out in ballast. Or the goods are dispersed by the coasting trade.

3210. Is it not part of the explanation that vessels

enter in the foreign trade, and then when they clear they go away as coasting trade, and do not appear in the foreign trade?—Yes, they go by the coasting trade. Then I will give the figures for the coasting trade in a similar table:—

	Coasting.					
	Number of Vessels.			Tonnage.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.
In 1799 - - -	11,163	4,913	16,076	1,411,878	491,300	1,903,178
In 1899 - - - -	12,843	9,818	22,661	5,438,378	2,208,683	7,647,061
Proportion of 1899 to 1799 -	Slightly increased.	Twice as many.	Nearly 1½ times.	Nearly 4 times.	4½ times.	More than 4 times.

Then I will add those two tables together to give the total foreign and coasting shipping trade:—

	Foreign and Coasting Shipping.					
	Number of Vessels.			Tonnage.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.
In 1799 - - - -	14,577	7,431	22,008	2,085,351	1,012,611	3,097,962
In 1899 - - - -	23,711	16,649	40,360	14,682,971	8,250,733	22,933,704
Proportion of 1899 to 1799 -	More than 1½ times.	More than twice.	Nearly twice.	More than 7 times.	More than 8 times.	Nearly 7½ times.

Mr. G. L.  
Gomme.  
11 Dec. 1900.

This increased magnitude of the problem as it is now presented for consideration is a measure of its importance from almost every point of view. Whatever is done in the future it cannot be left to the chance results of temporary measures of co-operation between private capitalists and public authority, as was the case in the past. It must be settled upon principles which shall give permanence and settlement in administration, and

wide and comprehensive powers of development, not only for meeting actual conditions, but of anticipating the probable conditions of the near future. The steady and remarkable continuity in the growth of the trade of London is the most apparent feature disclosed by these tables. The increase in the tonnage has, on an average, been as follows:—

	FOREIGN.			COASTING.			TOTAL.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.
Average annual increase per cent. from 1799 to 1899	2·65	2·48	2·58	1·36	1·51	1·40	1·97	2·12	2·02

3211. Are those percentages a division of the total increase between 1799 and 1899 by the number of years?—That is so.

is the geometrical progression annually. Then I will give those totals according to quinquennial periods, as that might be a convenient way of doing it.

3212. You have not really the annual increases?—It

Periods.	Increase in tonnage in each Quinquennial period on the preceding period.								
	Foreign.			Coasting.			Total.		
	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.	Entered.	Cleared.	Total.

(a) Comparable figures are not available for these periods.

For so long a period as 100 years this annual increase is very remarkable, and is not to be equalled by any other port in the world. It shows above all things the natural capabilities of the Port of London. No amount of artificial aid would create such results. But, on the other hand, their very magnitude suggests that these natural capabilities may be encroached upon insensibly, and so be gradually undermined and almost destroyed. Artificial aid in the shape of adequate dockage, wharfage, etc., is necessary to be able to put the natural capabilities to their utmost possible use, and the question therefore is, does the present system produce the utmost possible use. It is impossible to suggest as a mere matter of statistics when this increase is going to stop. If it continues, or, rather, if it tends to continue, then the position of the Port becomes one of the most pressing questions of the day. If it decreases or remains stationary, then the question will arise whether the natural volume of trade to London has been reached or whether the want of development of London facilities has not hindered trade, and, further, whether the nation or only the Port of London suffers from this. To answer some of these questions it is necessary to analyse the tables in various directions. I will first turn to the relative volume and growth of the import and export trade—of the shipping entered and the shipping cleared with cargoes. It will be seen that while the tonnage entered from foreign countries rises from 673,473 in 1799 to 9,244,593 in 1899, or nearly fourteen times as much, the tonnage cleared rises from 521,311 tons to 6,042,050 tons, or only nearly twelve times as much, the tonnage of shipping entered being now more than 50 per cent. in excess of the tonnage cleared. The question arises whether the in-

conveniences of the port help towards this result. All things being equal, shipping would clear from the port of entry as much as possible. In 1799 it largely did so in London. It had fallen back considerably in 1853, and has never recovered itself, though it is noticeable that after 1867 the growth has been continuous, though comparatively not very great. Next it is noticeable that the increase in the number of ships is not continuous with the increase in tonnage. This, of course, is due to the substitution of steam for sailing vessels, and the consequent increase in the size of the vessels.

(The Witness handed in a Table showing the average tonnage of the shipping entered at the Port of London from 1841 to 1899. See Appendix, 9th Day, No. 8.)

This table gives a complete history of this important change. It is difficult, owing to the different methods of reckoning adopted in the official returns, to make a certain comparison for the whole series of years. As far as the figures go, they show that from 1841 to 1872 the tonnage of the sailing vessels rose from an average of 142 to an average of 203. On the new basis adopted in 1873, the average fell from 122 in 1873 to 71 in 1897. As regards the steam vessels, the deduction can be made with more certainty. Both the number and the tonnage of these have gone steadily up. In 1841 it worked out at an average of 238; in 1897 at an average of 686; in 1899 (on a basis which excludes certain of the smaller steam vessels) at an average of 731. This figure has to be considered with reference to the figure of maximum tonnage of ships which are moored in the river, which has already been stated in evidence before the Commission, at question 15, as

600 tons. I turn now from these figures relating to London only, to the registered shipping of the United Kingdom, and I will hand in two tables. One is a table giving a classification according to tonnage of the steam vessels engaged in the foreign trade belonging to the United Kingdom in each year from 1860 to 1899; and the other is a table giving a classification according to tonnage of the sailing vessels engaged in the foreign trade belonging to the United Kingdom, in each year from 1860 to 1899.

(The tables were handed in. See Appendices, 9th day, Nos. 9 and 10.)

3213. (Mr. Ellis.) These are all official figures?—These are all official figures. The source of information is given at the top of the table. The table illustrates the alteration in the character of the ships that are being built in later years. It will first be seen that since 1890 the number of British steamers engaged in the foreign trade has not materially increased. As to the classification of the vessels, it will be seen that the number of steam vessels under 1,600 tons is steadily decreasing; vessels of 1,600 tons to 2,000 tons show a decrease in 1899 for the first time, whilst vessels of from 2,000 tons upwards have been steadily increasing since 1860. In 1860 there were only five steam vessels of 2,000 tons and upwards, whilst in 1899 there were

1,108 vessels of this class. It is further significant that the steam vessels above 4,000 tons, which in 1894 numbered 19, and in 1898 66, rose in 1899 to 98—a most significant increase in the number of the largest vessels. As regards sailing vessels in the foreign trade, the most striking fact is the gradual reduction of the number in all classes. Having seen the great increase in the number of the larger steam vessels, it will be useful to see, if possible, to which of the ports of the Kingdom these belong, as indicated by the port of registry. This is dealt with in another table, which I will hand in.

(The witness handed in a table showing the number and proportion of the whole Kingdom of the vessels of each class belonging to London and the Ports of Liverpool, Glasgow, and Greenock. See Appendix, 9th day, No. 11.)

3214. (Sir John Wolfe-Barry.) I suppose you know why Greenock shows up as having a large number of very large vessels?—I understand that it is principally due to the owners living there.

3215. Is it not because the P. and O. Steamship Company register their vessels at Greenock?—I was not aware of that. Taking the vessels above 3,000 tons tonnage, the figures are most significant of London's inferiority. The figures are:—

Classification of Tonnage.		United Kingdom.	Number and Proportion Registered as belonging to							
			London.		Liverpool.		Glasgow.		Greenock.	
Tons.	Tons.	No.	No.	Per cent.	No.	Per cent.	No.	Per cent.	No.	Per cent.
3,000 and under	3,500 -	149	27	18·12	60	40·30	43	28·86	5	3·36
3,500	„ 4,000 -	77	12	15·59	25	32·50	14	18·18	6	7·80
4,000 and over	- -	101	7	6·93	64	63·40	4	3·96	5	4·95
Total - - -		327	46	14·07	149	45·57	61	18·65	16	4·89

Of the 327 vessels above 3,000 tons it will be seen that while Liverpool has 149, or 45·57 per cent., and Glasgow 61 or 18·65 per cent., London has only 46, or 14·07 per cent. This classification is according to net tonnage. This question of the size of vessels may be further considered in view of what is the position of the ships of other nationalities.

(The witness handed in a table of steam vessels above 7,000 tons gross of all nationalities. See Appendix, 9th day, No. 12.)

In the Table of English vessels the first thing of importance is the large number that have been built in the last three years. Of the 85 British vessels in the list, the number built in each year is as follows:—

Year.	Number of vessels.
1881	3
1883	1
1884	2
1889	2
1891	1
1893	4
1894	4
1895	4
1896	5
1897	6
1898	16
1899	20
1900	17
	85

This shows to what extent the later development of vessels in the direction of the greater size is proceeding. The port of registry of these 85 vessels is as follows:—

Port of registry.	Number of vessels.
Barrow	1
Belfast	6
Glasgow	3
Greenock	7
Liverpool	58
London	4
Southampton	4
West Hartlepool	2
	85

Though the port of registry does not mean that the trading of a vessel is confined to, or even principally concerned with, that particular port, yet taken with all other facts it cannot but be regarded as of some significance that even as a port of registry London, with its great trade, holds such an inferior position in respect of the larger class of vessels, whereas in the smaller vessels its position as a port of registry is undoubted, as will be seen from Appendix 11. It will be further seen from the last Table that foreign countries show a considerable competition in the direction of larger vessels. The number of German ships over 7,000 tons gross is 34, and the number of French 7. I will hand in a further table showing the classification of steam vessels of all nationalities according to Lloyd's Register.

(The witness handed in a table showing the classification of steam vessels of all nationalities according to Lloyd's Register. See Appendix, 9th day, No. 13.)

It will be seen that the number of German vessels between 7,000 and 10,000 gross tonnage is 15, against 63 British, and over 10,000 tons, 19 against 22 British. Germany is thus building large vessels out of all proportion to its commercial fleet compared with what Great Britain is building in connection with its enormous fleet of merchant vessels. In view of these facts I suggest, at all events, that the incapacity of Britain's greatest port to accommodate the larger vessels may become a serious factor in deciding the national position. It must be remembered that the shipping of London is about one-fifth of the rest of all the ports of the country put together. Accommodation at Liverpool, Glasgow and other ports will not make up for want of accommodation at London. It will only partly do so. If London, therefore, cannot properly accommodate the largest ships, not only its own trade, but the trade of the kingdom is seriously menaced.

3216. (Sir Robert Giffen.) I should like to ask you this with regard to your evidence that, all things being equal, shipping would clear from the port of entry as much as possible, and that the fact of the clearances being so much more in London than the entries is an indication of something that is not quite satisfactory. Have you investigated the causes why the clearances are not so great as the entries?—Yes. I have gone into that, and I find that in the first instance it is due to the ships coming in and

Mr. G. L.  
Gomme.

11 Dec. 1900.

See 7843-51.

Mr. G. I. L. Gommc. clearing in ballast, and entering in and clearing coastwise.  
11 Dec. 1900.

3217. Is it not partly that in connection with the coal trade ships come in from foreign ports and then go to Cardiff and Newcastle for a supply of coal?—That is to some extent the answer, no doubt.

3218. And does not that apply to a great many ports besides London?—Yes, it applies to a great many ports besides London, but London has always been a port of general trade, and not particular trade, and it seems to me to be a significant change in its class of trade.

3219. I recollect a good many years ago when dealing with these subjects—I have not any figure to give you at present—observing that Continental ports were in much the same condition as our English ports. A larger number of ships arrived from foreign countries, exclusive of England, than went to them. You have not observed anything of that kind?—No, I have not observed anything of that kind. But my point rather is that the Port of London, up to the present, has been a port of general trade where entering and clearing has been more or less equal.

3220. But still the exports of goods from London are much less than the imports into London?—Yes.

3221. Therefore there is not so much work for ships to do going away owing to the nature of the trade?—No, not now. That is my point.

3222. Is not that a case where the trade commands the shipping, and there are causes for trade going in certain directions which the ships must follow?—Yes, no doubt that is so, and that seems to me to be one of the important things we must look at at the present moment, because there will be no longer any reason for ships to come to London unless they have every facility, if they have to go to other ports to clear. Unless there are greater attractions to import to London they will go to the nearest port where they want to clear from.

3223. But still there is no material prospect of the clearances of ships in London, from the foreign trade, increasing in the same proportion as the entries?—No; considering the drift of trade, I think not, but it makes it all the more important that the Port of London should be well equipped, otherwise the natural event will happen, and the import trade will follow the export. I next turn to the position of the trade of the port as far as an analysis of the Tables from a general statistical point of view can interpret the facts. I think the relation which the trade of the port bears to the trade of the whole kingdom is the most useful form of consideration of the subject. This I have taken from various points of view, as far as the information available in the official returns admits, and I will put in some Tables showing the results. One table shows London's proportion of the total shipping entered, the actual figures for London and the rest of the United Kingdom being given.

(The witness handed in a table showing the Shipping entered with cargoes at the Port of London and at the Ports of the rest of the United Kingdom in each year from 1853 to 1899; and London's proportion of the whole Kingdom. See Appendix, 9th day, No. 14.)

Taking first shipping of the country, both foreign and coastwise, it shows that London has failed to hold its

own. London's proportion of the total tonnage of shipping entered has been in—

1856	-	-	-	-	23.4 per cent.
1860	-	-	-	-	22.6 "
1880	-	-	-	-	20.2 "
1897	-	-	-	-	22.8 "

When divided between foreign and coastwise shipping the figures are more significant. In the same years they have been—

	Foreign.	Coastwise.
1856	31.1 per cent.	19.2 per cent.
1860	29.4 "	18.6 "
1880	24.3 "	16.4 "
1897	25.9 "	19.4 "

So that while the coasting trade (that is, smaller vessels and for produce required principally for London home markets) has remained about the same during these forty years, the foreign trade has fallen 5 per cent.

3224. (Sir Robert Giffen.) Is 5 per cent. quite the proper figure there. A fall from 31.1 per cent. to 25.9 is more than 5 per cent. It is a fall of five points. See but upon 31 it is more than 5 per cent.?—Yes, it is 3276-7. clearly. The next table deals in the same way with the shipping cleared.

(The witness handed in a table showing the Shipping cleared with cargoes from the Port of London and from the rest of the United Kingdom in each year from 1853 to 1899; and London's proportion of the whole Kingdom. See Appendix, 9th day, No. 15.)

It will be seen that in the number of vessels cleared there is an increase in London's proportion from 7.3 per cent. in 1856 to 9.4 per cent. in 1897, while in the tonnage there has been an increase from 10.1 to 11.6 per cent. An analysis of these figures, however, reveals an important fact, viz., that this increase in the total is entirely due to the coasting trade. The coasting trade of London has increased in number of vessels from 5.8 per cent. to 8.5 per cent., and in tonnage from 6.4 per cent. to 7.4 per cent., but in the foreign trade there is a decrease in the proportion, viz., in the number of vessels from 12.6 per cent. to 12.3 per cent., and in tonnage from 15.9 to 14.9 per cent.

3225. (Mr. Ellis.) I suppose these percentages are correct?—Yes. The two next tables take the consideration of the question of decrease in London's proportion of the foreign shipping of the country a step further.

(The witness handed in a table showing the Tonnage of Shipping entered from each of the chief foreign countries and British Possessions at the Port of London, and at the ports of the rest of the United Kingdom; and London's proportion of the whole Kingdom. See Appendix, 9th day, No. 16.)

This table shows London's proportion of the shipping entered from each of the chief foreign countries and British possessions in 1861, 1871, 1881, 1891, and 1899. That is London's proportion to the whole Kingdom. As regards the tonnage of shipping from foreign countries, it will be seen that the proportion is a steadily decreasing one, from 20.7 per cent. in 1861 to 16.2 in 1899. Examining into these figures further by dividing the countries into groups, the result is perhaps more significant. The groups and the corresponding figures are as follows:—

GROUPS.	Shipping entered from Foreign Countries and British Possessions.				
	London's Proportion of the Total of the United Kingdom.				
	1861.	1871.	1881.	1891.	1899.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
North Europe - - - - -	21.3	19.0	18.2	17.2	14.7
South Europe - - - - -	21.1	16.8	12.8	15.6	10.1
Total Europe - - - - -	21.3	18.8	17.3	16.9	13.9
Asia - - - - -	74.9	84.4	62.7	78.0	89.4
America - - - - -	17.1	11.4	13.7	17.5	21.5
Foreign Possessions - - - - -	20.2	20.0	12.2	14.2	15.8
British Possessions - - - - -	36.4	40.5	43.1	43.2	44.3
Total Foreign Countries and British Possessions - - - - -	24.0	21.1	20.4	20.7	19.3

It will be seen from this to what extent London is losing its share of the import trade from the Continent, that is to a large extent in materials for manufacture, and of export to the rest of the world. There is an increase in the shipping from British possessions in the course of the same period, trade that is for the most part required by the population of the United Kingdom. The total result, however, is a steadily decreasing figure for London's proportion from 24 per cent. in 1861 to 19·3 per cent. in 1899. The next table is a table showing the tonnage of shipping cleared to each of the chief foreign countries and British possessions from the Port of London and from the ports of the rest of the United Kingdom, and London's proportion of the whole Kingdom in 1861, 1871, 1881, 1891, and 1899.

GROUPS.	Shipping cleared to Foreign Countries and British Possessions.				
	London's Proportion of the Total of the United Kingdom.				
	1861.	1871.	1881.	1891.	1899.

London's proportion of the shipping cleared to the Continent shows a steady decrease from 17·3 per cent. in 1861 to 13·3 in 1899, and is principally responsible for the decrease in London's proportion of the total shipping cleared to foreign countries. London's proportion of the shipping cleared to British possessions does not follow the same course as the proportion of shipping entered. From 1861 to 1881 the figure increased from 25·7 per cent. to 27·3 per cent.; in 1891 it had fallen to 26·3 per cent., and in 1899 to only 22·4 per cent. The figure for London's proportion of the total shipping cleared to foreign countries and British possessions is a steadily decreasing figure, from 18·1 per cent. in 1861 to 14·5 in 1899. Turning next to London's proportion of the trade as indicated by value, the relative position of London is perhaps more decidedly illustrated. Two tables I will hand in illustrate this.

(The witness handed in two tables showing the value of the Imports and Exports into the Port of London and the Ports of the rest of the United Kingdom; and London's proportion of the whole Kingdom, 1872 to 1899. See Appendix, 9th day, Nos. 18 and 19.)

The tendency to decrease in the value of imports (for the shorter period for which the information is available) is undoubted. London's proportion, which, in 1872, was 35 per cent., and in 1886 had risen to 36·6 per cent., was for the last four years for the first time less than 34 per cent. It is, however, in the table of proportion of value of exports that the most significant decrease is shown. London's proportion of the export of both home and foreign produce has materially declined since 1882 (the first year for which the information is available) from 32·1 to 26·7 per cent., while London's proportion of foreign and colonial export trade in the same period has fallen from 61·2 per cent. to 53·0 per cent., the decrease being especially marked in the last five years, as follows:—

1894	-	-	-	-	59·8
1895	-	-	-	-	58·6
1896	-	-	-	-	56·7
1897	-	-	-	-	54·7
1898	-	-	-	-	53·7
1899	-	-	-	-	53·0

Thus the conclusions which have been drawn from the figures as to London's relative proportion of the shipping is confirmed by these figures as to values. In these

(The witness handed in table. See Appendix, 9th day, No. 17.)

Considering London's proportion of the shipping cleared to foreign countries and British possessions in the same way as in the last table, it will be seen that as regards foreign countries, the figure for London's proportion is also a decreasing figure, from 15·9 per cent. in 1861, to 13·4 per cent. in 1899, the figure for 1899 being, however, slightly higher than the figure for 1891. Dividing the foreign countries into the same groups as in the case of the shipping entered, the result is as follows:—

Mr. G. L. Gomme.

11 Dec. 1900

figures the question of alteration in values does not, of course, affect the figures, because we are dealing with proportions only. A further section of the trade not included in either of the foregoing tables is that known as the transshipment trade. This is apart from the export of foreign and colonial merchandise which has been dealt with in the last table, and which has shown such a marked decrease in London's proportion. The figures for the transshipment trade are shown in another table.

(The witness handed in a table showing the transshipment trade of London and of the United Kingdom. See Appendix, 9th day, No. 20.)

These tables require some explanation as to the division into two sections, namely, "imported for transshipment," and "exported for transshipment," it being, of course, understood that the total "imported" and "exported," so far as the whole kingdom is concerned, must always be the same. The difference between these figures for London and the rest of the kingdom arises from the fact that these goods are sometimes imported at one port, say Southampton, and exported at another, say London. The difference in the percentages indicates to what extent this is done as far as London is concerned. Table (a) deals with the transshipment of wines and spirits. London's proportion, it will be seen, has gone down from 90·3 per cent. in 1853 to 38·5 in 1899; and though there has been a recovery in particular years, the total result is a certain tendency downwards. Table (b) deals with the transshipment of tea, and in this article London holds its own, the rest of the country taking only about 5 per cent. Table (c) deals with the transshipment of tobaccos and cigars, and the falling off in London's position is here most marked. From 91·8 per cent. in 1853 it has fallen to 35·6 per cent. in 1898, and to 17·6 in 1899. Table (d) gives the value of all other articles recorded in the official returns as being transhipped, and here it will be seen that though London's position was bettered from 1871 to 1886, namely, from 24·9 per cent. to 47·3 per cent., it has since fallen to 27·2 per cent. in 1899, the lowest proportion of all since 1886. The total value of the transshipment trade is only given for the years 1896, 1897, 1898, and 1899, as set out in Table (e), and it will be seen that in the year 1899 London has very much fallen off. As the trade of London has thus been shown to be decreasing in proportion to the trade of the United Kingdom, it is of importance to note what ports have been increasing during the same period. I accordingly hand in a table showing the proportion which the shipping

Mr. G. L.  
Gomme.

11 Dec. 1900.

of certain ports bears to the shipping of the United Kingdom.

(The table was handed in. See Appendix, 9th day, No. 21.)

From these tables it will be seen that the Channel ports of Southampton, Dover, Newhaven, and Harwich have secured a very considerable proportion of the kingdom's shipping for the last thirty years. It is almost certain that this has been to a great extent at the expense of London, and that the enterprise and expenditure on the docks of these places has enabled them to take away trade which, had the Port of London been brought up to its proper accommodation, would have come to London. This is not, however, the whole of this important matter. It is well known that these ports have all been equipped by the railway companies, and in this respect it is necessary to bear in mind the conclusion of the Joint Select Committee of 1872 on Railway Companies' Amalgamation, which dealt with this important subject:—"It is possible . . . that a railway company, by acquiring both a port and the railways leading to it, may obtain control over the whole of a certain description of traffic by sea as well as by land. It is possible, for instance, that if a great amalgamation were to take place between the North-Eastern, the Great Northern, and the Midland the united company might obtain possession of the Tyne, the Wear, and the Tees, as the North-Eastern have of Hartlepool, and in that case they could, and probably would, discourage the carriage of coals by sea to London and other ports of England. There is, therefore, a danger in this respect, which well deserves the attention of Parliament, and cannot be considered sufficiently guarded against by the Standing Order (151) of the House of Commons, which provides that no railway company shall acquire any harbour, steam vessel, etc., unless the Committee on the Bill report that such restriction ought not to be enforced with the reasons and facts upon which their opinion is founded" (Page xix.). "There is real and effective competition between railways and the traffic by sea, especially in the carriage of heavy goods, and this competition is likely to continue unless Parliament should give public harbours into the hands of railway companies." (Page xxix.). "Effectual competition by sea exists, and ought to be guarded, by preventing railway companies from obtaining control over public harbours." (Page l.) Therefore, it comes to this, that the railway companies of the south and east of England have been allowed to do in these Channel ports what has not been accomplished for London, owing to the want of properly constituted authority having control of the matter. It is quite true that the rise of these ports, if it is to some extent a loss to London, is not necessarily a loss to the kingdom. But there are important economical considerations which should be taken count of. The addition of the railway rates to the cost of shipment may affect the price of commodities compared with the price if they had been landed directly in the Port of London, which is the natural port for these commodities. Here is evidence, I think, of the way in which the natural advantages of London have been eaten into by the neglect of development in artificial dockage, etc. Even this is not all, for the railway companies, in order to attract trade to these ports, and therefore to their lines for carriage to its destination, have neglected the carriage of the home produce as witnessed by the voluminous evidence given before the Agricultural Commission, particularly by the farmers of Kent. I am aware that this touches upon a branch of economics not free from difficulties, but it is a matter not to be overlooked, I think, by this Commission. The suggestion that the Port of London uses these channel ports as feeders overlooks the fact that the money which has been spent there, and which must earn its dividends out of the charges imposed upon the goods shipped to these ports might have been spent upon the Port of London to the better advantage of the community. While London has been hesitating about connecting Tilbury more directly with London, and improving the dock system to the required extent, the necessities of the port have been met by railway companies creating extra docks at distances ranging from 50 to 80 miles of London. If London docks had been in the hands of the railway companies they would not have built the channel docks. It will, therefore, be seen that other ports have succeeded in obtaining large percentages of the shipping of the kingdom, and it is also a fact that at almost all these ports the dock accommoda-

tion and conveniences have been almost created, and at all events very considerably extended, during the past 20 or 30 years. The question of population in regard to trade is more important in the case of London than in other places. The enormous development of London as a population centre is quite abnormal. I will hand in a table showing this.

(The witness handed in a table showing the population of Greater London and of the United Kingdom; and London's proportion of the Kingdom. See Appendix, 9th day, No. 22.)

It will be seen that in 1801 London's proportion was 7 per cent., in 1856 it had risen to 10½ per cent., in 1886 to over 14 per cent., while in 1896 we find it is more than 15½ per cent. of the population of the whole kingdom. This enormous population needs larger imports than any other aggregate of population in the world. It compels a large amount of imports to come to London whatever may be the difficulties of that trade arising from lack of accommodation. When this fact is considered in connection with the growth of the import shipping, that growth, so far as it depends upon dock facilities, will be found not to have been so considerable as it appears. This increase in proportion of population has to be borne in mind in considering the position of the trade of London and the proportion which it bears to the trade of the whole country. The proportion of population is now more than half as much again what the proportion was in 1856, while the preceding tables show that as regards trade the proportion is in nearly all respects less, and in some cases considerably so.

3226. (Sir John Wolfe-Barry.) Is the rate of increase in the population of London maintained now?—The decennial rate of increase is not maintained—it is gradually decreasing—but I think the proportional increase to the rest of the country is maintained.

3227. Then the total decennial rate of increase of the country has gone down in the same proportion?—Yes, that is so—the rate of increase. The increase is still going on, but the rate of 1891 over 1881 is somewhat less than the rate of 1881 over 1871.

3228. That is over the whole kingdom?—Yes. It is on a larger basis, of course.

3229. And what about London?—It is the same in London.

3230. Therefore there is no apparent increase in the proportionate amount of the population of London relatively to the population of the United Kingdom?—Yes, but it is slight. In 1891 it was 14 per cent., and in 1896 it was 15½ per cent.

3231. Therefore it is not increasing at the same rate as it did between 1856 and 1886, is it?—No, but that is a period of 30 years, I would point out.

3232. What I rather wanted to ask your opinion about was whether the proportionate rate of increase of the population of London as compared with that of the whole kingdom is increasing or not, now?—I think it is slightly increasing.

3233. But not so greatly as it was before?—No, not so greatly as it was before.

3234. And the proportionate amount of trade to the whole volume of trade in the kingdom is also showing signs of decrease?—It is a decrease.

3235. An ascertained decrease?—Yes.

3236. And probably it is not very unreasonable to suppose that the population will follow the trade. If there is not enough work for them to do in London they will go somewhere else?—It depends upon whether the population of London is dependent upon the trade.

3237. I suppose most populations are more or less dependent on trade?—That is not so much the case with London. London is the capital.

3238. It is a great transshipping place, is it not?—Yes.

3239. Not only coastwise by vessels, but by railways and in other ways?—Yes.

3240. Therefore if it is the fact that there is less of that trade coming to London we may expect that the population will decrease: the means of livelihood of a certain number of people will diminish?—Yes, there is that, but London is also a manufacturing place—rather more so than some people think—and it would still employ a large number of people.

3241. That is assuming that the increase in manufactures makes up for the decrease of transshipping?—Yes.

3242. (Sir Robert Giffen.) It is not the case that the imports into the Port of London are actually diminishing?—No. I understood the question to be as to the proportion.

3243. (Sir John Wolfe-Barry.) Yes, the question was as to the relative proportion?—I quite understood that.

3244. I suppose there are a great many other questions of a very interesting nature which may account for a relative diminution of increase of imports into London besides want of accommodation?—I quite agree that there are a great number of reasons which might be suggested, and as I venture to put it before the Commission, it is rather the result of cumulative evidence that I rely on. It is not the evidence at any particular stage, but it is the cumulative evidence which I think will show that if London has not already suffered from the want of accommodation it inevitably must do so in the very near future.

3245. I do not want to minimise the question of accommodation at all, but you will quite recognise that there are a great number of other possible explanations of the facts which have been ascertained?—Yes.

3246. Such, for instance, as the great competition of foreign ports?—Yes.

3247. The subsidised lines of steamers?—Yes.

3248. And, as you have pointed out, the enterprise of railway companies in developing dock properties elsewhere?—Yes; but particularly with regard to the competition of foreign ports, it is exactly in these foreign ports where they have seen the necessity for extending their docks so much. In the ports I have visited recently you get a considerable extension of docks in order to meet the increased volume of trade; and that competition will go on as soon as they get their accommodation there.

3249. Yes, but the competition of a foreign port may be entirely independent of the accommodation in London?—I am not suggesting that accommodation is everything, of course, but I do suggest that the increase of London is an undoubted fact, but its increase in proportion to the kingdom is not maintained; and so long as that is so, unless you are quite clear that it is not due to want of accommodation, it is an extremely dangerous thing to let accommodation go by the board.

3250. I am quite with you on that point. I only want to guard ourselves against supposing that the question of the want of accommodation is the only thing?—Of course, I have not given any other reason, because I did not understand that this Commission would be prepared to listen to it. Of course, the object is to show how it is affected, or how accommodation enters into the question; and I have rather concentrated my evidence upon that point. I quite understand that it is to be modified in various directions as you have stated.

3251. A fair proportion of weight should be given to other circumstances?—Certainly.

3252. (Sir Robert Giffen.) Before we leave this question as to whether the trade of London is diminishing even proportionately to the rest of the United Kingdom, I should like you to look at Appendix 18. Is not any decrease in the proportion of imports to London a very small one, such as might arise from variations which are not easily accounted for and which may imply no real diminution in the proportion of the trade of London, if we were able to go behind the figures and get at the real figures. A diminution in proportion from 35 per cent. in 1872 to a proportion of 33·8 per cent. in the last year is a very small diminution, is it not?—That is so, but it is a continuous diminution, or it is very nearly a continuous diminution. If I found that there were very many occasions where the line of decrease was altered into a line of increase, I should think that there was not very much in it, but if you will notice, with the exception of 1876, 1877, 1879, 1881, 1884, 1885, 1886, 1887, and 1888, and after that period, with one exception only, namely 1893, it never reaches 35.

3253. But still you have a good many exceptions in those years. I am merely suggesting that, in a case where we do not know everything about the trade, that is hardly sufficient to justify a general statement that the proportion of the trade of London, all things considered, is diminishing. At any rate it hardly justifies the statement that it is seriously diminishing?—I do not think I have used the word "seriously," but I would add to my previous observation by saying that up to the period of alternating increases and decreases there was a consider-

able increase in the dock accommodation of London and it is only since 1890 that no increase of accommodation has taken place.

3254. But we are talking of proportion now, and there has been an increase of accommodation everywhere throughout the United Kingdom, I suppose?—Yes, and that is followed by this continued decrease.

3255. A continued decrease in proportion, but to a very small amount?—Yes, to a comparatively small amount, I quite admit.

3256. And possibly the effect of that question of proportion might be modified in our minds if we were going into all the particulars of what constitutes the trade?—Yes, no doubt it would be modified.

3257. We cannot decide these things upon figures merely?—Quite so.

3258. We require to know something of the actual trade itself?—Yes.

3259. Then with regard to Appendix 16, which is a table as to shipping, is not the effect of that very much to show that the proportion of the trade of London with our Colonial possessions not merely maintains itself, but has increased a good deal?—It has increased in actual figures, but not in proportion.

3260. It has increased from 36·4 in 1861 to 44·3 per cent. in 1899.—Yes, that is so. I mistook your question. That is for the British possessions.

3261. Is it not the case that the British possessions, being so much in distant parts of the world, the proportion of shipping employed in doing the same amount of trade is larger, although the voyages are fewer than in the case of Continental trades?—Yes, that would no doubt be so.

3262. When you use these figures of shipping to give these entries and clearances it means the employment of a larger amount of shipping than the larger entries and clearances just above?—From the foreign countries, yes.

3263. So that, as a matter of fact, the increase of the trade of London which gives employment to shipping has been in an increasing proportion, and not in a less proportion?—No, I do not think that is so, because this figure, 36·4, is only the British possessions compared with the 44·3, whereas the total trade is 24 compared to 19.

3264. Yes, but I am pointing out that there are internal differences in trade, which are very material in questions of this kind. This is the table as to shipping, and I am pointing out that, as regards one large group of countries, the trade of the Port of London which increases is the trade which gives large employment to shipping?—Yes, that is so.

3265. I am not going into the details as to particular foreign countries, but would it not require some investigation of that before you draw inferences as to the diminishing proportion of the trade of London?—I have gone into that, and the 36·4 in 1861, which is the British possessions figure, compared with the 44·3 in 1899, which is the British possessions figure, includes a very large amount of such vessels as carry cattle, which are required almost entirely for the consumption of the population of London. The New Zealand trade, for instance, would come to London, because the population is there, whatever the difficulties may be.

3266. But still, whatever the cause is, it comes to London?—Yes, because the people are there who want the cattle.

3267. But is it not the fact that in the case of a great many of these increases of entries and clearances in trade with Continental ports—for instance, the increase of passenger steamers varies much: steamers, for instance, going between Dover and Calais, where the entries and clearances amount to a great deal in the course of the year—there is not the same employment for docks or for cargoes or for business of that kind?—That is so to a large extent at Dover and other places, but all these places are now developing their general trade to a very considerable extent.

3268. Has not the tendency been to an increase of entries and clearances at ports like Harwich, Dover, and Folkestone, where you have an increase of entries and clearances of shipping, but not a proportionate increase of goods traffic?—That would no doubt be so, but, on the other hand, there is also a great deal of development of actual goods traffic. For instance, at Dover the timber

Mr. G. L.  
Gomme.

11 Dec. 1900.

Mr. G. L.  
Gomme.

11 Dec. 1900.

trade is being enormously developed, and it all used to come up to the Greenland Dock in London.

3269. I am merely putting the point. These are all questions which require to be considered before we are led up to a general conclusion of the kind that you are deducing. I am not disputing the figures, but I am disputing the inference a little?—I quite see the point.

3270. (*Lord Revelstoke.*) Before adjourning, I think we should like to say that the next portion of the statement of your evidence seems to be controversial. I do not think we shall be prepared to listen to any of the arguments to which it refers?—May I say in what way?

3271. For instance, the dock companies, the Trinity House, and the Thames Conservancy Board can give us their own figures?—Might I say that it is not the question of the figures that I am submitting this to the Commission for. It is not on account of the figures, but it

is on account of their importance from the point of view of the taxation of shipping and goods as they come into the Port of London. While I quite understand that any one of these figures might be more correctly given by the authorities themselves, it is with their total relationship to London that I am concerned.

3272. You will quite understand that we have not any objection to your giving the figures as long as they are matters of common knowledge—for instance, the figures of the dock companies are published in their own accounts—but we should not be prepared to listen to any argumentative representations on the subject?—I am only anxious to say that I quite understand that the figures might be corrected by the authorities themselves, but it is not in relation to the figures that I am desirous to place this evidence before the Commission.

Recalled 3273.

(Adjourned to Thursday next, the 13th instant, at 2 o'clock.)

---

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TENTH DAY.

Thursday, 13th December, 1900.

PRESENT :

The Right Hon. LORD REVELSTOKE (in the Chair).

Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.

CECIL OWEN, Esq., Secretary.

Mr. GEORGE LAURENCE GOMME recalled and further examined.

3273. (Lord Revelstoke.) You remember at the conclusion of our last sitting we intimated that we should hold to ourselves the right to reserve some of the questions you propose to deal with?—Yes.

3274. Although we think it would be a good thing for you to state the views of the County Council with respect to your relation with other public bodies, we should be glad if you would reserve all arguments in support of the County Council's views until you have the opportunity of appearing by counsel—I mean against any proposals which may be made by the dock companies or other public bodies. Therefore will you continue your evidence with that reservation?—Thank you, my lord. Before doing that may I refer to Questions 3180 to 3185? I want to ask whether I may put in the table which appears to have been excluded?

3275. That is with regard to the powers of the dock companies?—Yes. I did not quite understand whether you wanted to rule out my observations on the table, or whether you wished to rule out the table itself.

3276. The decision we came to, if I remember rightly, was that we did not wish to have the table?—I am obliged to your lordship. Then I quite understand. Then with reference to Question 3224, Sir Robert Giffen asked me a question with reference to a fall of five points in London's proportion of trade. I should just like to explain that the 5 I am dealing with there is not 5 per cent. upon the original figure of 31.1, but the difference between the two proportions with which I was dealing, namely 31.1 in 1856 and 25.9 in 1897, and the 5 was simply the difference between those two, and therefore accurately expresses what I intended to convey. As Sir Robert Giffen put it, it is not 5 per cent. on the 31; it is the difference between those two figures.

3277. (Sir Robert Giffen.) That is the point I wished to make quite clear to prevent any misunderstanding?—So long as that is understood I am quite content.

3278. (Lord Revelstoke.) Will you proceed with your evidence under the head of Expenditure and Revenue?—It is very important to get from the various authorities a statement of the condition of their finances in connection with the Port of London at the present moment. The revenue accounts of all the authorities having control over the Port and Docks of London are not available. Those I have been able to analyse are the dock companies, Trinity House (as to pilotage), Thames Conservancy, and the City of London Corporation (as port sanitary authority), and I will hand in a table showing the results.

(The Witness handed in a table showing the Expenditure and Revenue of the Dock Companies, Trinity House, Thames Conservancy, and the City Corporation as Port Sanitary Authority. See Appendix, 10th Day, No 1.)

Beyond these there are various administrative expenses in the departments which have control in the Thames, and in connection with docks held by railway companies, the wharfingers, barge-owners, and other charging authorities which cannot be particular-

ised. The Board of Trade and other Government Departments do not specify the expenditure under administrative heads, but only in general totals, from which it is impossible to determine what expenditure relating to the Port of London is incurred by these bodies, or how such expenditure is met. The total expenditure upon the Docks and Port of London (maintenance, works, and services) reached, according to the available data, in the year 1899, the very considerable total of £1,888,875. It is obvious that this total must be increased by the expenditure of other bodies, which I have not been able to ascertain, but it is not possible with present information to give even an approximate estimate of the remaining expenditure. The ascertained total expenditure in 1899 was incurred by the following authorities and bodies:—

	£
Dock companies - - - - -	1,644,909
Trinity House and pilotage - - -	146,716
Thames Conservancy Board - - -	90,768
Port sanitary authority - - - -	7,392
	£ 1,888,875

The purposes of this expenditure are not ascertainable to the extent which is necessary for a complete survey of the subject, as the accounts of the dock companies and of other bodies are not drawn up with this purpose in view. With the information available, the expenditure on works and services may be divided in the following manner:—

	£
Dock, warehouse, and service expenses	1,236,063
General expenses of the dock companies (management, rents, rates, taxes, etc.) - - - - -	408,936
Pilotage - - - - -	143,326
Pilot cutters - - - - -	2,360
Locks, weirs, tow-paths, and foreshores - - - - -	6,798
Piers - - - - -	10,509
Dredging - - - - -	27,238
Mooring - - - - -	8,926
Wreckage - - - - -	6,263
Harbour expenses - - - - -	7,606
River purification - - - - -	2,113
General expenses of Thames Conservancy (management and working) - - -	22,226
Port sanitary expenses - - - - -	7,392
	£1,888,875

As to how far this expenditure is properly divided among the several branches of service it is not possible to speak with certainty, but it is abundantly clear that it does not meet all the requirements of the port.

Mr. G. L. Gomme.

13 Dec. 1900.

Mr. G. L.  
Gomme.  
Dec. 1900.

The Thames Conservancy has many times, before Parliament and before this Commission, explained that its expenditure is not controlled by the necessities of the services it administers, but by the amount of yearly revenue it receives, and I am not sure that the services administered by the Trinity House Corporation are not similarly controlled. The total revenue of the limited number of authorities for which information is obtainable was in the year 1899 as follows:—

	£
Dock companies - - - - -	2,311,302
Trinity House and pilotage - - - -	146,096
Thames Conservancy - - - - -	100,568
Port sanitary authority - - - - -	351
	<hr/>
	£2,558,317

This revenue has nearly all been raised by means of charges upon shipping and goods, charges which, of course, ultimately fall upon the consumers of goods. The significance of this fact cannot be exaggerated, as upon it depends to a great extent the prosperity of the port. In the first place, the sum of £793,562 is levied as tonnage dues and other charges upon shipping entering the port and docks.

	£
Thames Conservancy - - - - -	55,729
*Dock companies - - - - -	591,930
Pilotage - - - - -	145,903
	<hr/>
	£793,562

\* Estimated in the case of the Millwall Company.

3279. (Sir Robert Giffen.) You have not included lighthouse dues?—No; I have explained already that I have not been able to pick those out of the accounts. Secondly, there are charges on goods made by the dock companies for landing, warehousing, etc., which amounted to £1,578,949, and there is also a small amount charged on shipping by the port sanitary authority for disinfection, etc., amounting to £89. Putting all the figures for 1899 together, it appears that the following is the total amount of the charges upon shipping and goods in the Port of London which ultimately fall upon the consumer as taxation of the goods brought to the port:—

	£
Dock companies - - - - -	2,170,879
Pilotage - - - - -	145,903
Thames Conservancy - - - - -	55,729
Port Sanitary Authority - - - - -	89
	<hr/>
	£2,372,600

These charges are in excess of the expenditure on works and services by £483,725, which is the amount reserved for payment of interest on capital. Interest on capital was paid to the following extent:—

	£
Dock companies - - - - -	648,770
Thames Conservancy - - - - -	3,000
	<hr/>
	£651,770

Besides the charges on goods and shipping there was revenue derived from other sources, as follows:—

	£
Charges by dock companies for various services, and rents - - - - -	140,423
Various charges and other revenue of Thames Conservancy not affecting shipping - - - - -	44,839
Interest on investments by Trinity House - - - - -	193
Charges, fees, etc., of the Port Sanitary Authority - - - - -	252
	<hr/>
	£185,177

If we take the total value of the goods entering the port in the year 1899 (£164,105,695), this taxation and charge represents 1·45 per cent. upon the value—a not inconsiderable tax.

3280. The value which you give here, 164 millions, is the value of foreign goods, and it does not include transshipment goods, it does not include bullion, and it does not include goods coming in the coasting trade?—Yes. That I understand. I have taken that figure here as being a reasonably approximate figure upon which the taxation falls.

3281. But that will not be so. It does not include the value of coals coming into the Port of London?—But then on the other hand there are a great number of charges which fall on the goods which are not included in the above figures.

3282. I do not wish to argue the point. I merely wish to make quite clear that this 164 millions is the import goods so classified in the foreign trade, and it does not include certain other things which I have mentioned?—That is so, and I have fixed upon that sum, so far as my judgment will allow me to go, as being the figure that is likely to give a fairly approximate result. I quite admit that it may be open to many criticisms, but it is the best approximate figure I can put forward from the means at my command.

3283. Have you any note about the value of goods in the coasting trade?—No, I have not.

3284. It would be a large amount?—Yes, it would be a large amount. When it is considered that the charges fall upon different classes of goods at different ratios, the position may be very serious. Tonnage dues are paid upon the registered tonnage of the ships whatever may be the cargo. Thus valuable cargoes escape with a light tax, while cargoes of great bulk and less value may be considerably burdened. Moreover, the dock charges included in this total fall upon less than one-half of the total tonnage entering the port, the remaining portion having to incur charges of lighterage, &c., the total of which is not obtainable. Further examination of the system of charge for services of the Dock Companies leads me to suppose that it is not altogether in proportion to the services rendered, but is calculated to some extent *ad volentem*. I will put in two tables to illustrate this point.

(The Witness handed in a table showing the Dock Charges:—"Landing Rate" on Goods Imported. See Appendix, 10th Day, No. 2. Also a table showing the Dock Charges:—"Landing and Delivery Rate" on Goods Imported. See Appendix, 10th Day, No. 3.)

To the extent that this system operates the dock companies are imposing taxation upon goods entering the port.

3285. (Lord Revelstoke.) Now, will you give us your opinion as to the practice prevailing in the Port of London and other ports of Britain?—In contradistinction to the practice prevailing in the Port of London must be considered that prevailing in some ports of Britain and in most foreign ports, namely, that expenditure upon the upkeep of the port is looked upon as a public service which must be maintained at the necessary level, even if the cost is not entirely met out of taxation and charges upon shipping. In England Bristol is a specially noticeable case. The docks were long controlled by the Corporation, but its rights were sold to joint stock companies, who so injured the trade of the port that the Corporation had to buy them out. This involved the levying of a municipal rate, in addition to the dock charges, for the purpose of maintaining and improving the port, and a harbour rate of from £10,000 to £20,000 a year has been levied. In the case of Manchester the Corporation was financially associated with the Ship Canal Company in raising money for the construction of the Manchester Ship Canal, the Corporation having advanced £5,000,000 to the company, this money being raised on the security of the city funds and rates. This loan involves a heavy charge on the rates at present, the amount transferred from the city fund in the year 1899-1900 to meet the charges for interest and sinking fund not met by the instalment of interest received from the Canal Company being £160,163. At Hamburg, Amsterdam, Rotterdam, and Antwerp, much of the recent extension of the port accommodation is met out of municipal rates or imperial funds, and I have already pointed out that at the beginning of the century the Government advanced considerable sums (without in-

terest) for the improvement of the Port of London. Another point to be considered is the expense of the present multiplied management of the port. The figures are as follows:—

Mr. G. L.  
Gomme.

13 Dec. 1900.

Salaries and Management Expenses in 1899.					
	Salaries.	Superannua- tion.	Directors' Fees, &c.	Other Management Expenses (Office Expenses, Stamps, Stationery and Incidentals).	Total.
<b>London and India Docks—</b>	£	£	£	£	£

<b>Total - - - - -</b>	183,638	49,084	8,050	21,867	262,639

Next, turning to questions relating to capital expenditure and requirements, it would appear from the figures that the principal dock companies are not in a position to provide more money for capital purposes unless they have new sources of revenue. Some of the capital which is now employed has been spent upon purposes which are no longer productive, and for various financial operations in connection with the amalgamation of the companies, which cannot be said to benefit the port. There is undoubtedly a large amount of capital lost in carrying out the many improvements and alterations of the dock premises from time to time. Of the amount of this it is not possible, with the information available, to give an accurate estimate. I have examined the subject in detail, as far as it is shown by the powers as to works given to the companies in their various Acts, and there is in these alone some evidence of duplication of expenditure. In connection with the financial operations which have taken place from time to time, I have estimated that about £1,700,000, now included in the nominal amount raised by the dock companies, has never been employed for direct capital services in the docks and Port of London; and I venture to think this fact should be considered in estimating the claims of the companies to have paid for capital charges out of revenue.

3286. That is a serious statement. You make it on your own authority, and it is your own opinion?—Yes.

3287. And it is, of course, subject to any reply which may be made by the dock companies or by the chairman of the joint committee?—I quite understand that. There is no sinking fund for the companies' capital, as there is for all municipal capital, and the dead capital goes on year after year sharing in the dividends, and thus sapping the vital energies of the undertaking. If all the *bona-fide* dead capital were surrendered, and employed for the purpose of improvement, it can be understood that a great deal could be done for the improvement of the port, but so long as the administration remains in the present hands such a step is not possible.

3288. How would the administration being taken out of the present hands affect the point of the sink-

ing fund?—If it were put into municipal hands, there would be immediately a sinking fund.

3289. But the question of the sinking fund is not one for which the present directorates are responsible?—I understand that.

3290. You suggest an alteration in the whole financial status of the Trust or concern, or whatever it may be?—I was rather pointing to this—that after a hundred years of control by the dock companies the capital still remains at its original figure.

3291. Your point is the sinking fund?—Yes.

3292. The sinking fund, of course, has nothing to do with the administration?—Not administration by private undertakings, but in contradistinction to administration by a Trust or a municipal authority.

3293. But the sinking fund has nothing to do with the administration of the dock companies?—I am not making a charge against the companies for not doing it. I do not pretend to do that. I am merely drawing attention to the two systems of administration.

3294. Perhaps what you intend to convey is that it would be better if it were in municipal hands?—Yes; I am not suggesting that the companies could have introduced a sinking fund, or that from their point of view it would be a wise thing.

3295. (Sir Robert Giffen.) It is a question also of the general policy of the Government, not merely with reference to dock companies, but to railway companies, gas companies, and other undertakings?—Quite so; that is my point.

3296. The dock companies are not different from other private undertakings which Government has sanctioned?—Certainly not; and water companies are all in the same category. I should like to repeat that I am not making this as a charge against the companies. I am merely calling attention to the difference. These are a few considerations which I submit should be borne in mind in considering the financial position of the dock companies. This consideration of the finances of the port shows (1) that private authorities, like the dock companies, and

Mr. G. L.  
Gomme.

13 Dec. 1900

non-representative bodies, like the Thames Conservancy and Trinity House, have powers of taxation of shipping and goods, which may affect the interests of commerce from the national point of view, as well as from the local point of view; (2) that the necessary limitations which Parliament has imposed upon the revenue to be levied by these authorities has resulted in such revenue not being found sufficient to meet all the requirements of the port; (3) that capital requirements of the near future are not likely to be met by the existing bodies. This is in such marked contrast with the policy which is adopted in some of the principal ports abroad as to be of considerable importance.

3297. You state that as far as you can estimate about £1,700,000 of dead capital is included in the nominal amount raised by the dock companies?—Yes.

3298. Have you considered how far such an amount of dead capital is incidental to the existence of an undertaking which has been carried on for so many generations as the dock companies have been carried on; and that unless there is a statutory provision for a sinking fund a certain amount of dead capital very likely will come into existence?—I think it is absolutely certain that dead capital would come into existence under the circumstances.

3299. If you were treating the railway companies in the same manner you would probably say that out of the £900,000,000 sterling of capital of the English railway companies, a certain amount is dead capital in that sense?—Quite so.

3300. And there is no particular charge against the dock companies of mismanagement in that connection?—None whatever.

3301. Admitting it to be true—which, of course, is a matter to be discussed afterwards—that there is a certain amount of dead capital which the dock companies are not entitled to treat as living capital?—It is entirely due to the fact that they are private companies, and not to any bad administration or anything of that kind.

3302. And it would not alter the fact if it should be afterwards ascertained that the real value of the dock companies' property, when a proper valuation is taken, may be much more than the nominal capital represented in their accounts?—Quite so.

3303. It would be quite fair when an account is taken that you should take it both ways; that there is a certain amount of capital which is not productive, and that there is also a certain other amount of capital expenditure which at the present valuation would be more than appears in the accounts?—Certainly.

3304. What you say now is not opposed to that view if we should afterwards investigate the matter?—Not at all—an independent view to be taken on a different issue.

3305. Have you ascertained further whether any part of the sums that were advanced by the Government in the early part of the century has been repaid to the Government or not?—I have not been able to ascertain that as a fact. As a matter of impression only, I think the whole of it has not been repaid, but I am not able to state that.

5583.

3306. Perhaps the companies, when we come to enquire of them further, will be able to give us that information?—They will be better able to give it than I am.

3307. (Sir John Wolfe-Barry.) Referring to what you said about the charges being in excess of the expenditure on works and services by £483,725, you said the interest on capital was paid to the extent of £651,770. Where did the balance come from?—From previous years' accumulation.

3308. Accumulations of revenue?—Accumulations of revenue; and also from the other sources of revenue which I set out in the next table. There is over £185,000 there.

3309. And that approximately makes the difference?—Yes.

3310. Then with regard to what you said about Bristol, you say Bristol is a specially noticeable case. You said, "The docks were long controlled by the Corporation, but its rights were sold to joint stock companies, who so injured the trade of the port that the Corporation had to buy them out." Have you quite verified that?—I have not verified it beyond this, that I have seen the statement made several times. As a matter of fact, only this morning I was endeavouring to go to a more exact source than that from which I evidently obtained the particular statement.

3311. The statement is not in accordance with the knowledge which I happen to possess about it, and I enter a caveat against its being quite correct. The real state of the case was that Parliament authorised a dock in competition with the Corporation Dock, and the Corporation bought out the private dock?—Yes, I understand that.

3312. But the Corporation never sold their rights to joint stock companies as far as ever I heard. The competition of the private dock was found to be so objectionable to the Corporation that they elected to buy out the private dock?—What I mean by that expression is that the Corporation, having the control of the docks in their city, any intrusion by a private company is a parting by the Corporation with its rights as the dock authority.

3313. That is not quite what you said. You said: "But its rights were sold to joint stock companies, who so injured the trade of the port that the Corporation had to buy them out?"—The Corporation did, I understand, buy out this private company eventually.

3314. Not because it injured the trade of the port, but because it injured the revenue of the Corporation?—I see your distinction. My point was that the competition itself rather produced injury to the trade.

3315. On the contrary, I think the competition produced good to the trade. Competition generally is rather favourable to trade?—I am quite willing to be corrected on that point.

3316. Then with regard to Bristol, can you tell us what the burden on the rates is at the present time?—I think I can ascertain for you exactly. I will send a note to the Commission on that point.

3317. I mean the rate on the municipality to make good the deficiency of working the docks. I am not sure I am right about the figure I have heard mentioned, but it is a considerable amount, is it not?—Yes, it is a considerable amount. I know I have it somewhere.

3318. Then perhaps you can also tell us how much it is in the £ in the case of Manchester?—I am afraid I have not that information, but I can also supply that.

3319. I suppose it is impossible for you to give us how much the rate in the £ is which is borne by Hamburg, Amsterdam, Rotterdam, and Antwerp?—I am afraid it is, but still, I have a great many papers on those ports, and if it is possible to obtain the information I will do so. I think, perhaps, I could obtain it directly from the authorities. They were very good to me, and promised to give me any information.

3320. (Sir Robert Giffen.) And will you be good enough to separate what is provided by the municipal authorities of Antwerp and the other places from what is provided by the Government?—Yes.

3321. (Sir John Wolfe-Barry.) Do you know the history of the Liverpool Trust?—Not in detail. I know that originally the Liverpool Corporation had the docks in their own hands.

3322. You know that originally the Corporation were more or less the owners of the docks at Liverpool?—Yes.

3323. And that was not found satisfactory, and a Trust was substituted for the Corporation?—Yes.

3324. The Bristol Docks at the present time are in the hands of the Corporation?—Yes.

3325. I do not know whether you happen to know that there has been a considerable agitation there for the formation of a Trust instead of retaining the Corporation as owners?—Yes; I do know that. I have heard of that fact.

3326. I do not know whether you lay stress upon the advantages of a corporation managing docks or not?—No; I am simply drawing attention to the facts. I have not made any suggestion.

3327. But the facts are these: That the Liverpool Corporation gave up the docks to a Trust, and that there is a certain amount of agitation at Bristol that a similar course should be adopted there?—I should like to qualify the statement with regard to Liverpool giving up its control to a Trust by this remark—that during that period municipal activity was at an extremely low ebb, and the Government was putting all special matters into the hands of special bodies. It was during the period when every new public power was not put into the hands of the old local authority, but

into the hands of some new body created *ad hoc*. I have always considered these Trusts as coming under that category of the settled policy of the Government and the stagnation of municipal affairs which existed certainly until within 40 years ago.

3328. There is no burden on the rates at Liverpool in consequence of the Trust at Liverpool?—No.

3329. And at Bristol there is?—Yes; at Bristol there is; but then I believe it is the settled policy of the Corporation rather to impose a burden upon the rates than to increase the charge on shipping.

3330. Is there a sinking fund at Liverpool for all new works undertaken?—I cannot say offhand. I could get that information.

3331. (*Lord Revelstoke*.) Apart from the case of Liverpool, can you mention to us an instance where the management of the port by a Trust is a success?—I have not gone into the relative success or failure of Trusts and municipal management; but I was very greatly impressed by the fact, and also by the evidence supplied to me when I was abroad, of what seemed to me to be the remarkable advantage to be gained by the municipal authorities having entire control.

3332. You are looking at it now entirely from the shipowners' point of view?—Yes; I was looking at it from that point of view; and at Hamburg and the other places the shipowners seem to be perfectly content to leave it in the hands of the municipal authorities, the municipal authorities, of course, paying attention to the needs of the shipping as a part of their public duty.

3333. But apart from public duty, can you tell us of an instance where the management of a port by a Trust has been a financial success?—It depends upon what you mean by a financial success. It does not always follow that because you levy a heavy tax on shipping, and get a surplus, that would be a financial success. On the other hand, it might be that you might levy a charge upon the rates, and the charge upon the shipping would be less. By having a very low rate on shipping they might attract a large amount of trade to the port, and so benefit their port in innumerable ways. They might introduce manufactures and various other things, and it might be that manufacturers would be content to pay a heavy tax for that. All I want to point out is that financial success is not always to be interpreted by the fact that they have a surplus.

3334. (*Sir John Wolfe-Barry*.) In the case of Liverpool do they not raise enough revenue to pay their debt, and then the charges are reduced accordingly?—I rather fancy that of late years the revenue has been employed in extending the docks a great deal. Liverpool has extended the docks of late years very extensively.

3335. No doubt, but if after that they raise enough revenue to pay their debt the charges are reduced?—Yes, I think that would be the principle in Liverpool.

3336. With regard to the dead capital, or capital lost in the docks of London, I suppose it is common knowledge that this must apply more to docks than in any other public works, on account of the rapid alteration in the size of shipping?—I do not think I would say that it is more so than to other great undertakings like the gas companies and water companies.

3337. But surely in the case of water companies it is not altered in the same way?—I gave rather extended evidence before the late Water Commission on that very point, showing what a very large amount of dead capital existed in the water companies' undertakings.

3338. It is an arguable point, no doubt?—Quite so.

3339. Could you separate at all in your table showing the cost of Trinity House and pilotage (*Appendix 1 (h)*) how much is pilotage, and how much is for lighting the river?—I think the whole of that is for pilotage. I have not been able to get the information as to lighting.

3340. It is obvious that the shipping has to bear other costs besides those you give here, such as for lighting?—Yes.

3341. And for the general expenses of the Trinity House?—Yes.

3342. (*Lord Revelstoke*.) Now will you tell us some particulars as to the extent of the Port of London?—The limit of the tidal action in the port is Teddington Lock, 19 miles above London Bridge.

3343. (*Sir Robert Giffen*.) Is Teddington Lock 19 miles by the river above London Bridge?—Yes. With reference to this portion of my evidence the matter is

very complicated, and I think I should serve the Commission best if I give the evidence in the form of a summary of the areas of jurisdiction in the Port of London. (1) The Customs Port. The Port Sanitary Authority Port, and the Thames Conservancy Port for port dues are the same. They extend from Teddington Lock to an imaginary straight line drawn from the pilot mark at the entrance of Havengore Creek in Essex to the land's end at Warden Point in Sheppey, Kent, and including part of the estuary of the Medway. [As appointed for Customs purposes by Treasury Minute of 1st August, 1883, under the authority of the Customs Consolidation Act, 1876; the Port Sanitary Port to be the same area as enacted by Section 3 of the Public Health (London) Act, 1891, and the Thames Conservancy Port for port dues to be the same area as enacted by Section 3 and Section 155 of the Thames Conservancy Act, 1894. The Port Sanitary Port is always to have the same limits as the Customs Port. The Thames Conservancy Port for port dues is also to have the same area as the Customs Port, within the limits mentioned in the second schedule to the Thames Conservancy Act, 1894. These limits are now considerably beyond the actual limits of the Customs Port.] Then (2) The Thames Conservancy—for general purposes. An imaginary straight line drawn from the entrance to Yantlet Creek in Kent to the City Stone in Essex (and so much of the River Lea and Bow Creek respectively as are below the south boundary stones mentioned in the Lee Conservancy Act, 1868). [As defined by the Thames Conservancy Act, 1894, Section 3.] Then (3) The Thames Conservancy—for dredging and ballasting. An imaginary straight line drawn from Shoeburyness water tower in Essex to Eastchurch Church in Kent (outside the jurisdiction of the Conservators of the Medway.) [As defined by the Thames Conservancy Act, 1894, Section 3, Sub-Section 1.] Then (4) The Thames Conservancy—for pollution. The same as Thames Conservancy for general purposes, but including the whole of the tributaries down to the western boundary of the County of London, and three miles from the Thames of all tributaries eastward of the western boundary of the County of London, except the Lea, where the limit is the south boundary stones mentioned in the Lee Conservancy Act, 1868. [As defined by the Thames Conservancy Act 1894, section 90.] For the duty of preserving the flow and purity of the water of the river and carrying out the necessary scavenging, the eastern limit of the Thames Conservancy is the western boundary of the County of London. [As defined by the Thames Conservancy Act, 1894, section 91.] Then (5) The Trinity House—for pilotage. For licensing pilots the limits of the London district are from London Bridge and Rochester Bridge respectively to Orfordness to the north and Dungeness to the south. [The Trinity House shall not license a pilot to conduct ships both above and below Gravesend.] [As defined by the Merchant Shipping Act, 1894, section 618.] Then (6) The Trinity House—for lighting and buoying. The Trinity House has (subject to the rights of local lighthouse and buoy authorities) the superintendence and management of all light-houses and buoys throughout England and Wales, the Channel Islands and Gibraltar. [According to the Merchant Shipping Act, 1894, section 634.] Then (7) Watermen's and Lightermen's Company. From Teddington Lock to Lower Hope Point, near Gravesend in Kent, and all docks, canals, creeks, and harbours of the Thames, so far as the tide flows. [As defined by the Thames Watermen's and Lightermen's Act, 1893, section 3.]

3344. Do you suggest that it would be expedient to have the port defined in the same way and with the same limits for all purposes?—I am not making any suggestion at the present moment as to policy. I am simply putting in these as facts, and I should be glad if you would allow me to reserve that point for the members of the Council. It will be seen that the areas of several authorities differ considerably, and that for most of the chief public services—lighting, buoying, pilotage, dredging, pollution—the area of administration is a differing one. The area of administration of the Thames Conservancy has, for instance, several limits according to the service performed. The government of the port and the administration of the services are made difficult of consideration through being in the hands of so many authorities administering similar or differing services over coterminous or differing areas. The chief authorities are:—The Thames Conservancy, for the conservancy of the whole of the Thames, including the port, the area of its jurisdiction in the port differing in limits for various purposes; the Trinity House of Deptford Strond, for pilotage, lighting,

Mr. G. L.  
Gomme.

13 Dec. 1900.

Gomme.  
13 Dec. 1900.

and buoying from London Bridge seawards; the City Corporation for port sanitary purposes, from Teddington Lock seawards; the Watermen's and Lightermen's Company. In addition to these there are many other authorities with statutory powers which have to be taken into account, such as the dock companies and other companies having statutory powers in the port, and the several local authorities.

(The Witness handed in a table setting out the Administration of the Government and Public Services of the Port of London. See Appendix, 10th day, No. 4.)

The heads of government and of service are as follows:—Regulation of navigation; removal and prevention of obstructions; prevention of pollution; port sanitary; police; levy of dues on shipping; lighting; buoying; beacons; pilotage; moorings; dredging; ballasting; landing accommodation. In respect of each of these heads I have set out in the table the authorities administering the duty or service, and the enactment regulating such administration.

3345. You have given us a table of the authorities with respect to the moorings?—Yes.

3346. You are not aware of any authority by which a merchant or shipowner having vessels moored to these moorings is charged £1 or some such sum for the use of the moorings, quite independently of the Trinity House or any other body?—I have heard that that is so, but I have no knowledge of how it is done, or under what powers.

3347. And you can give us no information as to what authority, or presumed authority, these people may have?—No, I cannot give you any information upon that.

3348. (Lord Revelstoke.) Now will you give us your evidence as to the system of government of the ports of the United Kingdom?—Before I commence with this, I should like to observe that the Chairman of the London and India Docks Joint Committee, in Questions 654 to 661, and Appendix, 2nd day, No. 10, criticises the Council's return upon which this part of my evidence is based, as not giving information about the docks. I should just like to observe upon that that I did not pretend to do that. It is the system of government of the ports of the United Kingdom, and has nothing necessarily to do with the docks. It is a distinct thing, and therefore the chairman's criticism is not really applicable.

3349. With reference to the evidence which you propose giving now, with reference to the system of government of the ports of the United Kingdom, will you tell us the sources from which you got the information?—The Government returns and the Acts of Parliament in every case. I have consulted the Acts of Parliament, and the third column of my table of the system of government of the ports of the United Kingdom gives the reference to the Acts from which the information is obtained.

3350. Then will you be kind enough to give us this evidence, which we shall not discuss?—In connection with my evidence as to the present administration of the port, the constitution of other port authorities in the Kingdom will be useful.

The Witness handed in a table showing the system of government of the Ports of the United Kingdom. See Appendix, 10th day, No. 5.)

In this table dealing with the system of government of the ports of the United Kingdom, I set out the authority as created by Parliament in 113 of the ports of the United Kingdom, the Act creating such constitution being stated in each case. These are the constituted port authorities, without reference to the duties they may perform, or the extent to which the services of the port are in their hands. The authorities may be divided into five groups: (1) municipal; (2) municipal in part; (3) public (non-municipal); (4) private owners; (5) special. (1) Municipal:—There are 22 ports where the municipal authority has complete control, as follows: Aberdeen, Aberystwith, Arbroath, Barnstaple, Beaumaris, Boston, Bridgwater, Bristol, Campbelltown, Cardigan, Chester, Colchester, Drogheda, Exeter, Galway, Lynn, Penzance, Preston, Stranraer, Weymouth, Wigtown, Wisbech. Of these, 17 are governed by the Corporations or Town Councils, 4 by the municipal authority acting as harbour commissioners or trustees; and 1 by the municipal authority acting as a conservancy board. With regard to Bristol, I need not repeat what I have already said.

3351. (Sir John Wolfe-Barry.) With regard to Bristol it is possible that you are referring to something in the

remote past with which I am not acquainted. I am talking about what has taken place within the last 20 or 30 years?—I rather fancy that is the reason. I know I have read what I have stated here.

3352. I will not say there never was a time when the docks were sold by the Corporation to joint stock companies, but I have never heard of it—certainly not since the Avonmouth Docks were authorised by Parliament, which is something like 30 years ago?—I will take an opportunity of looking it up.

3353. (Lord Revelstoke.) In any case we may take it that you state as a fact that the Corporation did buy them out, without making criticisms?—Then with regard to the second group, "Municipal in Part," this group consists of 67 ports, which I have mentioned in the table. The municipal authority shares its control in some cases with public, in some cases with private, and in other cases with both public and private authorities. They are as follows:—Alloa, Ayr, Banff, Belfast, Berwick-on-Tweed, Blyth, Carnarvon, Coleraine, Cork, Cowes (Isle of Wight), Dartmouth, Dover, Dublin, Dumfries, Dundalk, Dundee, Falmouth, Faversham, Fowey, Fraserburgh, Glasgow, Gloucester, Greenock, Hartlepool, Harwich, Hull, Inverness, Ipswich, Irvine, Kirkcaldy, Kirkwall, Lancaster, Leith, Lerwick, Limerick, Littlehampton, Llanelli, Londonderry, Maryport, Middlesbrough, Montrose, Newcastle-on-Tyne, Newport, Padstow, Peterhead, Plymouth (Cattewater), Poole, Portsmouth, Rochester, Scarborough, Shields (North and South), Shoreham, Skibbereen, Sligo, Southampton, Stockton-on-Tees, Stornoway, Sunderland, Swansea, Tralee, Waterford, Westport, Wexford, Whitby, Whitehaven, Wick, Yarmouth. Of these, 33 are governed by Harbour Commissioners, 13 by Harbour Trustees, 7 by Conservancy or River Commissioners, 1 by the Board of Trade and a Harbour Board, 1 by the Admiralty and Corporation, and the remainder by sundry bodies of commissioners, etc., in all of which the Corporation or the ratepayers are represented. The most important ports in the United Kingdom, with the exception of Cardiff and Liverpool, are to be found in this group, and are under the control of authorities, partly municipal and partly representative of public and private interests or both. At Hull the Corporation had a recognised statutory right of acquiring for a public trust, to be defined by Parliament, the property of the old Hull Dock Company. It invested instead £100,000 in the Hull and Barnsley Railway Company's dock, when the Hull Dock Company was empowered by Parliament to require the Corporation to exercise its right of purchase within two years, or lose it for ever. The right was allowed to lapse. Glasgow was originally in the hands of the magistrates and the City Council, but is now managed by a harbour trust. With reference to the Tyne Ports, the Corporation had been the Conservators from time immemorial, but was replaced by Commissioners in 1850. The Tees, Wear, and Tay Ports and Belfast are similar cases to the Tyne Ports. Then the third group, "Public authority (non-municipal)": Under this heading are included those ports where neither the municipal body nor the ratepayer has any share in the government of the port, but at the same time the authority controls the port for public purposes and not for commercial profit. They are as follows:—Channel Islands (Alderney, Guernsey, Jersey), Liverpool, Ramsgate, Runcorn, Teignmouth. Two of these are under the control of the Board of Trade, two of the local government of the island they are situated upon, and the remainder of harbour commissioners, etc., representing the various interests in the port. In Liverpool the Corporation formerly administered this port, but have given way to the Mersey Docks and Harbour Board. Then group 4, "Private owners": This group consists of 16 ports, which are controlled by companies or individual owners. They are as follows:—Ardrossan, Barrow, Cardiff, Carlisle, Fleetwood, Folkestone, Goole, Grangemouth, Granton, Grimsby, Lowestoft, Milford (Milford Haven, New Milford), Newhaven, Newry, Scilly, Troon. Of these, six are under the control of railway companies, two of harbour companies, three of private owners, two of dock companies, one of a canal and a railway company jointly, and two of canal and navigation companies. At Cardiff there has been a movement in favour of the Corporation acquiring the entire property in the Bute Docks. In 1892 a modified form of this proposal was suggested to the effect that corporate influence over and part ownership of the docks should be acquired by the Corporation investing money for their extension. Then there is the special case of Manchester. In the case of Manchester the Corporation are at present represented on the company to the extent of 11 members out of a total of 21, but this representation is subject to reduction as the Corporation loan is paid off, as I have shown in the table.

Thames Conservators for the admirable way in which they deal with the salvage operations in the Thames. It is important that, in any readjustment of the administration of the port, the salvage operations connected with wrecks should be in the hands of the new central authority, and extend beyond the existing limits of the Thames Conservancy. If I may be allowed to say so, that is rather an important point. At the present moment the Thames Conservancy have done remarkable service. I know of no port where such services have been rendered in connection with salvage. The moment you get outside their limits, there are no facilities except by the courtesy of the Conservancy, and of course they can only grant them when their apparatus is free from the demands of their own port. We are then left at the mercy of the lighting authority, and the lighting authority is the Trinity House. They have no apparatus for lifting, and consequently we are placed in the difficulty, that is serious where you are your own insurers, of sometimes finding our property blown up instead of being lifted up—coming up in pieces instead of as a floating ship.

3400. How far down does the Thames Conservancy's power extend?—Only as far as Yantlet Creek. Section 530 of the Merchant Shipping Act of 1894 deals with the question of the authority as to lifting sunken wrecks outside the port authority. About 1880 I formed the Short Sea Traders' Association, there being at that time no association which represented solely the interests of coasting and short trade steamers. I was then elected chairman, and I have been annually re-elected. The Short Sea Traders' Association have had considerable difficulties to deal with with their great competitors, the railway companies, who have obtained steamboat powers at various places on the coast; and this was one reason why the Short Sea Traders' Association was formed. The Association was formed also to deal with public questions, such as the present enquiry, and those relating to the Shipping Acts, Pilotage, and Board of Trade, Railway Bills in Parliament, and trade competition by foreign states and bills of lading, and, of course, the question of bills of lading is a very important point, and it has been touched upon in the evidence of various witnesses here. The association, as a trade association, have adopted what has been accepted by London as a whole—what is called the authorised form of Continental steam bill of lading, that is accepted and generally used by everybody. Perhaps the Commission might find it useful if I handed that bill of lading in.

*(The witness handed in a form of Continental steam bill of lading, authorised by the London Direct Short Sea Traders' Association. See Appendix, 10th Day, No. 12.)*

In order to secure it from any risk of forgery, and as an assistance to shipowners generally, the association, in 1899, registered a trade mark. That trade mark is affixed to the bill of lading, which is revised from time to time, and certain authorised printers are allowed to print it. The merchants buy it, and the shipowners accept it upon examination simply of the trade mark. There is one rather important clause which affects this inquiry, and that is the right that the shipowner takes under his contract for immediately discharging his ship on arrival at the port. That is a power that the river trader has taken almost immediately after the passing of the Merchant Shipping Act, 1862, which has now become Part VIII. of the Merchant Shipping Act, 1894, and which deals with the right of the merchant importer to have his goods delivered to him on his passing entry and making application and being ready to receive. The association, of course, took a very active part in regard to the erecting of the bridges below London Bridge, and, I think, were mainly instrumental in resisting the applications of the Metropolitan Board of Works of that day to build a bridge, which subsequently resulted in the successful bridge—the Tower Bridge—which has been erected by the Corporation. We have also assisted at many inquiries and Royal Commissions on questions of trade and shipping construction, and so on. But our particular effort was in connection with the Merchandise Marks Act. The Merchandise Marks Act has had the gravest effect upon the trade of the Port of London. I think that whatever difficulties may be shown in the Port of London of a physical character, and so on, there is no difficulty which has had so great an effect as the Merchandise Marks Act has had in connection with the trade of the Port of London. The trade of the Port of London is, of course, a transshipment trade, except in so far as it is a trade directly applicable to the port. My company developed

this trade, which I myself had to create very largely, and were enormous carriers of the transshipment cargo from the continent. The effect of the passing of the Merchandise Marks Act was, within a year or two, to destroy the trade by many thousands of tons. In point of fact, it practically destroyed the whole of the German trade which used to come over for Australia and elsewhere. The result of that was that the German shipping, particularly the German lines, was largely increased. That was owing to no cause of expense in the port or any difficulty in the port, but wholly and solely because the Legislature decided that, assuming the goods were foreign and could be in any way thought to be attached to Great Britain, they should be stopped and possibly confiscated under certain circumstances, or possibly sent back. But in any circumstance the risk to the merchant was grave in the extreme, and upon many occasions the goods lay in the port, causing the merchant enormous expense, with the result that the trade was completely lost to British shipping, except only when British shipping went to the continent and loaded the cargo directly into its own bottom, in which case it escaped the Merchandise Marks Act altogether, because the ship was able to come into the British port and fill up with British cargo, and so the ship went on to its destination with any marks they pleased. That was taken advantage of by the German ships enormously, because they loaded their cargo freely and then dropped in at Southampton for mails and so on, and then went on their journey. The membership of the association is limited to vessels trading regularly to and from London coastwise or to the European ports. The interests of a consultative association like this have to be necessarily on all fours. Therefore it involved the regular lines trading coastwise or to the European ports. There are 29 members of the association, and they may be divided into shipowners owning steamers for the coastwise, passenger, and goods trade. Then there are passenger steamers trading to the continent. These are less numerous; and, lastly, a large number of cargo steamers that trade to the continent without passengers. I thought perhaps the Commission would like to see a list of members of the association.

*(The witness handed in a list of members of the London Direct Short Sea Traders' Association, showing the number of ships and the tonnage belonging to each member. See Appendix, 10th day, No. 13.)*

The short sea trader overseas has to undergo all the requirements of an ocean trader in connection with manifests, bills of lading and such like technicalities. The Association's form of bill of lading is universally accepted as the "authorised form."

3401. That is what you have already told us?—Yes. I need not repeat it. The Committee revise the bills of lading constantly, and then the bills of lading are sealed, and half-a-dozen or so printers are allowed to print them on signing an agreement regulating the correct use of the die and so on. It is unfortunate that the Association in 1894 overlooked the inquiry before Parliament in connection with the Thames Conservancy Act, 1894. The result was the short sea interest was not represented before the Committee on that Bill, and they now complain that under the A and B Clauses of the 12th Section the short sea element is not represented on the board, notwithstanding the fact that the short sea trader has of necessity a closer knowledge of the practical working of the Thames, and a greater interest in the whole river, and pays about 50 per cent. of the tonnage dues. It is the 12th Section of the Conservancy Act, 1894, Clauses A and B. The section is a little complicated to read, but in short it comes to this that there is to be a registered owner of at least 250 tons of shipping who shall be resident at the port, and then the registered owner can either reside in the Port of London or in any other port of the United Kingdom, but his vessels must come at least twice in the case of steamships, and once in the case of sailing ships. In that case he is allowed to have his name registered as a voter, and he gets one vote for every 250 tons of shipping owned by him, the whole of the votes not exceeding 10. The collector of Customs has to keep a register which has to be handed in to the Conservators. The effect of that is that the short sea traders, whose business necessitates the embarkation of an enormous amount of capital, for their ships are very expensive to build, and make frequent voyages, but the traders are few in number, and the consequence is that they are practically outvoted by the larger shipowners who may or may not be resident in London, but whose tonnage far

Mr.  
R. Cattarus.  
13 Dec. 1900

Mr.  
R. Cottarns.  
13 Dec. 1900

and away exceeds the ship tonnage of the short sea traders. The consequence is that—unintentionally of course—the Act has been so worded that the short sea trader has no share in the voting. Of course, supposing there was any alteration in the system of the port authority, or the election of the port authority, I anticipate that this Commission would probably recommend that the voting should be on the basis, to a certain extent at all events, of payment, and that the man who pays the halfpenny rate should be entitled to have a certain number of votes, and the man who pays the three-farthings rate should be entitled to have a certain number of votes. The three-farthings ratepayer only comes up as far as, we will say, the Victoria Dock. It is a very long way down from the upper part of the river. Of course I do not suggest that they are entirely limited to the Victoria Dock, but the majority only come up as far. The short trader comes into the upper part of the river. His interests are above Woolwich, and not so much below Woolwich. The Dredging Inquiry was held under Section 189 of that Act, and good has resulted from that Inquiry. The short sea trade complain that the Inquiry was limited by the Act to considering what was a "convenience" as distinguished from a "necessity" to the trade of the port. The port itself was suffering, and still is suffering, from want of dredging in the river. What is meant by that is that whilst no doubt there was a very important question to be considered by the Dredging Commission—and it is quite right that the Board of Trade should have dealt with it when the Act was before Parliament; just as Sir Thomas Sutherland and other gentlemen who gave evidence before that Commission said, no doubt it is a very great advantage that shipowners should not be delayed one two, three, or four hours. But in the port itself the short trader, and the long trader too for the matter of that, was delayed for days, or at all events for a tide in consequence of having missed his tide, and having shallow water to get over above Long Reach or elsewhere. And while it is very important that the big vessel should get up to time it is still more important that the short trader should get up to his time because the vessel that is delayed is a vessel trading say from Dundee, Aberdeen or Grangemouth or elsewhere, and these vessels are running in direct competition with the railway companies, the Great Northern and the London and North Western and others. They have to catch their markets. If they catch their markets they keep their trade, but if they miss their markets the trade goes to the railway companies. My own experience is that in consequence of our vessels which are built at great expense to catch the markets having been delayed, merchants have taken their business away, and it has shifted to the railway companies, who do their business with so much more regularity. Not only do we build our ships at this great expense, but in addition to that we own our wharves which have to be considered as part of our working expenditure. The wharves themselves so far as the ships are concerned earn very little indeed. Wharfage or quayage without warehousing has very little profit indeed attached to it. The General Steam Company bought the wharves from the dock company for the purpose of dealing with this very traffic, and similar classes of traffic, but unfortunately we were spoilt in consequence of the shallow water, and to that extent we were very much hurt. By the courtesy of the Commissioners the Association was allowed through me to intimate partially some of the points which were occupying their minds, but they were not heard by witnesses, and to some extent their views were misunderstood. They desire that the port shall be improved as a whole, and so long as money is well spent they do not shrink bearing their share of the cost. So far as we are concerned, probably, we are more eager than anybody to spend money on the port in order that the port may be made the most perfect and practicable port that the world has. It is more important to us perhaps than to anybody. The "coaster" is a vessel most costly to build and equip, and works under difficult conditions at an enormous expense. The coaster such as I have been describing costs roughly speaking, £20 to £22 per ton.

3402. (Sir Robert Giffen) Per ton gross?—Yes; not per ton deadweight.

3403. And not per ton of register?—No; per ton gross. Of course, that compares very well with other vessels of a very much larger type. I had a curious case of that in a vessel that I built some years ago, where she was to travel at 17 knots, and she does. She cost a certain sum of money, and I was told by the builders the other day that her engines had just been duplicated for a ship of 4,500 tons capacity to

travel 12 knots. This little vessel could only carry 1,700 tons, but she had to go at a big speed in order to run this traffic that I have been describing. Of course the effect of that is that a big vessel is able to take a longer journey with a big freight and at a comparatively smaller expenditure. The coaster carries about with her a full equipment of loading and discharging gear, and in many cases the owners have to own or hire wharves, which are used as auxiliaries to enable them to load and discharge promptly, and to efficiently compete with the railway companies for London traffic. I have explained that. The least depth of water at the following points in the river is as follows:—

Erith Reach	-	-	-	14 feet to 17½ feet.
Halfway Reach	-	-	-	16 "
Barking Reach	-	-	-	14 "
Woolwich Reach	-	-	-	12 "
Limehouse Reach	-	-	-	12 "
Tunnel Pier	-	-	-	14 "
Tower Bridge Fairway	-	-	-	10—11 "

I do not commit myself to those figures. They are the pilots' reports.

3404. (Lord Revelstoke.) They are accurate, to the best of your knowledge?—Yes. Between the 3rd and 4th December instant I caused the water to be sounded at the following Tiers, and found the lead water to be as follows:—

Upper Tower Tier	-	-	-	-	11 feet.
Lower Tower Tier	-	-	-	-	15½ "
Irongate Tier	-	-	-	-	14 "
Dublin Tier	-	-	-	-	13 "
Upper Hermitage Tier	-	-	-	-	16½ "
Lower Hermitage Tier	-	-	-	-	11 "
Norwood's Tier	-	-	-	-	14 "
Mill Stairs Tier	-	-	-	-	18 "
Upper East Lane Tier	-	-	-	-	17 "
Lower East Lane Tier	-	-	-	-	16 "
Fountain Tier	-	-	-	-	13 "
Church Hole Lower Tier	-	-	-	-	17 "

We do complain that we ought to have our tiers at such a depth of water that at low water vessels are held up-right.

3405. (Sir John Wolfe-Barry.) What water do the vessels that you refer to draw?—18ft. to 20ft. The limit of a vessel trading in the European trade, from the Baltic down to the Sea of Azov, will be about 18ft. to 20ft. All round, a 20ft. depth is a maximum depth.

3406. Are you upon depth of water, or upon what the ship draws?—Of course, there must be a margin of safety below the ship itself. I am speaking of what the ship draws.

3407. Would not the pilots demand some depth of water under the keel for safety?—Certainly—two feet, I should think, quite. We think that money ought to be spent on these things. Of course, the vessels come to the quays and wharves, which some people own, and then they discharge the rest of their cargoes in the tiers. That is particularly the case at Fresh Wharf, immediately contiguous to London Bridge, where they do an enormous trade, and where the size of the vessels has increased very largely. The General Steam Company's ships have grown from an average of 700 tons gross to 1,092 tons gross. Going all over their fleet, big and little, they have vessels now of 2,697 tons gross, 1,714 net, and 4,100 dead weight, and 21ft. draught. These vessels are arranged to go to Fresh Wharf at London Bridge, and their draught of water is 20ft., or possibly a few inches over. We like to keep it to 20ft. In the case of this particular class of vessel she is 21ft. Of course, with regard to all these ships, they are arranged for working their cargo. They have to have an immense number of holds, as Sir Thomas Sutherland described his own ships; all the liners have the same thing. They have many decks, and those decks are divided by many bulkheads, and thus the cargo is assorted at loading, and is prepared for assorting on discharging. The effect of that is that the working in the stream is very rapid. Whilst manager of the General Steam Company, I found it necessary to develop the transshipment trade. It was not an entirely new trade, but what was new was the issue to the Con-

continental public of a through bill of lading and inclusive rate which covered the short sea freight and the ocean freight, together with the intermediate charges in London, and further gave the Continental shipper a through bill of lading upon which the financial and other requirements of his trade could be worked. In effect, the larger ports, like Antwerp and Hamburg, have a daily service of these Continental steamers. A through bill of lading from Antwerp to Calcutta, without any clause for transshipment in London, or what not, places the Continental shipper in the position of shipping direct and enables him to fulfil all his financial obligations so far as the bill of lading is concerned. Thus the London ocean trader is put in a very advantageous position. But that trade has very materially altered; it has gone away very considerably, partly because it is worth the while of the ocean trader himself to send it over. The ocean ship owner sends his steamers over to Antwerp partly owing to the improved port at Antwerp and partly owing to the effects of the Merchandise Marks Act, to which I have referred. A similar system was developed by the ocean shipowner in the ocean ports, and so there is an exchange of traffic. Of course that can only be done by the regular lines. The number of ships "calling" at the Port of London has of late years increased. Taking the twelve months ending last month there were some 800 vessels entered the Port of London, and they were reported at the Customs House as having "cargo remaining on board for exportation." This is a development of modern trade. Goods which formerly came in small parcels now come in sufficiently large ones to justify the ocean ship herself going on to the Continental or coast port. So far as I know there is no record kept by Government of the tonnage and value of the cargo so remaining on board for exportation; the figures must be large. I have brought up samples of Bill A. It is an official document issued by the London Customs. I have picked out three showing what particular ships had cargoes on board.

(The Witness handed in samples of the Customs Bill of Entry.—Bill A.)

I have made all the enquiries I can and I find that the Customs take no note of that cargo.

3408. (Sir Robert Giffen.) The official returns of trade take no notice of these things?—No, I do not think they do. I am speaking from information derived from Customs.

3409. And as far as the ships going to other ports of the United Kingdom are concerned, that would hardly be necessary?—No.

3410. But as far as ships going to the Continent are concerned, there is no record of the ships coming with goods and taking away goods?—No, and I particularly mention that because it makes it appear as though our transshipment cargoes had very largely fallen off, and so on; but it is not quite so. That would have been transshipment cargo except that it has got so large that it is worth the ocean man's while to go and fetch it for himself. Take, for instance, the cargo coming in on a Peninsular Company's ship, probably taken on board at Calcutta. She brings 2,000 or 3,000 tons in the bottom of the ship, and that remains on board.

3411. Do these goods appear in Bill A?—No. There is a note of the fact that she has cargo on board, but not otherwise. There are 802 ships, I think. Of course, that applies very largely under certain circumstances. For instance, take the wool trade, which has been said to have left London. The wool trade has altered to a certain extent; there have been wool sales in the colony as well as London, and the result is that the buyer has been purchasing in the colony, and the wool has come over to the consignee direct. It has constantly come to London in large quantities and been taken on by the ocean-ship; she has discharged a part of her cargo in London, and then it is taken on by the ocean-ship to the Continental or Coast port. The trade of London is a berth trade, and there are few, if any, chance cargoes. The supply of cargo, particularly weight cargo, from London is not great, and it has to be collected from all directions, and this remark emphatically applies to the transshipment trade, seeing that such trade has to be secured from the Continental port or coast port, which is its natural port of shipment, and can only be obtained with difficulty, and for some inducement to the shipper. The transshipment trade varies constantly in volume. I will not repeat what I have said with regard to the Merchandise Marks Act. The difficulties in London have been exaggerated, and it is

to be regretted that harm must result from the publication on the Continent of the so-called drawbacks to London. Every port has a drawback of some kind, but London is well suited for the trade it has to do. It is not so well suited for the new trades which the development of commerce has introduced, and it is certain that advantage could be secured by some outlay in the docks which would expedite their working. There is no sufficient justification for complaint against the practical management of the docks, but, as Sir Thomas Sutherland said, much improvement would follow from a considerable outlay on appliances, and possibly a re-arrangement of quays and sheds. In 1899, of the 14,937,565 over-sea ship tons of vessels entered and cleared through the Port of London, 6,193,716 tons came from ports north of Bordeaux, to which must be added 6,913,914 coasting tons, making 13,107,630 tons short sea ship tons. The amount or tonnage dues paid to the Thames Conservancy in 1899 was £55,000, and of this, £27,000 was paid on the  $\frac{1}{2}$ d. basis. It is not possible to do more than give an approximate estimate of the vessels that worked in the stream and those that worked in the docks, because whilst a large number of over-sea vessels worked in the stream—such as the General Steam Company's larger vessels, and similar ships trading between the Mediterranean and Smyrna and London—some of the coasting and foreign owned short trade boats worked in the docks, but it may be taken that about 10,000,000 tons of shipping load and discharge in the stream. The quantities handled by the short sea traders are very large. It was my practice to check these quantities occasionally, not every year, for the General Steam Company, and they varied from 700,000 to 1,000,000 tons of goods per annum, and were divided in the proportion of about one-third or rather more "out," and two-thirds or rather less "home." Last year the company worked through London 857,000 tons, being 280,000 tons "out," and 580,000 tons "home." The short trade ships are rarely full from London to the Continent, indeed, often practically empty, as they cannot wait for cargo, and sail at fixed dates. Eleven members of the association have sent me in returns showing that they carried last year 1,357,500 tons of goods, of which 590,200 tons was "transshipment." It might be useful if I handed in these tonnage returns, which I have obtained from the Customs.

(The Witness handed in the Customs Returns of Ships.)

With regard to that 857,000 tons carried by the General Steam Navigation Company, it is interesting to observe. Taking their accounts for the year 1899, I find that they earned a net profit of £17,500. They carried, in addition to that, 857,000 tons of goods, 137,000 tons of goods to outports, and in addition to that, earned a large sum of money by passengers. But appropriating the whole of their profits, the £17,500 to that 857,000 tons, I think you will find it gives about a net profit of 5d. per ton. Of course, some goods were carried at a loss and some at a large profit, but it works out at that. This is a company of great age, and they are doing their business properly, and if there is any tax put upon goods it becomes a very serious item, having regard to this transshipment trade. I do not suppose my figures will be doubted, but I have the accounts of the company, if they are worth checking. With regard to the tendency to increase the size of ships, I should like to say this: While the ocean ship owner is able to increase the size of his ships, and carry two cargoes in one ship, the short trader has also increased the size of his ship, but only sufficiently to meet the quantity offering for a single cargo. The short trader is bound, owing to the circumstances of his trade, to maintain his regular departure; therefore, while the tonnages are larger, they are only large in proportion to the trade offering for that cargo. Mr. Scott in his evidence, Questions 632-642, suggested that the difficulties of navigation in the upper part of the river were such that they would lessen the ships coming up. That is a mistake. As a matter of fact, the ships have greatly increased in size, and, I think, in numbers, but the vessels go to Fresh Wharf, where there are wonderful facilities. They do not go into dock at all, and so probably they escaped Mr. Scott's notice. The tonnage of the vessels of the company entered and cleared through the Customs averages 1,600,000 per annum, including coastwise ships.

3412. (Sir Robert Giffen.) I asked you this question before. Do you mean the entries alone would come

Mr.  
R. Cattarns.  
13 Dec. 1900.

Mr.  
R. Cattans.  
13 Dec. 1900.

to that?—Entries and clearances. The entrances are half that amount. The entries and clearances aggregate about 1,500,000 tons per annum. Ships working in the stream apparently work at less cost than the ships working in the dock, but this fact must not be too readily assumed, because to enable them to work in the stream the vessels have to be provided with the necessary crane power, as do the wharves, etc. All the General Steam Company's vessels are provided with cranes, four or five in number, lifting from three tons, five tons, seven tons, and in a few cases up to ten tons weight. Our crane power is wonderful. The ships leave Rotterdam on Wednesday, arrive here on Thursday, and have to discharge 1,000 tons of cargo and load cargo and get away again on Saturday, and the whole of that is done, by means of these cranes, into barges. The absence of public facilities for craneage in the Port of London is very marked. Port authorities certainly ought to provide the port with a public crane of maximum lifting power. During the year the company paid £706 for Customs' overtime. So far as the company are concerned, they do not begrudge that, for the Customs in London do everything they possibly can to assist trade, and we think that is money well earned. Compulsory pilotage is an important factor in the port expenses. Sections 603, and 622 to 625 of the Merchant Shipping Act, 1894, deal with it. Comparing the cost of Antwerp, Rotterdam, and Hamburg against London, the determining factor is whether or not the ship is under compulsory pilotage. I have brought up brokers' accounts for each of those ports, but I cannot hand them in, because they contain the company's earnings and disbursements, and so on, and therefore they are private figures; but, taking the port expenses, practically the port expenses are the same. The Port of Antwerp, in particular, is deliberately attacking London. London took its trade away years ago, and it wants to get it back again. Fortunately for us they maintain their compulsory pilotage. We do not; if we did the cost of compulsory pilotage would make the trade so frightfully expensive that we could not do it. England has this exemption from compulsory pilotage, and the consequence is—I am now taking the stream work against Antwerp quays—that the charges are rather less in London than they are in Antwerp. Rotterdam is a cheap port, and the most remarkable port for its improvements; the new waterway is a most remarkable work. Hamburg is a little less than any of them, and the explanation of that is that the labour in Hamburg is particularly well done; it is well organised; the Germans work remarkably well, and probably give you more work for your money than any other port with which we trade, and the result is that to a certain limited extent they make Hamburg a better port than London.

3413. Do you say that London is cheaper than Antwerp all expenses put together, or merely as regards

compulsory pilotage?—If you added compulsory pilotage London would be slightly dearer than Antwerp for us who work in the stream; but seeing that we escape—and everybody else escapes—British compulsory pilotage through that part of the Trinity House district, Antwerp is really and truly slightly dearer than London.

3414. (Sir John Wolfe-Barry.) Do you mean dearer to a shipowner or dearer when you take the total charges on the goods?—Dearer to a shipowner. Assuming a ship going in from Calcutta to Antwerp and a ship coming in from Calcutta to London, then, of course, there is compulsory pilotage into Antwerp and compulsory pilotage into London; but assuming a ship going from London to Antwerp the short traders find that Antwerp is a slightly more expensive port than London.

3415. To the ship herself?—Yes, to the shipowner.

3416. (Lord Revelstoke.) Will you hand those figures in?—I will send in extracts to the secretary.

See  
3423—9.

3417. I am afraid we shall not be able to finish your evidence to-day, and as it seems rather important you would probably not like to be hurried?—We think this evidence is important, and I should be glad if you would allow me to come before you again.

3418. I might say this now. You will remember that Sir Thomas Sutherland gave us evidence which is at variance with your suggestions as to foreign ports?—It is not in my mind that I am differing from Sir Thomas at all.

3419. (Sir John Wolfe-Barry.) It is Question 2009?—I remember carefully reading Sir Thomas Sutherland's evidence, and the impression formed on my mind was that my evidence and his would be very much in agreement. (After referring.) I daresay that may be so, but I carefully guarded myself in dealing with the port expenses by saying that I was dealing with the short traders and not with the ocean traders.

3420. You put the case of a ship coming from Calcutta?—She would have to incur compulsory pilotage.

3421. But with the exception of compulsory pilotage, I thought you said you had compared them and the charges would be rather more into Antwerp?—I did not mean to convey that, at all events. Assuming that the shipowner had to incur dock dues, although I have tried, and the company have tried, to work it out, we find great difficulty in giving a fair estimate of comparative dues, for the reason that a strange ship going into the docks would have to pay the full tariff dues, but regular traders like Sir Thomas Sutherland's vessels, would hire the quay, and would probably save considerable expenses, doing their own labour. Therefore, I intended to say that I avoided making any estimate for a dock vessel. My figures relate entirely to the stream.

3422. You will send in the extracts you have promised us during the adjournment?—Yes.

Recalled 3425

(Adjourned *sine die*.)

Under the powers of the Manchester Ship Canal Acts, the Corporation has lent to the Ship Canal Company £5,000,000, resulting at present in a considerable charge on the rates, a policy deliberately considered in the interests of the city as a whole.

3354. (*Sir John Wolfe-Barry.*) It may be partly true, but is it true as a general statement, that the Southampton Docks are controlled by the municipal authority. Do they not belong to the London and South-Western Railway Company?—The docks may. I am alluding to the harbour. This relates to the port and harbour authority, and not necessarily to the docks. I believe in that case the largest or the principal docks belong to the London and South-Western Railway Company.

3355. How do you distinguish between the harbour and the docks? Take the case of Grangemouth; that is a railway company's dock?—Yes; that is so.

3356. They do not control anything but their dock?—They do really. That is the information that I have. They control the approaches and whatever harbour is outside their dock. They control the whole thing.

3357. Until it reaches the River Forth, perhaps?—That would be so.

3358. I see your distinction. You are not talking of the control of the docks, but of the control of the port?—Yes.

3359. Sometimes that appertains to the ownership of the dock, and sometimes it does not?—Yes; that is so.

3360. (*Lord Revelstoke.*) Now, will you tell us what you have to say with regard to foreign ports?—I have reserved for the last a few points in connection with the foreign ports which bear upon the previous evidence. The consular reports issued annually from the Foreign Office have for the past seven or eight years been continually reminding the country of the great attention which was being paid to the development of certain ports, and particularly with reference to Hamburg, Rotterdam, Amsterdam, Antwerp, and Havre. I have at hand such of the reports as bear upon this question, and if the Commission desires, I could prepare a memorandum giving such points as are pertinent. I have not done so up to now. Without at the present dealing with these reports, I am able to place before the Commission certain facts which I have investigated myself. The Rivers Committee of the Council deemed this subject of sufficient importance for me to visit certain of the foreign ports for the purposes of this evidence, and during last summer I went to Hamburg, Amsterdam, Rotterdam, and Antwerp. In the evidence relating to London, already placed before the Commission, I have ventured to suggest that the statistics relating to shipping pointed in the direction, if they did not absolutely prove, that the trade of London was suffering from the condition of its port, and I pointed out that other ports of the Kingdom which have developed their docks and harbours, have secured an increased proportion of the trade of the Kingdom. I also suggested that this relative falling back of London might also mean a loss to the nation at large, by reason of trade going to foreign ports. I now propose to place some figures before the Commission relating to some of the above-named ports. I think the conclusion is irresistible, that those ports have been enabled to develop their trade because of the extension and development of their dock and harbour facilities. If this is so, I think it would be hard to resist the correlative conclusion that the proportional falling back of London is due to the want of corresponding development and attention in the docks and port. I will hand in two tables showing the shipping and trade of the Port of Hamburg.

(*The Witness handed in a table showing the shipping entered at the Port of Hamburg from 1791 to 1899. See Appendix, 10th day, No. 6. Also a table showing the weight and value of imports into the Port of Hamburg, 1850 to 1899. See Appendix, 10th day, No. 7.*)

One table gives the number and tonnage of the shipping entered at the port during the century. It will be seen how enormous the growth has been. The other table shows the weight and value of imports, and the figures are correspondingly striking. Two very large docks are now being constructed in addition to those opened in recent years, and every improvement in machinery, warehouses and facilities for unloading and storage is made

from time to time. I have maps of these docks and ports if the Commission would like to have them.

3361. I think we should like them?—This shows the position of the port about 18 miles up the river.

(*The Witness handed in a map of the Port of Hamburg.*)

3362. We should like your memorandum to which you have referred with reference to Hamburg, Amsterdam, Rotterdam, and Antwerp?—I will prepare it, and send it to the Commission. This is a map showing the particular docks, and it is the map that I had in my hand when I was going round and examining them in detail. It shows the three docks that are now being constructed. They took a huge piece of land there and practically converted it into a dock. At Amsterdam I also found considerable extension of docks and harbour works in order to introduce the latest improvements. I will put in a table showing the shipping entered at the port in the years 1884-99.

(*The Witness handed in a table showing the shipping entered at Amsterdam from 1884 to 1899. See Appendix, 10th day, No. 8.*)

The increase in the last four years is especially noticeable.

(*The Witness handed in a map of the docks and harbour at Amsterdam.*)

Then at Rotterdam great extensions were going on.

(*The Witness handed in a map of the docks at Rotterdam.*)

An entirely new waterway was constructed in 1872. I put in a table showing the shipping entered at this port for a series of years.

(*The Witness handed in a table showing the shipping entered at the Port of Rotterdam and the weight of merchandise imported. See Appendix, 10th day, No. 9. Also a table showing the growth of population at Rotterdam from 1830 to 1900. See Appendix, 10th day, No. 10.*)

As in Amsterdam, the increase in the last four years is the most marked feature. At Antwerp, again, considerable works are in progress, and I put in two tables showing the increase of trade at this port.

(*The Witness handed in a table showing the shipping entered at the Port of Antwerp. See Appendix, 10th day, No. 11.*)

The figures are equally striking with those for Hamburg, the increase since 1890 being over 50 per cent.

(*The Witness handed in a map of the docks at Antwerp.*)

There is nothing in the United Kingdom to equal the increase in shipping in recent years that has taken place at these four ports. In all these places the docks and harbour are under the control of the municipality, and it is a universal policy with the authorities to undertake all that is needed by way of improvement without reference to any limits of revenue which arise from charges on shipping. By this means the service is kept at its full height, in all branches, whether it be dredging, buoying, lighting, construction of cranes and other machinery, provision of warehouse accommodation suitable to different classes of goods, connection of all parts of the port together by means of railways or steam tramways and vessels of various kinds, and the provision of a competent and expert staff to deal with all branches of the service.

3363. (*Sir Robert Giffen.*) I am not disputing your figures, but I should like to ask you if you have at all entered into the question as to how some of these figures are made up. I will begin with the Port of Hamburg. Can you tell me whether the entries of shipping include vessels coming down the river as well as vessels coming from the sea?—These are sea vessels only.

3364. It is not so stated in the table. I think we ought to have it specifically stated?—They are sea vessels only.

3365. And in the corresponding table as to goods, the imports, I presume, are imports by sea exclusively in the foreign trade?—Yes, that is so.

3366. Is there not a certain amount of importation of goods which are really to a very large extent transshipment goods, and do not compare with the imports as they appear in the imports of London, for instance, exclusive of transshipment?—I am afraid I am not able to say that.

3367. But that would be a point of some interest in connection with the matter?—Certainly.

Mr. G. L.  
Gomme

13 Dec. 1900

See 7771.

See 7387.

Mr. G. L.  
Gomme.

13 Dec. 1900.

3368. Hamburg is to some extent in these days a free port, and there are goods admitted which are not part of the imports of the Empire in the ordinary sense?—As a free port it is particularly able to deal with transhipment.

3369. Have you looked into the matter from the same point of view with reference to Amsterdam, Rotterdam and Antwerp?—I am not able to say what transhipments are included in these totals.

3370. And with regard to the entries of shipping, have you looked at all into the question whether some of the entries are in the same nature as the shipping entries between Dover and Calais, the result of the large interest of the local shipping?—I understand that all these are the foreign trade and not the local shipping.

3371. But to some extent the foreign trade of ports like Amsterdam and Rotterdam is a ferry trade chiefly with London and other ports in the United Kingdom?—It would include those of course.

3372. You have not any separate information as to how much this increase of trade at these ports is an increase of trade very largely with London, and certainly very largely with ports of the United Kingdom?—No.

3373. So that if we see an increase at Antwerp, to a large extent it corresponds to an increase which we see in the ports of the United Kingdom?—Yes, that would be so.

3374. The percentage of increase is larger in their case because they start from a smaller total, but the amount of the increase is equally great in the case of the ports of the United Kingdom?—That is so, no doubt.

3375. That is a point that ought to be considered in studying these figures?—Certainly.

3376. Then with regard to the table, with reference to the Port of Antwerp in particular, there are some apparent discrepancies between the table at the top and the table at the bottom, are there not?—I have explained those discrepancies in Note c. I discovered them for myself. The figures there include the number and tonnage of steamers from the interior. Those were taken out afterwards.

3377. Your attention has been given to that point?—Yes.

3378. If we use the tables, which of them ought we to use?—The bottom table.

3379. (*Rear-Admiral Hext.*) You visited Antwerp yourself?—Yes.

3380. The plan you have given us here shows the docks, but does not show the wharves. Is not a very large proportion of the big ship trade done from wharves, and not from docks?—Yes, that is so; but the wharves and the warehouses all belong to the municipality at Antwerp.

3381. What I wanted to arrive at is that the wharves in the river are used by the larger ships as well as the docks?—Yes, that is so.

3382. Can you give us any idea of the proportion?—No. I am not able to give any proportion.

3383. And does the same thing apply to Hamburg as regards wharves?—Yes, that is so, but in Hamburg I understand there is a great deal more lighterage done from the big ships in the docks. It is sent up to the wharves by lighters just in the same way as it may be in London.

3384. But the larger ships do use the wharves both at Antwerp and Hamburg?—Not so much at Hamburg. I think the large ships principally use the docks at Hamburg, and the wharves are approached by lighters.

3385. (*Sir John Wolfe-Barry.*) You are going to prepare a memorandum, as the Chairman has invited you, with regard to Hamburg, Rotterdam, Amsterdam, Antwerp, and, say, Havre. Could you extend your memorandum to Calais and Dunkirk?—Yes, and to Marseilles. See 7771.

3386. Marseilles is scarcely in point, but Calais and Dunkirk are *vis-à-vis* with this country, and also Cherbourg?—Yes.

3387. And in the memorandum will you be able to give us the expenditure and increase of accommodation?—I think so. In almost all the reports a great deal of information is given as to the expenditure.

3388. And could you also give us information as to the basis of charge for the shipping?—That I am not sure of, but I know there has been a return lately prepared for the Government by the English Consul at Paris, where he gives very elaborate details of the charges on shipping.

3389. The provision of accommodation at Calais has not attracted much trade, has it?—My recollections of Calais are not very pleasing, and it does not seem to me that they do much there.

3390. It would be instructive to see what has been done at these ports, and what has been the result from a financial point of view, and also to study the mode in which shipping is charged by the different ports. You will be able to give us that, I daresay, in your memorandum?—I will endeavour to do so as far as I possibly can.

3391. I have particularly in my mind a statement made by Sir Thomas Sutherland as to the charges on the shipowner at the various places—not the total charges on the goods, but the charges on the shipowner?—The proportion charged upon the shipowner as compared with what is charged on the consignees?

3392. Yes. Sir Thomas Sutherland told us that the ships like to go to a port that is cheap to the shipowner. The shipowner does not care very much what happens to anyone else?—I quite understand that point.

3393. And there may be quite different modes of charging shipowners at different places?—I might say that I did make very strenuous efforts to be able to put before this Commission a table of comparative charges, but I find there is so much difference in the methods of charge that it is almost impossible to compare things with the limited amount of knowledge that I have, unless one visited each port and dug out all the details so as to be sure that one is comparing like with like.

3394. But you are going to take it from the consular reports?—Yes.

Recalled 7769.

Mr. RICHARD CATTARNS called and examined.

Mr.  
R. Cattarns

3395. (*Lord Revelstoke.*) You are chairman of the Short Sea Traders' Association?—I am.

3396. You are giving evidence on their behalf?—I am.

3397. And also at the request of the General Steam Navigation Company, whose secretary and manager you were until the year 1894?—Yes.

3398. Will you be good enough to tell us the facts in connection with the General Steam Navigation Company?—The General Steam Navigation Company was formed in 1825, and is a very large user of the Thames, entering and clearing through the Customs in connection with London about 1½ million tons of shipping per annum.

3399. (*Sir Robert Giffen.*) These are the entrances and clearances together, I suppose?—Yes. The company do not insure their vessels except against fire. The company, in addition to their fleet of 49 ships, own Irongate and St. Katharine Wharf, and some 50 barges, and a factory at Deptford. During the period of my management, the company spent about a million and a half in reconstituting their fleet. I may observe

that about the time that I became commercially interested in the company, the screw propeller was found to be coming to the front very much in connection with these shallow-water ports, and therefore we had to change our paddle-wheel steamers, which, up to that time, had been almost entirely in vogue, for screw steamers. We had another object in view in the same way. At that time the Franco-German War had come to an end, and commerce had very largely developed and quantities very largely increased. Therefore we required very much larger ships in order to carry the amount of cargo. The company are not only their own repairers, but their own insurers and their own salvors in the event of difficulty, and, in addition, when cattle are carried, they take the risk of that cargo. The cattle trade at the present moment, from the Continent, has ended, owing to the British Government interfering in consequence of disease; but up to 1887 or 1888, we used to bring up the Thames something like a million or a million and a-half of sheep or horned cattle, the whole of which we were able to carry practically at the company's own risk. The company have reason to be grateful to the

## ROYAL COMMISSION ON THE PORT OF LONDON.

## ELEVENTH DAY.

*Tuesday, 19th March, 1901.*

## PRESENT:

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTELTON, K.C., M.P.

The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.

Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.

JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

(*Chairman*.) It is the intention of the Commission now to resume the taking of the evidence of those witnesses who have been appointed to appear before them in order to give evidence upon matters of fact, and evidence which is of an uncontroversial nature. This evidence it is anticipated will occupy four or five days' sittings, after which the Commission will be prepared to hear the proposals of the dock com-

panies, the London County Council, and the City Corporation.

All persons and public bodies whose applications to appear by counsel have been granted may then be so represented. The presence of counsel will, however, at all times be governed by the conditions publicly stated at the opening of the sitting held upon the 15th day of November last.

Mr. RICHARD CATTARNS recalled and further examined.

3423. (*Chairman*.) The last time we had the pleasure of seeing you, you were about to touch on the question of the Merchant Shipping Act?—Yes. Sir John Wolfe-Barry asked me to look into that matter, which is dealt with by Sir Thomas Sutherland at Question 2020. Where I was comparing the cost at the Continental ports with the cost at the Port of London, apparently my evidence did not quite agree with the evidence of Sir Thomas Sutherland, and I promised to bring four ships' accounts of four voyages to Antwerp, Rotterdam, Hamburg, and Havre, respectively. That I have done, and with your Lordship's permission I will hand them in directly. Then in order to identify as far as I can my evidence with that of Sir Thomas Sutherland I have looked at Question 2009 and I will just call attention to one or two points that occurred to me with regard to that matter. I think you will find that my evidence is not very far out when compared with that of Sir Thomas Sutherland. Sir Thomas Sutherland calls attention to the fact that the expenses of a voyage to London is £316 13s. 4d. as against the cost of £53 3s. for a voyage to Antwerp. He gives the details of how he arrives at the £316 13s. 4d. Your Lordship will see that he deals with light dues as being part of the cost of the port. That no doubt is a slip, or it may be looked at either way as the Royal Commissioners think well. Light dues are hardly a port charge, and of course they vary whether a ship is coming from foreign ports or whether she is engaged coastwise. The Board of Trade Act, 1893, gives the particulars of how that is arrived at, but for my purposes I should propose to eliminate that £91 altogether from part of the port charge. It is not a municipal charge or a port charge; it is an imperial charge really and truly. Then, of course, dock dues, as I explained before, the river steamers do not incur. Sir Thomas Sutherland necessarily takes his dock dues at £200. Therefore to the extent of the dock dues obviously London is dearer than Antwerp, because Antwerp deliberately avoids charging dock dues. Sir Thomas Sutherland's ships do not go into the docks at Antwerp; they go alongside the wharves, the same as the ordinary river steamers, and they avoid the dock dues altogether. Therefore, to that extent, the Peninsular and Oriental Company's ships and all other ships that go into the docks in London are hampered by

the charges that have to be borne. Then the only other charge to which Sir Thomas Sutherland referred is the Conservancy charge of £25, and that £25 has to go consequently against the Antwerp charge of £54 3s. Therefore, in effect, leaving out the exceptional charges which may be said to apply to exceptional accommodation, that is to say, accommodation that is provided in the one case and not in the other, really and truly the London charge is less than the Antwerp charge. Then Sir Thomas refers to the fact that he leaves out pilotage altogether. So far as the steamers about which I was giving evidence are concerned, they carefully bring themselves within the Merchant Shipping Act, which allows them, being registered in the Port of London, to avoid compulsory pilotage, and, consequently, they do not incur compulsory pilotage in London; but directly they go to Antwerp they do incur compulsory pilotage, and in all continental ports the pilotage is compulsory, while in England it is not so in all circumstances. The consequence is that, as far as London is concerned, we save a considerable amount of pilotage when the vessels are registered in London, but if they are registered in the outports they become liable to compulsory pilotage, and have to pay. Of course, that is the difference between the Peninsular and Oriental steamers and the river steamers on whose behalf I am speaking. The Peninsular steamers register at Dundee or Greenock, or possibly other ports in Scotland, and are, therefore, liable to compulsory pilotage in London. They become liable to compulsory pilotage in London, but they avoid the liability for collisions and other things in consequence. The river steamers being smaller, the owners find it better worth their while to register their steamers in London, and so avoid compulsory pilotage, which otherwise would be a very heavy tax indeed. The consequence is that taking a river steamer in the instance I give, the "Benbow," on an Antwerp voyage she incurs at Antwerp a cost of £27 15s. 10d., as against a cost of £9 2s. in London.

(*The Witness handed in a Table of the Comparative Official Port Charges incurred by the General Steam Navigation Company's steamer "Benbow," 515 tons net register, on a voyage in January, 1900, out from London to Antwerp, with 758 tons general cargo, and home with 776 tons cargo, Antwerp to London (River). See Appendix, 11th Day, No. 1.*

Mr. R.  
Cattarns.

19 Mar. 1901.

Mr. R.  
Cuttarns.  
19 Mar. 1901.

In Hamburg it is the same thing; the cost of pilotage is very high, all of which is compulsory, and which is saved in the Port of London. In the case of the voyage of a river steamer called the "Auk," of 642 tons net register, to Hamburg, she expended at Hamburg £40 14s. 10d., and for the same charges she expended in London £8 2s. 6d.

(The Witness handed in a Table of the Comparative Official Port Charges incurred by the General Steam Navigation Company's steamer "Auk," 642 tons net register, on a voyage in May, 1900, out from London to Hamburg, with 1,042 tons general cargo, and home with 985 tons cargo, Hamburg to London (River). See Appendix, 11th Day, No. 2.)

Then, in the case of the "Falcon," 366 tons net register, on a voyage to Rotterdam she expended at Rotterdam £14 1s. 6d., always bearing in mind this pilotage, and at London £5 6s. 10d.

(The Witness handed in a Table of the Comparative Official Port Charges incurred by the General Steam Navigation Company's steamer "Falcon," 366 tons net register, on a voyage in May, 1900, out from London to Rotterdam, with 103 tons general cargo, and home with 256 tons general cargo, Rotterdam to London (River). See Appendix 11th Day, No. 3.)

I have had the labour eliminated from those accounts, because it has only been necessary to give the Commission just the official charges, as to which there can be one charge set against the other.

3424. (Mr. Ellis.) In all these cases you assure us that you are comparing like with like?—Yes.

3425. Everything is eliminated in one case that is not in the other case?—Yes, that is so. These are actual accounts of actual voyages of ships with actual cargoes, and they are as far as it is possible, comparing like with like.

3426. You appreciate the point?—Quite. I should regret extremely if I did not do so, because otherwise it would upset the whole of the evidence altogether. My remark only applies to port charges and port charges.

3427. (Sir Robert Giffen.) And they include light dues?—Yes, they do. Of course, as you are aware, light dues are also charged abroad, but they are charged under a different heading. They are not charged in the name of light dues, but I think, if I recollect rightly, in the name of sanitary dues. On the question of light dues, as you know, a peculiar question arises. Under the Act of 1898 a foreign ship like Sir Thomas Sutherland's, for instance, has a certain hardship, in that, being a foreign-going ship, she has to pay her full light dues, but only the light dues for six voyages in one year. Therefore, it is practically impossible for a Peninsular and Oriental ship on an Australian voyage to get any reduction in her dues, because she hardly makes six voyages in the course of a year, or certainly not many more than six voyages in the course of a year. With regard to the home trade ships, our vessels get a reduction when they have made ten voyages, and of course these ships make many voyages, say, between London and Antwerp. Therefore, in giving the Commissioners our voyage accounts we have allowed for the light dues being charged on the lower scale. I have had a note made at the bottom of the account calling attention to it. We have allowed for the fact that the ship would make her maximum number of voyages and consequently get the benefit of her reduced light dues.

3428. And you have made similar allowances where they ought to be made in the case of the foreign ports?—I have not given any account for foreign ships.

3429. But you have made a similar allowance where it ought to be made in the cases of Rotterdam and Hamburg, and so on?—Yes, quite so. The Antwerp accounts are the official accounts sent in actually from the broker of that particular ship, and, of course, the same reduction is made in the same way. Then I will hand in an account in the case of a French port, Havre, together with a copy of the sworn broker's official statement. It is the case of a vessel called the "Condor," of 434 tons net register. The Havre charges came to £25 14s. 2d. and the London charges came to £5 18s. 2d. There are dock charges included in the Havre voyage.

(The Witness handed in a Table of the Comparative Official Port Charges incurred by the General Steam Navigation Company's steamer "Condor," 434 tons net register, on a voyage in September, 1900, out from London to Havre, with 248 tons of general cargo, and home with 448 tons of general cargo, Havre to London (River). See Appendix, 11th Day, No. 4.)

3430. Have you a similar account for London, includ-

ing dock charges?—No, I have avoided bringing you up any account that would not give you what I consider to be a fair basis to work upon. The traders that work to the upper docks have, we some of us think, very fair and liberal arrangements with the Dock Companies which enable us to go and work in the upper docks—the St. Katharine's Dock and the London Dock—on a satisfactory basis; but the charges that are made to the smaller ships that come to the upper docks are less than the charges made for the larger ships that go into the lower docks. Under the Dock Companies Act, of course, there is not allowed to be any favouritism; but then the circumstances have to be identical. Taking the identical ship with the identical ship, of course the charges are the same, but no charge made to a small ship in the upper docks would be any guide to the Royal Commissioners as to any charges made to the larger ships in the lower docks, and therefore I have not given you that. If a chance ship goes into the upper docks, with a chance cargo, the charges are one thing—they are higher—but if, on the other hand, she comes into the upper docks as a regular trader, paying a certain sum per annum for a berth in the upper docks, the charges are considerably less, and then there is, as we most of us think, a fair and just arrangement made by the dock companies to meet the requirements of these smaller vessels. In point of fact, the upper docks are brought by the dock companies into competition more or less with the wharves in the upper part of the river, for the purpose of getting smaller vessels into those docks.

3431. (Chairman.) You told us that the maintenance of Part VII. of the Act of 1894 is a serious question for the river trader?—Yes. That Part VII. of the Act of 1894 is the part of the Act which gives to the merchant the right of obtaining free delivery of his goods when he has lodged on board the steamer the order to receive the goods from the ship, and is prepared to take delivery.

3432. It is a point which does not refer exclusively to the Port of London?—No.

3433. It is of general application?—It is general. It refers to the whole of the United Kingdom. It applies to every port in the kingdom. We venture to think that it would be a very dangerous thing if any step were taken to interfere with the liberty of the merchant to obtain delivery of his goods so long as he complies with the law and is ready to take delivery. Of course, as ship owners, we all like to have the privilege of discharging our cargoes on the quays and sorting them there and delivering them to cart or craft or railway truck, as the case may be. Under the Merchant Shipping Act that is provided for; we are at liberty to do that, but we have to do it at our own expense. On the whole, we think that that is just to the merchant and equally just to the shipowner. If he wants to land his cargo for the purpose of assortment, he ought to bear the expense of it. It has not worked badly up to the present time, and so far as we are concerned in the river we have to do it constantly. When we go into docks, as we very often do to discharge our cargoes for them to be sorted there, it all works remarkably well. In the case of one of the new large vessels with general cargo coming in it becomes a serious matter, though not so serious to the regular trader as it is to the stranger. The regular trader assort his cargo in his ship, as Sir Thomas Sutherland explained. We do it on a smaller scale. They do it on a larger and better scale. A stranger, no doubt, if he loads a cargo more or less mixed, has great difficulty in delivering his cargo; but I am afraid that is one of the misfortunes of being a stranger; if he got a ship fitted to the trade, and men and officers accustomed to the trade, he would have no greater difficulty than the regular trader has.

3434. Now, with regard to the moorings?—That is a very peculiar point which, no doubt, the Royal Commissioners will have to consider sooner or later. We have moorings spread over the river. There are tiers on the north side of the river and on the south side of the river extending as far down the river as the harbour master thinks well. Some of these moorings are private and some are public. We ask that the Commissioners will be kind enough to look into that matter, or, if they think it is not large enough, probably the new authority, if there is a new authority appointed, would take the question up with a view to these moorings, which are really a public facility, being dealt with as they should be as a public facility. Private persons ought not to be allowed to have the control of the moorings and to make charges more or less regular.

Mr. R.  
Cattara.

19 Mar. 1901.

3435. Is there always a charge made for moorings?—Yes, there is.

3436. By whom?—That is not very clear. There is no charge made by the Conservators, but there is a charge made by the proprietor of the moorings, and who the proprietor of the moorings is, is not very clear. He is a most mysterious creature. Sometimes the proprietor is the widow of an individual whose father or grandfather may have held these moorings for many years, but what the right or title is I do not know.

3437. (Mr. Lyttelton.) The title of a squatter, I suppose?—Probably only the title of a squatter. There is a section in the Conservancy Act which authorises the Conservators to turn them out, but they have to pay compensation for turning them out.

3438. (Chairman.) The Conservancy make no charge to you?—For their particular moorings I understand they make no charge, but for the moorings which are held by private individuals there is a charge: whether it be for lifting the chains, or whether it be for the use of the moorings, or why it is made, or the amount charged, is a very doubtful thing. I am afraid traders would tell a very peculiar tale about that.

3439. (Rear-Admiral Hext.) Is anybody responsible for the efficiency of the moorings?—I should say not. No doubt in a general sense the Thames Conservancy would be, but I should imagine they do not take any responsibility in the way of supervising them and so on. For their own moorings they do, but for these private moorings I should doubt if they do.

3440. (Sir John Wolfe-Barry.) Are these private moorings renewed from time to time by anybody?—I have never heard of them being renewed. I have heard of them being removed occasionally, but not renewed.

3441. If anybody breaks one who repairs it?—I presume it would be the proprietor, but it is altogether a very mysterious subject. When I was manager of the General Steam Company we controlled our moorings to a large extent. We owned some and rented others, and being very regular traders, we had every possible facility provided for us, and we had no difficulties. But now I am speaking on behalf of a great number of other persons who are strangers, and they undoubtedly do have difficulties, and it is not a satisfactory system as it stands.

3442. (Chairman.) As far as you are concerned it is satisfactory?—As far as the General Steam Company is concerned it is, but in ship-owning it is just as necessary for us that our competitors should find things satisfactory as it is for ourselves. We want to consider the trade as a whole; we cannot look upon ourselves by ourselves. Then with regard to lighterage, I presume that will come before the Commission. It is hardly necessary for me to delay you with that.

3443. No?—We think it is necessary that there should be an inclusive authority—an authority of practical persons, who should control the whole of these smaller details of the administration of the port. There is the Waterman's Company; there are the moorings; there is the Thames Conservancy; there is the dredging duty; and there are all those innumerable duties connected with the public highway of the river, which we think it is of the highest importance should be handled as a general subject and in a very efficient way. We think that the authority should be an authority which should command the confidence of the public so that there would be no difficulty in raising sufficient revenue (and we think there ought to be none) for the purpose of dealing efficiently with all these various duties. We suggest that as regards the estuary of the Thames, which undoubtedly does require to be kept in good order and deepened and have the channels properly buoyed and so on, if the port authority was entrusted with that duty the funds for carrying out the work ought to be provided from Imperial sources. I refer to the estuary of the Thames, as distinguished from the port. We do not think it reasonable that the traders should out of their trade earnings, be called upon to provide for a general highway, and, above all, to provide for maintaining a general highway beyond the condition that nature has itself provided. But for the port itself, having regard to the economies of the port, which are really very great, perhaps too great—the port has perhaps been too economically worked up to the present

time—we think that the trade is quite good enough to bear its own taxation, and that the shipowners are a sufficiently wealthy body, and the merchants, too, to bear their own expenses. As a matter of public policy, seeing that we have to deal with a competition which is deliberate, so far as the foreigners are concerned, in their determination to do away with all expense possible, we think it is important that the traders themselves should bear their own taxation; that that is really the only effectual way to keep the expenditure down to its proper limits—to get outside mere fads and fancies, and to provide only what is really necessary for the work; and the work really necessary and of a very important character. Then, as to dredging. We strongly urge that the river should be dredged to the utmost depth, within reason, that science will allow. Although we are river traders, dealing with a smaller class of vessels, we consider our livings largely depend upon the big ships; therefore, we are very anxious about the welfare of the big ships, and we do know that big ships are desiring to come into and use the port as a port of call. Therefore, we urge very strongly that, for those particular vessels, the river should be so deepened that they could come up, and if necessary go down at all states of the tide. For that purpose there ought to be a depth of not less than 30 or 31 feet at low water, where it can be given. Then we urge that the port authority ought to provide London with the facilities that we find elsewhere. We have them at Hamburg, we have them at Antwerp, and elsewhere, in the shape of these quays along the banks of the river. At Hamburg there are so-called docks, but there are no dock gates, they are open docks. Probably, in London, docks always will be a necessity for some part of the trade; but in the case of the calling ships, and the new class of trade that is coming up, namely, the ship that comes to-day and discharges 5,000 or 6,000 tons of cargo and then goes on to Liverpool or elsewhere and discharges the balance of her cargo, and loads nothing in the port of London; that class of vessel ought to be encouraged, and provided with accommodation, so that it can come in and go out again and discharge its cargo, and not have to go into the docks at all. We urge that there should be free quays on the river.

3444. Where do you suggest that the embankments and the piers to which you have referred should be placed?—In Long Reach. Long Reach is a reach that has been made by nature almost specially fitted for this very work. It is just above Fiddler's Reach. You have the deepest water, you have the straightest reach, you have a wide waterway, and if that reach were dredged, as it could be, down to a depth of 31 or 32 feet at low water, there is land on either side unoccupied by buildings, and there would be no difficulty, we think, in providing piers where these vessels could come and discharge their cargoes, and where barges could lie on the other side of the piers, protected by the piers, and where there would be no mudding required as in the docks, for there would be no silting; it is a very straight reach, there would be a run of tide which would, generally speaking, keep the channel clear, and you would get good accommodation with the railways on the one side and what is still more valuable, and what we have not got at present, you would get a means of access to London along the south side of the river. At the present moment all our docks, with the exception of the Surrey Docks, which are timber docks, are on the north side of the river. There would be an advantage in getting on to the south side of the river in this way, and we think that by building these piers if they were kept in the hands of the new authority they would be able to work at a very small price, and they would not interfere with a single vested interest. We do not think they would interfere with the docks, except that they would take this new class of shipping; but the docks to provide for the new class of shipping must expend a considerable amount of capital; this outlay would be saved, we hope, and it would not interfere with the wharves above, because the warehousing must always remain in the neighbourhood of the merchants' offices. We think the expenditure would not be extreme.

3445. We take it that your principal complaint is the sub-division of authority?—That is our great complaint. Our main complaint is the want of dredging.

3446. The suggestion you make is as to abolishing the sub-division of authority?—Distinctly, so far as the river is concerned. We do not in any way support

*Mr. R. Cattams.*

this suggestion of a public trust or anything of that sort; we are strongly opposed to it.

19 Mar. 1901.

3447. You suggest there would be no serious difficulty in the Government or a public authority being authorised to advance to the port authority a moderate amount for capital purposes. I should like you to tell us on what security you suggest such advances would be made?—I suggest that the money in question should be advanced upon the security of the taxation which the public authority would have power to raise, the taxation in question being tonnage dues on the vessels, and no doubt there would be further taxes upon the wharves, the riparian owners, and the docks and lighters, and all traders in effect using the docks, other than the merchants dealing with the goods. Then we ask that the goods which form the cargoes of vessels, both inwards and outwards, should be kept free of taxation.

3448. You are referring, I presume, to the transshipment goods?—I am referring to all goods, whether the goods are landed at the docks for the purpose of warehousing or for any purpose whatever. There is at the present moment no tax upon goods, and we urge that they should remain free. I am, of course, well aware that there is a tax on goods at very many ports; but London has been kept free of this taxation up to the present time, and the trade has been worked on that basis, and it would be a very serious upset in principle if there were now to be any suggestion of a tax upon goods. That applies very strongly, no doubt, to the class of goods to which your lordship referred, the transshipment goods. That we should feel most seriously. Then we urge that the expenditure on the port should be limited to what is necessary, subject to the remark that we urge it should be as full and as liberal as could possibly be required. We ask that the taxation should be borne by the traders, and the paramount control of the port should be in the hands of practical commercial people, and not any municipal authority.

3449. Would you suggest that municipal authorities should not be represented?—Clearly they would have to be represented, but it would be a very serious thing we think, if, in a competitive business such as that of the Port of London, there were anybody but the persons who had to deal with and control this competitive business introduced as a paramount authority. There is not a single branch of the business of the Port of London that can be said to be worked on a hard and fast line. Every regular trader has a different system of paying his men, for instance. Labour is a very important item necessarily, and if we had any system whereby strangers came in to control our business, taking labour as a case in point, it would throw the whole thing into really very serious confusion, and possibly something worse. Then we suggest that a large part of the London trade is competitive with the Continent, and consequently a public loan could not possibly be raised, having regard to the nature of the security. We venture very respectfully to press that upon the Commissioners.

3450. What do you mean by a public loan, and why should it not be raised?—Because of the security. Supposing there was a public trust, and a very large sum of money—some millions—was to be raised for the purchase of the docks or the purchase of the wharves, or the purchase of the docks and wharves, or whatever it might be, there would be a question of the security apart from the ordinary rating. The revenue of the port itself is of a very uncertain character, if one may so express it. It is entirely competitive. We cannot lose sight of the fact that Antwerp and Hamburg are at the rail head of the great trunk lines of railway on the Continent; and as far as London is concerned we have to fight for every part of that trade, and to bring it here after the expenditure of great energy. It is possible that in the course of competition the trade might leave London or its competitive business might be shifted to some other centre, perhaps Liverpool or Newcastle or elsewhere, and that being so it would be a very serious thing if the taxation of the port had to be pledged to the public for any advance of funds for the purpose of creating a trust.

3451. Do you suggest that the new authority should have the power of taxing the ships?—Yes, they have that power now, and we suggest that that power should be increased. We think there would be no difficulty if it was a good substantial authority.

3452. We have already gone, I think, into the question of the embankments and piers?—Yes.

3453. Have you anything else you would like to say upon that point?—I think not.

3454. Do you say that the tide is not a great objection?—We speak rather feelingly upon that point because so many of our ships are loaded and discharged in the river. The suggestion has been made that it would be a very serious difficulty to discharge these large vessels into craft in a tide-way; but in practice we do not find that is so. We have to work in the tide-way in the Upper Pool, where our barges are right out in the strength of a three-knot tide, and we have not the least difficulty; on the contrary, it is rather an assistance to us than otherwise, because the tide enables us to work the barges easily.

3455. Your opinion is that the course you suggest would do away with the evil of the crowd of barges?—It would relieve everything all round. It would do away with the crowd of barges in the docks; it would avoid what is now a serious congestion in the way of the dock entrance. We have to deal with these large vessels—it is a problem we have to face in London—required rapid and economical handling, and if we have to deal with large quantities of goods, it is essential that the ships should be discharged, not on to quays at all, if it can be helped, but into craft at once, so as to economise quay space for the work.

3456. (*Sir Robert Giffen.*) With regard to what you were saying just now as to there being no tax on goods, do you consider that warehousing charges are not in the nature of taxes on goods, such as dock charges would be?—Clearly, they are an expense upon goods, but I do not think you can put warehousing charges on a level with taxation, because the warehousing charges depend upon matters of contract between the warehouse keepers and the merchants.

3457. Do you consider that the charges on goods now made in the Port of London are all in the nature of warehousing charges and not taxation such as you have described?—I should not call them taxation such as I have described. I do not regard warehousing charges as taxation. They are an expense of course.

3458. Are they clearly distinguished in their nature as warehousing charges?—Perhaps I do not make myself quite clear. The only practical suggestion appears to be that there should be taxation on goods in the docks, and not at the wharves. It would not be possible to levy taxes at the wharves without a very large addition to the administrative powers of somebody.

3459. I am asking the question now because some statements which have been made to us as to the great expense of the Port of London are based upon the amount of certain charges upon goods. I wish to know whether you consider that these charges now made are in the nature of taxation or not?—Certainly not. They are not taxation, they are a question of contract. If the warehousing charges are too high in London I apprehend if there are other ports where lower warehousing charges are incurred, then London must come down.

3460. I think they are not called warehousing charges, they are called dock charges; that is to say, when a ship enters the dock it has to pay so much upon the goods which are landed on the quay. The contention is that they do not get the warehouse accommodation, that they are not exactly warehouse charges, because they are made the moment the goods are landed on the quay, or, at least, the dock companies have power to make the charges then?—Yes, it is perfectly reasonable. They are quay charges. The dock charges that are levied upon the ships are charges for the ships to go into the dock or basin. They get the use of the cut that has been made by the dock authority, which holds the water.

3461. When you speak of the port authority making charges upon the ship, it has nothing whatever to do with ships going into the docks?—No; I simply mean that it should be like the tonnage dues which are now levied by the Thames Conservancy on all ships entering the Port of London; but which, no doubt, would have to be considerably increased.

3462. And you think the trade can bear the increase?—Certainly.

3463. In spite of all these statements which are made about the expense of the Port of London?—Speaking of shipowners at the present time, a shipowner, I venture to think, has not to pay excessive charges in the Port of London. Those charges of the Thames Conservators might very well bear addition if we are to derive additional facilities and accommodation. There is plenty of room in the Thames to give us both better water and better moorings.

3464. The statement has been made to us, I think, that it is practically impossible for shipowners to avoid giving their goods into lighters, instead of landing them on the quay. I should like, with reference to that, to refer you to your bill of lading, and ask if the shipowner has the option to put goods into lighters, or land them on the quay?—Certainly, we have that power; it is only a question of expense.

3465. Certain charges would be made upon the landing?—Clearly. The quay charges, to which you have just been referring, as distinguished from the warehouse charges, would then be incurred by the shipowner when the goods are put upon the quay. Someone has to pay the quay charge, which is probably about 1s. 6d. a ton. That quay charge, if the goods are put there at the shipowner's request, is borne by the shipowner. If, on the other hand, they are put there at the request of the merchant, or through any failure on the part of the merchant, or by reason of his not applying for his goods at the particular time under the terms of the Act, the charge is borne by the merchant.

3466. So that if the shipowner chooses to exercise his option, and land his goods, he could easily make a charge for freight to recoup himself?—You say "easily"; it is a little difficult to agree to that; it becomes a question of competition.

3467. Is not that what is done at other ports where the goods, as a matter of course, are almost always landed. The shipowner, in that case, knowing that that expense has to be incurred, must necessarily recoup himself in the freight, so as to equalise the conditions with any other port where that is not done?—Yes, that is so; but on the Continent you have some extraordinary customs. Although the goods are landed, particularly in the French ports, they remain at the responsibility of the shipowner for days after they are landed, and he incurs those charges. For instance, at Havre and many French ports we used to have to erect tents, and discharge our goods into those tents, and to leave them there for three or four or five days, until the merchant took them away from the ship's side. During the whole of that time they were at our responsibility and our expense.

3468. In your opinion the question as between putting the goods into lighters and landing them on the quay in London is very much a matter of arrangement in the trade?—Certainly; it is a question of contract.

3469. And hardly a question for legislation or for regulation?—We respectfully submit not. We do not think it is. We think it is purely a question of contract.

3470. Then with regard to the comparison between London and Hamburg, Antwerp, and other ports, I understand that it relates mainly to short voyages, and it would not apply to ships like those of the P. and O. Company and other large ships?—Quite so. It does not apply to any ship that has to trade to and from the London Docks.

3471. And the difference arises very much from the means you have of escaping the pilotage charge which the big ship has to pay?—It does, and one other thing, too. We have, to avoid docking, built for ourselves these wharves, and we have fitted our ships with this crane power and so on, which are facilities which small vessels carry about with them, but which the large vessels find in the docks, and consequently could not very well work without. But in testing the expenses it is fair that I should point out that we have all this capital outlay for these cranes and these wharves, as to which no charge appears in these accounts, so that a certain sum has to be considered with regard to that.

3472. But still there are no official port charges in connection with that?—No.

3473. (*Rear-Admiral Hext*). Would you exempt all goods from paying any taxation in London when in almost every other port in the Empire such dues are charged?—They never have been charged in the Port of London, and it would be a very serious thing to

do it now, largely for the reason that London is a place where we land cargo more than take cargo away. It is a receiving port; and the goods are of exceptional value. There is no port in the world where cargo of such freight-paying value and such intrinsic value is delivered in such quantities and so regularly, and we think it would be a very serious thing indeed, having regard to that cargo and the transshipment cargo outward, and the competitive nature of the trade as a rule, if anything were done which would so seriously alter the working of the port.

3474. (*Mr. Peel*.) You used an expression just now: "The upper docks." What do you include under that?—The St. Katharine's Dock and the London Dock.

3475. You do not go down further than that?—No.

3476. Now, one question about these moorings. Do the Conservancy put in any special conditions when it gives a grant for fresh moorings as regards supervision or otherwise?—There has been no grant, I think you will find, of late years for fresh moorings at all. The Conservancy lay down their own. These moorings that we have been talking about are ancient possessions going back a very long time ago, before the Conservancy was brought into operation at all.

3477. And they have no restriction on them whatever as regards being looked after or any kind of restriction on their use?—The Conservancy really does not deal with them; or, at any rate, I think not. I should prefer the Conservancy to answer that question for themselves, but our experience is that as the ships come up they are told off by a waterman who is looking after these moorings, and he makes the most money he can.

3478. Then you were telling us about what this public trust ought to do if it were formed, and you said you thought it ought to be confined to the dredging of the river, and making channels?—I think that it should be confined to a public authority with the public duties relating to a public highway.

3479. But at the same time you advocated free quays along a particular reach?—Yes.

3480. Do you suggest that they should be built by this public authority?—I do. I should like to see it myself. I think it is a great pity that it was not done years ago when the Port of London was made.

3481. Have you considered what the effect of these free quays would be on the wharves and on the docks of London?—Very carefully, and that is one reason why I should like to see it in the hands of a public authority. Assuming that there is no warehousing—and of course there would be no warehousing there—it would not interfere with the wharves up above, and I am perfectly sure that the dock companies would provide accommodation which will always be demanded by a large class of the vessels that could not go to these free quays at all. What I have sought to point out is that the real competition between London and the Continent is the cost of dock dues to these foreign going vessels. The rest of the ships must come to the Port of London. The Port of London is good enough to keep the trade here, and always will keep it here, but there is a large trade now growing up which demands accommodation; this the Barry Commission inquired into carefully and proved up to the hilt. It is growing every day; it is to that trade that we have to look; and it is for that trade that the new authority ought to cater.

3482. You told us that the business was a competitive business, so that if a large sum of money was raised on the security of the charges of the Port of London, which would be necessary, it might be necessary to have some further security?—Yes.

3483. And that further security could only be the rates?—It could only be the rates.

3484. In that case the municipal authorities would have to be largely represented on any such trust?—Undoubtedly, and that is why we say that there should be no trust at all; that it should be an authority dealing with the public highway only, and the expenditure in connection with that authority could be met by the existing taxation and such additions to that taxation as the traders could bear.

3485. But you suggested the formation of these free quays?—That would be a small matter comparatively. We believe that an expenditure of £1,000,000 or thereabouts would be amply sufficient to provide both sides of Long Reach with as much quay accommodation as would be required.

*Mr. R. Cattarns.*

19 Mar. 1901.

Mr. R.  
Cattarns.  
19 Mar. 1901.

3486. (*Mr. Ellis.*) How does the Port of London compare with other ports as regards its natural facilities or difficulties?—It has many advantages. If you take the Scheldt you have a tortuous, fast-flowing river with plenty of water, but in the winter time much heavy ice. At Hamburg in the Elbe you have a river very long, with severe shallows, and in the winter time, for months sometimes, ice so heavy that it frequently happens—in my experience it has often happened—that the whole of the lightships have been swept away, and we have had to navigate the Elbe for a month or six weeks at a time, 70 miles of it, with ice blocks 6ft. thick, and without a lightship throughout the whole of it. In London we have nothing of that sort. We have, of course, some ice, but no ice of a character such as that. We never have our lightships swept away. With the exception of this serious difficulty of fog that I have referred to—

3487. I do not think you have referred to it; is that increasing?—No. It did increase until the last few years. In view of my evidence I have made careful inquiry about it, and the answer I have got is that the smoke itself has increased, but the wind has not prevailed in the same direction during the last two or three years, strange to say; and while up to within four or five years ago sometimes the ships have been delayed four or five days in getting up the river, that has not occurred within the last two or three years.

3488. Although the smoke has increased?—Yes, and it is simply owing to the direction of the wind.

3489. That is natural?—Yes, it is natural clearly, but the smoke is there, and it is a very cruel thing that it should be allowed to be.

3490. Why do you use those words "cruel" and "allowed"?—Because we think that through the county authority or some authority, or if there was a sufficiently strong river authority, pressure should be brought to bear to compel the cement manufacturers to keep their smoke within limits.

3491. You think that in the interests of the port, and the trade of London through its port, there should be some controlling authority as regards the volume of smoke emitted from factories and other works on the banks of the river?—Certainly.

3492. You think it impedes navigation to a certain extent?—Yes; the losses are most serious. The company of which I was manager have lost certainly half a dozen steamers within my experience of 20 years.

3493. You mean the steamers have been wrecked?—Yes, run down or been in collisions. The white vapour has a most curious effect, and other people will tell you the same thing. It is as dense as a fog. You have a perfectly clear atmosphere, and suddenly you come into a perfect curtain of fog before you know where you are.

3494. Has your association made any representation to any authority about it?—Yes, and personally I have made many.

3495. To whom?—Verbally, to the Thames Conservancy, and also to the Trinity House.

3496. Have you ever written?—I cannot tax my memory.

3497. Then, although you have lost a number of ships, you have not thought it worth while to write a letter?—I do not think you ought to put it as high as that. We are not alone, and it has been accepted there is no authority.

3498. I am asking you about yourselves. Has your association ever made any written communication to any authority about this smoke?—I should hardly think so, because the answer has been, "We have no authority, and can do nothing." That is the verbal answer that we have always received.

3499. (*Sir John Wolfe-Barry.*) Do you use Welsh coal in all your steamers?—No, north country.

3500. With regard to Sir Thomas Sutherland's evidence, you do not, I suppose, traverse his figures at all?—Certainly not.

3501. Therefore, so far as his evidence goes, which is directed to ships like the P. and O. ships, going to discharge part of their cargoes, or take in part of their cargoes, at Antwerp, the figures would be all right?—I have no doubt at all.

3502. And the broad result is that they would pay

about six times as much in London as at Antwerp?—If you include the £91 for light dues.

3503. If you include the items that Sir Thomas Sutherland gives?—Yes.

3504. Therefore that must be a very serious question when the transshipping of cargoes from ocean-going ships destined for the Continent is considered?—If it comes in an ocean-going ship, yes.

3505. I mean, suppose an ocean-going ship has goods consigned to the Continent, and she has the alternative of taking those goods to Antwerp or bringing those goods to London, and then sending them by a coasting steamer to Antwerp, she has to pay six times the amount of money if she adopts the alternative of coming to London in the first instance?—Quite so, and that is why we advocate these free quays.

3506. We will come to the free quays afterwards. But still it is the fact, is it not, that at the present moment the ocean-going ship has to bear six times the amount of initial expense if she elects to come to London and send her cargo forward by coasting vessels?—Yes; I think you must put it in that way.

3507. That, of course, does not apply to your vessels, which are strictly vessels making transit backwards and forwards to the Continent; but it does apply not only to Sir Thomas Sutherland's vessels, but to all the large ocean-going vessels, such as the British India Company's?—Yes.

3508. And the vessels of all those very large companies for whom Sir Thomas Sutherland was speaking?—Certainly.

3509. Then if your idea is that the cost of any improvements should be borne entirely by the ships using the Port of London, Sir Thomas Sutherland and his friends would have to pay still more?—I think it would all be raised by tonnage dues.

3510. But Sir Thomas Sutherland would still have to pay more than he does now?—Yes. The two descriptions of shipowners pay about half each. The £52,000 that is now raised by the Thames Conservancy is equally borne by the ocean-trader and the short trader.

3511. But as compared with Antwerp Sir Thomas Sutherland would have to pay still more than the six times that we have been talking about?—Yes. The £25 Conservancy dues that he refers to in Question 2009 would probably be doubled.

3512. Therefore the proportion would be still greater for London as compared with Antwerp?—Certainly.

3513. Then you used the word "estuary." You said that the port authority should do all the works necessary in the estuary of the Thames. I do not know whether you mean the estuary, or the whole way up to the docks?—We think it is essential that it should be done the whole way up to the docks. But so far as the estuary is concerned—I mean the part of the river beyond the port which has to be dredged—we think that the part of the expense incurred in the neighbourhood of the Medway should be borne by the Imperial authority.

3514. Where do you mean the estuary to begin? Do you mean Yantlet Creek?—No, below that. We should rather urge upon the Commission that it should go from the Reculvers, which is below the Medway.

3515. Do you mean that the Imperial taxation should bear the cost of anything seaward of the Reculvers?—No, seaward of Yantlet Creek.

3516. The present limit of the Thames Conservancy for some of its duties?—Yes.

3517. You think that all the work of deepening and improving the river above that should be done by some port authority which would have the right to tax shipping to meet the expense of those improvements, and that there should be no public trust to absorb the docks?—Yes.

3518. Your view is that there should be no absorption of the docks by any public trust?—Certainly.

3519. Then I was going to ask you what I think Mr. Peel has already asked you, that is, whether you have considered that if the river authority were to build piers, and construct quays, as you suggest, you would have the state of things of the public authority competing with the docks?—I do not think you would. You would find, I think, that the quays in question would not in effect compete with the docks; that the

ships which would use the quays are just these very ships which have to be brought to the Port of London, and about which we have been speaking. If they come to the docks they have to incur these dock charges which they do not incur at Antwerp, and then you get this violent difference between London charges and Antwerp charges, which it is vital should be met somehow if we are going to do any good at all; and the only way to meet it apparently, with due regard to the interests of all parties, is to provide these free quays.

3520. Then you said the course suggested would be to relieve the dock companies of the growing evil of the crowd of barges?—Yes.

3521. How could it?—They get nothing out of the barges at the present time.

3522. They get the ships?—Yes. They get the dock charges of the vessels going into the docks; but it is said the ships do not come here because of the competition which we say keeps them away.

3523. If you are going to relieve the crowd of barges, you will relieve the crowd of barges by taking the ships out of the docks?—The ships are not in the docks at the present moment. It is suggested that they cannot go because of these heavy port charges.

3524. There is a crowd of barges, of which everybody complains?—Yes.

3525. You say that that crowd would be relieved by the public authority doing what you suggest. When I point out that it could only be relieved by taking the ships away, and that is competition?—I do not think that is what I desire to convey. To start with, the vessels that would come in would discharge their cargoes on to these quays, and would go away; they would not incur any dock charges; they do not come to the dock now, but if they would have come to the dock, of course, the dock companies would lose those charges, and to that extent there would be that competition.

3526. They either relieve the congestion, or they do not. If they relieve the congestion they could only relieve it by taking the ships out of the docks. I think that must be so when you come to think of it?—The suggestion is that London is at a disadvantage with the Continental ports and trade is driven away. We are tied to this Port of London. These short traders have enormous sums invested in freehold properties, and wharves, etc., and they are tied to the Port of London, so that our suggestion is for the general good. It is vital something should be done.

3527. (Mr. Lyttelton.) But still, unless it creates a new traffic, it will not relieve the congestion?—It will take away a small part of the traffic. With regard to the import traffic to the dock, that may be so. Now, my Lord, may I add that my Association have passed a resolution conveying exactly the principles that I have given evidence upon, which I ought to hand in.

*The following resolution was handed in:—*

“Resolved it is the opinion of this meeting of ship-owners, representing the short sea trades, employing over one-half the steam tonnage entered and cleared through the Port of London, that:—

1. It is desirable a central authority should be formed to take over the control and administration of the Port of London, such authority to have power to borrow public money with a view to extending, improving, and adding to the facilities of the port.
2. It would be disastrous to apply any part of the funds thus raised to assist or purchase any of the existing docks or wharves, or other of the trading corporations of the port.
3. The success of the Port of London has arisen from and depends upon the maintenance, development, and free and unrestrained use of its waterways. Taxation should be limited to the maintenance and development of such waterways.
4. The existing docks (the Surrey Commercial Docks only excepted, which latter are of exceptional value for the timber ponds they include) are to

some extent out of date, as is the system of closed docks.

5. To bring the docks up to date and available for future requirements and possibilities would probably involve, in addition to the purchase money, heavy outlay for the deepening of dock-sills and dock-basins, the underpinning and rebuilding of dock-quay walls, and superstructures and railway and quay extensions. Such expenditure would, we think, with the purchase money of the old docks, exceed the cost of new docks, to say nothing of the loss of time and the fact that when completed these docks would not be equal to modern requirements.

6. From London Bridge down to Woolwich private enterprise has during a long series of years to a large extent embanked both sides of the river with quay walls, and built thereon warehouses and quays, which have developed to a large extent the trade of London by water. Ships using these wharves pay no dock dues, and can time their arrivals and departures to suit markets and their own convenience.

7. This meeting is of opinion that the new authority should in the main expend its funds, and the money to be borrowed from the public.

(a) In broadening the channel and deepening the bed of the river where such works can efficiently and satisfactorily be performed.

(b) In embanking the sides of the river and erecting quay walls and piers thereat, and providing deep water berths for steamers of the largest tonnage, which will enable them to avoid the delays consequent upon docking and undocking, and to load and discharge their cargoes with the greatest rapidity and the least expense, and by saving dock dues be thus prepared to pay additional tonnage dues to the port authority, and thus find the funds to meet the necessary charges in respect of the works in question.

8. The barging system is a necessity to the port, and ought not to be hindered by taxation of any kind, beyond what is fair and reasonable in connection with the expenditure of the controlling authority. In the opinion of this meeting it is necessary that the bargeowners should remain free of taxation on entering the docks or using the public quays in the port. It is urgently necessary that the system which requires the exclusive employment of licensed lightermen should be amended.

9. This meeting is further of opinion that it is of great importance to the merchants and traders of the Port of London, that Part 7 of the Merchant Shipping Act, 1894, should be maintained.

10. It is essential in the national interests and in the interests of the Port of London, as the largest transshipping centre in the United Kingdom, that the taxation of the port should be kept to the lowest possible figure, having regard to the competition of Continental ports, and that anything in the nature of taxation on goods or a substantial tax on lighters would be detrimental to the port.

11. Any outlay on capital account should be so applied as that the works undertaken may earn the interest thereon, and be so planned as to create an inducement to strangers to send their ships to the port, and so bring new trade.

12. That these resolutions be sealed, and Mr. Cattarns be requested to present the same to the Royal Commission, and support them by evidence.”

Mr. JAMES GREIG called and examined.

3528. (Chairman.) You are managing director of the Free Trade Wharf Company, Limited?—Yes.

3529. Will you tell us what is the accommodation at your wharf?—At this wharf we accommodate four lines of coasting steamers, viz.: The Tyne Steam Ship-

ping Company, Limited, trading to Newcastle; the Tees Union Shipping Company, Limited, trading to the Tees; the Little Western Steamship Company, trading to Torquay, Penzance, Bristol, and Newport; the Poole Shipping Company, trading to Cowes and Poole.

Mr. R. Cattarns.

19 Mar. 1901.

Mr. J. Greig

*Mr. J. Greig.* 3530. Where is the Free Trade Wharf?—At Ratcliffe, just below the main entrance to the London Dock.  
 19 Mar. 1901. 3531. Are you giving your evidence at the request of the Short Sea Traders' Association?—Yes.

3532. Now tell us about the Association?—The members of this Association are principally engaged in trades from London along the coast, and also in voyages to the Continent. They number 29 firms. Some of its members use the docks for their ships, but for the most part they use the river, some ships working wholly in tiers, others partly unload and load in tiers, and partly at the wharves to suit the cargoes. The inward cargo of two lines for which we are agents amounted in 1899 to 153,133 tons; of this 46 per cent. was transhipped to export ships in docks by barge. The outward cargo of those two lines was 65,325 tons, of which 24 per cent. was transhipped from import ships in dock by barge. I would particularly call attention to the goods, both export and import, that are transhipped direct by lighter from and to the coaster and the export and import ships in the docks. The quantity of goods thus dealt with in the course of the year is very heavy indeed, much heavier in some trades than ours, and it forms a very important part of the trade of the coaster, and also of the trade of the ocean-going steamers. We act as feeders to the ocean-going ships for outward cargo, which is so gravely important to London. There have been no dues or charges hitherto imposed on transshipment goods in London, and it is essential that transshipment goods should continue to be free of any port charges, because the trade has to be brought to London, and can only be secured at a minimum freight, which, in fact, has to cover agency and shipping charges in London. We have very great difficulty in retaining the carriage of these goods to London, and any additional charges would seriously injure the trade. In Middlesbrough we find a great tendency for ocean-going ships to go to Middlesbrough to take in their dead-weight cargo there, and come on to London to fill up with their measurement goods. We also find at Middlesbrough there is a great tendency for goods to be shipped direct to the Continental ports for transshipment there, notably to the German lines, and the same thing prevails in all the North-East British ports, from Aberdeen southwards; and I say without hesitation any imposition of charges in London, either on the barges conveying these goods or on the goods themselves, will tend to drive them away from London. There are excellent services of steamers from Leith to Hamburg, Rotterdam, and Antwerp catering for export shipment goods and drawing them away from London. Our Association, in considering the future of the port, had in view the desirability of avoiding charges on transshipment goods and also the keeping of the expenditure as low as possible consistent with efficiency, and they adopted the resolution which our chairman—Mr. Cattarns—has brought before you. The scheme of deep-water quays we think eminently desirable and practicable for the accommodation of deep drafted ships, without the very great expense of making new docks for their accommodation. These quays would relieve the docks greatly, and being public would, at a minimum cost to the ship, give a splendid facility to secure dispatch, and for "calling ships" or for berth ships intending to load in the docks there would be a great advantage to the port. Neither rise nor fall of tide, nor the tide-way itself, would injuriously affect the working of these quays. Speaking individually, my experience of working ships at tiers and at wharves in the river leads me to think that considerable accommodation could be found for vessels to discharge in the river lower down, say, below Blackwall, and the river authorities should, I think, turn their attention to this point at once. Ships are moored in the upper reaches of the river in tiers at places most suitable and convenient for them to lie for the discharge of their cargoes and also for loading cargoes. I complain of the system that now prevails whereby moorings in the river are managed by a body of men who are termed "under watermen." They control groups of tiers, and make charges for the use of them, which I think is inequitable. The Conservancy puts down the ground moorings, and they also attach the first chain to these ground moorings, which is a stone or a screw. I understand that these ground moorings and the first chain are the property of the Conservancy, but the upper chains that are attached to the first mooring chain are in some cases the property of these under watermen, and in other cases they are the property of the steamers that as a rule use the tier. These under watermen are in attendance on the ships' arrival

to give them the chains, and when the ships go away, to receive the chains and get them ready for the next arrival. They make a charge for the use of these chains, collecting it themselves from the various vessels. There is no fixed charge for this. Some vessels even of small dimensions—say 200 to 300 tons—pay 25s. for the ostensible use of the chains; others, again, steamers of 1,000 tons, have been known to pay 15s. There is no regular charge, and this irregularity often gives rise to disputes. The Secretary of the Thames Conservancy at Question 6 said there was no charge for these moorings. He was mistaken as to this, as these charges make a considerable tax.

3533. The Secretary said the Conservancy made no charge, I think?—Possibly so, but he gave to the public the impression that there was no charge for these moorings. I submit that these moorings should be under the direct control of the Conservancy, and that the charge for moorings should be uniform, and should be paid direct to the Conservancy at the same time as the tonnage dues are paid. Here let me say that the only control that the traffic of the river has, is by the harbour master or his deputy. The area of the Harbour Master's jurisdiction is of great extent, and he cannot be in several places at once, and there is a difficulty in finding him when a blockage arises. Such blockages nearly always take place towards high water, when most of the ships are on the move, and the difficulty has to be left to solve itself without anyone's interference. I think that the services of whoever has charge of the moorings, if a Conservancy servant, could be utilised to overcome this difficulty and to clear any blockage that may temporarily arise, and to see that the navigation of the channel between the tiers and the shore is kept clear for vessels coming out from or going to the various wharves inside the tiers, so that they could get in and out without accident. We make considerable use of the tiers off the wharf for the accommodation of our vessels. The steamers from Middlesbrough discharge wholly in the tier, only coming to the wharf to load their outward goods. During the late strike of lightermen we have for greater convenience unloaded 16 of our Tees Union steamers in the docks, so that we have recent experience of unloading into lighters in the docks as well as of unloading in the tiers, and we certainly prefer unloading in the tiers, because it is handier for the moving of barges. The tide assists us in moving the barges to and from the ships as well as swinging them when necessity requires. The still waters of the docks and the proximity of other barges and vessels do not give us this facility. I may mention that we have frequently unloaded ex ship into craft 1,000 tons of iron in 12 hours entirely with ship's gear. There are suitable places for more tiers in the river, notably below Blackwall, and the accommodation of the port could be considerably increased by creating tiers there. For ships able to use the tiers and wharves London is a cheap port, there being only the tonnage dues and moorings to be paid for. I complain that I have never known the Conservancy to do any dredging off our section of the river, at least for the last 17 years.

3534. What do you call your section of the river?—Right opposite the wharf. The tendency of ships in the coasting trade is to get larger, and our present ships, when moored in the tier, take the ground at low water. I need not mention that this is detrimental, and I think that sufficient water should be made at the tiers for them to always lie afloat. At one of the tiers off this wharf—Bell Wharf Tier—at neap tide, the soundings were at high water 24ft. and 26ft., at low water 14ft. and 16ft. The steamers of the Tees Union Shipping Company when loaded draw 18ft. 6in. and 18ft. respectively, they lie in Bell Wharf Tier, so that at low water the largest would sue about 4ft. on neap tides, and, of course, more spring tides. In Bell Wharf Tier at spring tides there is high water 33ft. and 35ft., and low water 12ft. and 15ft. In the summer when the excursion traffic is on the river a serious state of things exists. At the young flood and before the steamer's stern is afloat the swell from the excursion steamer causes the bow of the moored steamer to yaw about and to grind on her heel likely to tear out her stern post. In October, 1896, the attention of the Conservancy was called to this condition of things, but nothing was done.

3535. Was the attention of the Conservancy called to it by your association?—The Wharfingers called attention to it. I think that the privileges of the licensed lightermen to exclusively work barges should be abolished, and any competent man should be allowed to navigate a barge, the same as on any of the

See 5628.

See 7544—5.

See 7547.

rivers in the provinces, or the same as the masters and mates of the sailing barges trading to the mouth of the Thames. The latter have no exclusive privileges, and yet are most trustworthy. Our wharf men load and unload barges, but although the ships are moored in the tier some 400ft. from the wharf, we must have a licensed man to move the barges to and from the ships. Our men are not allowed to do it. To move barges in any of the docks no licensed lighter-man is required. We strongly support the resolution this association has adopted in favour of a river authority being formed, and complain that, as large taxpayers, we river traders are practically unrepresented on the Thames Conservancy Board, and we also urge that greater attention should be paid to dredging the channels.

See 3527

3536. (*Mr. Ellis.*) Is that the resolution that was put in by Mr. Cattarns?—Yes. This new central authority, the formation of which is recommended in the resolution of our association, would necessarily require money for broadening the channel and deepening the bed of the river, and for the erection of quay walls and piers and for their equipment. This money could be raised on the security of the port dues of London, but inasmuch as the ships using the quays and piers, which would be public, would pay for that accommodation, the quays would be self-supporting. Conservancy tonnage dues and rent charges, as far as they would go, would be available for the interest and redemption of the money expended on broadening the channel, deepening the bed of the river, and were more required no doubt further dues could be levied on shipping. Our Association is clearly of opinion that it would be detrimental to the Port for any dues to be placed on transshipment goods or on barges carrying them. My company acquired their wharf some 17 years ago, primarily to accommodate the coasting trades with which they were connected, but they found a wharfing and warehousing trade in imported goods being done by their predecessors, and they acquired this part of the business by purchase. They endeavoured to accommodate that part of the trade still further, spending about £20,000 upon it during the last ten years. They did this knowing and relying on that statutory right that merchants and wharfingers have of free delivery of goods from vessels in the river and in the docks, the same as all the other London wharfingers both public and private have done for years past. We therefore, trust that in simple justice to us and to our fellow wharfingers and warehouse-keepers no charge will be put upon goods imported or upon the lighters removing these goods, or at least that the dock companies will be put on an equality with the wharfingers. Here I would point out that for the purpose of warehousing and economically distributing goods, the Tilbury Docks, the Royal Albert Docks, and even the Victoria Docks are inconveniently distant from London as compared with the St. Katharine Docks and the London Docks and the wharves in the upper portion of the river. For years past the dock companies have been compelled to acknowledge this, and have been quoting rates for certain classes of goods which include removal of the goods by barge from the lower docks to the St. Katharine Docks or London Docks, and warehousing them there, and in that respect the upper docks and their warehouses have been used much in the same way as the public wharves on the river. It will be noted as a rule that some wharfingers make a speciality of some particular class of goods, as, for instance, at some wharves tea is a speciality, at others coffee, and at others drugs. The importers of these commodities prefer that their goods should be warehoused at one place and not left at the different docks at which the import vessel arrives. I would point out that inland warehouses are not so convenient or economical for the distribution of goods as wharves or waterside warehouses, because a great quantity of goods have to be shipped coastwise and to the continental steamers, and it is cheaper to send these from the wharves by barge. If they lay at an inland warehouse cartage would be incurred as well as wharf charges or dock charges. In common with other wharfingers, we have to complain of the very great delay in delivery of goods that sometimes occurs from import ships to barges in the docks. Might I mention that if the river is put under the control of a new authority this authority should be fully empowered to take charge and have entire control over the stairs and over the approaches leading from the shore to the river? As it is at present there are so many authorities connected with these stairs and approaches

See 5628.

that it is very difficult indeed for any improvement to be carried out. When we entered into possession of our premises 17 years ago we had to do a considerable amount of dredging ourselves, of course, with the consent of the Conservancy, and we succeeded in making a depth of water of from 25ft. to 29ft. at high water, giving about 10ft. at low water neaps in the ship's berth. We also wished to extend the length of our frontage so as to accommodate a longer steamer in a second berth; some public stairs stood in the way, and we saw the desirability was very great of shifting them some 20ft. lower down the river; but before this could be done we had to get the consent of the following authorities, viz.: the Vestry, the District Board of Works, the Magistrates in Petty Sessions, the Magistrates in Quarter Sessions, the Watermen's Company, and the Conservancy, all of which took time and money. I point this out because I think it desirable that the new authority should have the power within themselves to effect such an alteration as we were desirous of making without having to submit the matter to all these different bodies.

Mr. J. Greig.

19 Mar. 1901.

See 3572.

See 7548.

3537. (*Chairman.*) I take it you are inclined to agree with the evidence which has already been given, that the navigation of barges on the river should be thrown open entirely?—Yes.

3538. You mentioned several times a river authority. Have you any suggestions to make as to its composition?—There ought to be representation of the barge owners and of shipowners, especially the coasting shipowners. That is to say, the coasting shipowners should have a proper representation upon it, because they use the river so frequently as compared with ocean-going ships. For instance, some of our vessels come into the river once a week for 50 weeks in the year.

3539. You say you are practically unrepresented on the Thames Conservancy. Is that literally true?—It is literally true. There is a long and difficult mode of registration before we can get a voice in it, and the voice is so small that the little shipowners have no representation.

3540. But you have a voice?—We have in a certain sense.

3541. Can you give the particulars of how you are represented?—It is in the Thames Conservancy Act, but I have not got it to my hand.

3542. (*Mr. Lyttelton.*) About how large do the barges run that you propose should be managed by unlicensed lighter-men?—All flat-bottomed barges; all barges trading in the river.

3543. What tonnage do they run to?—They run from 30 tons up to 200 tons.

3544. Would not danger arise from unlicensed persons navigating them?—No, I do not consider so. There is no more danger than in a carman driving in the streets of London.

3545. You put that as equally easy?—May I add that the owners of the barges would see that competent men were employed, because the barges are entirely at the risk of the owners, both as regards damage to the barges and damage that they do to other vessels.

3546. (*Sir John Wolfe-Barry.*) You said you think it is of great importance that no charge should be put upon goods imported or upon lighters removing these goods, or, at least, that the dock companies should be put on an equality with the wharfingers. Do you mean that supposing a charge were put upon goods removed by lighters to private warehouses in the Thames, a similar charge should be put upon goods removed to the warehouses belonging to the dock companies?—Yes.

3547. You urge that the Dock Companies are warehouse owners, and therefore competitive with private warehouse owners?—To a certain extent they are.

3548. That there are, as it were, two functions of the dock?—Yes.

3549. One is to maintain the waterways, docks, and quays for transshipment, and the other for warehousing goods?—Yes.

3550. And *quid* warehousing goods, they are directly competitive with private warehouses?—Yes.

3551. So that if anything were done to put any charge upon goods going to the private warehouses, there should be a similar charge put upon goods going to the Dock's warehouses?—That is my opinion.

*Mr. J. Greig.* 3552. So that both should be on an equal footing?—Yes.

19 Mar. 1901. 3553. (*Mr. Ellis.*) Have your Association made any complaint with regard to the grievances about mooring, the irregularity of charges, and so on?—Frequent complaint has been made. I cannot call to mind that I have actually made one lately, but there have been frequent complaints made to the Harbour Master.

3554. Official complaints on behalf of your Association?—Yes.

3555. Your Association has written letters?—Not the Association. That has not been brought by me before the Association. I may have done so as representing the shipping companies.

3556. But, at all events, I may take it from you that complaints have been made by you as a trader?—It is a long while ago if I have written about it. It is not lately. We are constantly seeing the Harbour Master, and any grievances that we may have we should tell him.

3557. That is verbal?—Yes.

3558. May I take it that the grievance or difficulty whatever it is, has been rather lessening than otherwise? Or have you been tired of making complaints? Is that it?—It has been lessening, I must say, within the last month or two.

3559. Then with regard to the control of the traffic on the river, are we to take it that your complaint is that the harbour master is physically unable to govern so large an area—that he has insufficient assistance, in fact?—That is so; that is my opinion.

3560. Are the duties well performed, so far as they can be?—So far as they can be they are, but the man cannot be in two places at once. The ships are nearly always moving at the top of the tide; within an hour of high water is when the ships are on the move, and he is wanted elsewhere, as well as at our place.

3561. If he had sufficient assistance of a qualified nature you would be satisfied?—I would be satisfied.

3562. Are you quite satisfied with the powers the harbour master has? Has he sufficient power?—Yes, I think he has. I have never made a request to him without his being able to get it attended to if it was reasonable and within his jurisdiction.

3563. You said something with regard to the excursion traffic on the river?—Yes, in the summer when the excursion traffic is on the river a serious state of things exists. At the young flood, and before the steamer's stern is afloat, the swell from the excursion steamer causes the bow of the moored steamer to yaw about and to grind on her heel like to tear out her stern post.

3564. You said something about making complaint to the Thames Conservancy?—In October, 1896, the attention of the Conservancy was called to this condition of things, but nothing was done.

3565. But what you have just stated was still happening?—Yes.

3566. Have you ever called the attention of the Thames Conservancy to the want of dredging in the river?—Only on that occasion in 1896, when we pointed out that there was a want of water at the tier, and that our ships grounded.

3567. Was that strictly limited to your quay?—It was strictly limited to the tier off the wharves.

3568. It was limited to that which affected yourselves?—Yes.

3569. It was no general complaint with regard to the river?—No.

3570. Was it in writing?—It was in writing, I believe, in 1896.

3571. But nothing since then?—Nothing since then.

3572. You said: "When we entered into possession of our premises 17 years ago we had to do a considerable amount of dredging ourselves, of course with the consent of the Conservancy." Can you give me any idea of what that cost you?—I really could not.

3573. Was it tens of thousands of pounds?—Oh, no. I should think it would not run above £700.

3574. Not £1,000?—No.

3575. You gave us the number of authorities you had to consult, all of which, as you say, took time and money. Then you suggest that the new authority should have the power within themselves to effect such an alteration as you were desirous of making without having to submit it to all these different bodies. Do you suggest that the cost of that should be transferred from yourselves to the new authority?—No. I merely say that they would have authority to allow anyone in our position to do it.

3576. You do not wish them to do the work?—No, except at the charge of whoever wishes it to be done.

3577. (*Mr. Peel.*) Mr. Lyttelton asked you a question about the licensing of watermen. I understand that now in the docks unlicensed men can work the barges?—Yes. They can move them in the docks as they please.

3578. It has been suggested that when a certain number of these barges are being towed by a tug the men have very little to do, and therefore you might have an unlicensed man, but you want to throw all the work open, I understand. Would you have all the three different classes of barges under the control of unlicensed men?—Yes.

3579. You would have no kind of qualification demanded from these men?—Except what the masters would desire.

3580. And you would allow them to ply in the river without any qualifications?—With goods; not with passengers.

3581. That applies to all classes of barges, sailing barges and steam barges?—The sailing barges have no licensed men now. It only applies to barges moving within a certain given area of the river—Gravesend upwards.

3582. That you would throw open?—I would throw that open.

3583. (*Rear-Admiral Hext.*) Do you know if the crews of barges trading seaward to the Thames pass any examination?—No.

3584. None whatever?—None whatever.

3585. In case of an accident caused by a barge, or to a barge, am I right in supposing that the barge is liable? For instance, suppose you have cargo, and you are run down; then are you liable to the full amount?—We are liable to the full amount without any restriction. There is no £8 per ton for barges.

3586. Then it is in the interest of the owners of barges to have careful men?—Certainly, the same as with sailing barges.

3587. Then when you talk of the authority, do you mean that this authority should have no control whatever over the docks, but only over the waterway of the Thames?—That was the resolution passed by our Association.

Mr. JOHN GLASS called and examined.

*Mr. J. Glass.* 3588. (*Chairman.*) You are the manager of the Regent's Canal and Dock Company?—Yes.

3589. Are you prepared to give us some particulars with regard to the company?—Yes.

3590. Apart from the particulars with regard to the company, are there any remarks you would like to make?—None, except that my company think that any scheme providing for the Port of London, unless it deals with the Regent's Canal, would be an unsatisfactory one to them, and, I think, to everybody else. It is a very important factor in dealing with the Port of London. Although it is only a small dock, the tonnage for its area compares very favourably with any of the other dock

companies. The total dock tons amounted to nearly a million in the year 1900.

3591. Will you give us, in the first place, the Acts under which the company was formed?—Under the authority of the Act of 52, George III., chapter 195, Regent's Canal Act, 1812, a company was formed for making and maintaining a navigable canal from the Grand Junction Canal, in the parish of Paddington, to the River Thames, in the parish of Limehouse; further powers were obtained from Parliament in 1813, 1816, and 1819; these powers included the right to construct and maintain a basin and channel thereto from the River Thames, so as to admit of the entrance and lying of

ships in the sail basin. These works were completed, and the canal was opened by a public ceremony on 1st August, 1820. The company have, at considerable cost, from time to time (under Parliamentary authority), enlarged, deepened, and improved the dock and canal. I will hand in a schedule of the several Acts of Parliament relative to the undertakings.

(The Witness handed in a Schedule of the several Acts of Parliament relative to the undertakings of the Regent's Canal and Dock Company. See Appendix, 11th Day, No. 5.)

3592. Now, will you give us particulars of the works of the company?—The works of the company consist of (1) the Limehouse Dock, which has a water area of 10 acres and about 4 acres of quayage and wharfage, with a ship entrance 350ft. long, 60ft. wide, and sills laid 26ft. below Trinity high-water mark; also an entrance for barges 79ft. long, 14ft. 6in. wide, and sills laid 22ft. below Trinity high-water mark. The dock, which is within and part of the Port of London, is most conveniently situated on the north bank of the River Thames, about half a mile below the Shadwell entrance to the London Docks, one and a-half miles below London Bridge, and one-third of a mile above the Limehouse entrance to the West India Docks, and is close to the Stepney Station of the London and Blackwall Railway, which is reached by trains from Fenchurch Street Station in eight minutes, and trains run to and from this station to all stations on the Great Eastern Railway, and the London, Tilbury and Southend, Thames Haven and London, Woodford and Ongar branches thereof, and also in communication with the trains of the North London Railway Company passing Bow Station. The jetties in the dock are capable of transshipping and weighing with great rapidity and small breakage coal from screw steamers and other vessels into craft for the River Thames and other inland navigations. The cranes and jetties are of modern type and recent construction, the hydraulic and pumping engines are of ample power, and are of approved and economical design. (2) The Regent's Canal, which is navigable for barges of 100 tons burthen, communicates with the Limehouse Dock, and passes through Stepney, Mile End, Bethnal Green, Shoreditch, Islington, St. Pancras, Marylebone, and Paddington, in which last-named parish it communicates with the Grand Junction Canal. The Great Eastern, Great Northern, Midland, Great Central, and London and North Western Railway Companies have goods termini on the banks of this canal. The canal is equipped with modern pumping appliances to facilitate the passing of traffic and economise the water in times of drought or shortness of water. (3) Hertford Union Canal, which communicates with the Regent's Canal at a point  $1\frac{1}{2}$  miles north of the Limehouse Dock, and terminates by a junction with the River Lea, which is navigable for barges of 70 tons burthen to the town of Hertford. (4) The Brent reservoir at Hendon. This reservoir has a storage capacity of 560 million gallons. (5) The Ruislip Reservoir. This reservoir has a storage capacity of 168 million gallons. The capital of the company is: Share capital, £1,358,100; debenture stock and loans, £536,336; making a total of £1,894,436.

3593. With regard to the Brent Reservoir at Hendon, and also the Ruislip Reservoir, how do those connect with the Regent's Canal?—By a feeder which brings the water down into what is known as the long level of the canal.

3594. (Mr. Peel.) What is the point that connects with the Regent's Canal?—The Brent Reservoir feeder comes in at Willesden. It is not shown on the map; it is really on the territory of the Grand Junction Canal, but it is a dead level from that point to Uxbridge. There is no lock in between.

3595. (Mr. Ellis.) It is the old River Brent impounded, I suppose?—Yes.

3596. (Mr. Peel.) Where does the Ruislip feed?—The Ruislip is near Uxbridge.

3597. (Sir John Wolfe-Barry.) In both cases the water finds its way into the Regent's Canal by means of the Grand Junction Canal?—Yes.

3598. (Chairman.) Now, will you hand in your statement of the traffic, number of ships, tonnage, gross receipts, and working expenses of the Regent's Canal and Dock Company?—Yes.

(The Witness handed in a Table showing the traffic, number of ships, tonnage, gross receipts, and working expenses of the Regent's Canal and Dock Company, for eleven years to 31st December, 1900. See Appendix, 11th Day, No. 6.)

I also hand in an analysis of the canal and dock traffic of the company. Mr. J. Glass.

(The Witness handed in an analysis of the canal and dock traffic of the Regent's Canal and Dock Company. See Appendix, 11th Day, No. 7.) 19 Mar. 1901.

I would like to point out the importance that this coal traffic is to London. A large portion of our dock traffic comprised in that 65½ per cent. is Welsh and Scotch coal brought to London. I am not sure whether the London people thoroughly appreciate how enormous is the quantity of coal that is brought to London by sea. Unless the facilities granted by the Regent's Canal were kept up the difference to the price of coal in London would be something very considerable.

3599. (Sir Robert Giffen.) The coal is brought to London by sea?—Yes.

3600. And it finds its destination over your canal?—Yes; this coal is brought from Welsh ports and northern ports. The expense of bringing the coal by rail would shut it out from London.

3601. (Chairman.) Have you any further remarks to make as to that table?—No.

3602. Will you now state the dock tonnage rates?—I will hand in a schedule of those rates.

(The Witness handed in a Schedule of the dock tonnage rates of the Regent's Canal and Dock Company, See Appendix, 11th Day, No. 8.)

3603. Do you wish to make any observations with regard to that?—No, I do not desire to do so.

3604. (Sir Robert Giffen.) What is the largest ship that you take into your dock?—Between 2,000 and 3,000 tons.

3605. Into the dock itself?—Yes, to discharge in the dock. The coal steamers have increased in size considerably during the last 25 years, and we have been obliged to increase and deepen our dock in consequence.

3606. The barges going into the canal are very small?—They carry up to 100 tons. They are not small.

3607. Do you use any part of the canal for the ships that come into the dock? Do any of them go up the canal any way?—No. You will see in the small map that at the Commercial Road there is a low bridge. The only sea-going vessels that come up the canal are the sailing barges. We have a large number of sailing barges with cement and ballast and similar class of goods, which lower their masts and go as far as to the river, except through the dock?—No.

3608. (Mr. Lyttelton.) Coal barges seem to go up the canal; I see you have 22 per cent.?—Yes. We have very large works on the canal—factories and electric lighting works.

3609. You deliver all along its length?—Yes.

3610. (Mr. Peel.) What is the largest size of these coal barges?—100 tons is the largest barge that can pass up the canal.

3611. (Mr. Ellis.) You have given us the capital of the company. I do not think you have given your revenue and expenditure, have you?—Yes, in the statement of traffic, number of ships, tonnage, gross receipts, working expenses, etc., which has been handed in.

3612. (Sir John Wolfe-Barry.) I suppose it would be fair to say that the canal lives by the dock, and the dock, to some extent, lives by the canal?—Yes, they are very intimately connected.

3613. They ought to be considered together as a whole?—Yes, I think so. You cannot reach the river from the canal without passing through the dock. There is no independent road.

3614. There is no independent access from the canal to the river, except through the dock?—No.

3615. And the bulk of the traffic on the canal comes into the dock?—It does.

3616. And is transhipped there?—Yes.

3617. And vice versa?—Yes.

3618. Is there a large amount of traffic in the dock which finds its way to other parts besides the canal?—Yes, on to the Grand Junction Canal.

3619. By cartage?—No, not a great deal.

3620. No considerable amount by cartage?—No.

3621. Is there any considerable amount of traffic which is transhipped in the dock, and then finds its

*Mr. J. Glass.* way into the Thames, and is distributed by means of the river?—Yes, a good deal. It follows that if a merchant has half a cargo of wood for his wharf on the canal that ship will come into the dock and discharge that portion of the cargo in the canal, and the other will probably go out into the river or to some other wharf on the River Thames.

19 Mar. 1901.

3622. Does your return give us any proportion between the amount of traffic which is strictly canal traffic and that which is not canal traffic?—I do not think it does.

3623. What I want to know is whether this Limehouse Basin is competitive with other docks?—Only to a small extent.

3624. Its main work is serving the canal?—Yes. In fact, in the wood season we cannot accommodate all the demands that are made upon the dock by people who have canal premises. The Norwegian and Swedish ships arrive generally in gluts, and we cannot take them all in.

3625. Then to that extent it is quite a special trade?—Yes.

3626. And it is not so much competitive with the other docks?—No, except that if the manufacturers who consume this timber on the canal could not get their wood by the canal, they would have to draw it or lighter it from the docks on the other side of the water.

3627. Supposing anybody with a wharf on the canal wanted to bring a barge from one of the other docks with timber up the canal, and therefore to do that passed through the Limehouse Basin, would that barge have to pay dues?—Not dock dues. It would have to pay the same canal charges as if the barge was loaded in the dock.

3628. It would pay canal charges, not dock charges?—It would not pay anything for the dock.

3629. You have a very large amount of barge traffic in the dock, have you not?—Yes. The arrival and discharge of the canal steamers is so rapid that it is absolutely necessary to keep a large number of barges there ready for the steamers when they arrive. Sometimes we get on one tide perhaps three steamers, averaging 1,500 tons apiece. All that has got to be put into barges on one tide, and the vessels go away again. A number of barges is absolutely necessary to carry on the business. We make no charge on these barges; they are a great nuisance, but still it is part of our business, and we have to put up with it and do the best we can.

3630. You do not come here to ask that any charge should be put on the barges?—I am afraid it would not be of any use.

3631. Other dock companies have; I only want to know while you are here whether you support that view or not?—We should like it very much, but I do not think we could ask it. If we charged these barges for coming to fetch the coal, say, from the river, they would

not come in, and the steamers would go to the derrick or discharge in the Pool, or go to some other moorings. As it is, we are obliged to charge the ship a mere nominal sum for dock dues. The trade will not stand more. For a steamer of 2,000 or 3,000 tons coming in with coal we only get a guinea; it is a very poor business.

3632. You pay 2½ per cent. on the share capital?—Yes, but we get that in another way. The dock gets the advantage probably of the canal.

3633. The dock you think by itself does not pay so much?—No. The only grievance that I have about the dock is against the local authorities charging us the enormous sum they do for local rates. I feel very strongly about that. I think it affects this question that you are investigating. I notice that the London Dock Company pay something like £100,000 a year for rates. For this tiny dock in two parishes we pay over £4,000 a year for local rates, and we cost them nothing. We provide our own sanitation; that is to say, we have to collect the refuse from the ships; we provide our own light and police, and so on, and yet we have to pay £4,000 a year to these two parishes. There seems to be no principle in assessing dock property. We have fought the authorities and appealed, but there is no rule laid down as to how the dock company shall be assessed. If there were the same principle laid down as there is with railway companies, I think it would be better. £4,000 a year is a substantial sum. We could do a good deal with that money for the advantage of the traders and users of the dock. But there is no principle; they simply value it according to other property in the neighbourhood.

3634. The amount you have put in your schedule for rents is nearly £22,000 a year?—Yes.

3635. Is that for rents of property other than canal property?—It is principally from wharves on the canal—not wharves at the dock, but abutting on the canal.

3636. Where you are landowners?—Yes, we are landowners of all the land round the City Road Basin, for instance.

3637. That amount of rent is very nearly the amount of interest on your capital?—It is, of the fixed interest.

3638. (*Mr. Ellis.*) You have given a schedule of the Acts of Parliament. I think you have been in Parliament several times in the last few years?—Yes.

3639. For what powers did you come in 1900?—To consolidate the various Debenture Stocks of the company and to alter the name. In 1896 for power to extend and improve the dock and the lower part of the canal, and to raise the necessary capital for carrying out the works.

3640. Did you ask for any further powers for charging rates of any kind?—No.

3641. Are you in Parliament this year?—No.

3642. Are you satisfied with your Parliamentary position as to powers?—Yes, I think so.

Dr. WILLIAM COLLINGRIDGE, M.A., LL.M., called and examined.

*Dr. W. Collingridge*  
M.A., LL.M.

3643. (*Chairman.*) You are the Medical Officer of Health of the Port of London?—I am.

3644. Have you had an opportunity of looking at the terms of the reference to this Commission?—I have.

3645. If you will kindly look at it you will notice that our inquiry is more particularly directed to the interests of the promotion of the trade of the port, and that we are not inquiring into its health. We consider, therefore, that it will be sufficient if you will confine your statement to the position and powers of the Medical Officer for the port?—Would you allow me to say, in the first place, that I am instructed by the Corporation of London, in accordance with your wish, to offer you any possible source of information which is at our disposal; and I would further say that already questions have been asked and answers given as to the advisability of transferring the sanitary authority from the Corporation of London to a possible trust, and also to the Thames Conservancy. That having been already mooted, it is felt advisable that evidence should be given as to the actual value of the work, unless your Lordship is convinced on that point.

3646. You wish to call the attention of the Commission to the work which has been done by the Corporation of London?—That is so, from that point of view.

3647. Will you be good enough to proceed with your evidence then?—The Corporation of London was legally constituted the Port of London Sanitary Authority in 1872, by the 20th section of the Public Health Act of that year (35 and 36 Victoria, chapter 79), which was as follows:—"The Mayor, Aldermen and Commons of the City of London shall be deemed to be the Sanitary Authority of the Port of London, and shall pay out of their corporate funds all their expenses as such Port Sanitary Authority." The Act also defined the limits of the port to be those of the port, as established for the purposes of the Customs laws, and gave the Local Government Board power, by Provisional Order, to assign to the Port Sanitary Authority any powers, rights, duties, etc., under the Sanitary Acts, or any of them. The present limits of the port are defined by Treasury Minute dated 1st August, 1883, and are set out hereafter. On the 17th September, 1872, the Local Government Board issued an Order assigning certain powers to the Port Sanitary Authority under the Nuisance Removal Acts, 1855, 1863, and 1866, and

the Sanitary Act, 1866, together with all the powers, authorities, and duties contained in the last mentioned Act in regard to ships and waters and persons engaged therein, and in regard to providing hospitals for the sick; and also the duty of appointing a legally qualified medical practitioner to be the medical officer of health, and also a competent person to be an inspector of nuisances. The above-mentioned powers were only assigned for the period ending the 25th March, 1873, and the order was annually re-issued without alteration until 1883. The Public Health Act, 1875 (38 and 39 Victoria, chapter 54), repealed the Act of 1872 and all the other above-mentioned Acts, and section 291 re-enacted the section constituting the Corporation the Port of London Sanitary Authority, with similar authority as before to the Local Government Board to assign powers, etc., under the Act, and with a similar provision in regard to the discharge of its expenses by the Corporation out of its corporate funds. The Local Government Board, however, continued to re-issue the original order, giving powers under the repealed Sanitary Acts, but this anomaly was corrected by a clause which the Corporation caused to be inserted in the Diseases Prevention (Metropolis) Act, 1883 (46 and 47 Victoria, chapter 35, section 8), which is as follows:—"The Local Government Board shall be deemed to have been empowered to assign to the Port Sanitary Authority of the Port of London for the whole of the said port, the powers, rights, duties, etc., which they have assigned to them; and the said Board may from time to time assign to the said Port Sanitary Authority for the whole of the said port, any powers, rights, duties, etc., of an Urban Sanitary Authority under the Public Health Act, 1875, with such modifications and additions (if any) as may appear to the Board to be required." This section also gave the Port Sanitary Authority power to acquire and hold lands for the purposes of their constitution, without any licence in mortmain. On the 20th March, 1884, the Local Government Board issued an order under the above section assigning certain powers under the Act of 1875, and re-assigning the former powers as to the appointment of a medical officer of health and inspectors of nuisances, together with assistant medical officers and assistant inspectors. Rules were duly made by the Corporation, and approved by the Local Government Board on the 4th March, 1884, for the removal to hospital of persons brought within the port by any ship or boat infected with a "Dangerous Infectious Disorder," which expression was defined to mean any one of the following diseases:—Diphtheria, erysipelas, measles, scarlatina, small-pox, typhoid or enteric fever, and typhus fever. In 1885 fresh regulations were made which included cholera in the list of diseases; but with regard to this latter disease, special regulations have from time to time been made by the Local Government Board, under which it is the duty of the medical officer to visit all ships arriving in the Port of London, whether infected with cholera or coming from an infected port, and examine all persons on board. Fresh regulations were again made in 1890 with regard to persons brought into the Port of London suffering from a dangerous infectious disorder, such disorders including only those named in the Order of 1884. By further Orders of the Local Government Board, dated respectively the 7th June, 1887, the Port of London Sanitary Authority was constituted the registration authority and the authority for supplying copies of regulations made by the Local Government Board under the Canal Boats Act, 1877 (40 and 41 Victoria, chapter 60), in respect of the following canals and rivers, viz.:—Grand Surrey Canal, Regent's Canal, Thames River. By section 142 of the Public Health (London) Act, 1891 (54 and 55 Victoria, chapter 76), section 291 of the Public Health Act, 1875, constituting the Corporation the Port of London Sanitary Authority was repealed; but section 111 of the later Act practically re-enacted the repealed section that, "The Mayor, Commonalty, and citizens of the City of London shall continue to be the Port Sanitary Authority of the Port of London, as established for the purposes of the laws relating to the Customs of the United Kingdom, and shall pay out of their corporate funds all their expenses as such Port Sanitary Authority." Section 110 of the same Act enacts that for the purposes of the Act any vessel lying in any river or other water in the district of a sanitary authority shall (subject to the provisions of the Act with respect to the Port of London Sanitary Authority) be subject to the jurisdiction of that authority in the same manner as if it were a house within such district, the master of the vessel being deemed to be the occupier thereof. Sec-

tion 112 of the Act gave the Local Government Board power to assign to the Port Sanitary Authority any of the powers, rights, duties, capacities, liabilities, or obligations of a sanitary authority under this Act or under the Public Health Act, 1875, and any Act extending or amending the same, and an Order was accordingly made by the Board on the 25th March, 1892, assigning to the Port Sanitary Authority all the powers, rights, duties, etc., of a sanitary authority created by or arising out of the following sections of the Act of 1891:—Section 2, as to summary abatement of nuisances; sections 3 to 15, as to nuisances generally, appeals against Orders, power of entry, proceedings in the High Court, etc., and as to offensive trades; section 24, as to summary proceedings for abatement of nuisance in regard to smoke-consumption by fire-places, furnaces, and chimneys; section 25, as to workshops and bake-houses; section 35, as to removal of filth; sections 40 to 42, regulations as to water closets, etc.; section 43, as to cleansing or covering offensive ditches, drains, etc.; section 46, as to sanitary conveniences being used in common; section 47, as to inspection and destruction of unsound food; section 48, as to insufficient water supply for living purposes; section 50, as to cleansing of cisterns; section 53, as to penalty of fouling water; section 54, as to closing polluted wells, etc.; section 55, as to notification of infectious disease. (The Notification of Diseases Act, 1889, was as soon as possible adopted.) Section 56, as to power of sanitary authority to add to number of infectious diseases by resolution. (Under this section the Port Sanitary Authority have added "measles" to the last of dangerous infectious diseases by resolution of the Court of Common Council, dated 3rd November, 1892.) Section 57, as to non-disqualification of Medical Officer by receipt of fees; sections 58 to 62, as to prevention of infectious diseases by cleansing, disinfecting, etc.; section 65, as to penalty for non-disinfection or ceasing to occupy infected premises, etc.; section 66, as to removal to hospital of infected persons, and the making of bye-laws. (Bye-laws have been made under this section and confirmed by the Local Government Board, on the 27th January, 1893, and are set out hereafter), sections 67 to 74, dealing with exposure of infected persons and things, inspection of dairies, removal of bodies, disinfection of public conveyances, etc.; sections 75, 76, 78, 80, and 89, as to provision of hospitals and ambulances, etc.; section 95, as to supervision of tents and vans used for human habitation; section 99 (4), as to delegation of powers of sanitary authority to a committee; section 99 (5), as to power to acquire and hold land by sanitary authorities for the purposes of their duties, without license in mortmain; sections 106, 107, and 109, as to appointment of medical officers of health and sanitary inspectors; section 113, as to application of various sections of the Public Health Acts relating to powers of Local Government Board in regard to epidemic diseases; section 114, as to bye-laws incorporating sections 182 to 186 of the Public Health Act, 1875; section 115, as to powers of entry; section 116, as to penalty for obstructing officer in execution of Act; sections 117 to 124, as to summary proceedings for offences, recovery of expenses by sanitary authority, protection of officers from personal liability, etc.; section 125, as to appeal to Quarter Sessions; sections 127, 128, and 130, as to authentication of notices and forms; section 138, powers of Act to be cumulative; section 23 is expressly made applicable to the Port of London by the Act itself, and provides as follows:—(1) Every furnace employed in the working of engines by steam, and in every public bath and wash-house, or in any mill or other building used for the purposes of trade or manufacture (although a steam engine be not used therein) shall be so constructed as to consume its own smoke, (2) any person (owner, occupier, or employé) contravening the above to be liable to fines; (3) the owner or master of any steam vessel on the River Thames, either above London Bridge, or plying to and fro between London Bridge and any place westward of the Nore Light, contravening the provisions of the Act with reference to the consumption of smoke to be liable to fines; (4, 5, and 6) definitions and directions as to carrying out the provisions of the section. Vessels under the command or charge of any officer bearing Her Majesty's commission, and vessels belonging to any foreign Government are exempted from the provisions of the Act. Although numerous prosecutions have been instituted against persons offending in regard to smoke nuisances, considerable difficulty has been experienced in obtaining con-

Dr. W.  
Collingridge,  
M.A., LL.M.  
19 Mar. 1901.

Dr. W.  
Collingridge,  
M.A., LL.M.

19 Mar. 1901.

victions, owing to the provision of section 23 (4) of the Act, which enacts that the words "consume or burn the smoke" shall not be held in all cases to mean "consume or burn all the smoke," giving the magistrate a large discretionary power. The limits of the port are defined by Treasury minute, dated 1st August, 1883, and extend down both sides of the River Thames, from high-water mark at Teddington Lock, to an imaginary line drawn from the Pilot Mark at the entrance of Havengore Creek, in the county of Essex, to the Land's End at Warden Point, in the Isle of Sheppey, in the county of Kent, such point being the north-western limit of the Port of Faversham, and extend up and include both sides of the River Medway to an imaginary straight line drawn from the south-west point of land westward to Coal-mouth Creek, thence across the said River Medway to the westernmost point of the piece of land which forms the eastern side of Stangate Creek, or in other words the north-west point of Fleet Mark, and from thence in a southerly direction to Swale Church, in the county of Kent, and thence in a north-easterly direction to Elmly Chapel, in the Isle of Sheppey, a supposed direct line from Elmly Chapel to Swale Church being the western limit of the Port of Faversham, and include the islands of Havengore Creek, called Potton and Rushly Islands, and so much of the said creek and watercourse as extends from it to the town of Rochford, and also including all other islands, rivers, streams, creeks, waters, watercourses, channels, harbours, docks, and places within the before-mentioned limits. Recognising its responsibility with regard to the protection of the entrance of the River Medway, the Corporation some years ago entered into an agreement with the Rochester Port Sanitary Authority by which all vessels entering that river on their way to Rochester are inspected by a medical officer under the control of the Corporation at Garrison Port, Sheerness. The Treasury minute of 1883 was followed by the Canal Boats Act of 1884, which threw additional duties on the authority and its officers, and in 1887 the Local Government Board issued an Order constituting the Port of London Sanitary Authority a registration authority under the Act for the Grand Surrey and the Regent's Canals, and the River Thames. In accordance with the provisions of the Canal Boats Acts, canal boats in the river and docks are constantly inspected by the officers of the authority. The wisdom of these Acts has been made apparent by the marked improvement which has since been perceptible in the condition of the canal boatmen and their families, an improvement entirely due to the continuous supervision carried out. The authority has also sanitary jurisdiction in and over any wharf and the area within the gates of any dock, and the buildings thereon respectively forming part of, or abutting upon the Port of London; and a considerable improvement has been effected in more than one instance by the Corporation putting into force their powers in regard to the sanitary condition of the various docks, creeks, wharves, etc. The Corporation, as the Port of London Sanitary Authority, for some years provided a hospital ship for the purpose of receiving and treating patients entering the Port of London suffering from infectious diseases. The ship was stationed on the River Thames about a mile below Gravesend, where vessels arriving in the river, bound for London, are by law required to stop for inspection by the officers of the Customs, as well for revenue as for health purposes. In the year 1882, the ship being out of repair, it was considered advisable to provide a hospital on land in its place. A suitable situation for such hospital was sought for, and a piece of land at Denton was selected with the advice and assistance of one of the medical inspectors of the Local Government Board, and purchased by the Corporation. The hospital was built and formally opened on the 17th April, 1884, since which time patients have been continuously received there. During the years 1882, 1883, and 1884 the expenditure in connection with the acquisition of the hospital site and the erection of the hospital amounted to about £5,000. During the ten years 1880-1889, the ordinary expenditure of the Corporation, as a port sanitary authority for the Port of London amounted to the sum of £58,362 6s. 6d., and the extraordinary expenses to £4,900 7s., or a total of £63,262 13s. 6d., the whole being provided out of City's cash, and not in any way charged upon rates.

3648. (*Chairman.*) Does that mean the Corporation fund?—Out of Corporation funds; that is, funds not raised at all by rates.

3649. (*Mr. Ellis.*) Where derived from?—From various sources. I am perhaps not in a position to explain that exactly, but it can be all laid before you.

3650. (*Chairman.*) You have the authority of the Corporation for that statement?—I have.

3651. Because it is a point which does not come under your evidence at all?—Exactly so, though I know that it is not a charge on rates. A medical officer of health was appointed in 1873, and an assistant medical officer to take charge of the hospital ship, which was moored at Gravesend. An inspector was appointed in 1873; a second in 1882; a third in 1883; a fourth in 1888; a fifth in 1892; and in consequence of the increase of work and responsibility two additional inspectors were appointed in 1893. In 1898 the two senior inspectors were allotted to the special duty of inspection of food only, and two further sanitary inspectors appointed, making a total of nine, viz.: two food inspectors and seven sanitary inspectors. A steam launch was at first hired, and afterwards purchased. In 1878 a steam launch was specially constructed for the port sanitary authority, and was appointed until 1884, when she was replaced by a larger vessel. In 1893 a second launch, still larger, was constructed. In 1896 a third launch, of a smaller type than the two previously mentioned, was placed upon the river for work in the upper reaches. All cases of infectious disease are conveyed in a specially constructed ambulance boat, either rowboat or steam launch. Disinfection is in all cases carried out gratuitously by the authority. Re-vaccination is offered free to the crews of all vessels from which cases of small-pox are removed. The river is patrolled by three sanitary inspectors in steam launches. An inspector visits each dock daily. The duties of the inspectors are to inspect the ships generally, and to make careful inquiries as to the health of the crew; referring all matters of doubt or difficulty to the medical officer of health. Inquiries are made also as to whether clothing, the property of persons who have died abroad, is carried on board, and the cause of death; disinfecting where necessary, and noting all cases in which structural alterations are required for the improvement of ventilation or light or to abate any nuisance. An important part of the duty of the port sanitary authority is the carrying out of the provisions of the Canal Boats Acts, 1877 and 1884. Under these Acts canal boats in the river and docks are constantly supervised and inspected. I have repeatedly called the attention of my committee to the marked improvement in these boats since the continuous inspection has been carried out, and my opinion has been confirmed by the Local Government Board inspector of canal boats. In 1873 the port sanitary authority was, for the first time, constituted a Registration Authority under these Acts, and 372 boats have been registered under the Acts. Special attention is paid to the supply and storage of drinking water on board vessels. The water barges are under my constant supervision, as are also the storage receptacles on vessels. The examination of cargoes of frozen meat, fruit, and vegetables is a very important part of the work, and on account of its magnitude occupies a very large proportion of the inspectors' time. Large seizures occur from time to time, and smaller seizures are very frequent. The necessity for increasing supervision in this direction being urgent, two inspectors were in October, 1898, appointed to the special duty of inspection of food, and the result has fully justified the arrangement. I would point out with regard to food inspectors that the inspectors were first of all qualified as sanitary inspectors, and were further qualified by holding a special certificate of the Sanitary Institute as inspectors of food generally. The Sanitary Institute certificate is granted after an examination on the lines laid down by the Royal Commission on Tuberculosis in their report, and is at present the only examination of the kind. The food imports are now under regular supervision, and large quantities of unsound food stuffs are now condemned which would otherwise be sold for human consumption. So rapidly has this part of the work developed that an addition to the staff of food inspectors is contemplated. To give some idea of the magnitude of the meat import trade of London, and its rapid growth, it may be mentioned that in 1880 (the first year) 400 carcasses of mutton were brought to London from Australia, the total for 1900 being nearly one million; from New Zealand the number of carcasses brought in 1882 was 8839, and in 1900 upwards of three millions; from the River Plate the number of carcasses in 1883 was 17,166, and in 1900

upwards of a quarter of a million. That is to say, the total imports of mutton into London from all parts has increased from 400 carcases in 1880 to nearly four and three-quarter millions in 1899.

3652. (Sir Robert Giffen.) Are these the figures of the medical officer in the course of his inspection?—These are the figures that are provided by the Meat Trades Association, which are checked by the Customs in their returns. These are figures of carcases that passed through our hands.

3653. Customs figures, as usually published, are not in carcases, but in so much weight?—That is so. But they are checked by that.

3654. (Chairman.) Now, will you tell us about the sewage in the Thames?—Another very important work undertaken by the Port Sanitary Authority has been the representation to the Government of the nuisance, and its attendant danger to the public health caused by the discharge of crude sewage into the river Thames. In the year 1881 the Corporation, in the interests of the inhabitants of the whole of London, took up this question, and it was to a great extent due to the continued representations of the Corporation and the public attention drawn to the subject, that the Government appointed a Royal Commission. The report of the Royal Commission, which was issued in 1885, upheld the views of the Corporation as expressed before the Commission, and the recommendations of the Commission have since been carried out with marked success. Then, as to cholera, yellow fever, and plague. By an Order of the Local Government Board, dated 9th November, 1896, yellow fever and plague were added to cholera, as diseases to be dealt with by the Port Sanitary Authorities, the Privy Council having had hitherto the control of the regulations dealing with these diseases, and of vessels infected therewith. At the boarding hulk at Gravesend three medical officers are always on duty, and one at Sheerness, for the purpose of carrying out this order, and also of dealing with any imported cases of other infectious diseases. One of these officers visits, in conjunction with His Majesty's Customs, every vessel arriving from foreign ports. If the vessel arrives from any port considered dangerous, he sees every individual on board, and if any are infected they are removed to hospital, the vessel fumigated, all effects disinfected, the bilges discharged, the drinking water thrown away (after disinfection), and the tanks cleaned. In this way 16,763 vessels have been medically inspected between August, 1892, and June, 1900, carrying crews to the number of 204,777 and 164,385 passengers. The following are the existing bye-laws which were allowed by the Local Government Board on the 27th January, 1893, and replaced those allowed on the 7th May, 1895. (1.) In these bye-laws the expression "The Port Sanitary Authority" means the Mayor, the Commonalty, and the citizens of the City of London, acting as the Port Sanitary Authority of the Port of London; the expression "Dangerous infectious disease," means any one of the following diseases:—Small-pox, diphtheria, membranous croup, erysipelas, scarlatina or scarlet fever, typhus fever, typhoid fever, enteric fever, relapsing fever, continued fever, puerperal fever. (2.) Every master or other person having charge of a vessel arriving in the Port of London, with any person on board, whether a passenger or belonging to the ship's crew, suffering from a dangerous infectious disease, shall stop on arrival off the Custom House at Gravesend, and forthwith send notice to the medical officer of the Port Sanitary Authority stationed at Gravesend that there is a person on board suffering from such a disease. (3.) The master or other person in charge of the vessel shall cause her to remain off the Custom House until the Medical Officer of Health has boarded her. (4.) The Medical Officer of Health, to whom notice is given, as aforesaid, shall as soon as practicable visit the vessel and ascertain whether the person referred to in the notice is suffering from a dangerous infectious disease, and if in the opinion of the Medical Officer of Health he is and can properly be removed, and proper accommodation can be provided for him in the hospital of the Port Sanitary Authority at Gravesend, or in some other hospital to which the Port Sanitary Authority are entitled to remove patients, the master or other person having charge of the vessel shall forthwith cause such person to be removed to such hospital according to the directions of the Medical Officer of Health. (5.) If any dangerous infectious disease shall

break out on board any vessel arriving in the Port of London, and after she has passed Gravesend, the master or other person having charge of such vessel shall give notice to the Medical Officer of Health of the Port Sanitary Authority, at his office at Greenwich, that there is on board a person suffering from such a disease, and if, upon examination, the Medical Officer of Health shall find that he is so suffering, the master or other person in charge of such vessel shall forthwith cause such person to be removed to a hospital to which the Port Sanitary Authority are entitled to remove patients, as directed by the Medical Officer of Health. (6.) Every person who shall offend against any of the foregoing bye-laws shall be liable for every such offence to a penalty of five pounds, and in the case of a continuing offence to a further penalty of forty shillings for each day after written notice of the offence from the Port Sanitary Authority. Provided, nevertheless, that the Justices or Court before whom any complaint may be made, or any proceedings may be taken in respect of any such offence, may, if they think fit, adjudge the payment as a penalty of any sum less than the full amount of the penalty imposed by this bye-law. In view of the large number of invalided soldiers arriving in this country from South Africa, and the steps taken to prevent the introduction of contagious diseases, the following particulars may be of interest:—Early in August last a communication was received by the Corporation from the Local Government Board enclosing copy of a letter addressed to the Board by the War Office authorities on the subject of the removal to the port sanitary hospital from transports proceeding up the Thames, of soldiers invalided from South Africa and suffering from enteric fever, and stating that the Board would be glad to arrange for a conference at the Board's offices on Friday, the 10th August, between their officers and representatives of the War Office, Admiralty, and Port Sanitary Authority, for the purpose of discussing the suggestion made by the War Office, viz.: that the bye-laws made by the Port Sanitary Authority should be relaxed so as to enable military patients on transports suffering from typhus, typhoid, enteric, relapsing, or continued fever to be allowed to proceed up the river, and to be landed at Woolwich. The Port Sanitary Committee of the Corporation accordingly deputed their chairman to attend the conference as the representative of the Port of London Sanitary Authority, and empowered him to agree to a provisional arrangement subject to the final approval of the Committee. Accordingly on the 10th August the chairman, accompanied by myself, attended at the Board's offices, and the conference took place between the several representatives. After full discussion it was suggested by the representatives of the Local Government Board that the following alternate proposals should be communicated in writing by the Board to the War Office, Admiralty, and Port Sanitary Authority for their consideration, and this suggestion was concurred in by all present:—(1.) That all cases of enteric fever on board transports should be removed to the port sanitary hospital, the question of their subsequent removal to Woolwich to be left to the discretion of the medical officer of health, after consultation with the War Office medical authorities; (2.) That all transport ships should stop at Gravesend, and War Office or Admiralty patients be removed on a steam ambulance launch to be provided by the Admiralty and landed at Woolwich, the War Office to be responsible for the disinfection of the launch, clothing, bedding, etc., the Port Sanitary Authority disinfecting the ship. It was agreed that in the case of either of the above courses being adopted it would be necessary, in order to comply with No. 5 of the Port Sanitary bye-laws, that formal authority should be given by the War Office to the Port Sanitary Authority to remove patients to Woolwich Hospital or any other military hospital. The following words were agreed to: "That in the case of naval or military patients suffering from typhus, typhoid, enteric, relapsing or continued fever, any naval or military hospital shall be considered a hospital to which the Port of London Sanitary Authority may send patients." It was also agreed that all transport ships coming into the port with any cases of dangerous infectious disorder on board other than typhus, typhoid, enteric, relapsing or continued fever, should be dealt with entirely by the Port Sanitary Authority, whether there are cases of enteric fever also on board or not. The Corporation subsequently received from the Local Government Board a letter enclosing sugges-

tions from the War Office as to the procedure in regard to the disposal of invalided soldiers arriving in this country in Government vessels, and their reply thereto, in which the Board stated that they agreed generally to the adoption of the proposals contained in the letter. The following are the suggestions made by the War Office authorities:—(a) In future all vessels to call at Southampton, and cases of enteric or other fever which may be considered in an infectious stage, together with other serious cases, to be taken to Netley Hospital, other invalids being sent by train to their destination. (b) When considered expedient to utilise hospitals in the West of England for home-coming invalids, the ship would disembark them at Plymouth, and the serious and infectious cases could either be landed there or at Southampton, at the discretion of the Army medical authorities. (c) In the event of a military hospital in the Thames Military District, or at Colchester, being selected for the reception of invalids, the serious and infectious cases would be landed at Southampton and the remainder would proceed in the ship to Tilbury Dock or Royal Albert Docks, and thence by rail to their destination. Having carefully considered the suggestions of the War Office, the Committee directed the Town Clerk to signify their approval of the same to the Local Government Board, subject to the following condition:—"That when cases are removed from vessels at either Plymouth or Southampton, or any other port, and such vessels afterwards come into the Port of London, the master shall be required to produce the certificate of the sanitary authority at the particular port at which such cases have been removed that the disinfection of the vessel has been carried out."

Then with regard to offensive cargoes, the jurisdiction of the Port Sanitary Authority was increased in 1894 by the assignment of further powers to the Corporation of London in regard to offensive cargoes; and under an Order of the Local Government Board dated 29th December, 1894, bye-laws, with reference to the carriage of offensive cargoes and matter, were made by the Port Sanitary Authority, and allowed by the Local Government Board on the 29th May, 1897. The first two bye-laws were made under section 16 (1 a.) of the Public Health (London) Act, 1891, as amended by the above-mentioned Order, and Nos. 3 to 5 under section 26 (1) of the Public Health Acts Amendment Act, 1890, and are as follows:—(1) A person shall not load or carry in any ship, boat, or vessel, within the district of the Port Sanitary Authority, any dust, ashes, or rubbish, being refuse from house dust-bins which contain any mixture of any offal, carrion, fish, or filth, or of any focal or offensive or noxious matter or liquid, otherwise than in a suitable tank or receptacle properly constructed and furnished with a sufficient covering so as to prevent any nuisance arising therefrom; (2) every person who shall load or carry in any ship, boat or vessel, within the district aforesaid, any dust, ashes, rubbish, offal, carrion, fish or filth, or other matter liable to become offensive or to cause a nuisance if exposed to the open air, shall, except while actually engaged in loading or discharging the same, at all times keep all such dust, ashes, rubbish, offal, carrion, fish or filth or other such matter or thing properly or securely covered, so as to prevent any nuisance arising therefrom, and no such dust, ashes, rubbish, offal, carrion, fish or filth, or other such matter or thing, shall be loaded above the coamings or hatches of any such ship, boat or vessel. If after the discharge from any ship, boat or vessel, within the district of the Port Sanitary Authority, of any dust, ashes, rubbish, offal, carrion, fish, or filth, or other matter or thing which is offensive or liable to become offensive or to cause a nuisance if exposed to the open air, any such dust, ashes, rubbish, offal, carrion, fish or filth, matter or thing, may be adhering to or otherwise remaining in or upon such ship, boat or vessel, or any part thereof, or any tank or receptacle therein; the master of such ship, boat or vessel shall so far as may be necessary for the prevention of nuisance cause such ship, boat or vessel to be thoroughly cleansed and deodorised within six hours after the discharge therefrom of such dust, ashes, rubbish, offal, carrion, fish or filth, matter or thing; (3) where, for the purpose of removal within or carriage through the district of the Port Sanitary Authority any cargo, load, or collection of focal or offensive or noxious matter or liquid has been put into or upon any ship, boat or vessel, the owner or consignee, or any person who has undertaken to deliver such cargo, load, or collection, or who is in charge of the same, or of any such ship, boat or vessel, shall not, without a

reasonable excuse, permit or allow or cause such ship, boat or vessel, containing such cargo, load or collection, or any undischarged portion thereof, to remain within the said district for a longer period than forty-eight hours; (4) every person who shall remove or carry in or through the district of the Port Sanitary Authority any focal or offensive or noxious matter or liquid shall use a suitable tank or receptacle properly constructed and furnished with a sufficient covering so as to prevent the escape of any such matter or liquid therefrom. Provided always that this bye-law shall not apply to the removal or carriage in or through the district of the Port Sanitary Authority of any stable or cattle manure, if and so long as the same be properly and securely covered, and be not loaded above the coamings or hatches of any ship, boat or vessel; (5) if any focal or offensive, or noxious matter or liquid shall have been dropped or spilt in any ship, boat or vessel, while being loaded thereon, or removed, or carried in or through such Port Sanitary district, the master of such ship, boat or vessel shall within six hours of the discharge of such matter or liquid so being removed or carried cause such ship, boat or vessel to be thoroughly cleansed of and from such matter or liquid so dropped or spilt. (6) every person who shall offend against any of the foregoing bye-laws shall be liable for every such offence to a penalty of five pounds, and in case of a continuing offence to a further penalty of forty shillings for each day after written notice of the offence from the Port Sanitary Authority. Provided, nevertheless, that the justices or court before whom any complaint may be made, or any proceedings may be taken in respect of any such offence may, if they think fit, adjudge the payment as a penalty of any sum less than the full amount of the penalty imposed by this bye-law.

3655. With reference to the Treasury minute to which you have referred, what is the force of its definition of limit. It does not seem to be in exact accordance with that which we have had before, I think, from the Thames Conservancy?—It is different altogether.

3656. Are you in favour of a uniform definition?—A uniform definition would considerably curtail the power of the Port Sanitary Authority. The question depends on what lines it followed. At present the jurisdiction of the Thames Conservancy extends a long way above the jurisdiction of the Corporation. There would seem to be no advantage in carrying the limits of the Port Sanitary Authority above Teddington Lock. Where the river is narrow and already within the district of riparian authorities that would seem to be a mistake.

3657. With reference to your remarks on the cattle trade, I presume they apply in great part to the frozen meat trade?—In the main part.

3658. We have had evidence from a former witness to the effect that the Cattle Market at Deptford is in the wrong place, the conditions of trade have so changed?—I am afraid I am not prepared to give evidence as to the conditions of trade.

3659. In your opinion is the Cattle Market at Deptford in the wrong place?—From a sanitary point of view I think not. I see no objection to it whatever in its present position.

3660. Have you had any complaints from shipowners as to the sanitary arrangements of the Port of London?—No.

3661. The sanitary supervision?—No. I think on the whole the shipowners are thoroughly satisfied with the conditions which at present obtain.

3662. (Mr. Lyttelton.) From whom did the criticism of the existing state of things proceed? You said you had given your evidence in reference to certain complaints or criticisms made before this body. By whom were they made?—Not complaints or criticism. The question was raised by two witnesses as to whether it would be advisable to transfer the sanitary supervision from the Corporation to a trust or the Conservancy, and the answer was that it would be advisable, but no reasons were given. It would be most inadvisable. See 1421-3.

3663. Do you recollect by whom that was said?—I think one of the witnesses was the Chairman of the Thames Conservancy, but no reasons were given.

3664. (Sir John Wolfe-Barry.) What staff have you under you?—We have three steam launches, each with its crew.

3665. How many inspectors?—We have seven sanitary inspectors, two food inspectors, and the Corporation are considering as to the advisability of appointing a third. We have a large hospital staff at Gravesend for the treatment of infectious diseases. We have a clerical staff and a medical staff. We have three medical officers stationed at Gravesend whose duty it is to board all foreign vessels with regard to disease. That is a different thing altogether from the sanitary inspection. They are on duty day and night, working in conjunction with His Majesty's Customs. We have also a medical officer stationed at Sheerness. It is his duty to board vessels from foreign ports.

3666. Does the expenditure of the sanitary authority vary very much from year to year?—In epidemic years it has gone up. It went up in 1884; it went up again in 1892. On the whole it is increasing slowly, with rapid development in very heavy times.

3667. The expense, whatever it is, is always furnished by the Corporation?—Always.

3668. Who controls the expenditure—the Committee of the Corporation?—The Port Sanitary Committee of the Corporation.

3669. Do you find the funds ample for all your purposes?—Ample for all that are required.

3670. You find no difficulty on the score of money?—None whatever.

3671. Your general evidence would be that the present system works well?—I think so, undoubtedly.

3672. You have nothing to urge why any greater powers should be granted to the sanitary authority or why there should be any alteration?—Alterations from time to time in questions of small matters of detail, but nothing more.

3673. Do you think the powers given to the sanitary authority are sufficient for all purposes subject to alteration from time to time in matters of detail which would be within the powers?—I do.

3674. Do you also consider that the limits of the sanitary authority are satisfactory?—Yes.

3675. They go far enough out to sea?—Yes.

3676. They ought to be retained as far as Teddington Lock?—As far as Teddington Lock, but not beyond.

3677. (*Mr. Ellis.*) May we gather that this inspection and examination of cargoes of frozen meat, fruit, vegetables, etc., which you say is such an important part of the work, proceeds smoothly? Is there any friction at all with regard to it?—No, there is no friction whatever.

3678. There are no complaints whatever made by anyone, reasonable or unreasonable, that it is an interference with trade?—No.

3679. You have no difficulty in making seizures and carrying out the thing?—We have no difficulty whatever.

3680. It is to the public advantage?—I think so undoubtedly.

3681. Are particular inspectors appointed *ad hoc*, or is that one of their duties?—There are inspectors appointed *ad hoc*, but for all important work there are special inspectors.

3682. Can you give us any idea as to how many inspectors there are for that particular province?—Two.

3683. And you are contemplating increasing them?—That is so.

3684. That is all under your supervision?—Yes.

3685. (*Mr. Peel.*) You have no complaint, have you, to make about the effluent that comes into the Thames at Barking or Crossness?—No, not of late years.

3686. Do you find that after times of storm, the storm water overflows into the Thames and brings a certain amount of crude sewage into it?—Higher up the river.

3687. But nothing to make any complaint of in the Port of London?—It creates a local nuisance for the time. Your question was first of all directed specially to the outfall. There are times of some difficulty with regard to the discharge of sewage from the storm overflows.

3688. Do you find from the docks the same thing happens occasionally—crude sewage?—No, not crude sewage from the docks. We have difficulties with the

dock water, but they are easily dealt with under the Public Health Act.

3689. One of the witnesses told us that the sludge vessels of the London County Council discharge their sludge sometimes on the ebb, the result being that the flow coming up the river brought the sludge to some extent up the river. Have you had any complaints of that?—I have heard of that, but I have never had any definite complaint, and I never have been able to get any proof, although I have looked for it.

3690. Then as to the storage receptacles on vessels. You supervise the storage receptacles on vessels. Those, I suppose, are for water?—For drinking water.

3691. Are those all vessels that come up, foreign as well as British?—All vessels.

3692. Supposing you find something wrong, you can only make suggestions, can you?—All vessels coming up the river, unless they belong to our own or a foreign Government are under the Public Health Act, and if there is anything wrong to such an extent as to be a nuisance or injurious to health it can be dealt with. It makes no difference whether the vessel is a foreign vessel or an English vessel.

3693. (*Rear-Admiral Hext.*) In case of an infectious disease, where do you send them?—We move them to our own hospital on shore below Gravesend.

3694. Are there any hospital ships on the Thames for infectious diseases?—None but the small-pox ships belonging to the Asylums Board.

3695. (*Chairman.*) Have you any tables to hand in?—Yes, I hand these tables in.

(*The Witness handed in a Return of vessels inspected by the Port Sanitary Authority since 1873; a return of vessels cleaned by the Port Sanitary Authority since 1873; a return of structural alterations insisted upon by the Port Sanitary Authority since 1875; a return of vessels fumigated by the Port Sanitary Authority since 1873; a return of infectious diseases dealt with by the Port Sanitary Authority since 1873; a return of infected clothing dealt with by the Port Sanitary Authority since 1874; a return of seizures of unsound food dealt with by the Port Sanitary Authority since 1884; a return of canal boats inspected, persons carried, and prosecutions instituted by the Port Sanitary Authority, under the Canal Boats Act since 1876. See Appendices, 11th Day, Nos. 9, 10, 11, 12, 13, 14, 15, & 16.*)

3696. (*Sir Robert Giffen.*) Have you had occasion to compare your regulations for seizure with those in existence at any foreign ports?—Yes, on many points. I have made it a rule for some years to collect all the information I could with regard to foreign ports.

3697. Do you find that you give as many facilities to trade in this matter of health as is done at any foreign port?—I think that there is no comparison between the restrictions of trade from the health point of view in this country (because all our ports are fairly uniform) and any continental port. That is to say, there is absolutely no restriction whatever to an incoming vessel, provided we have full information as to the health of the crew on board. The shipowners tell us constantly that abroad they are hampered and restricted at every turn, but that in England or in London—of course, they are speaking of London to me—they have nothing whatever to complain of.

3698. So that you do all that is expedient for health, and you have all the powers that you wish to have?—I think so.

3699. And yet you do not interfere with trade in any way?—That is so. It is the constant anxiety of the authority not to interfere with trade.

3700. With reference to the table with regard to seizures of unsound food in the last two years of 1899 and 1900, the seizures are about double the maximum of any previous year, and a good deal more than the average of the previous years?—Yes.

3701. Is that due to the increased importation of unsound food or to the increased diligence of your inspectors?—It is due to the two causes. It is due, first of all, to the large increase of unsound food finding its way into the port, and it is also due to the fact I have mentioned, that in October, 1898, special food inspectors were appointed.

Dr. W.  
Collingridge,

19 Mar. 1901.

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWELFTH DAY.

Wednesday, 20th March, 1901

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTETON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. THOMAS WILLIAM JACOBS, jun., called and examined.

Mr. T. W.  
Jacobs, jun.

20 Mar. 1901.

3702. (*Chairman*.) You are Chairman of the Association of Master Lightermen and Barge Owners of the Port of London?—Yes.

3703. And you are also Managing Director of the Thames Steam Tug and Lighterage Company, Limited?—Yes.

3704. Your association has been good enough to prepare answers to certain questions which were submitted to them by this Commission?—Yes.

3705. What is the local authority to which the owners of barges and the crews of barges are subject, and what bye-laws, if any, have been made by that authority?—The Board of Customs, the Board of Trade, the Local Government Board, the Thames Conservancy, the Watermen's Company, the Lea Conservancy, the various dock companies, and the Port Sanitary Authorities. Each body has made bye-laws or has issued orders affecting the owners and crews of barges.

3706. Will you state the number and tonnage of barges used in the Port of London under 50 tons, over 50 and under 100 tons, over 100 and under 150 tons, over 150 and under 200 tons, over 200 and under 250; distinguishing between dumb, sailing, and steam barges?—The association has not the means of furnishing these particulars, and must refer the Commissioners to the Watermen's Company, to the Registrar General of Shipping, to the Lea Conservancy, to the Grand Junction Canal Company, and to the Local Government Board.

3707. Can you state the number and tonnage of barges (divided in the way mentioned in the previous question) belonging to members of the association?—Applications have been made to the members to furnish particulars so as to enable the secretary to answer this inquiry. Answers have been received from 67, out of a total of 88 members and others identified with the association. The following is a summary of the information obtained up to the present time:—Dumb barges: 4,941 barges of the burthen tonnage of 391,329 tons, giving an average burthen of 79 tons. Sailing barges: Returns have been made by 14 firms owning 106 vessels, of the gross burthen of 11,413 tons, which gives an average burthen of 108 tons per barge. Steam barges: Returns have been made by two firms owning seven steam barges of the gross burthen of 460 tons, which gives an average burthen of 66 tons. It has not been possible, up to the present time, to distinguish the divisions of tonnage as mentioned in the question.

3708. What is the legal definition of a barge especially in regard to (a) Port where it is registered; (b) Size and tonnage; (c) Means of propulsion?—There are three classes of barges in use upon the River Thames, viz., dumb barges, which are propelled by oars only, or are towed by steam tugs; sailing barges, which are propelled by sails; and steam barges. There are but few of the latter vessels in the Port of London. There is no limit as to size and tonnage of any of the before-mentioned craft.

3709. Have barges increased in size during the last fifty years, and, if so, of what description and tonnage? What is the most convenient size from every point of view?—Yes, the tendency of recent years has been to build larger dumb barges. The majority in use do not exceed 60 tons dead weight, but barges of various tonnage, both decked and open, are still necessary in order to meet the requirements of particular trades.

3710. Are barges when in dock subject to any bye-laws of the dock company, and are those bye-laws rigorously enforced?—Yes.

3711. Are you convinced that that is a correct statement?—Yes.

3712. Especially as regards small fines?—Yes, speaking broadly.

3713. You say it is true?—Yes, undoubtedly.

3714. Are barges at liberty to make use of the docks at any time or tide, and in regard to the use of the quays is any payment ever charged?—Barges when *bond fide* engaged in the work of delivering or receiving goods are entitled to pass in or out of the docks. The dock companies fix the times, usually from two to four hours before high water each tide. The time for the locking in and out is fixed by the dock companies, and is much too limited to allow of work being done in sufficient time to permit craft to reach their destinations. Barges are not allowed the use of the quays except for mooring purposes, and no operation is permitted on the barge except the necessary work of loading or discharging cargo without payment of dock dues.

3715. What number of men are employed on each description of barge when on its journey to and from ships? (1.) While in the river. (2.) While in the docks?—(1.) When under oars only for craft under 50 tons burden, one man; over 50 and under 150, two men; and over 150, three men. Whilst being towed one man only in each barge. (2.) One man or more according to the requirements of the work.

3716. Are barges ever left in docks without attendants?—Yes, at times, when safely moored, otherwise they become subject to charges under the Dock Companies' bye-laws. They are also liable to charges if the Dock Company find it necessary to remove them during the absence of the lighterman.

3717. Would you not agree that it is a matter of common knowledge and a notorious grievance in the Port of London that barges are left unattended?—Not unless they are properly moored. They are not left adrift, certainly, at the wish of the barge owner; for he is liable for any damage they may cause in their drifting state, and he is liable to penalties under the Dock Companies' bye-laws.

3718. But, apart from the penalties, you do not agree that it is the case that barges are left?—Not unattended, unless they are made properly fast.

3719. You say only when safely moored?—Quite so. There is not only the risk of damage to other craft, but there is also the risk of damage to the barge itself and the cargo if it is left drifting about.

3720. Now, will you state the total number of persons employed on the barges? (1.) Altogether. (2.) On barges belonging to members of the association?—(1.) The association cannot give this information, and are compelled to refer the Commissioners to the Watermen's Company. (2.) About 1,500 freemen and about 400 apprentices licensed by the Watermen's Company, and about 800 unlicensed men who find employment on the barges otherwise than in navigating the same.

3721. What is the proportion of employment for barges in connection with ships moored in the river, in connection with ships coming to quays or wharves in the river, and in connection with ships in the docks respectively?—We have found it impossible to afford this information, as there are no records kept to which reference can be made or which will enable the association to answer the question.

3722. Now will you give us any information as to the nature and extent of the business of barge owners which the association may be of opinion has a bearing on the inquiry of this Commission?—The business of barge owners is the collection and delivery of goods by barges on the Thames and the various docks, wharves, creeks, and canals thereon. It is impossible to give the tonnage and value of the cargoes moved. The number of barges employed is estimated at not less than 8,000, which will afford some indication of the magnitude of the trade and the great importance thereof to the Port of London as a means of distribution.

3723. Can you state any defects in the Port of London or its administration affecting barge owners' business and any proposed remedies?—In answer to that question I may say that my committee have drawn up short and concise answers which, with permission, we shall amplify by the evidence of our witnesses later. We have put the answers in sections, which I will read:

—(a) The law of compulsory pilotage in the port under which in the event of a collision occasioned by the pilot's default a ship owner is exempted and the pilot himself is not liable for more than £100 and his accruing pilotage. It is contended that the liability of the owner or master of a ship for loss or damage occasioned by the fault or incapacity of any pilot acting in charge of the ship should not be affected by the compulsory employment of the pilot. (b) The liability of a barge owner to pay to each and every claimant all damages which may be caused by collision between his barge and another vessel if such barge be in the wrong, whereas a ship owner, when liable, can, under similar circumstances, by virtue of the 'Merchant Shipping Act, 1894,' limit his liability, without regard to the number of claims, to £8 per ton, or, in case of loss of life, to £15 per ton. The barge owner claims to be placed upon an equality with the ship owner. (c) The necessity for improving the water way by deepening the channels at the entrance to the port, and between Gravesend and London Bridge. (d) The speed at which steamships, especially passenger vessels, travel between London and Gravesend, particularly in the summer months, to the injury of barges and their cargoes, a more effectual supervision by the Thames Conservancy, and prompt proceeding against offenders is called for.

3724. Are there regulations regulating speed in the lower river?—I am not sure that there are any. I think that there are not now. The Thames Conservancy had a bye-law, which I believe has been repealed, regulating the speed of vessels to seven miles an hour. I think now they rely more upon the general law that a ship must keep at such reasonable speed as not to cause damage to other vessels or to the shores of the river. I do not think there is any fixed limit.

3725. (Mr. Ellis.) That we can get from the Thames Conservancy. You do not speak of that first hand?—No. Then section (e) The facilities for docking and undocking of barges is insufficient at the present day, and means should be afforded for the locking in and out of barges at any state of the tide, instead of from three to four hours out of every 12, as now permitted. (f) The failure of the dock companies to provide sufficient tug power for towing barges within the dock water, and refusing to allow barge owners to keep tugs in the docks for the purpose of rendering such service.

3726. (Chairman.) Do you allege that this is the case?—Yes.

3727. Have the dock companies been appealed to?—I made application myself some two or three years ago to the dock companies to know whether they would permit me to keep a tug in the dock, and upon what terms. The answer was that they could not allow us upon any terms whatever. Certainly the accommodation afforded by the company is not sufficient to tow the barges as frequently and promptly as is required.

3728. Do you tell us that the dock companies have been appealed to, and have refused to give satisfaction?—They have refused to permit my company to keep a tug in the dock.

3729. And that was an official application to them, was it?—Yes.

3730. Have others done the same?—Yes, so far as I know. It is a matter of common complaint.

3731. But I am asking with regard to particular instances. Will you tell us when you made this application?—Some two or three years back.

3732. Can you show us the application?—I daresay I can find it.

3733. And the dock company's reply?—Yes.

3734. Will you let us have it?—Yes. Then section See 5576.

(g) The refusal of the dock companies to afford reasonable facilities for the passing out of laden barges in cases where a *bond-fide* dispute has arisen between the shipowner and the lighterman as to tally marks, conditions, numbers, or the like.

3735. In that case also you have instances in your mind to which you are referring?—Yes, many; and this matter I may say has been before the Board of Trade on several occasions recently. We have tried to get this particular bye-law amended. It is a bye-law sanctioned by the Board of Trade—"regulations" I think they are called. We have had several meetings before the Board of Trade with a view to getting that particular regulation amended.

3736. (Mr. Ellis.) These are rather general statements, although they are extremely important. I think you ought to give particular instances, and prove these general statements if you make them?—Yes, I can do that.

3737. (Chairman.) You allege that this is true?—Yes.

3738. We should like particulars. Can you give us them?—Yes, but I may not be able to get them to-day. I have not them here.

3739. With reference to section (g), we suggest that with regard to any grievances in this connection which you may have, you should put in some specific statement of what actually occurred?—Very well, my lord, that shall be done. Then section (h): The conditions affecting the delivery of goods from import ships to barges call for amendment. Craft are required to be in attendance for many days before the shipowner can or does in fact deliver. The docks, in consequence, become congested with craft. When the shipowner is unable to give delivery upon application, it is submitted that he should give 24 hours' notice to the consignee or his agent of his readiness to deliver, and that such delivery should be completed within 24 hours thereafter. That the shipowner should also be compelled to regulate the order in which goods are to be brought to alongside export ships, so as to avoid the further congestion of barges in the dock, and the loss caused to the owners by delay. (i) The want of accommodation for the quick discharge of vessels in the docks owing to the absence of modern appliances and methods, and in the river for vessels desiring to discharge there by reason of insufficient mooring accommodation. (j) The want of sufficient mooring accommodation for barges in the river. (k) Greater facilities are required from the Board of Customs with regard to the clearing of goods delivered overside; the granting of passes to leave the docks, and the working hours, which should be extended to 6 o'clock p.m.; the conditions applied to Tilbury Docks should be the same as those in force with regard to the docks higher up the river, as the carriers' liability is the same in each case.

3740. Will you explain this question with regard to the passes to leave the docks?—Do you mean the Customs' passes.

3741. We do not know quite to what you are referring there. Are passes necessary to leave the docks?—Yes, passes are necessary to leave the docks in all cases.

Mr. T. W.  
Jacobs, jun.  
20 Mar. 1901.

Mr. T. W.  
Jacobs, jun.  
—  
20 Mar. 1901.

First of all the pass is given by the officers on board the ships, and then it has to be revised by the Customs and the Dock officials before the goods are permitted to leave the docks. Then section (l) The obligation to employ only licensed men (either freemen or apprentices), without regard to the capabilities of the individuals and without any relief from liability for their negligence, as in the case of shipowners when pilots are compulsorily employed. The bargeowners claim the right to employ any person able, in their opinion, to do the necessary work, notwithstanding that he be neither a licensed waterman nor an apprentice. (m) The want of efficient police protection in the docks, especially at the time of strikes or labour disturbances. Owing to the peculiar circumstances under which work is carried on, the opportunities for intimidation in the lighterage business are much greater than with any other class of employment. The Metropolitan Police authorities refuse to send men into the docks, except on payment of all expenses, which are very heavy, owing to the large area to be protected, and these expenses make it quite impossible for private bodies such as the lighterage trade to avail themselves of the said protection.

3742. (Mr. Ellis.) I understand that these answers have been prepared by the Association of Master Lightermen and Bargeowners?—That is so.

3743. You are the authorised representative of that association in respect of these answers that have been given?—Yes.

3744. Were they prepared at any meeting of the board or committee of the association?—At a meeting of the council of the association. Many meetings, I may say, have been held to consider the answers to be given to these questions, and these are the answers the council arrived at after a good deal of consideration.

3745. Are they placed in your hands to lay before us, as the official representative of this Association of Master Lightermen and Bargeowners?—Yes.

See 5572.

3746. You make a general statement of the failure of the dock companies to provide sufficient tug power for towing barges within the dock water, and the refusal of the dock companies to afford reasonable facilities for the passing out of laden barges, and so on?—Yes.

3747. You clearly understand that the Commission will require either from you direct or through the secretary specific illustrations of these complaints, with the correspondence that has taken place, fixing the dates?—Yes.

3748. These are complaints against the dock companies, and we shall have the dock companies hereafter, and they must be in a position to answer specific complaints?—Yes.

3749. We must have particular instances, giving names and dates. You quite appreciate that?—Quite.

3750. (Rear-Admiral Hext.) With regard to a barge being left in the dock with only one man, if the dock company want it moved, can that one man move it?—Yes.

3751. Say a barge of 100 tons?—Yes; it is done constantly.

3752. Of course he can move it, but can he move it with the necessary facility?—In most cases I think so. I very seldom hear a complaint on that head—that the man is not able to move the barge quickly enough.

3753. Then you ask for more easy access to the docks, and also to have tugs in the docks, and questions of the same sort. Are you prepared to pay for those facilities?—Yes.

3754. And the extra pumping and the moving of barges by tugs if the docks provided them?—We are prepared to pay for the towage in the docks. That is done now in the Albert and Victoria Docks.

3755. With regard to the loss of water, two hours before high water, you wish to have access more frequently. Would you pay for the pumping required to make up the shortage of water?—No; I am not prepared to say we should do that.

3756. With regard to your answer concerning the want of sufficient mooring accommodation for barges in the river, would you pay for that accommodation or not?—We do not suggest that we should pay for it.

3757. Would you object to it?—Yes; we should object to pay for it.

3758. If it was provided?—Yes.

3759. You would like to have it for nothing?—It has not been increased in sufficient proportion to the increase of traffic in the river. It always has been free for all time.

3760. (Sir Robert Giffen.) With reference to greater facilities being required from the Board of Customs with regard to the clearing of goods delivered overside and the granting of passes to leave the docks, and the working hours, you say that the conditions applied to Tilbury Docks should be the same as those in force with regard to the docks higher up the river. What is the difference between Tilbury Docks and the docks higher up the river?—One difference is that the Customs will not permit barges to come from Tilbury unless they are locked down, whereas in the upper docks with certain goods they will permit the craft under certain conditions to leave the docks and get to the wharves without the necessity of the Customs locks. They will not under any conditions allow officers to come in the craft from Tilbury Docks, as they will in the upper docks, with bonded goods.

3761. Have you any objection to give further particulars under this head to show exactly what you mean?—None whatever. My company is not particularly concerned in Customs work, but there are two witnesses present who are able to give evidence on that particular point; they are in the habit of dealing with bonded goods.

3762. You are dealing with the Customs now?—Yes, on this particular question it is the Customs we refer to here.

3763. With reference to those questions about the number of barges, you stated that the number of barges employed is estimated at not less than 8,000, and then you stated in reply to another question that 67 out of a total of 88 members of your Association or persons identified with your Association, have given returns of very nearly 5,000 dumb barges, and 106 sailing barges, and 7 steam barges; so that your Association represents five-eighths of the whole business. Would that be a fair statement?—That is a fair statement.

3764. Are the remaining barges probably of much the same size as the barges represented by your Association?—Yes; I should imagine the large number represented by our Association would be average craft. Of course, there are many firms who are not members of our Association, but their business would be much the same.

3765. So that from these particulars we might have some idea of the total tonnage of the barges?—I think so, but I think the Watermen's Company could give it to you accurately.

3766. (Chairman.) Turning now to your personal evidence, we understand that you will give it as managing director of the Thames Steam Tug and Lighterage Company, Limited?—Yes.

3767. Will you give us particulars with regard to the company of which you are managing director?—The company of which I am managing director is a limited liability company registered in the year 1856 under the Joint Stock Companies Act. Its share capital is £57,200, all of which is fully paid up. The business of the company is that of carriers by water to and from the various docks in the Port of London. In addition to a large general lighterage business it also acts as sole lighterage agents for the under-mentioned railway companies, viz.: The Great Western Railway Company, the London and North-Western Railway Company, the London, Brighton, and South-Coast Railway Company, and the South-Eastern and Chatham Railway Company. The company own five tugs, and 320 dumb barges, lighters, and punts; in addition to which they have at present 30 lighters on hire from other persons. The average number of craft necessarily engaged in the company's work is about 400. Three months ago, when we were busy, we had 120 lighters on hire. To-day it is 30. The business fluctuates in that way, but the average number would remain the same taken for the whole year. My company employ upon an average 105 foremen, 30 apprentices, 110 watchmen, 5 engineers, 5 stokers, and 70 barge builders and repairers. The business which is now carried on by my company was first established early in the century, immediately after the incorporation of the Grand Junction Canal Company, and has gradually increased until it has reached its present

dimensions. I have been connected with the company for 31 years, and for the past 16 years have been, firstly, secretary, and then managing director. I have had the opportunity of making myself well acquainted with the mode in which lighterage business is carried on in the Port of London. I have made an examination of my company's books for the purpose of obtaining some data which will be of assistance to the Commission, and I find that the average yearly tonnage conveyed by the company's barges for the past three years is 600,000 tons, of which probably 70 per cent. passes into or out of the various docks. I have ascertained that the tonnage into and out of the various docks for one month, viz., May last, was 43,000 tons. It was a fair average month's work, and gives a total of 516,000 tons per annum to and from the docks. Of this month's work the tonnage inwards for export was 18,000 tons, and the tonnage outwards, either for delivery to the various railway companies or to private customers, was 25,000 tons. Of the above I estimate that 31,000 tons were collected from or delivered to the before-mentioned railway companies for export or for carriage inland or delivered by us to places outside the London radius, and 12,000 further tons were delivered by us at places and wharves within the London district, from which latter a portion was again distributed. That assuming the dock authorities were to succeed in imposing the rates upon goods carried by barges into and out of the docks and upon the barges entering and leaving such docks as suggested by the Bill brought into Parliament last Session, the goods carried by my company would have paid in respect of this month's work the sum of, say, £2,600, and the company itself would have been taxed in respect of the craft in the sum of £1,000, and my company would, therefore, necessarily be compelled, in conjunction with all other carriers by water, to increase the rates for lighterage. The said rates would have the effect of diverting water-borne traffic, as large quantities of goods now dealt with by barge would be taken over the dock-quays and conveyed away by land carriage; such charges would also seriously handicap the transshipping trade of London, which is a large and important one, and helps largely to freight our colonial and foreign steamers. The question of compulsory pilotage in the River Thames constitutes a grievance which for many years past has been keenly felt by lightermen and barge-owners. When, by compulsion of law, the navigation of a vessel is handed over to a pilot, it follows that in the event of collision the shipowner is exempt from liability, provided that he can show that his officers and crew gave the pilot the assistance, by way of look-out and otherwise, to which he was entitled. By section 620 of the Merchant Shipping Act, 1894, such pilot is not responsible for damage resulting from his neglect or want of skill, beyond the sum of £100 and his current pilotage fee. If therefore, by the negligence of the pilot of a ship a lighter containing goods of great value is run down, there is practically no redress. This condition exists over the whole stretch of 25 or 26 miles of river between Gravesend and London Bridge over which barges are being constantly navigated, and it is submitted that in view of the constantly increasing steamship traffic on the Thames the time has come when, in the interests of the lighterage trade, as well as for the general advantage of the port, the exemption of the shipowner from liability should be abolished, and that the Merchant Shipping Act should be amended in this respect. In consequence of losses sustained by my company through collisions with steam vessels upon the Thames, the following letter was sent by my Association to the Corporation of the Trinity House:—"The Association of Master Lightermen and Barge Owners, Port of London, 109, Fenchurch Street, E.C., 14th March, 1898. Sir.—Upon the 15th April last year, at about half-past 10 a.m., the weather being fine and clear and the tide flood, the s.s. "Amstelstroom," whilst in Limehouse Reach, and in charge of Edmund Liley, a duly licensed Trinity House pilot, overtook, collided with, and sunk the lighter "Ralph," belonging to the Thames Steam Tug and Lighterage Company, Ltd., who are members of this Association. The collision was so severe that the barge was instantly cut in two, and the lighterman who was in charge thereof narrowly escaped drowning. The pilot is alleged to have transgressed every Thames Conservancy rule, which, under the circumstances, he ought to have observed. The barge owners' loss amounts to £118 9s., and upon the owners of the "Amstelstroom" being applied to for payment, they promptly referred the barge owners to the pilot, to whom application was made in turn. The pilot ~~denied his liability~~, and sought to throw the

blame upon another s.s. called 'Guildhall,' which was either about to enter, or was in the act of entering, the Millwall Dock. An action was commenced against the pilot in the Queen's Bench Division of the High Court of Justice, in which action he appeared and delivered a statement of defence. The trial took place upon the 28th ultimo, before the Hon. Mr. Justice Mathew, who found that the collision was brought about by the reckless navigation of the 'Amstelstroom,' that no attempt was made and no measures were taken to endeavour to prevent it, and that the defendant, as pilot, had kept on his course regardless of the consequences. Judgment was therefore given for the plaintiffs for £100 and costs, which latter have been taxed at £52 0s. 2d. Application has been made for payment, but the defendant simply declines to make any proposal for a liquidation, and the plaintiffs are therefore left to proceed against him by such process of execution as may be most effective. In addition to the before-mentioned claim, the same company have another claim against the defendant in respect of damages arising out of a collision between barges belonging to them and a steamer under his charge, and Messrs. A. Frey and Co., Limited, also members of this association, have a claim against the same pilot for damages likewise arising out of collision. In no instance has he made the slightest attempt to liquidate these claims or to meet them in a compromising spirit, so that the barge owners must either put up with the loss which they have sustained, or incur the expense of bringing actions against him in order to compel him to do that which without compulsion he ought to do, and which my council understand he is able to do, as he enjoys regular and constant work. In the interests of the various members of this association my council write to bring these circumstances to your notice, and they respectfully invite your Corporation to exercise their disciplinary powers over the pilot in question. In making this request my council wish it to be distinctly understood that they have no personal feeling against the pilot complained of; but as so many cases of this kind occur, they give the foregoing as an instance of the necessity of some steps to be taken to compel the pilots to realise and meet the responsibilities cast upon them by the Pilotage laws. I am, Sir, your obedient servant (signed), Chas. J. Yonwin, Secretary. To the Secretary, Trinity Corporation, Trinity House, Tower Hill, E.C."

Mr. T. W.  
Jacobs, jun.  
20 Mar. 1901.

Sec 4047-9.

3768. Will you tell us what answer, if any, you received from Trinity House?—I will not say that we received any answer, but I saw the secretary of Trinity House. I expect we should have had a formal acknowledgment of the letter, but I don't think the matter was dealt with in the way that we thought it might have been at the time.

3769. (Mr. Ellis.) Can you say specifically whether there was an answer?—I cannot from memory. I should think there was an answer, but it did not deal with the matter.

3770. (Chairman.) Have you no correspondence to show us on the subject?—Not here.

3771. Or anywhere?—We should have it at the association, undoubtedly. If there is a letter I will undertake to let you have it. If an answer was given it led to no result.

See 4069-70.

3772. Will you continue your evidence, please?—Of the amount of the judgment recovered by my company, £152 0s. 2d., the sum of £16 and no more has been recovered during the past two and a half years from the pilot, who is an undischarged bankrupt. Upon being further pressed for payment he has stated that, in consequence of further claims on him arising out of other collisions, he should have to file his own petition in bankruptcy for the purpose of clearing off all his existing liabilities. A barge owner is liable to pay to each and every claimant all damages which may be caused by collision between his barge and another vessel, if such barge be in the wrong, whereas a shipowner when liable can, under similar circumstances, by virtue of the Merchant Shipping Act, 1894, limit his liability without regard to the number of claims to £3 per ton, or in case of loss of life to £15 per ton. The barge owner claims to be placed, and I submit that it is only just that he should be placed, upon an equality with the shipowner, and to be able to limit his liability in the same way. A short time ago certain members of my association were in the Admiralty Division, held to be liable in respect of a collision between their barge whilst under oars and a steamer lying alongside a wharf. In consequence of the damage to the steamer and cargo the barge owners had to pay altogether a

See 5575.

*Mr. T. W. Jacobs, jun.* sum of £2,000. The barge was a vessel of 73½ tons register. If she had been propelled by sails and registered under the Merchant Shipping Act her owners' liability towards both shipowner and cargo owners would have been £588.

20 Mar. 1901.

See 4066-7.

3773. (*Mr. Ellis.*) You say, "A short time ago." This is a specific illustration of an action at law, as I understand. Can you give us the date?—Yes; or I can, if you would prefer it in that form, ask the principal of the particular firm to come here and give that evidence.

3774. If a statement of this kind is made it is a serious thing, and you give it in support of your claim that barge owners should be put on the same footing as shipowners?—Yes.

3775. When you amend your evidence instead of saying "a short time ago" you can give the date?—Yes, I will give you that.

3776. (*Chairman.*) Now will you please continue?—The time has arrived when, in the opinion of the Master Lightermen of London, the restrictions at present imposed upon them in respect of their choice of servants should be abolished. The following resolution was on the 26th November last passed at a meeting of the council of my Association:—"Resolved: That in the opinion of the council of this Association the trade of the Port of London is seriously hampered by the restriction placed upon the employment of lightermen on the River Thames under Section 66 of the Watermen's and Lightermen's Amendment Act, 1859, and the time has arrived when Parliament should be asked to abolish such exclusive privilege and grant to employers the right to employ such men as they deem suitable." This restriction may have had justification in years gone by prior to the advent of steam tugs, or when steam towage was in its infancy, and when a certain amount of skill in navigation and a considerable knowledge of currents and tides were essential on the part of those placed in charge of lighters. Now, owing to the employment of tugs, the duty of such men is to a large extent confined to the making fast of ropes and of watching the property placed under their charge. As an illustration of actual conditions which prevail the case of a sailing barge may be instanced. So long as she does not trade between two points, both of which are within the limits of the Watermen's Company's Act, she is under no necessity to employ licensed men. She comes up the river in charge of two men, neither of whom is certificated nor is a freeman of the Watermen's Company. These men are invariably as capable, thanks to their experience in navigation, as are the licensed watermen whom master lightermen are now compelled to employ even on towed craft, although the tug herself is exempt. The existing obligation of the master lightermen to employ only certain men for the purposes of their trade could be understood if the master were exempt from liability as is a shipowner in the case of employment of a compulsory pilot, or if there were any guarantee of special qualification on the part of those who are licensed by the Watermen's Company; but, as a matter of fact, an apprentice entered at 14 years of age is considered at the age of 16 to be quite equal to the work of a licensed lighterman. This of itself is evidence that no special skill is required. It is contended that the employers should be at liberty to engage any man whom they deem fitted for their work, more especially as under the present régime the statutory obligation to employ only licensed men is accompanied by no corresponding duty on the part of the latter to do the work required by them. If master lightermen employ other than licensed men they render themselves liable to penalties; and if new hands are taken on during a strike they must be discharged directly licensed watermen offer to resume work, even though temporarily. It is submitted that the maintenance of the obligation in its present form is undesirable at the present day, and that the restrictions imposed upon masters should be removed. I desire to point out that the trade of London, as a great distributing centre, has largely depended upon that facility for the water carriage of goods within the limits of the port which the Joint Committee have sought to imperil. It may be true that the tendency of the age is towards direct shipment, but a very large transshipment trade is maintained in the Thames at the present time, and will be maintained all the while cargo, whether from inland centres, coastwise, or from the Continent, may be relied upon to make up the freight of ships which, owing to their great size, afford an economical means

See 5628.

of transport. Were any restriction placed upon the present freedom of the port in respect of the carriage of goods by means of lighters and barges, there is good ground for apprehending a diversion of cargo and a consequent loss of trade which would be inimical to the best interests of the Thames. I submit that at the present day, when there is great and increasing competition in the steamship trade, it is extremely undesirable that the welfare of the Port of London should be largely dependent on the policy adopted by dock companies whose interests are necessarily determined by dividend considerations, and whose financial prospects have been unfavourably affected by the fact that goods now pass more rapidly into consumption than formerly, and do not therefore yield so large a warehousing profit as in previous years. Looking at the future of the Port of London, it would be eminently desirable that its river and dock waters should be controlled by some representative public body which would be able to take a broad view of its requirements, and to anticipate those improvements which are essential to the maintenance of its position among the great ports of the world. The aim of such a body would necessarily be to offer all possible facilities to the various interests concerned so that the cost of work in the port would, together with its more rapid despatch, enable London to hold its own against the rivals which now threaten it.

3777. (*Sir Robert Giffen.*) With reference to what you have just now said, can you give us any idea of what kind of public body you have in your mind?—A public body that would be representative of the interests that are concerned in the commerce of the port: shipowners, merchants, and undoubtedly the representatives of the Corporation and the London County Council; and we might suggest the lightermen.

3778. When you say "controlled" is it your idea that they should be the owners of the docks as well?—Undoubtedly of the dock waters.

3779. And the quays?—Of course that would involve the present warehouses of the wharfingers along the riverside. They might be let, as the wharves are now, to private owners, and worked separately from the dock waters.

3780. First of all they would be in the ownership of this public body, and then let by them?—Yes.

3781. You have not gone into the details of what the expense would be, and how much property would have to be acquired, and points of that kind?—No, we have not. I think wharfingers and merchants are perhaps better able to deal with that than the lightermen would be.

3782. Then with reference to what you say as to the barge owners being obliged to take back men who have been on strike, the moment they are willing to come in again, have you ever tested a case of some man who has left his employment and gone on strike, and then come and offered to be taken on again?—I have passed through several strikes, and my experience is this: If I fill up the barges with men who may be competent to navigate them during the time of strike, when I am entitled to employ a man who is not licensed, immediately a man with a licence tenders himself for employment at the usual rate of remuneration I am bound to employ him.

3783. Have you ever tested such a case?—Yes.

3784. Can you refer us to the particulars of the case?—I would not risk a judgment. The Act of Parliament is so specific and clear. There is no doubt about it whatever. I am compelled under the Watermen's Act to employ a licensed man, so I have never risked taking a case to Court.

3785. That is not an answer to my question. I wished to know how far you have tested the point. You have never appealed to a judge on the question that, when these men have refused employment and you have been obliged to employ other men, the men who have been out on strike have come back again, and you have been bound to dismiss the other people, and take back the men who have been out?—I am not speaking of such a case as you put. The man does not refuse employment at the usual rates. I say when the men are prepared to come back on terms that are arranged, then immediately I am obliged to employ the licensed men.

3786. I wished to know how far that point has been before the judges and actually decided?—Such a case has not arisen because, as I say, we should not be just-

fied. I do not know whether I have made myself clear. The section of the Act of Parliament to which I am referring says that if we are unable to employ a licensed man at the usual rate of remuneration, then we may employ whom we like; but if the licensed man is prepared to work at the usual rate of remuneration, which becomes the usual rate as soon as we have agreed terms, then we are compelled to employ him. In such a case we have never tested the point, because there has been no occasion for it. We are obliged to take the man back, the section of the Act of Parliament is so clear.

3787. That is all you have to say, is it? Your interpretation has never, in fact, been brought to the point of a judicial decision?—No, I cannot say that it has.

3788. You say that on the average you have about 400 craft engaged in your work?—Yes.

3789. Then you give the number of people that you employ on the average, including, I think, a good many that are not engaged in navigation, properly speaking. I find that you have not got one man on the average for each craft. You say you have 105 freemen, 30 apprentices, 110 watchmen, five engineers, five stokers, and 70 barge builders and repairers. Those do not add up to 400 altogether?—That may be, because we should have probably, at our railway depôts, for instance, 30 or 40 barges at one time waiting to discharge, which may be there waiting for days together. They would not require a man in attendance on each barge.

3790. How many of these men that I have enumerated are actually engaged in navigation, and what is the average number you have engaged in navigation?—The freemen and the apprentices would be generally engaged in navigation.

3791. That is 135?—Yes, that is 135.

3792. And the watchmen?—They would be engaged in looking after barges in the various docks.

3793. You are not compelled by the Watermen's Company to employ them?—No.

3794. So that 135 is the number you are compelled to employ for 400 craft?—Yes, that is so.

3795. (*Rear-Admiral Hext.*) You have referred to towage by steam. Do you know that lighters are navigated by oars, independently of steam?—Yes; but the great majority are towed.

3796. And, in the case of your being permitted to employ your own men independently of the Watermen's Company, would you have any examination at all to ascertain whether they are qualified?—We should have to judge by our experience, the same as we do now. We do not look upon the licence as any guarantee of a man's competency. Unfortunately, we are bound in all cases to employ the licensed men, but we should have a much larger area of competent men to select from if we were not.

3797. But the fact of their being freemen of the Watermen's Company surely is supposed, at all events, to be a guarantee that they know their work?—It is supposed to be; but we do not look upon the licence as any guarantee of their ability. We rely upon the famous experience and knowledge of the particular men. I think the reference that I made to the fact that an apprentice at 16 holds the licence which qualifies him to navigate the largest craft is an answer, perhaps. If a lad of 16 is qualified it does not seem to indicate that a very great amount of skill is guaranteed by the licence; but the lad of 16 gets the licence.

3798. (*Mr. Peel.*) I see you do a great deal of your business with the railway companies?—Yes.

3799. You spoke of railway depôts?—Yes.

3800. Where do you actually deliver to the railway companies, do you deliver to wharves?—To and from the railway depôts, which are situated at the Collier Dock, Poplar, for the London and North-Western and the Great Western Railway Companies; Dudman's Dock, Deptford, for the Brighton Railway Company; and Brentford Dock again for the Great Western Railway Company.

3801. Is it always going into a dock? Do you always go from one dock into another dock?—The whole of the business is not done within the dock. At Deptford Wharf there is an outside wharf for the Brighton Railway Company.

3802. Which is possessed by the railway company?—Yes; and we deliver to and from wharves for the railway companies as well as to and from the various docks.

3803. You said that any charges made on the barges would affect the transhipment trade of London?—Yes. *Mr. T. W. Jacobs, jun.*

3804. Of course you do not apply that to the business which is not transhipment trade?—The transit trade would affect London undoubtedly—that which passes to the railway companies for transport to various parts of the country inland. To the extent of any toll imposed upon traffic carried by barges the Port of London would be handicapped as compared with ports such as Liverpool or Hull. The same foreign ports send both to Liverpool and London, and that which is distributed in the country is distributed from either port, according to the facilities which are offered. *20 Mar. 1901.*

See 5628.

3805. I thought you laid special stress upon it with reference to the transhipment trade in goods coming from foreign ports?—Yes; and goods passing into the country. My view was to draw a distinction between goods which passed through London for other destinations and those which remained in London for consumption.

3806. (*Mr. Ellis.*) I will ask you a few questions about this compulsory pilotage matter, which you have raised. We understand that you say your secretary will let us have the reply to the letter you have read?—Yes. *See 4069-70.*

3807. You had an interview, I think you told us, with the Secretary of the Trinity House?—Yes, as a result of previous interviews I had had with the Secretary of Lloyd's and the chairman of one of the big underwriting associations.

3808. We are at present dealing with Trinity House. Was the Secretary of Trinity House impressed with this grievance?—Yes, I think so. He led me to believe so; but he put it that the Trinity House could not take the initiative in any reform that was necessary.

3809. This is a case, as I understand it, in which a man who you say now is an undischarged bankrupt is in the service of the Corporation of Trinity House, and was unable to meet his obligations imposed by a court of law to the extent of £152, and that you suffered a loss of £136. Am I correct?—Yes.

3810. That is a correct recital?—Yes; that is so.

3811. Did the Corporation of Trinity House offer any defence for having such a person in their employment?—The only excuse offered, if I may so call it, by the secretary was that the man was moving a large number of vessels upon the river, and that, having regard to the extent of the business he did, the Trinity House Corporation did not feel justified in dealing with him in a summary manner, to the extent of withdrawing his licence or curtailing his privileges.

3812. Then the secretary of your association makes this assertion in the last paragraph of the letter: "So many cases of the kind occur." Do you come before us to corroborate that?—Yes.

3813. You see this is a serious matter?—Yes.

3814. It is a charge against the Trinity House. No commercial undertaking would go on employing such a person as that, and I want you to be very careful. You say you corroborate that statement—"So many cases of the kind occur"?—Yes.

3815. Now can you give me any of those cases?—I have mentioned two or three cases here against Liley, this particular pilot.

3816. Yes, we have got those, but I mean apart from those cases?—I have another case in my mind where a barge was run over and sunk.

3817. Can you tell us the name of the man?—I could not tell you without reference. I could not give you further particulars.

3818. It is not that I am wanting these things, only I want the corroboration?—We can furnish further evidence upon this point undoubtedly, if further instances are required.

3819. These words of the secretary of your association are rather serious: "So many cases of the kind occur." You have had 30 years' experience?—Yes.

3820. You are a witness of great experience, if I may say so. Am I to take it from you that you corroborate the secretary of your association in these words: "So many cases of the kind occur"?—Undoubtedly.

*Mr. T. W. Jacobs, jun.* 3821. In other words, you know that the Trinity House has a number of men who are unable to meet their obligations in this respect in the same way as this man Liley?—My own company have had other cases of the kind, and I think other witnesses will be here before you, who will be able to give you specific cases to-day.

20 Mar. 1901.

3822. I am asking you with your 30 years' experience behind you?—There are undoubtedly other cases where pilots have not been able to meet their obligations?—

3823. Licensed pilots?—Yes.

3824. Can you give us the names of two or three?—I cannot offhand.

3825. But, surely, this is a serious matter, and you put it before us as a serious matter. Are you unable to tell us the names of any other pilots. I will not press the matter further, if you are not able to tell us any other names?—No, I am not able to give you specific names. I can furnish further particulars undoubtedly.

(*Mr. Ellis.*) But when a witness comes here he should have all the facts.

Recalled 4066

Mr. WILLIAM VARCO WILLIAMS called and examined.

*Mr. W. V. Williams.* 3826. (*Chairman.*) You are chairman of Samuel Williams and Sons, Limited, a member of the Thames Conservancy Board, a member of the Watermen's Company, and a Commissioner of Sewers for the county of Essex?—Yes.

3827. You have had 25 years' experience of the Port of London, and are well acquainted with the character and extent of the work which is carried on therein?—Yes.

3828. Will you tell us the capital of your company?—My company has a capital of £280,000, and owns eight steam tugs, 190 barges, and four steam dredgers. During the past year we lightered between 900,000 and 1,000,000 tons, of which about 100,000 went into dock. I may say that in addition to the 190 barges that we possess ourselves, we have a large number of craft on hire from time to time—on an average about 30, with a tonnage of 3,600 tons. My company are also owners of a continuous length of river frontage, amounting to something over a mile on the Essex shore of Halfway Reach. With regard to the proposal that quays on the Thames should be substituted for further dock accommodation, my company have from time to time given this matter very serious consideration. Antwerp and other continental ports, where the system is in operation, have been visited, and the conclusion arrived at is that the cost of providing quay space, with the necessary depth alongside of, say, 25ft. at low water (ordinary spring tides) is prohibitive, and that it would be far more economical to increase the facilities of the port by either extending the present docks, or, better still, by building new ones.

See 3846-71

3829. You say "the conclusion has been arrived at." Do you state this of your own knowledge?—We took out certain figures, and that was the conclusion we arrived at.

3830. Have you gone into the matter of cost?—Yes, we have gone into the matter of cost.

3831. And prepared estimates?—I cannot say that they were of a very definite character. We were soon satisfied that it would be more economical to construct a dock upon this particular property that we possess than to put a quay wall along the river front. On these grounds I consider that the Dock Companies have received very considerable assistance and advantage in being permitted by their Acts of Parliament to provide quay space in their docks at so much cheaper rate than the same could be provided on the river banks. The chief difficulty that would be met with in constructing quay walls, which would have to be at least 50ft. in height, would be the foundations. The rise and fall of the tide is so great that extraordinary care would have to be exercised in mooring and continual watching; while the cost of providing the special class of machinery for either discharging or loading cargo would be great, and the difference in time as compared with a vessel discharging alongside the dock quay would be considerable. Were the river to be dredged to a depth of 25ft. alongside any such proposed quay for any considerable length, it would probably, we are advised, materially alter the direction of the scour of the river.

3832. By whom were you advised?—We were advised by the Thames Conservancy Board. We approached them to see whether permission would be granted by them as the authority to dredge a berth of that depth alongside. The suggestion that we received from them was that there would be probably opposition from them on the ground that it would so materially alter the scour of the river that they would not allow us to do it.

3833. Have you taken the expert opinion of an engineer on the point?—No, not beyond that. In my opinion the deepening of the channel to 30ft. up to the Albert Dock, and widening the same to 1,000ft., while

doubtless desirable from many points of view, is, on the score of the enormous expense, inadvisable at the present moment. The cost of dredging alone has been roughly estimated at a sum of £2,000,000, entirely exclusive of the necessary training walls in the lower reaches, which would cost a very large sum.

3834. Can you tell us by whom this estimate was made?—There, again, we have not gone very closely into the figures, but I may say that we have been engaged in dredging operations in the River Thames and in other ports from time to time, and, taking into consideration the quantities that would have to be dealt with, that was our estimate as to what it would probably cost.

3835. That was the estimate of your company, you mean?—Yes; that was the estimate of our company, we having some considerable experience in work of a similar nature. In addition to this, there would be the serious question of maintenance of the river walls under the jurisdiction of the Sewers Commissioners for Essex and Kent respectively, which walls might and probably would be materially affected by such deepening. These are merely floating walls, and when once in any way disturbed, it is a most difficult and expensive operation to render them again secure, as I can vouch for by my own personal experience. I think that very great delay is caused to the traffic generally, owing to the fact that the dock companies, except in the case of the Surrey Commercial Docks, have not sufficient pumping power for maintaining their head water in the dock to admit of their making use of the locks, except for two or three hours before high water. Take, for instance, a tug with six barges in tow, containing, say, 800 tons of goods. Leaving London Bridge at high water, she will be outside the Albert Docks entrance about two hours afterwards. She has, under present conditions, to lie there with her tow during the remaining five hours of the ebb, and probably two or three of the flood before the barges are allowed in. By the time the craft coming out of the dock can be got hold of by the tug, it is frequently too late to save high water even up to London Bridge. Were facilities afforded for docking and undocking craft on the ebb tide, so as to get those undocked away on the low water and early flood, they would then be well out of the way by what is ordinarily called tide time, which is naturally the proper time for handling steamers and other large vessels coming in or going out of dock. In my opinion nearly the whole of the present difficulties existing in connection with the Port are owing to the dock companies lacking the necessary means to bring their plant and machinery into such a state of efficiency as to meet latter-day requirements; in other words, the delays which shipowners complain of are not in my judgment brought about, except in a very few instances, by their inability to navigate up and down the river, but by the trouble they experience in docking and undocking and the handling of their cargoes when alongside the dock quay. With regard to compulsory pilotage, I am of opinion that the system is an extremely unsatisfactory one, and should be modified. Also that the same privileges as to limitation of liability should be granted to the bargeowner as to the shipowner. I agree upon these points with the views which have been expressed by Mr. Jacobs. So far as the lighterage trade is concerned, they have no reason to complain of the administration of the Thames Conservancy Board, who in their regulations for traffic, providing of mooring accommodation, etc., have always endeavoured to meet the trade in a fair and equitable spirit. I am strongly of opinion that steps should be taken to limit the speed at which steamers, especially excursion boats during the summer months, should be navigated, and I believe that in the

best interests of all concerned it would be most desirable that the larger class of excursion boats should not be permitted to navigate above Tilbury or Gravesend. With regard to the proposed abolition of the privileges of the watermen and lightermen on the River Thames I agree that some modification of the present system is desirable. I believe that some form of registration and licence is necessary, especially in the case of the watermen.

3836. With reference to your statement as to the dock companies lacking the necessary means to bring their plant and machinery into such a state of efficiency as to meet latter-day requirements, can you give us any more specific complaint? This is made in very general terms?—I am afraid I cannot go any nearer than that. We do say that as lightermen we have these difficulties in getting in and out at low water.

3837. To begin with, I am speaking more particularly with regard to what you told us as to the difficulties at present existing owing to the dock companies not having the necessary means to bring their plant and machinery into a state of efficiency. Are you referring to anything beyond?—No, it is only in general terms. In my opinion I do not think they have the same amount of labour-saving appliances in the Port of London that they have elsewhere.

3838. For instance?—For handling bulky general cargoes. I should say grain and that kind of thing—especially grain perhaps.

3839. Is that what you were more particularly referring to?—This is what I had more particularly in my mind.

3840. Have you any other specific instance?—I have no other specific point beyond the one I mentioned. That is the difficulty with regard to getting in and out of the dock; and I should also corroborate what was said by the previous witness with regard to towage.

3841. You told us that in your opinion the dock companies lack the necessary means to bring their plant and machinery into a state of efficiency?—Quite so.

3842. Do you say that there you are referring to grain cargoes?—To the handling of grain cargoes and labour-saving machinery generally; and in the Albert and Victoria Docks we find in practice that the tugs that are at our disposal for towing craft up and down are out of date and not at all suitable for the purpose.

3843. That is two things you have told us of. Have you anything else?—I have nothing else.

3844. And you complain of the handling of the cargo when alongside the dock quays?—Yes, I have nothing specific in that way.

3845. (*Mr. Ellis.*) I am rather anxious to probe this engineering matter a little further. Are you an engineer?—No, I am a lighterman.

See 3828.

3846. You said, "The conclusion arrived at is that the cost of providing quay space, with the necessary depth alongside of, say, 25ft. at low water (ordinary spring tides), is prohibitive." Can you tell me in a sentence or two on what you base that: what investigation you made; how the conclusion was arrived at, and by whom?—It was based upon our own personal experience in connection with the mile of river frontage to which I have alluded, of which we are the owners. Our original idea was to put the quay wall there. We made a number of experiments on the spot, and took bearings, and so on; we took out roughly the estimated cost of putting this wall in, and the conclusion we arrived at was that it was actually cheaper to build a dock with the ordinary entrance than to construct this quay wall on the outside of our line of frontage.

3847. It is based on the personal experience of your company?—Yes; it is based on our own personal experience on the spot.

3848. Then you said that if the river were to be dredged to a depth of 25ft. alongside any such proposed quay for any considerable length it would probably, you were advised, materially alter the direction of the scour of the river. Does "advised" in that case mean the Thames Conservancy's intimation that they would not permit it?—It was not of an official character from the Thames Conservancy; it was an opinion expressed by Mr. More, the engineer. When we asked him if we suggested to carry out this quay wall whether there would be any objection from an engineering point of

view by the Thames Conservancy that was his personal answer. It was not official. *Mr. W. V. Williams.*

3849. Then it is Mr. More really?—Yes.

3850. Then you spoke of the deepening and widening the channel up to the Albert Dock, and the cost of dredging and so on, and then you said, in answer to the Chairman's questions, that you had very considerable experience in dredging. Will you give us that in specific terms? Where have you had considerable experience?—We have been engaged in dredging operations in the River Thames for a good many years. I think our first dredger was built in 1869, and since then we have been dredging continuously in the River Thames, and we have been to Portsmouth, Plymouth, and other places; therefore, we have all the data at our disposal for forming a reasonable estimate as to the cost of such a gigantic operation as this.

3851. It is based upon your own experience?—Yes.

3852. What dredging per annum have you done during the 25 years, and where?—We have been continuously dredging in the River Thames, practically. *See 5578.*

3853. Where, in the River Thames?—In various parts of the River Thames. We have raised large quantities of Thames ballast for the making of concrete and other purposes, so that we know what the cost of dredging operations is. We have done a great deal of dredging for the dock companies.

3854. I want something more specific, if you please. What is your maximum in a year in thousands of tons?—I have not that at my fingers' ends, but I can furnish it.

3855. You understand my object. I want to get at the magnitude of your operations?—Yes; quite so.

3856. How many days in a year are your dredgers at work?—We work 300 days in the year.

3857. Every day except Sunday?—Yes, every day except Sunday, practically.

3858. Of what capacity is the dredger?—The present dredger has a capacity of 300 tons per hour.

3859. Would you like to say it is continuous; that the dredger is at work ten hours a day for 300 days?—No. Owing to the distance we have to go it is only towards low water that we can reach the stuff. But we have done a great deal of dredging outside the Albert Dock entrance. When the new jetty was placed there we did a good deal of work for the Dock Company. We have been dredging for the new ironclad which is to be launched from the Thames Ironworks to-morrow. We are constantly engaged in such work.

3860. At all events, you have considerable experience in dredging?—Yes, considerable—especially in connection with the river Thames.

3861. When you refer to the enormous expense, do you do that as one of the public, or do you do it as representing your firm. I want rather to know what your interest in the matter is?—Our interest as lightermen is that the facilities of the port should be increased, and that the trade of the port should be increased. We consider that a sum of £2,000,000 might be more profitably spent in other directions. That is our point.

3862. But you would like money spent on the port and river?—It requires it, without doubt.

3863. Then when you speak of the shipowners, forgive me for suggesting that your craft are not ocean-going vessels, of course?—No, they are not.

3864. To that extent the persons who have the ocean-going vessels may be left to speak for themselves, may they not?—Quite so.

3865. Then speaking with regard to the proposed abolition of the privileges of the watermen and lightermen, you said: "I agree that some modification of the present system is desirable." Can you give us a little more specifically what is in your mind?—The suggestion has been made that the privileges of watermen and lightermen should be absolutely and entirely swept away. On that point I am at issue with most of the members of the Association, especially in connection with the watermen. The watermen are a class of men who are employed in rowing labourers from the shore to and from steamers and other vessels working in the Pool and other districts. I think that, at any rate in their case, it would be most desirable that they should be men who have passed a reasonable examination in connection with the river, and who are properly acquainted with it. They frequently

*See 3835.*

Mr. W. V.  
Williams.

2 Mar. 1901.

carry eight or ten men in their boats, and if incompetent men were allowed to navigate these boats I think very often there would be a serious loss of life which should be provided against. With regard to the lightermen, I do not know that there is so much to be said for them. It is quite true that nowadays nearly all the work of the port is done by towing, but as far as the apprentices are concerned I do not quite agree with what Mr. Jacobs said about their having their full licence at 16 years of age. I think in that case the barge they are in must be towed behind a tug. I do not think they would be allowed to navigate a barge under oars.

3866. What you have now said amplifies and explains the word "modification"?—Yes.

3867. I gather that you differ from the opinion of your Association?—Yes.

3868. And even from the last witness, Mr. Jacobs, in some respects?—Yes.

3869. (Mr. Peel.) You said the speed of excursion boats should be limited. At what speed are they allowed to go now?—There is no limit. The Thames Conservancy have no bye-law dealing with this matter. It is more a question of fact to prove that they were travelling at too great a speed on any particular occasion. What may be an extravagant rate of speed at one point may not be at another. But we suffer a great deal from the speed at which these boats do travel from time to time. Off Dagenham we have a number of barges constantly lying loaded, and on Sundays when these excursion boats are passing up and down, we find it necessary to have tugs and men in attendance in order to make the craft fast, as they may be broken adrift by these vessels passing up and down. They are continually increasing in size, and we do really believe that the interests of everybody would be served if they were not allowed to come above Gravesend or Tilbury. We consider that there is a very great risk to life and an extremely great risk to property in their coming above there.

3870. Could you give us any specific instance of damage which you have suffered in that way recently?—I could furnish you in the course of the day with numbers of claims that we have sent in and been paid.

3871. You have not had any barges sunk by these steamers, have you?—Oh, yes.

3872. With reference to deepening the channel, you say it is desirable from many points of view. Is that with reference to these larger steamers which are now coming up the Thames?—Yes.

3873. Is there any other point of view from which you think it would be desirable to increase the depth of the channel?—No. I think that is the only point.

3874. And your sole objection to deepening the channel is the expense?—I think the money might be spent in a better way. I think that is not what is most wanted.

3875. But, of course, if the non-deepening of the channel prevented these larger vessels coming up, you would consider that a very serious blow to the trade of London?—I do not think it does prevent them coming up. It merely incurs a certain amount of delay, and if the dispatch were increased by an hour or two occasionally, or on an occasional boat, I do not think it is worth paying this money for it.

3876. (Rear-Admiral Hext.) You say your company owns four steam dredgers; when was the first built?—In 1869.

3877. And the last?—Last year.

3878. At what depth of water can you dredge?—40 feet.

3879. Then practically you can dredge the Thames at any time of the tide; that is, with some; I presume they are not all 40ft.?—We have had to go lower down the river year by year to find this material.

3880. But I am talking more especially of dredging shoals and deepening the river for the requirements of trade. What do you take as the rise and fall of the Thames?—20ft., practically.

3881. Do the dredgers all dredge to 40ft.?—No; we have two that would dredge 40ft., or probably a little more, but about 40ft. is their proper working depth.

3882. They are ordinary ladder bucket dredgers, I suppose?—Yes.

3883. How much would the largest carry?—She carries nothing but her own machinery. She loads barges or hoppers.

3884. Have you any steam hopper barges?—None.

3885. You mentioned the term "floating walls"; will you tell me what "floating walls" means?—In front of our property we do not find in practice that the wall has any foundation. We prove by experiment that the tide will actually find its way underneath the wall. We have there a lake of some 80 acres of water, and we find when we have a very high spring tide in the summer months, and there is very little water coming down from the country to the lake, that the water will find its way out of the river, and actually flow up into the lake. Then when we have a quantity of flood water down, as we have at the present time, and we have an extremely low spring tide the water will flow up on the outer side of the wall in the river.

3886. You have spoken of facilities being afforded for docking and undocking craft. Would you be prepared to pay for any extra pumping?—No.

3887. Then with regard to what you have said about limiting the speed of steamers, I presume that the paddle-wheel vessels affect you more than the screw vessels?—Generally speaking that is so.

3888. Are not some of those accidents to which you refer owing to the barges themselves being overloaded?—Situated as we are, in a rather exposed position, we never load the barges beyond a certain depth.

3889. I ask that question because I have noticed barges once or twice affected by a steamer going down the river, and water washing over them, and it appeared to me that the barges were very much overloaded?—I do not think I could admit that the damage is caused by the overloading of the barge. We say it is owing to the excessive rate of speed at which these vessels are navigated at certain states of the tide.

3890. (Sir Robert Giffen.) How many men do you employ in connection with the 190 barges, and how many of them belong to the Lightermen's Company?—I should think between 75 and 100. It varies at different times of the year.

3891. Altogether you employ that number?—Between 75 and 100.

3892. How many of those belong to the Lightermen's Company?—I am referring to the lightermen pure and simple—lightermen and apprentices.

3893. (Mr. Ellis.) Have you read any of the evidence given before this Commission?—Some of it.

3894. Let me refer you to a question that was put by Sir John Wolfe-Barry on the 4th December. It is Question 2907. He asked a witness "From your knowledge of the craft on the river do you think any difficulty would be experienced if the monopoly of the 'Watermen's Company was broken up?'" I put that question to you?—I do not think there would be any difficulty in carrying on the trade of the Port, but I do say that there would be a serious risk if these watermen's boats were to be allowed to be navigated by incompetent men.

3895. In fact your reply was given to me when you amplified the word "modification"?—Yes.

Recalled 35

Mr. RICHARD LAMBERT called and examined.

Mr. R.  
Lambert.

3896. (Chairman.) You are manager and secretary of the Union Lighterage Company, Limited, of London?—Yes.

3897. You appear here representing the Association of Master Lightermen and Barge Owners?—Yes.

3898. Will you give us some particulars with respect to the Union Lighterage Company?—I have had 33 to 34 years' experience in the lighterage trade in the Port of London. The Union Lighterage Company, Limited,

has a capital of £50,000, and £80,000 debentures, and was incorporated in 1876. It commenced business with between 40 and 50 barges, and now owns 349 barges of a dead weight capacity of 23,000 tons. The company also hires barges, as occasion requires, and when busy has some 400 barges at work. The company also owns five steam tugs, and has its own barge building and repairing yard, and employs from 65 to 70 licensed lightermen, from 30 to 50 apprentices, and from 70 to 75 non-freemen. I have taken out parti-

culars of the tonnage carried by the company in the month of March last as a fair average month, and find that 64,000 tons of goods were lightered. Of this quantity about 9,000 tons was traffic to and from the railways, about 15,000 tons was transshipment traffic to and from coasting and continental steamers, 12,000 tons was on account of wharfingers, 14,000 tons was oil, and about 14,000 tons were timber and goods to factories and private wharves on river and canals (about 35,000 tons was traffic in and out of docks). I have considered the questions which were issued by the Royal Commissioners to the Master Lightermen's Association, upon the council of which I am a member on behalf of my company. I think it is an acknowledged fact that owing to the increase in the size of steamers they are unable to go into the upper docks to discharge, and as there is not much warehousing accommodation in the lower docks, a very large portion of their cargo has necessarily to be brought up the river by lighters, and consequently there has been a considerable increase in the lighterage business during the last few years. The collection and delivery of goods by lighters enables merchants, wharfingers, and manufacturers to get such goods conveyed from and to their premises on the river and adjacent canals at a very moderate cost, and any dues levied upon the lighters or upon their cargoes for entering or leaving the docks would act prejudicially to those, including Master Lightermen, who have embarked very large sums in acquiring and extending waterside premises and building up businesses on the strength of the various Acts of Parliament passed during the past century, giving lighters free access to and from the docks. The law of compulsory pilotage in the port, under which, in the event of a collision occasioned by the pilot's default, a shipowner is exempted, and the pilot himself is not liable for more than £100 and his current pilotage, is felt to be a hardship. This is a very old grievance, and the hardships from time to time suffered by the owners of craft and goods have been laid before various Governments. I submit that the time has now arrived when it should be settled that the liability of a shipowner for loss or damage occasioned by the fault or incapacity of any pilot acting in charge of the ship shall not be affected by the compulsory employment of the pilot. The unlimited liability of a master lighterman is a very serious matter, and calls for amendment. At present the law holds a master lighterman liable for any loss of or damage to goods he carries, unless such loss or damage arises from the act of God or the King's enemies, and he is also liable for any damage caused by his barge to other vessels, cargoes, and persons to any amount arising from the negligence of the man in charge, whom, by virtue of Section 66 of the Watermen's Company Act, he is compelled to employ. Master lightermen maintain that they should be placed on the same footing as the owners of sailing barges registered under the Merchant Shipping Act, whose liability under similar circumstances is limited to £8 per ton, or in case of loss of life to £15 per ton. The obligations placed upon barge owners by Section 66 of the Watermen and Lightermen's Act, operates prejudicially to the interests of the trade of the Port. At the present time a very large proportion of the barges used for the transportation of merchandise are towed by tugs. No skill is required on the part of the man in charge of a barge so towed, and the present certificate held by him is not evidence of his competency. In order to strengthen my contention, I desire at this point to call attention to the exemptions which have already been allowed, and which are contained in Sections 311, 312, and 313 of the Thames Conservancy Act, 1894, whereby all lighters passing entirely through the limits of the Watermen's Company Act, and any lighter navigating the Grand Junction Canal passing into or out of the said canal from or to the Thames; all lighters navigated from places above Teddington Lock as far as London Bridge; and lighters passing along the River Lea and its branches into or from or along the Thames, are not required to be navigated by a freeman, apprentice, or other person licensed by the said Company. I further desire to call attention to the fact that by a judgment of the Queen's Bench Division of the High Court of Justice delivered on the 2nd day of July, 1898, in an action, *Kennaird v. Cory and Son, Limited*, it was held that Bye-law 98 of the Watermen's Company, which sought to apply Section 66 to steam tugs was *ultra vires* as to those vessels, so that neither the master nor the mate in charge is required to be a licensed man, although having the government and controlling power over six laden barges and the responsibility for the safe

navigation of both tug and tow, whilst the man upon each barge must be either a freeman or a licensed apprentice, although he has, comparatively speaking, nothing to do whilst under way. This, I submit, is an anomaly which should be put an end to, and I call attention to the operation of the statute as an existing defect which requires to be remedied. In the interest of the trade of the Port it is important that every facility should be afforded to merchants to avail themselves of the cheap method of collection and delivery of goods by barge, and that the time is past when freedom should be restricted. What adds to the cost of the Port is the delay in docking and undocking barges and in discharging cargoes from steamers. The present docks are not designed in the best manner for berthing ships with a large quantity of cargo for overside delivery, and the appliances are not adequate to ensure prompt discharge of cargo and loading same into barge. The existing defects have, I find, been fully dealt with by other witnesses who are to give evidence. More moorings should be laid down for steamers wishing to discharge into the river, and greater accommodation should be afforded for mooring barges in roads set apart for that purpose. I am in favour of a Dock and Harbour Board, which should have the control of the river up to London Bridge, and the water and quay space in the docks, but should not undertake the storing of goods. Further dock accommodation is urgently required, and it should be on the jetty system, and fitted with all modern appliances for the prompt discharge and loading of steamers, and for the equally prompt discharge and loading of barges. In place of spending several millions for the purpose of dredging a 30-foot channel up to the Albert Docks, I would prefer to see the money expended in constructing a modern dock properly fitted, in accordance with the requirements of the day.

3899. Where do you suggest this dock should be?—At Tilbury.

3900. What do you suggest its size should be?—It should be the largest possible.

3901. And cost?—I am unable to form any opinion upon that. With reference to the collection of timber overside, it is a fact that merchants having wharves on the river and canals can and do send their craft to secure delivery of their timber, and get possession of it within a few days after the commencement of discharge, whereas it frequently happens when the timber has to be stored in the Surrey Commercial Docks, it is not sorted and a return issued to the merchant until several weeks after it is landed. I cite this as showing how advantageous it is to the merchant to have delivery free by lighters. I think attention should be called to the fact that all dock companies have an unlimited supply of river water free of cost for the purposes of their docks, and in this respect are not put to any expense. Speaking generally, I agree with the complaints which have been set out by the Master Lightermen's Association. The docks should be under the protection of the Metropolitan Police, as the dock constables do not afford the necessary protection to workmen using the docks when labour disturbances arise. At the time the dock companies obtained their first Act, compensation of about one million pounds was paid to the wharfingers, and free water was granted to the lightermen. If this privilege that the lightermen now enjoy is abolished, the master lightermen would be entitled to claim compensation in the same way as the wharfingers were compensated.

3902. With reference to what you say about the police question, have you any particular case to which you are referring?—During the recent strike there was not sufficient protection to the men who were working during the strike.

3903. Can you tell us of any particular instance when that was the case?—Men were intimidated on several occasions. My company had to arrange for police protection at the Victoria Dock, so that the men we had at work might receive protection. The moment those police constables were withdrawn, intimidation immediately began.

3904. Did you make any representation to the dock companies?—Yes, we saw the dock officials on the question. They would not provide the Metropolitan Police protection, we had to do that ourselves; but an arrangement was ultimately made whereby certain police protection was afforded, and the master lightermen and the dock company and others interested shared in the expense. But the dock company have really no con-

Mr. R.  
Lambert.

Mr R.  
Lambert.

20 Mar. 1901.

stables; there are uniformed watchmen to patrol the dock, and there are not a very large number of those.

3905. (*Mr. Lyttelton.*) You said that compensation of about one million pounds was paid to the wharfingers, but was not that in consideration of the monopoly granted to the docks?—The monopoly was granted to the docks, and free water was granted to lightermen.

3906. The monopoly was abolished after 21 years, was it not?—That was a monopoly that they should warehouse goods.

3907. The free water clause was given as part consideration for that?—There was no limit to the free water clause; it was perpetual.

3908. But in consideration of the dock getting a monopoly for warehousing, certain terms were accorded for barges?—I do not read it in that way. I read it that they had this privilege with regard to the dock, and they were permitted to make this water space, and the arrangement was that the lightermen should have free entrance and exit for their barges for all time.

3909. (*Sir Robert Giffen.*) Is it not the case that the free water clause was inserted with Dock Companies which had no such monopoly?—All dock companies.

3910. (*Mr. Lyttelton.*) As to the alteration you suggest as regards the certificates of men employed on lighters, I am not saying, of course, that any change will be recommended, but would your views be met by certificates not being required by men in charge of barges which are being towed, or do you wish to go further?—I submit that the employer should engage those men whom he deems suitable for the work, whether the barges are towed or whether they are navigated under oars. At the present time he has to use his judgment. The licence now granted to the lightermen extends for the navigation of barges from Teddington Lock to Lower Hope Point, Gravesend. There are numbers of men who hold those licences who have never navigated up to Brentford. If I had to send a man there I should want a man who had had experience; I do not accept a certificate as evidence of competency.

3911. Do you wish the certificate system abolished altogether?—Entirely.

3912. And abolished in the case of men in charge of boats in tow?—I wish it abolished entirely, so far as lightermen are concerned.

3913. (*Mr. Ellis.*) With regard to the question of compulsory pilotage, were you in the room when Mr. Jacobs was examined?—Yes.

3914. You have heard his replies with regard to specific cases, and the interview he had. Has your company suffered any loss or damage in this matter from the inability of pilots to meet their obligations?—There is one case, but not a very extensive one; it was a great number of years ago, where we had to accept a very small amount owing to the pilot saying he could not pay.

3915. So far as your statement that all compulsory pilotage in the Port is felt to be a hardship is concerned, that is the only personal experience you have had?—That is my only personal experience; but, of course, the risk exists at the present moment.

3916. I want to get from you whether that is all you have to tell us with regard to your company?—Just so.

3917. Did you hear the evidence of the last witness with regard to the question of certificates and so on?—Yes.

3918. Do you concur with that—you differ from it, I gather?—So far as the lightermen are concerned, I say there should be no certificate whatever.

3919. Your reply to Mr. Lyttelton exhausts the matter. You have nothing to add to it?—Only that with respect to the watermen who ply for hire they are in a totally different position. I should have no objection to their having a licence or certificate; but seeing that the master lighterman is responsible for the negligence of his servant, we maintain that we have a right to select that servant. The certificate is not evidence of competency, and it does not relieve us from the liability, which is unlimited.

3920. You said that in place of spending several millions for the purpose of dredging a 30ft. channel up to Albert Docks you would prefer to see it spent in another way. You mean, of course, from your point of view, the money could be better spent than in providing this channel?—Undoubtedly.

3921. You do not speak of ocean-going steamers?—No. I anticipate that in 60 or 70 years' time the Victoria Dock and the East India Dock will be obsolete, in the same way as the St. Katharine Dock is now, and that a new dock should be further down the river, and the steamers should go in there as they do now.

3922. You are looking ahead?—It behoves us to do so in these times.

3923. (*Mr. Peel.*) You spoke of the delay in docking and undocking barges. What is it that you ask—that you should be able to go in and out of the docks at all states of the tide?—Yes; our barges are frequently shut out of dock because of the large number that accumulate outside the entrance.

3924. You say these appliances are not adequate to ensure prompt discharge of cargo. Could you amplify that statement in any way?—There are no luffing cranes at all in any of the docks that I am aware of. They cannot pick the cargo up with a crane out of the ship's hold and put it into a barge as they can at many wharves on the river now.

3925. Is there anything else?—I should like to see certain of the modern docks on the jetty system, so that prompt delivery could be given to cargo to go into barges.

3926. There is nothing else you wish to add to that?—I should like to see better accommodation for the towing of barges within the docks.

3927. With reference to your evidence about a Dock and Harbour Board, have you considered that matter fully?—I consider that in the interest of the port it is desirable that there should be a public board, who should take the control of the docks and the rivers.

3928. You do not consider they should have the control of the wharves?—No.

3929. You would have a public body managing the docks, and therefore competing with the wharves?—No. The public body should not have anything to do with the storing of goods. That should be left to private enterprise.

3930. You mentioned that in your evidence, but they should have the control of the docks, and the control, therefore, naturally, of the dock charges?—Control of the water space and the dock quays, and, naturally, the charges which would be levied on the steamers.

3931. Not the control of the wharves?—Not the control of the wharves at all.

3932. So that you have a public body controlling the docks which would compete with the wharves?—I say that the public body should have no power as to the storing of goods.

3933. I quite accept that, but they would charge for allowing dock accommodation to ships?—Yes. They would not be in competition with the wharfingers in that respect. If a steamer goes alongside a wharf there is no charge made by the wharfinger for the accommodation given to the steamer.

3934. So that by separating the warehouse accommodation from the actual dock itself in the matter of control, you would avoid competition between the public body and the wharves?—That is my opinion.

3935. (*Rear-Admiral Hext.*) You have said that the present certificate held by the man in charge of a barge being towed is no evidence of his competency?—That is so.

3936. Can you tell us what kind of certificate it is?—It is a certificate to the effect that he is licensed to navigate any barge, that is all. A lad apprenticed at 14 years of age after he has served two years can claim his certificate to navigate a barge, and if he satisfies the Court (there is no full and thorough examination) he gets his certificate and exercises the privileges of a fully licensed lighterman so far as navigation of barges is concerned.

3937. Do you know if he passes any examination to obtain that certificate?—There is no examination. It is impossible to have any examination as to the man's ability to navigate a barge.

3938. You have spoken as to the facilities of the docks. I presume that the delivery of the barges refers to overside cargo?—Yes.

3939. What appliances could the docks supply to load from a ship overside into a barge, I presume on the opposite side of the ship—say a ship 45 to 50 feet deep?—If the ship was alongside the quay with a luffing jib it could lift out the cargo from the hold and put it over the ship's side into the barge.

3940. On the far side of the ship?—Yes.

3941. That would entail a reach of at least 60ft.?—Yes, and the cranes in use at the wharves now in London will do it 70ft.

3942. You advocate quays instead of docks. Have you any experience of a large steamer, say a steamer of 4,000 tons, alongside a wharf in the river, and the difficulty of maintaining her moorings and keeping her in position in a tideway?—No, I have no experience. I do not think such a large steamer as that has been alongside a wharf—not to my knowledge.

3943. You would not propose putting the large steamers alongside the wharves, but you say you advocate quays instead of docks?—Pardon me. I advocate the making of docks, but having a jetty system on the docks, not quays on the river side.

3944. You said you would prefer to build a modern dock instead of dredging a channel, but in every modern dock would it not be a necessity to have a deep-water channel to it?—In my opinion the modern dock should be at Tilbury. The tendency is now to get goods very quickly from Tilbury—as quickly as from the Albert Dock—and as the steamers are increasing in size year by year I think the large steamers should go into that dock. That would save the risk of the voyage up the river, and there would not be the necessity for deepening the channel to 30ft.

3945. You have drawn attention to the fact that all dock companies have an unlimited supply of river water. Do you mean to say the water could come into the docks and go out again?—The water in the docks is taken from the river, for which they pay nothing whatever.

3946. Where would you propose to take it from?—

If they pay nothing for it we say we have a perfect right to go in there free.

Mr. R.  
Lambert.

3947. Do you know any dock in the world where they pay for the water, whether they take it from the sea or the river?—No, I cannot say that I do. 20 Mar. 1901.

3948. (Sir Robert Giffen.) Are you obliged to employ members of the Watermen's Company on your lighters whether they are competent or not?—We are obliged to employ licensed men.

3949. But if you make a selection have you always plenty of competent men satisfactory to yourselves?—Yes, they are competent generally. They answer our requirements, but our area in selecting labour is limited. For instance, if I discharge a man because he has neglected his duty I have to take another licensed man in his place. The man I have discharged will go and get employment somewhere else. We are limited to that circle of licensed men.

3950. But have you, as a matter of fact, suffered from the inconvenience of having incompetent men, and being obliged to select them from that limited field?—Undoubtedly. I am sorry to say that nine-tenths of the damages which we have to pay are caused by the negligence of the men.

3951. That is to say, that you are obliged to take incompetent men, and you are not allowed to go into the open market to get men who are competent?—I would rather use the word "careless"—not actually incompetent men. We are obliged to employ those men who have licences, who are in many cases careless men, and we are not permitted to go into the open market to get reliable men.

3952. That is to say, you employ men who would be competent if they were not careless?—Yes, generally they would be competent.

Mr. RICHARD DEERING called and examined.

3953. (Chairman.) You are a managing director of Messrs. J. W. Cook and Co., Limited, Wharfingers and Bargeowners?—Yes.

3954. Are you here now representing the Association of Master Lightermen?—Yes.

3955. Will you tell us as to your company?—The company of which I am one of the managing directors is a limited liability company registered under the Joint Stock Companies Act. Its share capital is £235,000, divided into 26,000 preference shares and 21,000 ordinary shares of £5 each, all of which are fully paid-up. The business of the Company is that of carriers by water, wharfingers and barge-letters in the Port of London. The company has been formed by the amalgamation of the businesses of Mr. James W. Cook, wharfinger, and Messrs. Ross and Deering, lightermen and tugowners. My company has a river frontage at its various wharves of over 1,000ft., and has warehouse accommodation for over 20,000 tons of merchandise. Our warehouses are nearly always fully occupied, and as a rule we hold for customers the largest stocks of fibres in London. My company own three tugs, ten hulks, and 160 dumb barges of the gross tonnage of 18,500 tons. In addition to this we hire barges from time to time from other persons according to the demands of trade. The average, taking the year round, is ten barges per week or thereabouts. As to labour, I find that for the four weeks ending October 19th last year we employed per day 9 foremen, 52 lightermen, 52 labourers, 16 apprentices, 4 engineers, 4 stokers, and 8 barge repairers. This is a fair average. I have had 40 years' practical experience in the lighterage trade in the Port of London as a working freeman, a foreman, a tug-master, a manager, a master lighterman, and as a director of my company. I have made an examination of my company's books for the purposes of obtaining data to be furnished to the Commission, and I find that during the twelve months between the 1st July, 1899, and 30th June, 1900, my company lightered 253,392 tons into and out of the various docks in the Port of London.

3956. (Sir Robert Giffen.) That would be in addition to other business?—Yes, transit from a wharf to a ship in the river, or from a ship in the river to a wharf.

3957. (Chairman.) Can you tell us the date when your company was registered?—1897.

3958. We do not want to ask any questions as to your private accounts, but will you have any objection to telling us whether that year is a fair average year?—Just about the same as last.

Mr. R.  
Deering.

3959. You have only been in operation three years, I understand?—This is the fourth year. I have no doubt whatever that the imposition of any rate upon barges entering or leaving the docks, and upon their cargoes would have the effect of diverting water-borne traffic, and would seriously affect the transshipping and coast-wise trades of the Port of London. I estimate that 125,000 tons of the goods carried yearly by us in and out of the docks are Continental and coast-wise transshipments to and from. I can, if required, give the various steamship lines by which these goods are carried. This is a large, important, and constantly increasing trade, and it is of the utmost importance not to handicap it by the imposition of charges which would have the effect of diverting it to Continental ports direct. For some years past I have considered the question of what defects exist and the improvements which are necessary in the Port of London in order to maintain its trade, and keep pace with the times as well as to offer facilities to enable the port to compete with other and rival ports, and have come to the following conclusions:—There is a necessity for restricting the speed at which steamships, and especially passenger steamers during the summer months, travel between London Bridge and Gravesend and vice versa. I think it is right to point out that the largest proportion of my damage does not happen from the passenger steamers, but the high rate of speed that the other steamers travel at, especially the Scotch and Continental boats. This speed is a source of great danger to barges by reason of the great swell caused by such steamers, which swell not only causes damage to the barges whilst underway and especially when in tow, but also to craft lying alongside the wharves on either side of the river. In my opinion a more effective supervision should be maintained by the river authority, and in every case where the bye-laws regulating the speed of steamers are transgressed proceedings should be promptly taken against the offenders. Barge owners should be placed upon an equality with shipowners so far as the limitation of liability is concerned in cases of damage to the vessels and goods of third persons. At present the owner of a sailing

barge registered under the Merchant Shipping Act can do so, but a barge owner whose vessel is registered under the Watermen's Acts cannot, although each man is a carrier by water. In my opinion the facilities for the docking and undocking of barges is insufficient in order to deal with the requirements of the present day, and for efficient working, such barges should be looked in and out at any state of the ebb tide and not for some three or four hours only on the flood, as is now the dock companies' practice. There would be no difficulty in affording this accommodation without interfering with the present height of water in the dock, if the company were to take measures to fill the locks from the stream by the use of proper pumping machinery. The companies do not at present provide sufficient tug power for the towing of barges within the dock waters, and refuse to allow barge owners to keep tugs in the docks for towing purposes, except in some isolated instances and under special agreements with certain firms, viz.: those firms who lighter for the Dock Company, or who are their tenants of certain coal drops. Master lightermen are prepared to pay for this service if efficiently rendered, so as to escape the delay which is caused by inability to get barges to and from the entrances with rapidity. The Dock Companies decline to afford reasonable facilities to lightermen, and through them to merchants, for the passing out of laden barges, upon what is called the "demand pass," in cases where there is a *bond-fide* dispute between the shipowner or ship worker, and the lighterman to whom cargo has been delivered, over the tally, the condition, the marks, or the number of packages, and on many occasions the pass outwards has been improperly refused by the vessel and the barge consequently delayed, to the prejudice of the lighterman and loss to the merchant. Beyond this congestion of craft in the dock is caused, for which the barge owner is unjustly blamed.

See 4014.

3960. Who do you consider is to blame?—The shipowner, as a rule, not the Dock Company; we have no complaint to make against the Dock Company, as far as the granting of passes goes. If any dispute arises we go to the superintendent and immediately get the matter settled. I do not think I have ever lost a tide with a barge through a dispute with the Dock Company. Our disputes arise in this way. Goods are damaged on board a ship; when I get my barge finished they say: "Come and sign for your goods"; but although the barge may have two-thirds of damaged cargo, I find on top of the receipt the words: "Received in good condition." I say: "I cannot sign that; a lot of the goods are damaged or stained," or whatever it may be. They say: "Very well; sign for 20 stained or 50 stained." I say: "I cannot sign for it in that way." Then they say: "Well, then, we cannot give you a pass," with the result that I have had a barge with about 80 per cent. of the goods in her damaged—(that would be over 1,000 packages)—and they have demanded a receipt for only 50 damaged, and that barge has been detained four days before I have been able to get the pass. The Dock Company were quite powerless in the matter; they would help us if they could, and we knew that.

3961. The complaint that you make when you say that the barge owner is unjustly blamed, is not against the Dock Company?—Not at all; they always assist us at once to put the matter right if the goods are delivered to us by them and we have to sign their receipt.

3962. In your opinion do the existing conditions affecting the delivery of goods into craft from import ships call for amendment?—Yes; we have been before the Board of Trade to get it done, but we have not been successful, owing to this Commission sitting. Craft are required to be in attendance for many days before the shipowner can or does, in fact, deliver. The bill of lading invariably contains a condition that the goods shall be taken from alongside as soon as the ship is docked or ready to deliver, notably the P. and O. Company's bills of lading. There is no corresponding obligation on the ship to deliver at any time. Lightermen are, nevertheless, bound to have their craft in waiting, for if such craft are not in attendance the goods are immediately put upon the quay and become subject to charges, or if on the quay for ship's convenience, charges are immediately claimed, which the lighterman must pay before he can get his goods. It is not unusual for me to have a barge detained in the dock for three weeks waiting to receive its cargo. In order to escape the risk of having to pay land charges, lightermen are compelled to have craft in attendance. The result is that the docks become congested with barges waiting to receive goods. Of late years it has

been the custom in certain cases for shipowners to undertake the discharge of their own vessels, and it is not uncommon for the shipowner, or stevedore entrusted with the work, to rent quay space from the Dock Company, on the condition that if the goods are landed there the company is to have the advantage of the landing charges, unless the cargo is put there solely for the ship's convenience. The result, therefore, is that, although he has been ready to take delivery, the lighterman is called upon to pay landing charges, for which it cannot be contended that any corresponding benefit is received by him. In my opinion the jetty system, as now in practice in the Victoria Dock, is that best adapted for the rapid discharge of a steamer. A steamer can be discharged on to one side of a jetty, and upon the other side of it barges can be berthed and loaded as the vessel is discharging. Accommodation is provided on the quay for the assortment of parcels as the goods are passed over it. Goods can also be delivered at the same time into barges placed on that side of the ship which is still accessible by water. In all the modern docks of London this principle has been lost sight of. Thus when two or more large steamers happen to lie alongside quays as ordinarily understood, there is no room for craft to receive cargo from the sheds until one or other of the steamers has moved away. This, again, is a cause of detention of large numbers of barges in the docks. With regard to the export trade, I complain that large numbers of loaded lighters are ordered into and are taken into the dock at one and the same time in order that the loading vessels may have a choice of goods. Such barges are frequently kept waiting for a long time and are passed on from one ship to another, and, although demurrage in these instances at a certain rate is paid to the lightermen by the ship, such payment is not a sufficient remuneration. The result of this course of conduct is to still further add to the congestion of craft in the docks through no fault of the lightermen, but owing to the course pursued by the Dock Company's customer, the shipowner. There is a want of accommodation for the quick discharge of vessels in the docks owing to the absence of modern appliances and modern methods, and there is also considerable delay in the river caused to vessels desiring to discharge in the stream by reason of the present accommodation being very much restricted by reason of paddle steamers, such as the Belle Line of vessels and the General Steam Navigation Company's vessels, lying at tiers above Blackwell during the winter months, and thereby occupying berths which might be profitably utilised for the discharge and loading of cargo steamers. I see no reason whatever why steamers laid up for the winter months, if not placed in one of the docks, should not be moved farther down stream, where there is ample room, and thus free the tiers above Blackwell, and afford room for the regular traders. I think greater facilities are required from the Board of Customs with regard to the clearing of goods delivered overside in the docks and river. The number of officers has been reduced of late years. The granting of passes to leave the dock should be facilitated, and the working hours extended until 6 o'clock p.m. The conditions which are applied by the Customs to Tilbury Docks are more onerous than those which are applied to the docks higher up the river. I can see no reason for this, as the lighterman's liability as a carrier towards the Customs is the same in each case.

See 7550.

3963. (Sir Robert Giffen.) In connection with the delay of barges owing to the shipowners ordering the delivery to take place at once, have you any claim upon your customers in any way?—We give a rate; that does not include so many days to load or unload. It is so much per ton.

3964. Is not that a question which the customers should settle with the shipowner?—I do not think so. This has been the custom of the Port always. If a man is going to buy, say 500 bales of jute, he wants to know exactly how much he is going to pay for them, what the charge would be through the Port of London, and what his freight would be to the Continent. He asks me what my rate for jute is. I say 2s. per ton. But if I were to say it would be so much a day for barge and man he would not know whether he would have to quote 2s. a ton or 5s. a ton. His margin of profit might be only 2s. a ton at the best.

3965. But whatever it is, it is only a matter of business arrangement. You are the agent of the customer, and you go into the dock?—It would be fatal to a large portion of the trade, in my opinion, unless a definite rate could be given to the merchant for the carriage of the goods.

3966. That is to say, you prefer to endure the ill that you know rather than raise the question with the customer?—It has never been thoroughly considered.

3967. I am not saying practically that you could do it, but I am putting it to you that if it was a very serious grievance, an intolerable one, there would be some means of settling with the customer for whom you are the agent?—Yes. I think he would cease to employ us very shortly, because his occupation would be, like Othello's, gone.

3968. Then the shipowner's occupation would be gone at the same time?—I do not know; at one time we had a large proportion of goods through London that do not come here at all now.

3969. You see no way of remedying the difficulty or the grievance by any remonstrance or negotiation between the customer and the shipowner and yourselves?—No. I think the only thing that would get one out of it would be for the dock company to have more cranes, to give greater facilities to carry on the trade of the Port.

3970. But if you had shipowners using the lighters coming into the dock in the way you have described, merely for their convenience and keeping them, first one ship and then the other, how would you get over that, by any arrangement with the dock companies?—It is not first one ship and then another in the case of taking goods from the ship.

3971. But in the case of exporting goods?—We charge so much a ton for the transaction, and we give two clear days alongside for the export ship, and then after that we get demurrage at from 10s. to 15s. a day per barge, and the merchant has to pay for that. The amount of demurrage that I receive does not quite cover my daily expenses on the barges, and that is the most I can get.

3972. (*Rear-Admiral Hext.*) You have said that there would be no difficulty in affording the accommodation if the company were to take measures to fill the locks from the stream by the use of proper pumping machinery. Who would pay for that?—In the first place the dock company.

3973. Would the lightermen or the bargeowners be at all prepared to pay some charge for their greater convenience?—In my opinion the dock company would save a considerable amount of money per annum, because in that case they would get the water higher in the dock than it is now, they would not have so many levels, and there would not be so much muddy water come in. If they were to sink a well far enough down to get fresh water, which they could do, and put it near the hydraulic power, at night when a quarter of the hydraulic power only is required, they could pump water from the well into the dock, and they would never require to alter the level at all, except when some unforeseen thing happens, as it does at the Albert and Victoria Docks sometimes, when a ship comes which is too long for the lock. On the other hand, I have been for some years of the opinion, and I am of the opinion, that the dock companies ought to have more means than they have had in the past to facilitate the trade of the Port.

3974. Then you have said that master lightermen are prepared to pay for towing if efficiently rendered. Who is to decide if it is efficiently rendered?—What I mean by that is that there is room in the Victoria Dock to employ three tugs for barges. I should like to put three in and pay a handsome rent for the privilege of doing so. At present there is only one, and when there is a glut of work she has been taken off that work and used for towing ships. If I had tugs in the dock for towing purposes I should use one by night and two by day, and I think I should find full employment for them.

See 7550. 3975. You have said you see no reason why steamers laid up for the winter months, if not placed in one of the docks, should not be moved further down stream, and thus afford room for the regular traders. Who can control that?—The Thames Conservancy.

3976. In fact, it rests with them?—Yes.

3977. Has any representation ever been made to the Thames Conservancy about these vessels?—I could not say; not by me, at any rate.

3978. (*Sir John Wolfe-Barry.*) Is the use of steam barges increasing?—No. I do not know any master lighterman of the Port of London who owns a steam

barge. They are used by one or two factories along the riverside, such as Charles Price, at Erith, who has a certain number of tons of oil to get up to time; but nobody else uses them, as far as I know.

3979. Then the engineers and stokers that you employ are on board tugs?—Yes.

3980. May I ask, without undue curiosity, whether your company pay a dividend?—Yes, a very small one.

3981. I suppose it is public property?—Yes.

3982. How much?—Five per cent.

3983. (*Chairman.*) Do you publish your accounts?—Yes.

3984. (*Sir John Wolfe-Barry.*) Five per cent. after proper insurance, and so on?—Yes, and depreciation.

3985. You have said that continental and coastwise transshipment of goods is a large and important and constantly increasing trade. That is rather contrary to what we have heard from other witnesses—that it is disposed to decrease?—That is from over-sea; that is from Australia and India and such places; I am certain it has not increased as regards the Continent to America and India, but from Calcutta in goods for New York, Philadelphia, and Boston, the traffic has increased with my firm.

3986. Traffic coming from the East in either a P. and O. or British India steamer, destined for the Continent, would be transhipped in London, and would find its way to the Continent, as compared with a steamer going into a continental port and discharging part of her cargo there?—I could not be quite positive, but I understand that the continental ports are not quite suited to the large ships that are now in existence.

3987. You find at the present moment an increasing trade, and not a diminishing trade?—That is so. Take the "Clan" line of steamers; their largest ship was 3,100 tons five years ago, and now it is 7,000 tons.

3988. You have also said that London was losing a great quantity of goods traffic which it formerly carried?—Trade from the Continent for America, and India, and such places.

3989. You mean the goods originating on the Continent and going to America in British ships?—Yes. It seems to be collected on the other side.

3990. And carried, I suppose, in German or French ships?—I think a large proportion of the ships on that side are English, according to what I can see.

3991. Still, there are also subsidised lines?—Yes, but a large number of brokers in London have ships loaded on that side, which are English vessels.

3992. With regard to the speed of steamships, is that within the jurisdiction of the Thames Conservancy?—If a man does any damage, if he is going only half speed, you are supposed to be able to claim against him; but there ought to be some limit as to how fast he should travel.

3993. Do you know that the Thames Conservancy have that power already?—If a man did any damage to me from the wash, I should have to summon him in his own name.

3994. I suggest to you they have the power already?—I am not aware of it; they can say: "You are travelling too fast," but what power they have I do not know.

3995. You have not complained to them?—I have a good deal of damage occasionally, but if I get it from a compulsory pilot I put the bill in my pocket and never trouble about it.

3996. I am talking of vessels effecting the transshipment of goods in the stream?—It does affect them.

3997. I was struck with an answer which you gave to Rear-Admiral Hext when he asked you about the pumping of water. You said that you realised the time had come when the dock companies should be helped financially?—I think some means will have to be devised to get more income than they have at the present day, or else the work that is required cannot be carried out.

3998. At the same time you do not propose, as representing the lightermen, to pay any of the expense of pumping water into the docks?—If we had to pay so much per barge, we should have to charge so much to the merchants; that would be putting it practically on the goods.

3999. But that is a way of getting out of the difficulty, is it not?—I do not think it would bring them enough.

Mr. R.  
Deering.

20 Mar. 1901.

Mr. R.  
Deering.  
20 Mar. 1901.

4000. The dock companies' evidence, which, perhaps, you have read, is that they are put to very large expense in consequence of the barge traffic?—That is so. If I might venture an opinion, my idea of the matter is that the only way out of it is for the dock company to have the right to levy a toll (it would not require to be a very large one) on every ton that ships carry into the dock. That money could be looked upon as compensation for locking the barges in and out. I see no other way out of the difficulty.

4001. Your opinion is that in some way or other the expense of the barge traffic in and out of the docks shall be met?—By the goods.

4002. It ought not to fall on the dock company?—I am of opinion that there is no gentleman to be found, if you gave him £20,000 a year, who could make any more out of the docks, or do anything more with the docks, than is done at the present day.

4003. They are getting as much income out of the docks as they possibly can?—Yes, and they are giving all the facilities they can, considering the amount of income they get.

4004. You have no cause of complaint against the management of the dock?—No, I have none whatever.

4005. You said you would like to keep a tug in the dock?—It wants about three in the Victoria and Albert Docks, and one in Tilbury Dock. I do not think there is any necessity in the other docks. Of course, so far down the river you feel the breeze, and the barges are so much larger; you may put three or four men in a barge, but without a tug you can do nothing with it.

4006. The general drift of your views is that you are in favour of strengthening the dock companies?—Yes, and I am also of opinion that the present docks should be improved and enlarged enough to meet the requirements of the Port for the next 20 years.

4007. If they had got the money?—If they had got the money.

4008. I also suppose that you do not hold views in favour of creating a trust?—No, I am of opinion that the dock companies are quite capable of dealing with the matter if they had the income.

4009. (Chairman.) It would be interesting to us to know how you would suggest this grievance, to which you referred in connection with the demand passes, should be met?—In the event of a dispute I would like to have the power to tell the man that if they did not decide in six hours what they would do, I should give the dock company an order to land these goods, and count them if it was a question of dispute of tally; take the marks if it was a question of dispute on the marks; or if it is a question of damage, certify how many were damaged. And then the party in error should pay the expense, and the pass should then be given when the charges were paid. The dock company should not give the goods up until the charges were paid for what they had done.

4010. Do you suggest that this difficulty should be met by legislation, or by order of the Board of Customs?—We were led by the Board of Trade to hope that it would be dealt with by this Commission.

Recalled 10864.

Mr. CHARLES JAMES FIELDER called and examined.

Mr. C. J.  
Fielder.

4011. (Chairman.) You are a member of the firm of Fielder, Hickman and Co., licensed lightermen and barge owners?—Yes.

4012. Have you come here to give evidence on behalf of the Master Lightermen's Association or your firm?—On behalf of the Master Lightermen's Association.

4013. Your firm carry on business at 4, Catherine Court, Trinity Square, in the City of London?—Yes.

4014. In what trade?—We are principally in the grain and flour trade. We, however, carry general goods into the docks for export. We have 55 barges, of the gross burden tonnage of 3,300 tons. We employ upon an average about 25 lightermen per week and about six watchmen. Upon an average we lighter in a month 9,500 tons. Of this, 2,000 tons would be taken into the docks for export ships and 7,500 tons would be brought out of the docks from import ships for wharves, granaries and mills in London. I attend to the outdoor department of my firm's business, and am daily engaged in and about the various docks over the practical working of the business, and have, therefore, had ample opportunities of making myself thoroughly acquainted with it, and with the various defects that exist and remedies which suggest themselves to one's mind. I have had altogether 23 years' experience—5 years as an apprentice, 7 years as a free-man working in craft, 3 years as a foreman, and 8 years as a master lighterman. With reference to the existing defects in the Port of London, I complain firstly of the insufficient facilities afforded by the dock companies for getting in and out of the docks with barges, notably at the Royal Albert Docks, where no assistance whatever is given by the committee's servants, and no attempt whatever is made to superintend or control the locking in or out of craft. The result is that very great confusion exists, and barges are constantly delayed. Our men in charge have to get in and out as best they can. The committee's servants, besides being few in number, are masterly inactive. The delay experienced by barges at the entrances bound in for the purpose of loading grain very frequently causes such barges to be late in arriving alongside the ship, and also at the Grain Elevator Company's premises within the docks for the purpose of taking delivery within the 24 hours of which notice has been given by the dock company that the grain is ready for delivery. A dock company's policeman is stationed at the entrance to the Grain Elevator Company's premises to record the arrival of each barge, and if the 24 hours have expired by even one hour, the company claim the right to be paid full landing charges, notwithstanding that the barge may have been delayed at the lock in attempting to get in. My practical experience has enabled me to escape this imposition, but I know many instances in which other firms have been compelled to pay, notwith-

standing that with proper facilities for ingress their barges would have been at the appointed place and ready to take delivery within the proper time. I also complain that when the dock companies are called upon to perform a necessary service the charge for so doing is excessive. The hydraulic cranes in the Royal Albert Docks will not lift more than 30cwt, so that for any greater weight the floating derrick has to be brought into use. This sometimes occasions a delay of three or four days, and the charge for its use by the dock company is excessive. I have a case within my own experience in which the company has made a charge against my firm of £20 for lifting a case weighing 5 tons out of a steamer's hold on to the quay, and then from the quay into the barge. It would be a double lift. There are no luffing cranes, which have been for some years past in use at many of the wharves in the river. There is also a scarcity of cranes upon the quays in the dock, so that delay frequently arises after the goods are landed and charges have been paid because of want of craneage power to put them from the quay into the barges. The shed accommodation is insufficient, the quay front being generally occupied by steamers discharging, with the result that frequently the ships' cargoes get mixed together and barges are compelled to wait until such cargoes have been sorted. We frequently have to come away short of our proper quantity, and have to go again, sometimes a fortnight, sometimes longer, afterwards to get the remainder of the parcel. There is no extra remuneration for this second journey. I think the jetty system as adopted in the Victoria Docks is the better and more convenient way, and for the reasons given by Mr. Deering in his evidence. My barges are frequently delayed in the dock for unreasonable times in waiting to be discharged into export steamers. This is a grievance about which nearly every master lighterman in London complains, and it is occasioned by the action of the shipowners in ordering more goods into the docks than the steamer can carry, and transferring the overplus to some following vessel. This undoubtedly causes a great congestion of craft in the docks, and it certainly causes great loss to the lightermen. There is very little accommodation provided by the dock company for towing barges within the docks. From end to end the Victoria and Albert Docks are four miles in length, and lie from east to west. With a wind blowing either up or down the docks the navigation of barges under oars is sometimes an impossibility. I should be prepared to pay a reasonable charge for this service if properly rendered. This want of steam power is another source of delay and cause of congestion of barges in the dock. The dock company's tug very often

only makes one journey during the day. I quite agree with, and endorse the opinions of the other witnesses as to the necessity for an amendment of the law relating to compulsory pilotage, and for extending to lightermen the same limitation of liability, which, under the Merchant Shipping Act, is enjoyed by ship-owners. I agree with the previous witnesses that the dock company's refusal in case of a dispute to let a barge out upon a demand pass requires amendment. I should just like to point out that there is a difference of opinion between Mr. Deering and myself with regard to this matter. He says the dock companies are entirely blameless in the matter, or at any rate I understood him to say that in his evidence. When we have a dispute with a ship it is the dock company that steps in and refuses to allow us to leave the dock. If we have a dispute with a ship as to the quantity of goods that we have received, which oft-times happens, or as to the condition in which the goods are, we have no means whatever of getting the barge out of the dock. When the ship lies in the river, we can bring the goods up to the wharf and have them landed and whoever is wrong would have to pay; but, in the dock, there is no means of getting out. The dock company refuses to allow us to go out of the dock without a pass, although they have no claim on the barge or her cargo. And the shipowner often refuses to give us a pass because there is a dispute, and we are put to the expense of getting independent witnesses to get them to sign a clean receipt under protest. So that, although when Mr. Deering says they are not responsible for that, it is true, yet at the same time they prevent us getting our barge out of the dock because they will not allow us out without a properly signed pass.

4015. (*Mr. Lyttelton.*) Who grants the pass when you get your independent witnesses?—The mate of the ship, or the clerk sent down from the brokers.

4016. Does he grant that pass if you bring independent witnesses as to the damaged state of the cargo?—That is it.

4017. The occasion of the dispute between the shipowner and the barge arises, and then the dock company say, "Until that is adjusted we will not let you out." Is that it?—Yes, that is it.

4018. (*Chairman.*) But you look to the shipowner or the official of the ship for the document you require in order to get out?—That is it. What we should like would be to give a letter of indemnity to the dock company to hold them harmless, and then for them to let the barge go out of the dock and leave the dispute between us and the ship to be settled when the goods are landed. We would indemnify the dock company against any loss they might sustain if they would allow us to go out of their premises with the barge.

4019. (*Sir Robert Giffen.*) But is it not the case that if you take goods that have been in the ship, without the ship giving you a pass, the dock company really think you are somebody taking the goods away without authority, and that they are obliged to prevent?—I presume that is so.

4020. (*Mr. Lyttelton.*) Although they have themselves no interest in the matter?—They have no interest in the matter.

4021. (*Sir Robert Giffen.*) But they are obliged, being in charge of the dock, not to let any goods go away from the ship without having the ship's authority for it?—That is so. Then, in my opinion, there is a great want of mooring accommodation for barges in the river. I have endeavoured to obtain, but without success, a permanent mooring place for my firm's barges, and we are consequently compelled to make fast to other people's vessels and premises owing to our complete inability to get a lodgment elsewhere. There is an urgent want of more public buoys in the river between London Bridge and Blackwall, and I think room can readily be found by shifting steamers which are lying in tiers between those places and by sending them elsewhere further down. My barges have been frequently delayed in the dock owing to our being unable to get Customs officers to clear the goods. I think that nearly the whole of the matters of which the dock companies have complained could be removed by the companies themselves if they were prepared to provide the necessary appliances, and to give increased facilities for the docking and undocking of barges and for the delivery of the goods. The great block of barges which frequently occurs outside the entrances could be entirely prevented by the companies making arrangements for locking the craft in and out upon their arrival in, instead of only

for about three to four hours on the flood, and not at all on the ebb tide.

4022. (*Chairman.*) With reference to your complaint that your barges have been frequently delayed, against whom does that complaint lie?—That would not be against the dock company.

4023. Against whom would it lie?—The Customs. We found that there is a scarcity of Custom House officers. The officers themselves are courteous and willing to do the very best they can, but the amount of work they have to do is rather more than they can get over in the limited time, and we are often delayed waiting for them to come and inspect our goods before we can get away from the docks.

4024. You tell us you are frequently put to this inconvenience?—Well, I should say yes, frequently.

4025. You have said frequently?—Yes.

4026. How often in the course of six months?—I should say we often wait three or four hours.

4027. But how often?—Weekly—once or twice a week.

4028. In the case of a particular vessel?—No, no particular vessel. The delay in waiting for the Custom House officers is pretty general.

4029. (*Sir John Wolfe-Barry.*) When you complain of the want of crane power at the docks, does that apply generally to all the docks, or any particular dock?—My experience is generally with the India Docks Joint Committee. There is a scarcity of crane power more especially at the quays; when vessels are occupying the quays nearly the whole of the cranes are used to discharge the vessels, and it often happens that there is no crane available, when goods are actually landed on the quays, to deliver them.

4030. Does that apply to all the docks, or to the Albert Dock in particular?—The Albert Dock in particular.

4031. Where most of your business is done?—Yes, the Albert, Victoria, and West India Docks.

4032. Do you think that the barge traffic is an increasing quantity?—Yes.

4033. Does it increase relatively to the quantity of goods brought into port? Do you take a larger proportion of a ship's cargo now than you used to take?—Yes, I should think so.

4034. In spite of all these difficulties?—Yes, in spite of all these difficulties.

4035. When you say your barges are delayed in consequence of your being unable to get the Custom House officers to clear the goods, is that a question of the number of hours or the number of men?—The number of men.

4036. It is not so much a question of hours?—No, nor yet a question of the individual officers. We find them very obliging when we can get them.

4037. (*Mr. Ellis.*) How many barges a week do you deal with?—We have 60 barges, and we allow them to do three freights in a fortnight.

4038. How many hours a week do you think you lose from want of assistance from the Custom House officers?—I could not tell you that.

4039. Can you translate it into money at all?—No, I could not do that.

4040. Still, you wish us to infer that there ought to be more assistance from the Custom House?—Yes, I do.

4041. Not only for your traffic, but for others?—Yes.

4042. Have you made any complaint to the Custom House?—I have made personal complaints to the officers on the station, and they have said that they were doing the very best they could.

4043. You have not brought the matter before the Custom House by any formal letter?—No.

4044. Now, with regard to compulsory pilotage, were you in the room when Mr. Jacobs was examined this morning?—Yes.

4045. You heard what he said?—Yes.

4046. Do you endorse all he said with regard to compulsory pilotage?—Yes.

4047. And would you say that the secretary of your association is correct in his statement when he said that so many cases of the kind occur. You will remember the phrase in the letter read by Mr. Jacobs

*Mr. C. J. Fielder.*

20 Mar. 1901.

Mr. C. J.  
Fielder.  
—  
20 Mar. 1901.  
See 3767.

pointing to a specific complaint of a pilot who is an undischarged bankrupt, he told us, who was unable to meet the decision of the Court with respect to damage. The secretary of your association used the expression: "So many cases of this kind occur." Would you say that is correct? Would you endorse that statement?—I have never had a similar case.

4048. In your personal experience you have had nothing of the kind?—No, I have never had a case like that.

4049. Your firm has no occasion to complain of that?—No.

4050. Then you said: "I think that nearly the whole of the matters of which the Dock Companies have complained could be removed by the companies themselves." Do you mean by that the matters of which lightermen have complained?—No. The Dock Companies complain of congestion of barges. They complain very much. The system in the docks is to have an order time, that is, from 5 hours to 3½ hours before high water. The barges accumulate at the dock entrance the whole of the other hours. It is almost like stopping the traffic of the Strand for an hour or two.

4051. These necessary appliances and increased facilities would all cost money, of course?—Yes, they certainly would cost money. I think that is the root of the evil.

4052. Is it your case that the Dock Companies do their best in the pecuniary position in which they stand, and that their pecuniary position should be somewhat improved?—I think that is so. It is all a question of expense certainly.

4053. Then, finally, with regard to this locking and docking, would your association or would your firm, if the increased facility was given, which would impose an extra charge upon the Dock Company, be prepared to bear some contribution to that increased cost and expense to them?—As a member of our firm, I certainly should say "Yes." If the company were prepared to give us adequate return for the amount of money demanded, we should certainly be prepared to pay it.

4054. You would be prepared to pay for increased facilities?—Yes. What I should like the Commission to understand is this. We often lie outside the dock entrances from 24 to 36 hours. We had an instance of this last week when we were outside the Victoria Dock for 36 hours. If the Dock Company would lock us in when I presented myself at the dock entrance with my barge, it would pay me to pay them a fair and reasonable amount for them to lock me in, rather than keep a man in continual attendance for 36 hours waiting for my turn.

4055. You want the regulation of three or four hours swept away and an open gate at all times; but you are prepared to pay something for that open gate?—Yes; that is so.

4056. (Rear-Admiral Hext.) If, in that case, the barges had free access to the dock, instead of waiting

outside 24 hours, does not that go to show that there would be still greater congestion in the dock through those barges going in before they are wanted?—We never send them down before they are wanted.

4057. And yet we have evidence of barges waiting a long time before the ships are ready to deliver their cargo?—That is a thing that we cannot remedy. We are compelled to take the goods from the ships as they arrive, and we have no means of ascertaining when they are likely to arrive; consequently we have to be in attendance.

4058. But it would increase the congestion in the docks if the barges were there before the ships were ready to deliver the goods which, as we have had evidence to show, is very often the case?—We often have to send craft down a tide before we otherwise should, because we are never sure of getting in the dock.

4059. Then you said: "My practical experience has enabled me to escape this imposition"?—That requires a little qualification.

4060. If your practical experience enables you to escape the imposition, why should not other people have also the same practical experience, and escape too?—That requires a little qualification. What I meant to infer by that was this: Being continually about the docks, I am thoroughly conversant with their system of doing business, and when a merchant brings an order into our office, unless I have a barge in the dock or already going into the dock, I refuse to take the responsibility. I throw the responsibility upon the merchant. Then if the goods are already landed, or the time allowed by the dock company has nearly expired, I refuse to take the order. We have a time limit everywhere.

4061. That goes still further to show that having barges in the docks waiting for orders must increase the congestion?—That is true; but if I could depend upon leaving London, and going into the docks at once right to my destination, I should not have to have craft in the docks as a stand-by.

4062. Then also you complain of the cranes?—Yes, that is so.

4063. But, I take it, it has been proved by experience in almost all ports in the world that a 30 cwt. crane is a most useful crane, and that in all ports, too, there is an extra charge made for lifting heavy weights. How often do you get weights of 5 tons and upwards?—Very often. We have contracts for most of this electrical machinery, and we are getting a large number of very heavy lifts.

4064. But do you know any port in the world where they do not charge extra for these heavy lifts?—I think it is the custom to charge extra everywhere.

4065. Then you bring up the question of the ships lying up in tiers being moved further down. Have you ever made any representation to the Thames Conservancy as to that?—No.

Recalled 10929

Mr. THOMAS WILLIAM JACOBS, jun., recalled and further examined.

Mr. T. W.  
Jacobs, jun.  
—  
See 3773-5.

4066. (Chairman.) I understand that you have now the documents you promised to let us have?—Yes; I am able to hand in a report of the case that I referred to in connection with the limit of liability.

4067. Are you referring to the case in the Admiralty Division?—Yes, where there was a loss of £2,000. The case was reported in the "Shipping Gazette" of the 16th May, 1899.

(The Witness handed in a report of the case in the High Court of Justice (Admiralty Division) as to the collision in the Lower Pool, River Thames, between the barge "Hercules" and the tug "Wasp." See Appendix, 12th Day, No. 1.)

4068. (Mr. Lyttelton.) There is no report in the Law Reports, is there, that you know of?—I should think most likely there would be.

See 3767-71;  
3806-11. 4069. (Mr. Ellis.) Now, what have you in connection with the letter to Trinity House?—I have the reply of Trinity House to our letter of the 14th March.

4070. (Chairman.) Will you read it, please?—"Trinity House, London, E.C., 29th March, 1898. Sir,—Having laid before the Board your letter of the 14th instant, complaining on behalf of the Association of Master Lightermen and Barge Owners of the Port of London, that Mr. E. Liley, a river pilot, had, while acting as pilot, been in collision with barges belonging to the Association, had been sued for damage caused by vessels under his charge, and although judgment had been given against him, he declines to make any proposal for liquidation of the damages, and requesting the intervention of the Corporation to compel him to do so by the exercise of their disciplinary powers, I am to acquaint you that the Elder Brethren have no power to assist the Association in the recovery of the amount stated to be due to them." That is signed: "Charles A. Kent," who is the secretary. The correspondence was carried further, but nothing came of it. If the Commission wish it, I will have a complete copy of the correspondence made. We did ultimately give them proof that the man was an undischarged bankrupt by handing them a certificate from the Official Receiver

at Maidstone. Then I have a copy of the Dock Company's pass regulations, which I was asked to furnish.

*(The Witness handed in Regulations of the London and India Docks Joint Committee respecting passes for lighters containing goods entered for warehousing at other places than the docks in which the ship discharges. See Appendix, 12th Day, No. 2.)*

Our point with regard to those regulations, I may say, is that we consider the Dock Company have no claim to stop our barges. It should be a matter for us to settle between ourselves and the shipowners, the same way as we do in the river. A vessel in the river has no right to detain our barges, and the matter is followed up as the owner or the broker may think expedient.

4071. (Mr. Lyttelton.) Have you had sufficient confidence in the point ever to test it?—We do it repeatedly

with vessels in the river, but the dock companies step in in the case of disputes at the docks and say: "We cannot allow you to go unless you have a ship's pass." *Mr. T. W. Jacobs, jun.*

20 Mar. 1901.

4072. I understand you to deny their authority to do that?—They have authority; but we want that amended. We have discussed the matter several times before the Board of Trade, and some day or other we hope to get it amended. We have no corresponding power with the goods we deliver for export. We cannot stop a ship leaving the dock.

4073. The whole point is that you should be allowed to go out provided there is a sufficient guarantee that the matter would be settled afterwards?—Quite so; in the same way that a ship leaves the dock. If we have a dispute with her we have no power to ask the dock company to stop the ship.

Recalled 5570.

Mr. ROBERT NEAL TOUGH called and examined.

4074. (Chairman.) You are a member of the firm of Tough and Henderson?—Yes.

4075. You are lightermen, and tug and barge owners?—Yes.

4076. You have been connected with the owning and working of barges and tugs, and the carrying of goods on the Thames, for the past 25 years?—I have.

4077. You are also a freeman of the Watermen's Company?—Yes.

4078. And you have a practical knowledge of the navigation of the river?—Yes.

4079. Will you tell us how many barges you have?—My firm own or work about 100 barges, of the aggregate tonnage of about 8,000, also seven screw tugs, and two steam screw carrying barges. We swim or lighter about half a million tons of goods yearly, and tow, in addition to our own craft, and as a business, about 12,000 barges annually. We carry goods and tow craft over the whole navigable waterway of the Thames. The bulk of our business is between Erith and Kingston-on-Thames. The goods we carry are chiefly rough goods, such as timber, paper-making and building materials, chemicals, granite, iron, coal, etc. We also carry wheat and flour to mills on the Upper Thames, about Reading and Oxford, from London. While appreciating the fact that the docks are at present the only existing safe and convenient places for certain ships and trade, my view is that equally safe and certainly more convenient and less expensive places should, by some authority, be provided in the interests of the trade of the Port. I suggest all advantages lie to the stream being used as against the docks. If in the tidal way, as near to the City as possible, some miles of quays on either or both sides of the river were provided, where vessels, by paying a toll to some authority, would be allowed to moor, discharge and load cargoes, there might be no difficulty in providing a sufficient depth of water at low water alongside such quays, or in mooring ships at right angles to the river as well as parallel with it. It seems to me that provision can be made for discharging or loading at one time a cargo out of or into a vessel, and the quays, and rail, road, and water carriage. With regard to the rail carriage, this may be possible by tubular communication underground, with lifts to raise and lower railway trucks at the quays and termini. Facilities might exist for sending goods by rail from alongside the vessel at quay to some distributing depot for the leading lines; as well also might accommodation be provided for road carriages, and for lifting and transporting goods at the quays. I would suggest that parts of such quay accommodation be let on terms, and power supplied to persons requiring goods lifted, and that public weigh-bridges, mooring and landing places for vessels and persons, be provided, a toll being charged for these facilities. I suggest also that, to further facilitate the trade of the Port, there be provided, or a power given for private enterprise to provide, large floating derricks, equipped with cranes, in the stream, at which vessels can lie and discharge or load cargoes into and out of barges. Such derricks might accommodate two vessels at a time, and deal with enormous tonnage, and work continuously. Such derricks now exist in the coal trade. In justification for the necessity of some scheme of deep water quays and of floating derricks, I think the following reasons exist. Those appertaining to the docks are Nos. 1, 2, 3, 4, and 5. (1) The increasing percentage of tonnage which is

imported into the docks being required to leave the docks in craft that have loaded direct from ship. (2) The delay experienced in obtaining or delivering goods both to and from the quays and ships in docks; also by loss of time to craft waiting to pass in and out of the docks and river; the block existing in the docks, waterways, and at the quays; and the unsuitability of the quays. (3) The very heavy and inequitable charges levied upon the goods when they, the dock companies, handle the goods or receive them into their possession. (4) The companies' inability to cope with the traffic now tendered them, and their inadequate quay space. The want of some proper and regular appliance to transport barges about the docks, and in and out the entrances. (5) The proposed tax sought to be levied upon goods and barges.

*Mr. R. N. Tough.*

4080. We have no proposal for taxation before us?—No, the Bill is withdrawn. I mean the Bill by which they did propose to levy tolls. I propose to substantiate these allegations as follows:—No. 1: Dock company's statement that 40 to 60 per cent. of imports go away in barges, and that to my own knowledge many vessels have by compulsion to use the docks because they are unable to obtain a berth at a tier in the stream to discharge at, or it is stated they draw too much water to lie at such tiers. I cannot call to mind any new tier provided by the Conservancy, and I say the want of suitable tiers in the stream has been the great factor in sending this 40 to 60 per cent. of trade into the docks. No. 2: It is quite clear that a barge would often, while waiting to enter the dock and get alongside import vessel, actually, in the same time, get loaded at a vessel lying in the stream and deliver her cargo alongside its place of destination; this loss of time, working in and to the docks, and the waiting for receiving cargo, and the impediments existing in the waterways and at quays, mean more time for barge and man, and, as a consequence, increased cost of lighterage. We require and obtain from one penny to threepence per ton extra for dock work as against the stream. To instance dispatch in the stream, it is a common occurrence now for a barge to leave Kingston in the morning, tow down to Charlton, load 100 tons of coal ex steamer, and get back to Kingston same day, well within the time that a barge ordinarily would take to get from outside dock entrances to alongside vessel in dock. We load a great deal from the tiers, and I know the great advantage existing to ship, merchant and lighterman who can use the tiers. I find that in 70 steamers we received cargo from in the stream, we were only 210 days in all receiving that cargo, and the average is, therefore, three days per steamer; number of barges loaded is 246. I put in a table showing the length of time occupied by the Millwall Dock Company in discharging 33 of our barges.

*(The Witness handed in a table showing barges loaded with timber sent into Millwall Dock by Messrs. Tough & Henderson for Millwall Dock Company to unload, with names of barges, date barge entered dock, and date discharged in dock, and number of days each barge occupied after entering dock. See Appendix, 12th Day, No. 3.)*

The length of time entailed a loss upon the merchant of £108 5s. for demurrage on barges beyond the charge for lighterage; the delay further locked our barges up, and prevented our accepting traffic offered us, and caused customers of ours to look round and endeavour to get their traffic placed elsewhere. These 33 barges were 370 days in all discharging or waiting to discharge after

*Mr. R. N. Tough.*  
20 Mar. 1901. getting into dock, being an average of more than 11 days each barge. The period was June to October, last year, inclusive, and was one merchant's business we did in deals under a certain contract he had. I also put in a table showing the length of time occurring between vessels' arrival at Gravesend and our receiving timber in the Surrey Commercial Docks.

*(The Witness handed in a return of steamers with timber discharged in Surrey Commercial Dock during September, October, and November 1900, from which Messrs. Tough & Henderson received goods overside. See Appendix, 12th Day, No. 4.)*

The table comprises a list of 29 steamers, and it will be found that 376 days were occupied, being an average of 13 days on each steamer, in our receiving our portion of the cargo. To further illustrate the delay existing at the docks, just recently—that is, last November—we had to receive six barge-loads of timber from an Allan liner in the Albert Dock. Some of the goods were delivered direct overside into craft, and some for ship's convenience were delivered to quay, and then from quay into our craft. Six barges were occupied in all 40 days in dock obtaining their freight, with the result that the merchant will have to pay 28 days demurrage on craft, amounting to £28. Coming to the third reason I give, namely, the very heavy and inequitable charges levied by the dock companies upon goods they get possession of, I propose to take some goods that my firm carry to a considerable extent. I am able to substantiate, if required, the figures I give by vouchers or dock company's printed tariff. First, wood goods, deals, battens, and boards from Baltic and Canadian ports; generally ship delivers to dock quay at her own expense. The goods being on quays, the dock companies say, "Before we will deliver to water carriage we shall require from 5s. to 7s. 6d. per standard," which is 2s. to 3s. per actual ton weight. The consideration given for such a charge amounts to the use of quay space for a period not exceeding three days and for labour in delivering from quay to barge close alongside. Secondly, I take the charges on wood-pulp, in which there is a very large trade indeed; here, again, the ship delivers direct to quay, where the pulp lies only so long as it may suit the dock companies' convenience before they will deliver to craft, which probably arrive the moment the goods were put on quay. For this the dock companies' charge is 3s. 6d. per ton for what can be, and is, to my knowledge, done for less than 1s. per ton.

4081. Where is it done for less than 1s. per ton?—I do it myself. I believe the docks do give a preferential rate to some shipowners on goods, but I cannot now prove this point.

4082. I think we must ask you not to go into these questions. They are verging on controversial matter. Will you give us the reason why you suggest that the evidence given and the tables put in establish the dock company's inability to cope with the traffic satisfactorily?—As to the fourth reason I give, I think the evidence given and the tables put in establish the dock company's inability to cope with the traffic satisfactorily. I am of opinion that instead of the dock companies allowing the waterways to be blocked up and being inaccessible, as they often are, thus preventing barges obtaining their cargoes, the dock companies should provide a reliable and regular appliance for transporting craft about the docks and in and out the entrances.

4083. Are you referring to tugs?—Yes, in that case. The dock company allow us 24 hours to get out of the dock after being loaded. If we remain in dock longer, or our barge is adrift, they put a charge on her, and this I do not complain of.

4084. Now have you anything to say with regard to the lighterage business of the Port?—Touching matters more closely connected with the lighterage business of the Port, I have endeavoured to ascertain what is the actual charge made for lighterage, that is on what I call rough goods, that is goods which do not exceed £5 per ton in value, and my own experience is that the charge does not exceed an average of 1d. per ton per mile. Large quantities of coal are carried from Brentford to Albert Dock, 23 miles, at 6d. per ton per mile. For valuable cargo, requiring more protection, I think the charge would not exceed 2d. per ton per mile. I speak of full cargoes. The charge for towage taken from our own tariff is 6½d. per mile per craft. I am of opinion that our business suffers adversely by the fact of so many bodies having

control over us, coupled with too much legislation being passed that affects us. I suggest no authority should be empowered to make bye-laws in relation to the river or docks.

4085. You suggest, I believe, that you suffer inconvenience by reason of the river being so shallow?—Yes; we are hampered, and suffer great inconvenience and loss by reason of the river being so shallow below and above London Bridge, tidal and non-tidal, and seeing we have ourselves paid the Thames Conservancy during the past eight years £5,890 10s. 8d. for toll on goods we carry, or an average of £736 6s. 4d. per annum, we consider we are entitled to better facilities than exist, and that tolls in the tidal way shall be abolished.

4036. What depth do you suggest, up to Teddington Lock, say?—I suggest that there should be 7ft. 6in. of water at low water between London Bridge and Teddington. Then we want a uniform system of lighting on all bridges.

4087. Why?—Because the lights are very misleading now, and the river is so difficult to navigate. If it is a man who is experienced who is continually going up there he has to carry the lighting of the different bridges in his mind—or, rather, in his eye, as it were—and occasionally he forgets it and makes a mistake.

4088. (*Mr. Lyttelton.*) Are the lights put in different places on the arches, or in different colours?—Different colours and different places; some in the middle of an archway, and others on an abutment.

4089. (*Mr. Peel.*) Does your complaint apply to railway bridges or only to ordinary traffic bridges?—I think, without exception, all the railway bridges are lighted in the way that I should say we want them; that is to say, with a red and green light; but the other bridges are not. Then we want better facilities for navigation during construction of works and bridges. Both Kew and Vauxhall temporary bridge plans had to be altered after great agitation was brought to bear. The throwing of snow and sludge into the river should be stopped; the number of draw-docks increased, and better kept up. More mooring buoys for ships and barges, more public stairs, and made accessible for landing. Compulsory legislation for the Conservators to raise and remove wrecks and obstacles. I should like to say as to this I may be in error through looking at the draft Bill. The word there was "may," and now it is "shall" in the Act. It makes it imperative.

4090. (*Chairman.*) Has not the Trinity House power to do this?—No, not that I know of. I am of opinion that the Conservators of the Thames, by an extension of their body, will be the proper and competent authority to control all matters relating to any trust or authority that may be found necessary to be created. I am of opinion that neither the present docks nor wharves should be taken over by any public trust, but that they should remain free competitors for trade as now, and that any new scheme proposed should have for its primary and main object the relief of the existing compulsion imposed upon the trade of the Port to use the docks. If within the scope of the inquiry, I am of opinion that the Royal Commissioners would render a great service to the Port in recommending the extent of the waterways, tidal and otherwise, which shall be included to be within the Port of London—commercially, I mean.

4091. (*Mr. Peel.*) You say that you think the wharves and docks should remain free competitors, but that any new scheme should have for its primary and main object the relief of the existing compulsion imposed upon the trade of the Port to use the docks. I do not quite understand that. Do you suggest that more wharves or quays should be built in order that the vessels might not go into the docks by using these quays or wharves, or what do you mean?—I do suggest that deep-water quays should be built to provide for the accommodation which I say is required in the Port, and that the shipping should be relieved from going to the docks as now by reason of the docks not giving the facilities that the trade demands.

4092. Then you do not suggest that the facility should be given by any public authority?—I suggest that it should be done by some authority, certainly.

4093. And so far as the present docks or wharves are concerned they should remain in their present owner ship?—That is so.

4094. (*Mr. Ellis.*) Do I understand that you and your firm are outside the Association of Master Lightermen?

—We are not at present members. I am associated with them.

4095. You outlined a large scheme of some miles of quays on both sides of the river, and you say that rail carriage may be provided by tubular communication. Taking the quays first, have you in your mind by whom those miles of quays should be provided?—It is certainly in my mind. My idea is that these quays—six or seven miles, I say—should be constructed, and that a sum of money should be borrowed by some authority, and tolls should be levied on the shipping that loads or discharges there. I say, further, that in my idea it would not be necessary to tax any private individuals or to tax the ratepayers, but that a sufficient return for the capital that could be borrowed would be made, and would be produced by reason of the shipping that could use these quays.

4096. Then, in your opinion, in the interests of the Port and trade of London, it is desirable that some authority should be created with power to spend money?—I am certainly of that opinion.

4097. Then you went on with various particular recommendations on which I do not dwell, but towards the end of your evidence you said: "I am of opinion that our business suffers adversely by the fact of so many bodies having control over us, coupled with too much legislation being passed that affects us." I imagine as regards that that there would have to be legislation to create the new authority, would there not?—There would have to be legislation to create a new authority. It is so divided now.

4098. And with regard to so many bodies, would you have those bodies consolidated or their powers concentrated in one body?—No; I am fairly neutral about that.

4099. At all events, you said, "I suggest no authority should be empowered to make bye-laws in relation to the river or docks"?—I do say so, because the bye-laws have operated so adversely to us. I should say there should be an Act of Parliament.

4100. You are against what is called grandmotherly legislation?—I say the bye-laws have been proved to be bad over and over again. Let us have an Act of Parliament. They sneaked these bye-laws upon us, and put a different construction upon them months afterwards from what they intended to do in the passing of them or in asking them to be passed.

4101. Would you allow every man on this great highway of commerce, and the docks connected with it, to do that which is right in his own eye?—No, I would not.

4102. You would have some restriction?—I would.

4103. You said, "I am of opinion the Conservators of the Thames, by an extension of their body"—would you mind indicating what you mean precisely by that?—I say the Conservators first of all have a very large staff of very great experience, and I am of opinion no men are better versed in the whole length of the Thames and navigation of the Thames than the Conservators are as a body. They have that staff, and they have large offices. I do not care what bodies you increase the Conservators with, but I do say that there is a foundation for any trust or authority that should be recommended to be created.

4104. Then your authority really is a reformed Thames Conservancy?—If you put it so.

4105. I want to take it from you. How do you put it?—I think that is a very good definition—reformed Thames Conservancy.

4106. You accept that?—Yes, I would accept it.

4107. Then there would have to be legislation to amend the Act of 1894?—Most decidedly.

4108. (Sir John Wolfe-Barry.) With regard to the quays that you recommend, you say that they should be as near the City as possible. Have you formed any idea as to what that means?—I mean to say not to go further down the Thames than may be absolutely necessary to get possession of the suitable land.

4109. I want you to point out what you mean by "as near the City as possible"?—I do not suggest anywhere near London Bridge, but much further up the river than Tilbury.

4110. Do you mean below the Albert Docks?—Yes.

4111. Where the land is not built upon?—Where the land is not built upon.

4112. And there you suggest the public authority should build wharves for the discharge of vessels?—Yes. *Mr. R. N. Tough.*

20 Mar. 1901.

4113. In that case they would be in competition with the docks, would they not?—They would to a certain extent. Of course some vessels would still continue to use the docks, I take it.

4114. You are in favour of competition, whether it is competition between companies, or between a public authority and a dock?—I think competition is very healthy.

4115. You have given evidence as to the time which is taken in discharging vessels into barges at Millwall Dock and the Surrey Commercial Docks. Can you tell us how much of the time is lost in getting in and out of the docks—the delay due to the dock company's operations—and how much is due to matters connected with the discharge of the vessel itself?—With regard to the table that I put in, do you mean?

4116. Yes?—I do not know of any more than the ordinary time that it takes to get from the dock entrance to the discharging place.

4117. Therefore these large excesses of delay are not due to the difficulty of getting in and out of the docks, so much as the question of discharging in the dock itself?—Not so far as this table is concerned.

4118. With regard to all the matters of lighting bridges, and alterations of plans, and throwing snow into the river, and mooring buoys, and the removal of wrecks, those are matters that are now under the jurisdiction of the Thames Conservancy, are they not?—Most of them.

4119. I think every one of them?—No, not the throwing of snow and sludge into the river. I think certain vestries or the Corporation of London have the right to do that.

4120. The Conservancy people at present make a great many bye-laws?—They have powers to make certain bye-laws.

(Mr. Lyttelton.) I think they have power to make bye-laws on some 40 different subjects.

4121. (Sir John Wolfe-Barry.) On almost every conceivable subject they are the people who make bye-laws?—Yes.

4122. I think it is a fact that bye-laws have to be submitted to the Board of Trade before they are authorised?—That is so.

4123. And that notice is given to those who are affected by the bye-laws?—Yes, by way of advertisement.

4124. Can you give us any better way of doing it?—I do not complain of the way it is done. I complain that they should be made at all.

4125. You are against all bye-laws?—Yes.

4126. You say that everybody should do exactly what is right in his own eyes?—No. I say that there should be an Act of Parliament instead of a bye-law.

4127. (Mr. Lyttelton.) Have you had any experience of Acts of Parliament dealing with minute regulations of rivers?—I have had a great deal of experience of bye-laws and Acts of Parliament, and a great many bye-laws have turned out to operate in a way they never were intended to.

4128. But the Act of Parliament says if the Thames Conservancy want to make bye-laws they have to submit them to the Board of Trade for approval, and notice has to be given to all people who are likely to be affected, so that they may be heard, and not until they are heard can the bye-laws become operative. Do you mean to say it would be more convenient to business that every separate bye-law should be made the subject of a separate Act of Parliament? You would have no chance at all of being heard in that case?—I rather differ from you there. My experience is that these authorities often make bye-laws which really, in fact, they have no right to make, but they are passed by the Board of Trade.

4129. At any rate, it is the rule now that everybody is heard before the Board of Trade before the bye-law becomes operative?—That is so.

4130. Even then, if it is unreasonable or contrary to law, you can take it to the Courts and get it overruled?—Yes, get it upset.

# ROYAL COMMISSION ON THE PORT OF LONDON.

## THIRTEENTH DAY.

*Monday, 25th March, 1901.*

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. STEPHEN PENNEY called and examined.

Mr. S.  
Penney.

25 Mar. 1901.

4131. (*Chairman*.) You are a pilot engaged in conducting vessels from Gravesend to the sea?—Yes.

4132. How long have you been so engaged?—Since 1876.

4133. Are you employed by any special line of steamers?—The Peninsular and Oriental Company.

4134. Will you tell us what you can with regard to the navigable channel of the river with which you are acquainted?—At the present time I should say the water from Gravesend to the Nore is in better condition than it has been the number of years that I have been acquainted with it. I may say that previous to 1876 I was 13 years in the service of the Honourable Corporation of Trinity House, so that I have been acquainted with those waters for a number of years, and I have no hesitation in saying that at the present moment the condition of the channel is better than it has been at any time that I have known it.

4135. Have you anything to suggest that would add to the safety or convenience of vessels entering or clearing the Port of London?—Yes. My first suggestion to the Commissioners is that there should be employed a permanent surveyor. I have never known any shoals of importance to be found in the waters between the North Foreland and Gravesend but what a ship's bottom has found them. The ship's bottom has found the shoals by grounding on them.

4136. Have you any other suggestion to make?—One has to be very careful about making suggestions. You asked me about the water in the channels. The remarks that I have made simply refer to from Gravesend to the Nore; but I should like to point out to the Commission that there is likely to be a very serious alteration in the different channels at the estuary of the Thames. The place to my mind is shoaling up very considerably, and is likely to cause great inconvenience at no very late date. In proof of that statement I may say this with regard to one shoal. When the Duke of Edinburgh Channel was opened it had 30ft. at least in it, and at the present moment I think I am right in saying that it has 15ft. in it; and from observations in going down I have noticed at different points the sand is going out, and in one of the cases I have reported that to the Board.

4137. What Board?—The Trinity Board. I believe a great deal of that has been brought about by the discharge of mud and sewage from different vessels that go down there to discharge. In fact, on one occasion I reported to the Trinity Board—my pilotage Board—that a vessel turned round under my bows right in the navigable channel, and dropped her cargo into the fairway. This was a large lighter in tow 10th September, 1898, at 2 a.m. In fact, just in that locality there is a great decrease of water and a narrowing of the channel. I believe that in the Edinburgh Channel there will be a great alteration, because when those steamers of the London County Council go down and discharge their sewage I believe they do not go down far enough, and

the time of tide that they get down there is very nearly low water, and when they discharge it it comes back on the first flood.

4138. Have you anything to tell us more particularly with reference to the action of the County Council in discharging sewage in the Barrow Deep?—They discharge it. I cannot tell you the exact distance, but the upper part is marked by a buoy, and as soon as they get within that they let go their sewage, they discharge their cargo. Se 7552

4139. Have you any remarks to make on that action?—Only that they should not be allowed to do it, and that they should be compelled to go a great deal further down than they go at the present time. In my opinion the steamers of the London County Council, in discharging their sewage, discharge it too near the Port of London. I think they should be compelled, if discharging it in the Barrow Deep, to go to the lower part of the Barrow Deep instead of the upper part. (*The witness explained on the map.*)

4140. (*Sir John Wolfe-Barry*.) How many miles further would that be?—They ought to go 10 miles further down than they do at the present moment.

4141. (*Chairman*.) And as to the Edinburgh Channel?—The whole of those channels are silting up.

4142. Is that due to sewage?—That I cannot tell you.

4143. (*Sir John Wolfe-Barry*.) Any discharge that takes place you think should be below the Edinburgh Channel?—Yes, so that there should be no chance of its washing across to those channels.

4144. (*Chairman*.) Is the discharging done on an ebb tide as a rule?—The vessels get to Gravesend about high water, and at the time they get to the discharging ground the ebb tide is nearly expended. My contention is that what they put over is so far up that it comes back with the first of the flood.

4145. Do you advocate the appointment of a permanent marine surveyor between Gravesend and the North Foreland?—I do, strongly.

4146. Do you wish to tell us anything as to the establishment of tide signals?—Under the present system the ships are now getting of such large draught that I think there should be some means of informing a vessel how much water there is on the Middle. With all the calculations in a man's mind I do not think he can establish sufficient to know near enough when a ship of very heavy draught can pass those waters, because, after all is said and done, it is marked that we have 24ft. of water. Well, it is simply in a ditch, and nine times out of ten you will find either fishing boats there or vessels brought up. They use the best water in that little space, and one does not find that out till one gets there. I believe there should be the establishment somewhere near Southend of some conspicuous tide signal similar to what is on the West Cliff at Ramsgate, in the shape of a very large ball, which shows when there is a certain rise of tide, so that one would have no doubt in crossing over

the Middle as to whether one could or could not get through the narrow part of the channel. That ball would indicate that the water had risen, say, 5, 6, 7, or 10ft., and one would have no hesitation in crossing over any part of the ground.

4147. (*Sir John Wolfe-Barry.*) Are you speaking of the Leigh Middle Shoals now?—That is the side that a ship would go up.

4148. The Leigh Middle Shoals as a whole, I mean?—Yes.

4149. (*Chairman.*) Are you aware of any complaints from wharfingers or others as to the speed at which ships navigate the river, causing damage?—That does not affect anything below Gravesend.

4150. (*Mr. Lyttelton.*) I do not quite understand as to the tide signals. Who do you suggest should have the authority to give the tide signals?—That is beyond me. I could not tell you that.

4151. The point I rather want information upon is, who do you suggest would be more capable of intimating the state of the tide than gentlemen of your experience—than pilots, for instance?—This should be a shore-tide signal.

4152. You have not thought as to into whose jurisdiction you should put that matter?—At the present moment the position that I suggest would, I take it, fall under the Honourable Corporation of Trinity House, as it is outside the limits of the Thames Conservancy.

4153. (*Mr. Ellis.*) How long have you been a pilot?—Since 1876. I have been connected with the water since 1862.

4154. Then you have had nearly forty years' experience?—Very near.

4155. Are there any gradations of pilots?—Yes.

4156. Superior and inferior. I mean, do you rise from the ranks?—The system of appointing pilots is that when a pilot is first examined, it is either for north or south, and for 14ft. draught of water; after he has served for three years in either of those channels as what is called an under-draught pilot for 14ft., he can apply to the Honourable Board for permission to be examined for the upper draught. They take him, and he is examined, and then after passing the upper draught for the south channel, he can make application to have his licence extended to the Isle of Wight on re-examination.

4157. Then there is a classification?—Yes.

4158. I presume, now, you are in the first class?—I hold all the licences that the Honourable Corporation grant.

4159. Could you give us an idea of how many ships you pilot up or out in a year?—Roughly speaking, I should say about one a week. It may be one or two over, or one or two under, but I think since I have worked outwards for the Peninsular and Oriental Company, my ships run once a week.

4160. Are you attached to any company?—The Peninsular and Oriental Company.

4161. They apply to the Trinity House for a pilot, do they?—No; that is not the system. They select their own pilot.

4162. They came to you?—Yes, that is so. If that system is not adopted, I have no doubt that, if the Corporation were applied to for a pilot, they would select one.

4163. When you say "the Corporation," you mean the Trinity House?—Yes.

4164. Then you are in the service of the Trinity House, but attached to the Peninsular and Oriental Company; is that it?—Yes, that is so.

4165. How long have you held what I may call the first-class certificate? How long have you been in the premier position?—As a first-class pilot, do you mean?

4166. Yes, how long have you been in the first rank?—21 years and 10 months.

4167. During that time has the size of ships that you have had to deal with been increasing?—Very considerably.

4168. Have the navigable channels of the Thames been improving relatively to the size of the ships during that 25 years?—Naturally, since the barges have been stopped from throwing their refuse into the river.

4169. By the prohibition of the throwing of refuse into the river the accumulation or silting up has been hindered, not to say stopped?—Yes.

4170. Has anything been done by art apart from nature to improve the navigable channels relatively to the increase that has gone on in the size of the ships?—In Gravesend Reach and in the Lower Hope Reach we have four things that they call dredgers. In the Lower Hope Reach those dredgers have been there to my personal knowledge from four to five years. I do not know when they work, but they certainly do more damage in blocking up the Reach than the bottom does.

4171. Then the dredgers have not improved the navigable channel very much?—Some of those dredgers were at work in the Thames when I went into the service of the Corporation.

4172. And they are rather antiquated, perhaps?—Well, I should think they are.

4173. This is what I want to get at if you will assist me. Will you tell this Commission whether, in your opinion, having regard to the increase in the size of the ships, the navigable channel is for the large ships of to-day as good as the navigable channel was 25 years ago for the ships of that day?—I should say better.

4174. Will you explain why?—I can only say, as in the answer I first gave, that the channels are better now than they were 25 years ago.

4175. Through natural scour?—Yes. That answer only applies down as far as the Nore.

4176. (*Sir John Wolfe-Barry.*) Did you appear before the Lower Thames Navigation Commission of 1894?—I did, when you were there.

4177. I daresay you have read the Report?—Yes, I read it at the time, but I have not looked at it lately.

4178. Perhaps the most important recommendation of that Commission was that a 30ft. navigable channel at low water should be provided up to Gravesend?—That is so.

4179. That had your support?—That had my support.

4180. And the warm support of Sir Thomas Sutherland and the gentlemen who appeared for the large shipping interest?—I cannot say that. I fail to see the good of a 30ft. channel at low water for vessels that draw 32ft.; I believe we have ships entering the Port of London running about 31ft. 8in. now.

4181. I want to point out to you that that 30ft. is at dead low water at spring tides?—I should like to know what "dead low water" means. I contend that though our Admiralty charts are marked at low water, ordinary spring tides, at times there is a great deal less water than is marked on them.

4182. Everybody knows that there are extraordinary spring tides as well as ordinary spring tides. At extraordinary spring tides you get less water?—Yes, but those extraordinary spring tides come when one hardly knows anything about it, and that is the reason of my contention that there should be established a good tide signal.

4183. Apart from that question, if you have a depth of 30ft. at dead low water at ordinary spring tides the detention in that channel must be very much less than if it is only 26ft.?—Quite so.

4184. Therefore, if you got 30ft. instead of 26ft. up to Gravesend you would have a very great amelioration in the question of detention?—If my memory is correct, I think that 30ft. channel was to be 600ft. wide.

4185. Yes, it was something of that sort?—You would have to have a very different arrangement to what you have at the present time to keep a channel of 600ft. clear.

4186. How it is to be done is a matter apart. I am speaking of the convenience to shipping if it were done?—No doubt ships would not be delayed. They would get up to Gravesend at low water.

4187. The Commission of 1894 was precluded from dealing with the river higher up than Gravesend. Will you let us have your idea on the question of what depth of water would be desirable above Gravesend?—I would rather you put that question to a river pilot. My duties only commence and finish at Gravesend.

4188. I daresay you also recollect that the Commission of 1894 recommended that there should be an an-

Mr. S.  
Penney.

25 Mar. 1901.

Mr. S.  
Penney.  
25 Mar. 1901.

nual survey of the river to lay down what changes were taking place?—I believe so.

4189. Do you think that would be a desirable thing?—I strongly support it.

4190. I suppose you say that the results of the survey should be made public property?—Yes.

4191. That they should be published in much the same way as you know is done at Liverpool?—I believe it is done.

4192. I suppose that the question of fog is a very important thing in the navigation of large vessels?—It is; and not only fog, but one of the greatest curses that pilots have to deal with is the smoke from the cement factories. I am speaking from Gravesend down in the Lower Hope Reach. It is not the first, second, or third time that there have been some very serious collisions brought about by that smoke alone.

4193. With regard to the Duke of Edinburgh Channel, am I right in thinking that that channel was a new channel at the time that the Duke of Edinburgh was in command or, at any rate, was connected with the River Thames in some way?—I think that the channel was officially opened by the "Duke of Connaught," one of the Orient Steam Navigation Company's steamers with troops on board, when the Duke of Edinburgh went out.

4194. How many years ago is that?—About 20 years ago.

4195. At that time and before that time there was no channel sufficiently pronounced through that course for big ships?—No.

4196. At that time what was the route taken by big ships?—In daytime they went through the Alexandra Channel.

4197. The Alexandra Channel is nearer the Nore?—Yes. Then if it was night-time the ship would come down, it would anchor in the Nob Channel, and then wait until the tide flowed sufficiently to allow it to proceed across the flats of the Girdler through the Prince's Channel.

4198. That was a difficult channel, and necessitated caution and delay?—There was only about 17ft. or 18ft. of water, so that if the draught was over that you had to wait till the tide flowed to enable you to go across.

4199. You did not take the course of going outside everything?—No.

4200. You always waited to go through the Alexandra Channel?—Yes; there was no chance of taking any other course.

4201. It would be too far out, I suppose, to go right away down Barrow Deep?—You could not take a channel that was not buoyed and marked.

4202. In those days you went out through the Alexandra or the Girdler?—Yes.

4203. The Duke of Edinburgh Channel was found to be improving?—Yes.

4204. And became the principal channel for the in-and-out traffic of the Thames?—Yes, and it is so now.

4205. But now it is beginning to deteriorate?—Yes; I think it is.

4206. Are the other channels at all improving?—I think so. My ships are large vessels, and there is much less risk in going through the Duke of Edinburgh Channel than in going through others, so that I use no other channel but the deep ship channel.

4207. You cannot say for certain that any deterioration of the Duke of Edinburgh Channel has not been to some extent compensated by the improvements of the other channels?—I cannot at the moment.

4208. I suppose it is quite agreeable with all the history of the estuary of the Thames that these channels open from time to time and close from time to time?—I have not known that.

4209. You know there was no way at all through the Duke of Edinburgh Channel at one time?—The first vessel that went through the Duke of Edinburgh Channel was the "Great Eastern," when she took the first cable; the channel was specially buoyed for that occasion.

4210. But that was not so fine a channel as it is now, or as good as it was, say, five or six years ago?—It was much wider than it is now. It was much wider when it was first buoyed by the Trinity Corporation.

4211. And deeper?—Yes.

4212. From that time it has been getting worse?—Yes.

4213. You think that may be due to the deposit of materials by the London County Council?—I do.

4214. Have you any proof of that? Have you picked up any sewage or anything of that sort?—I was at anchor when I was piloting a Peninsular and Oriental Company's ship inward. I got caught in the upper part of the Black Deep, not far from the Nob gas buoy. When we got under weigh in the morning, the chief officer when he came on to the bridge said to me, "Where in the name of Fortune have you anchored the ship?"

4215. (*Rear-Admiral Hext.*) How was the tide running?—It was flood tide. I said, "Anchored the ship? Why, in the Black Deep." I should not like to say what his remark was, but he said, "Well, you have anchored her in some very peculiar stuff." I said, "What is it?" He said, "The mud that has come up on that anchor stinks something fearful." I asked him if he would send for a little on the bridge, and it was taken off the anchor and brought up. It was of a bluish stinking nature, and to my mind was nothing more or less than sewage.

4216. (*Sir John Wolfe-Barry.*) Can you give us the date of that?—No; I could not give you the date.

4217. Was it one year ago or two years ago?—It was about eight or nine years ago.

4218. (*Chairman.*) Have you had any similar experience since?—No; I have not.

4219. You must have anchored constantly just about there since?—No; not near there. Perhaps just the lower part.

4220. (*Sir John Wolfe-Barry.*) Do you know that the County Council steamers begin to discharge in Barrow Deep?—I do not.

4221. (*Rear-Admiral Hext.*) Have you ever seen sewage discharged actually when the flood tide was running or just beginning to make?—Yes, at the upper part of the Barrow Deep.

4222. You have actually seen the lighter discharging her sludge with the young flood making?—I have seen the County Council's steamers at the upper part of the Barrow Deep on the first of the flood.

4223. Could you say that they were actually discharging at the time?—I could not say what they were doing. I could see them going round.

4224. Did you see them arrive and turn round?—Yes. They go down and turn round.

4225. The very fact of turning would show that they had discharged their cargo, I presume?—I take it that would be so.

4226. Do you know who is in charge of the river so far as buoys and navigation and shoals go, from Gravesend to the North Foreland?—The Honourable Corporation of Trinity House.

4227. At present they do not survey it, do they?—I cannot say that they do not survey it.

4228. You know of no official survey?—No; I know that there has been a survey just lately done by the Thames Conservancy officials.

4229. (*Mr. Lyttelton.*) Is the Honourable Corporation the same thing as the Trinity House?—Yes.

4230. (*Rear-Admiral Hext.*) Have you ever, in navigating a heavy draught ship, been delayed a considerable time in recent years?—Not latterly, not since I gave evidence in 1894.

4231. In navigating a heavy draught ship from the Nore to Gravesend, would you say you have been detained by want of water? Have you had to anchor for want of water?—Many a time I have done that.

4232. Have you ever had to actually turn round and go back to find deeper water?—I have anchored on several occasions quite recently with Peninsular and Oriental Company's ships on the outward passage when we have got away from Gravesend. I might have ~~one~~ through, but it was a question whether I should, and rather than run the risk of touching ground I have put the anchor down and waited until the tide flowed.

4233. You wish to have a tide gauge to show from hour to hour, or any change, in fact, in the actual rise or fall of the tide?—Yes, because the fall affects the outward ships; the rise affects the inward ships.

Mr. HARRY DAVIES called and examined.

4234. (Chairman.) You are a pilot licensed to conduct vessels outwards from Gravesend?—Yes.

4235. How long have you been so employed?—Ten years.

4236. You are a master mariner and a Trinity House pilot?—Yes.

4237. Do you work for one company?—I work for the Orient Line.

4238. Exclusively?—I am exclusively engaged to work their boats outwards, but I pilot other boats not belonging to them as well.

4239. Are you of opinion that the estuary of the river is well lighted and buoyed?—Yes.

4240. What depth of water do you regard as necessary between the Nore and Gravesend?—Twenty-eight feet.

4241. Have you anything to say with regard to the deposit of mud and sludge?—Yes; I think that it ought to be shot when the ebb tide is running hard. It is generally shot on the young flood, and, consequently, tends to silt up the estuary, especially round the Duke of Edinburgh Channel. The London County Council's sludge boats generally get down at the very last of the ebb, and all the sludge is emptied just as the young flood is making; consequently, the greater part of this solid matter comes up again with the flood.

4242. Will you tell us where you have yourself seen these vessels discharging?—At the Barrow Deep.

4243. The highest point being where?—I could not say the outside limit. We see them half way down the Barrow Deep.

4244. (Mr. Lyttelton.) Pointing due north of the Girdler?—Yes. If they discharge at the upper end of the Barrow Deep at the young flood, the stuff must come back.

4245. (Chairman.) And you say that is the case?—That is the case, and the worse the weather is the higher up they discharge.

4246. Will you tell us whether, in your opinion, vessels are hindered owing to the presence of sailing barges or shrimping boats in the river?—They are hindered or hampered very much by both at times.

4247. Have you any suggestions to make which would add to the safety or convenience of vessels?—Do you mean as regards barges and shrimping boats?

4248. Not necessarily, but we should like to hear your opinion on that also?—As regards shrimping in the fairway I consider that it ought to be forbidden. As regards barges I should suggest that they be confined to the southern shore of the river, and tacking short of mid-channel. As regards the depth, I think we ought to have a minimum of from 26ft. to 28ft. at low water springs.

4249. (Rear-Admiral Hext.) You say 28ft. as a minimum?—Yes.

4250. Supposing you had an extraordinary spring-tide when you were bringing up one of these very heavy ships, would 28ft. be enough?—If it was not enough we should have to wait until there was enough; that is, if it was an extraordinary spring tide. Vessels of more draught than 28ft. are exceptions at the present day.

4251. But there are such vessels?—There are such vessels.

4252. And the tendency is to increase?—I think the tendency is not to increase in the draught so much as in the tonnage.

4253. With reference to what you have told us about the discharge of mud and sludge, have you actually seen these barges discharging on the young flood tide?—Yes, I have seen them discharge and turn round and go back again.

4254. Actually when the young flood was making?—Yes. It must of necessity be so when the weather is bad, because they always come down from Barking on the ebb, and by the time they come to the Barrow Deep the ebb is done.

4255. I understand that the fact is they arrive there at the very end of the ebb, and when the young flood is beginning to make?—Yes.

4256. And, therefore, they must discharge their  
4944.

sludge on the flood tide unless they wait so many hours?—Yes.

4257. Do shrimpers keep under way when they are shrimping, or do they anchor?—They have their trawls down. They are practically helpless. We have to keep out of their way.

4258. Are there large numbers of them?—Yes, scores of them, and they are nearly always in the deep water down by Southend, where we have to go with the deep draught ships.

4259. You have heard that the last witness advocated a tide gauge. Do you advocate a tide gauge?—Yes, it is a very desirable thing, but we have a tide gauge for outward ships.

4260. Who is responsible for it?—The Thames Conservancy.

4261. Where is it?—On the Chapman Lighthouse.

4262. That would hardly show how the water higher up the river was?—No, not higher up. It simply shows the water we have over the flats at Southend.

4263. Have you ever been detained from want of water and had to anchor?—Yes.

4264. Outward or inward?—I have been detained outward.

4265. Not inward?—No, I do not work inward.

4266. Do you not work into Gravesend from the Nore?—No; I work outwards. We are divided into two bodies—inwards and outwards. The outward men are here.

4267. You have been detained?—Yes.

4268. Often?—No, not very often.

4269. Can you give us an idea how often in a year?—With the particular line that I work for, six times. That would be the maximum. We always sail at a fixed hour.

4270. (Mr. Ellis.) As I gather, you consider these barges and shrimpers an obstruction to navigation?—Yes, a very great obstruction, because we are practically helpless when we get into a fleet of shrimpers, as I said just now. They always dredge in the deep water down by Southend, and we practically have to keep out of their way.

4271. Have you ever had any accident?—Yes.

See 8564-96.

4272. You personally?—Yes.

4273. When?—In the month of January of this year.

4274. What happened?—I had to put the ship on the mud.

4275. What ship was it?—The "Norfolk."

4276. What tonnage?—About 5,000, or 6,000 tons.

4277. Will you just tell us what happened?—I simply got into a big fleet of barges with a light air up from the north-east, and I had to port to go under their sterns; they were all standing over on the starboard tack, and before the ship could recover her port helm she touched on the Lower Hope Point.

4278. Did any damage accrue to the ship?—No, she only just put her nose there.

4279. Was she detained any time?—Two or three hours, till the young flood made.

4280. In that case there was a loss of time of a few hours to the vessel in order to avoid damage to these craft?—In order to avoid sinking barges and causing loss of life. I either had to sink the barges and drown men, or port.

4281. Have you ever had any other accident?—No.

4282. That is your only experience?—Yes.

4283. I understand, then, of course, you have never had any action against you at law?—No.

4284. Do you know any of your fellow pilots who have had actions against them at law?—Yes, a good many of them.

4285. How many?—I could not say how many, but I daresay it would enter into the tens.

4286. Arising from what?—Arising from the number of sailing barges in the river and dummy barges. Then even if a man does not have an accident you can hardly comprehend the strain that it puts on a man when he is surrounded by these barges and shrimpers in light airs and calms; because what you have to do you have to do promptly.

Mr. H.  
Davies.  
25 Mar. 1901.

4287. You would say to us within your experience, and not only your own personal experience, but what you know happens in the river, this kind of thing is an obstruction and a danger to navigation?—Yes, a great obstruction.

4288. (Sir John Wolfe-Barry.) Are you engaged entirely by the Orient Company now?—Yes.

4289. What is the largest ship they have in their fleet?—10,000 tons gross.

4290. Do you know what she draws when fully laden?—She does not draw as much as some of the older ones.

4291. Do you know how much she does draw?—26ft. or 27ft.

4292. When fully laden?—Yes, and the others draw 27ft. or 28ft.

4293. Do you pilot out the largest ships?—Yes.

4294. About how many ships outwards do you take in the year?—I take the Orient boats fortnightly; that would be 26.

4295. You say that you have been delayed as much as six times out of 26?—I say that is the maximum.

4296. But have you been delayed six times in the year out of 26 trips?—Yes, till the young flood made.

4297. Do you corroborate Mr. Penney about the deterioration of the Duke of Edinburgh Channel? Do you say that it is getting worse?—I am of opinion that heavy gales from the North East, East, and South East tend to shallow the Edinburgh Channel by the seas

breaking over that part of the long sand seaward of the Edinburgh Channel and washing the sand in.

4298. That is in the middle of the channel?—Yes.

4299. Can you say when you began to see it grow?—It has been growing within the last five years.

4300. Can you tell us whether the other channels are any better? Is the Alexandra Channel getting any better?—No, I do not think there is any alteration in the Alexandra Channel as far as we know.

4301. You do not use it?—We do in the daylight with moderate draught ships.

4302. How do you find out whether a channel is improving or not? Do you take soundings as you go along?—If we have any doubt on the matter we sound all the time; and Trinity House advise us of all information they get as regards shallows and growth of sands. They send us printed matter. See 5369.

4303. About how often do they send this?—As soon as they find out that there is any change in the channels or sands.

4304. Are the officials of Trinity House always surveying these various channels?—Yes, their boats are always at work in the district.

4305. Then the Trinity House people would know the position of the channels better than anybody else?—Yes.

4305A. Whether they were improving or not?—Yes.

Mr. EDWIN RIGDEN called and examined.

Mr. E.  
Rigden.

4306. (Chairman.) You are a pilot licensed to conduct vessels inwards from Dungeness to Gravesend?—Yes.

4307. How long have you been so employed?—Since November, 1874.

4308. Do you work for any particular company?—The Orient Company inwards.

4309. You are, of course, well acquainted with the navigable channels of the river?—Yes.

4310. What have you to say with regard to the South Channel from Gravesend to the sea?—It wants a lot of dredging.

4311. (Sir John Wolfe-Barry.) Would you mind telling us what you mean by the "South Channel"?—The Edinburgh Channel to Gravesend.

4312. (Chairman.) Has it become worse in your opinion since you knew it?—Yes. On the patch in the Edinburgh Channel there is much less water than there used to be.

4313. Can you give us any suggestion as to the reason for this?—No, I cannot. The sands shift about in the channel a little.

4314. You have no other reason in your mind why it should be worse?—No, only the sands shifting about in consequence of the winds, I think, and the tides.

4315. Have you any further point which you would wish to bring to the notice of the Commission?—Yes. The Ovens Point at the lower part of Gravesend Reach I think should be dredged away just by the Ovens Buoy. A few years ago the buoy was shifted out and it is getting very narrow there. It is a very dangerous point coming up on the ebb tide with a heavy ship.

4316. Has it become worse lately?—Yes, it keeps getting worse. The buoy was shifted further out into the river a few years ago. It is a very dangerous point to turn coming up on the ebb tide. We meet many vessels coming down into the Hope while turning up into Gravesend Reach.

4317. (Mr. Lyttelton.) Would you consider it your business to make any representation to anyone after an increase in any of these shoals?—Yes.

4318. To whom would you make your complaint or representation?—To the company.

4319. And it is for them, you think, to make any representation to the Trinity House?—Yes, I should leave it to the shipowners.

4320. (Sir John Wolfe-Barry.) With regard to the Trinity House, do they give you information about the channels?—Yes. When they find there is any alteration they give us notice.

4321. Where do they begin to give you information—at what limit down the river? Do they give you information as to the upper river?—No; from Gravesend Reach downwards.

4322. Does anyone give you information upwards of Sea Reach?—Only to Gravesend. See 5369.

4323. Not the Trinity House?—Yes, to Gravesend.

4324. Do the Thames Conservancy give you any information as to the channels above Sea Reach?—No.

4325. Therefore, all the information you get from the Trinity House is, we may say, I suppose, seaward of Southend?—Yes, and to Gravesend.

4326. That is to say, seaward of the jurisdiction of the Thames Conservancy?—Yes, and from Gravesend.

4327. What information do you get with regard to the upper river—above Southend, say?—From using our own leads as we go up, and from information from Trinity House.

4328. There is no body of people like Trinity House to give you information with regard to the upper river?—No.

4329. You have to pick that up for yourselves?—Yes.

4330. By the upper river I mean upwards of Southend?—We receive information up to Gravesend.

4331. There are certain places that you have drawn our attention to where you have difficulties?—There is Mucking Flat; a very dangerous part.

4332. The navigable channel must be very narrow there?—Yes, very narrow indeed, and very dangerous. Mucking Flat is continually getting to have less water on it. Years ago there used to be 18ft. on it, and it has now got as little as 15ft.

4333. Do you navigate ships above Tilbury?—No, I stop at Gravesend.

4334. Have you anything to tell us about the discharge of sewage?—No. I have not noticed anything particular in the Edinburgh Channel, only the shoaling of the Patch.

4335. You have not found any sewage mud in that part of the river?—No, I have not.

4336. Have you anchored there at any time?—We very seldom anchor there.

4337. I suppose you navigate all classes of the Orient steamers there, big and little?—They all run very much the same draught of water.

4338. Would that be about 26ft.?—About 25ft. or 26ft.

4339. What depth of water do you say is desirable up to Tilbury?—I do not think there ought to be less than 30ft. to make it safe.

4340. You want a little to come and go on?—Yes.

4341. And 30ft. at ordinary spring tides, I suppose, might be 28ft. at extraordinary spring tides?—Yes.

4342. (*Mr. Ellis.*) Were you in the room when a witness spoke about the barges and sailing ships?—Yes.

4343. Do you agree with his evidence on that?—You mean about the innumerable barges we have to contend with?

4344. Yes?—Well, they are a serious danger to us.

4345. You would not put it as high as he put it?—No, I think not. I find the barges very accommodating. As soon as you blow the whistle to them they always tack round and try to get out of the way.

4346. Have you ever had any accidents?—I have had two accidents in the last eleven years with Orient vessels with barges.

4347. Did those accidents arise from the presence of barges in the fair way?—Yes.

4348. Were they run down?—I ran them down.

4349. How many years' experience do you say you have had?—My licence extends from 1874. It will be 26 years last November.

4350. And those are all the accidents you have had?—Yes.

4351. About how many ships do you navigate in the year?—About 52.

4352. Is that an average over the last quarter of a

century?—We have been doing about a turn a week for the last few years. Previous to that it was very much less.

4353. Do you consider that the Thames as a navigable river has been going back in your time or improving?—I think it has been going back.

4354. Why?—There is the silting up at the Ovens Point. The buoy has been placed much further out in the river, and that has made it much worse for us. Then there is the Mucking Flat. That used to have 18ft. of water on it, and now it has only 15ft.

4355. Then your experience is that relatively to the ships the navigable river has been going back?—Yes, for the class of ships that we have to navigate.

4356. (*Rear-Admiral Hext.*) Have you seen the sludge barges start at all on the young flood?—I could not say that I have.

4357. Have you seen them arriving?—I have seen them arriving at the latter part of the low water in the Barrow Deep.

4358. When the young flood has begun to make?—I have seen them down there. I really have not taken particular notice about their discharging their cargo.

4359. Which gives the most trouble in the channel—the shrimpers or the barges?—I think myself that the shrimpers are much worse than the barges, because they cannot get out of the way as the barges do if you blow the whistle.

Mr. ELI MUNDY called and examined.

4360. (*Chairman.*) You are engaged in conducting vessels inwards from Dungeness to Gravesend?—Yes.

4361. How long have you been so engaged?—Twenty-two years.

4362. Are you working for one company?—Yes, the Peninsular and Oriental Company.

4363. What other experience have you had?—All classes of ships from Dungeness.

4364. We should like to hear from you anything you can tell us with regard to the navigable channels of the river?—I have nothing to remark, only that I should like to see a little more water in it from the Nore upwards—from the Nore to Gravesend.

4365. You would like there to be a uniform depth of water?—Yes; a uniform depth of water at all states of the tide.

4366. What depth do you advocate?—Thirty feet.

4367. Have you anything to tell us with regard to a channel from the East River Middle Buoy to the West River Middle Buoy?—I should like to see an improvement there in the depth of water. That is the most particular place we have to contend with.

4368. (*Sir John Wolfe-Barry.*) That is on the Leigh Middle Shoal, is it not?—Yes.

4369. (*Chairman.*) Have you any further suggestions to make with regard to improving the approaches in the river?—There are two other places that Mr. Rigden spoke of. That is the Mucking Flat and the Ovens Buoy.

4370. (*Rear-Admiral Hext.*) Have you ever noticed the mud barges discharging at the last of the ebb or the beginning of the young flood?—I do not know that I have noticed them discharging. I have seen them come down there.

4371. And turn round and go back at once?—No; I will not say so.

4372. Have you ever noticed one anchor there for a considerable length of time?—No; I have not.

Mr. WILLIAM HENRY SANDFORD called and examined.

4385. (*Chairman.*) You are a pilot engaged in conducting vessels up and down the river between Gravesend and London Bridge?—Yes.

4386. How long have you been so engaged?—About 27 years.

4387. You have been employed by the British India

4373. (*Mr. Ellis.*) In your experience, has the River Thames become worse or better as a navigable channel?—It has certainly not improved.

4374. Has it gone back relatively to the size of the ships?—I could not say that it has; the ships are so much larger now than they were a few years ago—ten years, say.

4375. Then will you say the navigation remains about the same?—I should think so.

4376. (*Sir John Wolfe-Barry.*) Has the channel on the south side of the river by the Leigh Middle Shoal been buoyed? I did not know whether you knew that there was a channel existing which has never been buoyed?—No; I do not know of any channel there.

4377. How many channels are buoyed through the Middle?—Sea Reach and the starboard side coming out.

4378. There is another channel further to the south which has not been buoyed. I daresay you may not know that?—I do not know of any other channel. It does not show it on the chart.

4379. Do the Thames Conservancy give you any information as to the depths of the channels between Southend and Gravesend?—All the information we get is through the Trinity House. See 5569.

4380. Do they give you any information as to the depths of the channels between Gravesend and Southend?—Yes; every information comes to us, I should take it, from Gravesend outwards.

4381. That is so, is it?—There is notice of all alterations of buoys from Gravesend outwards. That comes through the Trinity House. We do not get any information from any other body. Where Trinity House gets it from we do not know, but it comes to us from the Trinity House.

4382. Then you do get information from Gravesend all the way to the sea?—Yes. If the position of any buoys are altered we get notice of it.

4383. And the depth of water?—Yes.

4384. Do you navigate above Gravesend?—Never.

Steamship Company, the Gulf Line, and Messrs. John Hall, Junior, and Co. for many years?—Yes.

4388. And you are, of course, well acquainted with the navigation of the River Thames?—Yes.

4389. What is your view with regard to the depth of water necessary between Gravesend and London

Mr. E. Rigden.

25 Mar. 1901.

Mr. E. Mundy.

Mr. W. H. Sandford.

Mr. W. H.  
Sandford.

25 Mar. 1901.

Bridge?—I should like the water 28ft. to Albert Dock, and from the Albert Dock if we could get 18ft. we should be perfectly satisfied. We cannot expect to get more.

4390. That is from the Albert Dock up to London Bridge?—Yes.

4391. Have you anything to tell us with regard to mooring buoys?—I should like to point out to the Commission that it would be much better if, say at Deptford, for instance, we could get a set of buoys placed for the convenience of those cattle ships that are often in foggy weather detained there, and have no place to get to only by very dangerous navigation. They have to get back to Long Reach. They have no home till then. If a set of buoys were placed there it would be very useful for that purpose.

4392. Then with regard to fogs artificially caused, have you anything to tell us?—I can only tell you what we experience. Take from Northfleet until we arrive at Purfleet—I am speaking, of course, of calm quiet weather—we are sometimes in a state of artificial fog most dangerous to navigation and to life, almost equal to a fog.

4393. Have you any remarks to make on the question of the screening of electric lights on the river?—Yes; I should advocate the lights at the West India Dock being screened. They are powerful electric lights, and they are not screened. If they could be dealt with like they are at the Albert Docks we should find it a very great convenience. They are very glaring. There is one place particularly at Deptford—I believe it is John Penn's—where they have a very big and most powerful light. That could be screened.

4394. And it is not?—It is not screened. Then at Blackwall, where the torpedo boats are, there have been works going on at night, and I think they might have improved those lights by screening them. If they would do that, it would be a great assistance to us.

4395. Have you anything to say with regard to vessels improperly anchored?—Yes; I must point this out particularly with regard to Gravesend Reach. Of course, it is the worst reach that we have to deal with, on account of the pratique that must be done by the Customs there, which causes a congested state of the river generally in Gravesend Reach. There is only accommodation for seven buoys there for shipping. I should suggest that there be more buoys placed there. Of course, that would mean interfering with the hulks which are lying there, but those hulks could be moved further down. I think that would be a great advantage to shipping in Gravesend Reach. Steamers have to anchor to the prejudice of navigation.

4396. Have you any complaint to make with regard to the position of the dredgers in the winter?—Yes. I might speak of the dredgers. If we are not going to have a better system of dredging, these dredgers are obsolete, and if they are to be used they might, in foggy weather especially and at night time, be taken in shore, and only placed there when really wanted to be used. That is what I would advise.

4397. With reference to a reply you made just now in connection with the screening of electric lights, have you ever made any representation or complaint on the subject?—I have done so only under my examination before the Honourable Masters of Trinity House. I have made mention of it there in my remarks, but only there.

4398. You have never complained through the companies by whom you are employed?—No, I have not.

4399. Have you never thought it worth while?—I always look to Trinity House.

4400. You have complained to them?—Yes.

4401. (Mr. Lyttelton.) You are employed by the British India Steamship Company and Messrs. John Hall, Jun., and Co.?—Yes.

4402. Is your work exclusively for the vessels of these two companies?—Yes.

4403. What is the maximum draught of any vessel you take up?—They are heavier draughted down always. I have from 24ft. to 26ft. down, but inwards we get them lighter—22ft. to 23ft.

4404. Have you been delayed often in your voyages?—With that draught of water we are always delayed coming up. We have to wait, say, an hour's flood.

4405. What suggestion do you make as to the deepening of the channel?—I certainly would advocate 28ft.

if it were possible to the Albert Dock, and above Albert Dock I would advocate 18ft. up to London Bridge.

4406. Are you informed of any alteration in the buoys by anybody when there is any alteration?—We are not dealing with buoys in the river, but as to the lights we are always advised.

4407. By whom are you advised?—By the Honourable Corporation of Trinity House. We are advised of any alteration that may take place.

4408. (Sir John Wolfe-Barry.) What is the length of your longest ship of the British India Company's?—460ft. to 465ft.

4409. What width of channel do you advocate above Gravesend?—I am afraid we cannot get it any wider.

4410. I mean the navigable channel. Supposing they dredge to a depth of 28ft., of course they cannot dredge to a depth of 28ft. right up to the high-water mark of the channel?—No.

4411. What width of channel do you advocate if you could get it?—We should be satisfied if we could get 800ft.

4412. You would like to have 800ft.?—Yes.

4413. You would like it so that you could be able to turn or swing?—Yes.

4414. Have you ever had to turn back after taking a ship up from Gravesend because you could not get it into the dock?—Yes, many times.

4415. If there is a risk of your not getting into the dock I suppose you must turn back?—Yes, we must.

4416. I suppose there are no places where you could safely turn?—No, we must go back to Long Reach.

4417. Otherwise the ship might touch the ground?—She would undoubtedly and probably very badly.

4418. Does that happen to you often in the course of a year?—Very often in the winter months.

4419. Can you give us any idea at all how often in your experience?—I may say that I have not been turned back above twice or three times in the winter myself.

4420. In the course of a year?—In the course of a year.

4421. Are those matters at all brought to you by the other pilots in the employ of the British India Company?—I mean could you give the Commission any idea how often ships connected with your company are turned back?—That is about all I could give personally but, of course, many have the same experience. I suppose it would be that average. It could not be more than that average that I am speaking of.

4422. In your experience you say about twice a year?—Twice or three times.

4423. You represent two companies, do you not?—Yes.

4424. About how many ships in the course of a year do you take up from Gravesend to, say, Albert Dock?—I suppose about 180 to 200 up and down; that is to all the docks.

4425. I suppose you may be delayed not only from want of ability to get into the dock, but also by fog?—Yes.

4426. If you run into a bank of fog I suppose you must either go on with the risk of its getting worse or you must go back?—Yes, but of course in fog one thing must be done. It is prudent to anchor. We endeavour to do the best thing we can in the circumstances. If I might be allowed to suggest that there should be a set of buoys it would very often save us from having to run back to Long Reach. It would very often save us that if we could have one set of buoys placed—I do not care if it is abreast of the Albert Dock, which is a very good place, where there is plenty of room, or in the upper part of Woolwich Reach.

4427. A sort of place where you could go and stop until the difficulty was passed?—Yes.

4428. Would those be buoys where you would moor stem and stern?—Yes.

4429. That would involve dredging a wider place where the ships could be moored, would it not?—Yes. At present there is not more than, say, 16ft. there. They would have to make 26ft. or 28ft.

4430. And you would also, I suppose, have to have it there at the side of the channel so as to get out of the fairway?—Yes. This only happens on the low water when you are getting into trouble, or nearly on the low water.

4431. You could not put the mooring buoys right in the middle of the channel?—No.

See 7551.

4432. They would have to be at the side?—Yes. There are buoys there now, only they are for smaller vessels—colliers.

4433. (*Mr. Ellis.*) You told us that this incident of detention has happened two or three times a year to you?—Yes.

4434. Can you give us an idea how many pilots there are whose experience might be similar to your own?—I should say that dealing with all those large vessels the same experience would exist, because it is only with large vessels that you have to go back.

4435. How many would there be in the winter, do you think?—That would be the average of the big draught ships.

4436. That is all you have personal experience of?—Yes.

4437. How many pilots would have the same experience?—I should say that there are 12 to 14 pilots like myself that are so placed.

4438. Then there would be 20 or 30 incidents of the same kind in the winter?—Yes, I should say that would be so.

See 7551.

4439. Do you wish us to understand that the fogs, electric lights, and the vessels improperly anchored are an increasing difficulty to navigation?—Yes, I would certainly say so.

4440. All those elements of difficulty are increasing, are they?—Yes, especially the cement business. Of course, that is a growing evil, if I may say so.

4441. There are more factories and more chimneys?—Yes; we have much more to contend with than we used to have.

4442. Have you any association of pilots—any trades union?—No.

4443. Then no representation has gone from any collective body of pilots. It has been an individual complaint, has it?—Yes.

4444. You have personally written letters, perhaps?—I do not say that I have written letters, but I have made that my objection before the Elder Brethren.

4445. The Elder Brethren of Trinity House have received from you verbal complaints?—Yes.

4446. You have been unable to make complaints to any authority with regard to the increasing amount of smoke?—We have never been in that position. We

have never been asked. The question was brought up some years ago at Northfleet, but we were not interviewed on the question.

*Mr. W. H. Sandford.*

25 Mar. 1901.

4447. Has any improvement taken place in consequence of the representations of yourself or your fellow pilots with regard to the improper mooring of these vessels?—No, I cannot say that there has been any improvement.

4448. Nothing has been done?—Nothing has been done in that respect.

4449. Were you present in this room when one of the witnesses spoke of the sailing barges and fishing boats?—Yes.

4450. Do you agree with that evidence? Have they been to you personally any difficulty?—If I speak from my experience I must say that these last two or three years I have found a great improvement with bargemen. There was a time when they were very obstinate, but I must say there has been a great improvement. If we give them the necessary whistle that we use, they certainly seem to act better.

4451. Have they become more reasonable?—Yes, they have become more reasonable in putting their helm down, and more reasonable with regard to their duties altogether.

4452. More reasonable in meeting the requirements of navigation?—Yes.

4453. (*Rear-Admiral Hext.*) With regard to dredgers, do you know if they are under the control of any board?—They are under the Conservancy control.

4454. Are all the dredgers under the Conservancy control?—They are under the control in one way, but I believe I am right in saying that there are individual speculations. In some cases people have one or two of their own.

4455. But as to the positions they occupy, and the time they occupy them, are they under any control in that way that you know of?—I am not sure in answering that question, but I believe they are under the Thames Conservancy instructions.

4456. Do they make any signal to you at all on which side to go?—No.

4457. Are there any laws of that kind on the Thames?—No; we use our own judgment in that respect. As I said before, if they could be taken away in the foggy weather and on the dark nights that we have, and then replaced when they are at work, I think it would obviate a great difficulty.

MR. GEORGE WILLIAM CHANEY called and examined.

4458. (*Chairman.*) You are licensed to conduct vessels up and down the River Thames between Gravesend and London Bridge?—Yes.

4459. How long have you been so engaged?—About 12 years.

4460. By whom are you engaged?—By the Atlantic Transport Line and the National Line.

4461. What is your opinion with regard to the necessary depth of water between Gravesend and London Bridge?—I think it should be 28ft. to the Albert Dock.

4462. What is the maximum draught of a vessel of the Atlantic Transport Co.?—You can class them in three classes: One class, 24ft.; another class, 26ft. to 28ft.; and the other, from 30ft. to 31ft.

4463. They are among the biggest vessels that come up?—Yes; 31ft. 6in. is the biggest draught that I have seen.

4464. What is her name?—The "Minneapolis."

4465. Have you found that the position of dredgers when not working is a cause of obstruction?—Yes, they are a great obstruction. In the navigable time for working up and down the river they lie in the channel not working, whereas if they had cross chains they could heave them in on one side or the other, clear of the channel.

4466. Have you any suggestion to make with regard to mooring buoys?—Yes. I should like some mooring buoys at Deptford for the cattle steamers when detained by fog. There is nowhere for a vessel to moor to at Deptford in the event of fog setting in.

4467. With regard to fog, have you found that the smoke from factories causes an artificial fog?—Yes, as far as half-way up Long Reach.

4468. And is it therefore a source of danger to navigation?—Yes.

4469. Are you also of opinion that the electric lights ought to be screened?—Yes.

4470. Have you ever made any complaint or representation on that subject?—I have mentioned it to Trinity House at my annual examination.

4471. Do you know whether any steps have been taken by them?—I do not know at all.

4472. Have you any other suggestions to make to us as to any steps that might be taken in order to improve the navigation of the river?—Gravesend Reach is very bad. After two or three days' fog it gets into such a congested state that there is no room to navigate in at all. Barques come up to Gravesend from the Baltic, and they lie there as long as a fortnight at a time. With regard to the buoys in Gravesend Reach, four of them are useless in my opinion. If they were taken away they would give a long ship ample room to swing about at her anchor in the line of the red light in the anchorage.

4473. (*Rear-Admiral Hext.*) With regard to the dredgers, you say they lie in the middle of the stream when not working. Is it not a fact that many of those dredgers cannot work except, say, within two or three hours of low water?—I believe they work from an hour's ebb until an hour's flood.

4474. Do you know if they are under the control of any board?—I do not know, without it is the Thames Conservancy.

4475. They make no signal as to which side you should pass on, do they?—No.

4476. Have they no regulation at all?—No; you have to pass them according to the set of the tide.

*Mr. G. W. Chaney.*

Mr. MILES KIRK BURTON called and examined.

Mr. M. K.  
Burton.

25 Mar. 1901.

4477. (Chairman.) You are the General Manager and Secretary of the Mersey Docks and Harbour Board?—Yes.

4478. Will you tell us how long you have held that office?—I was appointed Secretary in 1890, and General Manager in 1894.

4479. Will you give us shortly an account of the origin of your trust, and also a sketch of how the undertaking has gradually passed from the Corporation to the hands of the trust?—From the year 1709, when the first Act relating to a dock at Liverpool was passed, to the year 1857, the docks at Liverpool belonged to the Mayor, Aldermen, and Burgesses of Liverpool. By an Act passed in the year 1811 the Corporation were formed into a body corporate for the purpose of working the same under the style of "The Trustees of the Liverpool Docks." In 1851, by an Act of that year, the management of the Docks was vested in a body called "The Committee for the Affairs of the Estate of the Trustees of the Liverpool Docks," commonly known as "The Liverpool Dock Committee," consisting of 24 members, of whom 12 were nominated by the Council of the Borough of Liverpool, and 12 were elected by the Dock Ratepayers. The Corporation of Liverpool in their capacity as "Trustees of the Liverpool Docks," had, when assembled in Common Council, power, with the assent of two-thirds of the members present at such Council, to annul any proceeding, resolution, or direction of the Dock Committee. The Corporation had also power to levy dues on vessels and goods carried in vessels that entered or used any of the docks belonging to the Corporation as trustees, or transhipped or discharged cargo in certain parts of the river, and the dues so received were expended in the maintenance and management of the docks, etc. The Corporation had also power to levy on all vessels entering the port, except vessels driven in by stress of weather, harbour and light dues, for the maintenance of the buoys, landmarks, and telegraphs within the port, the expenses of lights and lifeboats, the expenses of the office of Marine Surveyor, and the improvement of the port, except in the construction of docks. The Corporation also levied certain dues on goods entering or leaving the Port, and anchorage dues on ships entering the Port, and such dues known as town dues were carried to the account of the Borough Fund of the Borough of Liverpool. In 1844, by an Act entitled "The Birkenhead Dock Act, 1844," certain persons therein called the Birkenhead Dock Commissioners were appointed Commissioners for the purpose of carrying into effect works for the formation of tidal basins and a dock at Birkenhead. In 1845 an Act was passed incorporating a company called "The Birkenhead Dock Company," with a capital of £1,000,000 and certain borrowing powers, and with powers to make and maintain docks and works at Birkenhead, adjoining the docks, and works proposed to be constructed by the Birkenhead Dock Commissioners. In 1848 all the powers and property of the Birkenhead Dock Commissioners were vested in a body corporate called the "Trustees of the Birkenhead Docks." In 1855 the undermentioned bodies were each of them prosecuting Bills in Parliament in relation to works undertaken or about to be undertaken by such bodies respectively and such Bills were all referred to the same Committee of the House of Commons, namely, the Trustees of the Birkenhead Docks, the Birkenhead Dock Company, the Liverpool Dock Trustees, and the Corporation of Liverpool; and the Committee, after hearing evidence, intimated that they entertained an opinion that it would be to the advantage of the maritime trade of the Port of Liverpool and of the public that the whole dock system on both sides of the Mersey should be under one trust. In consequence of this intimation an agreement was entered into between the trustees of the Birkenhead Docks, the Birkenhead Dock Company, and the Corporation of Liverpool, transferring to and vesting in the last-named body all the property and liabilities of the first-named body and company. This agreement was confirmed by the Birkenhead Docks Act, 1855. The 19th Section of this Act, after reciting that it was expedient that the same rates, dues, and charges should be levied in respect of the Birkenhead Docks as were levied in respect of the Liverpool Docks, and that all the docks should be placed permanently under the same control and management and be consolidated, and become part of the existing estate of the Liverpool Docks, enacted that

the Corporation of Liverpool should, and they were required, either alone or conjointly with the Trustees of the Liverpool Docks, to prosecute a Bill in Parliament in the ensuing Session for obtaining the requisite powers for accomplishing the said objects. The Committee of the House of Commons to which the above-mentioned Liverpool and Birkenhead Bills were referred made a special report, which was as follows:—

"The Committee on Group (D) of Private Bills, in considering the Liverpool Docks Bill, and the Birkenhead Docks and Liverpool Docks Bill, referred to them, have come to the conclusion that it is of great importance that an amalgamation should take place of the Birkenhead and Liverpool Docks on both sides of the river, under the control of one public body."

"In lending their assistance to promote and effect this amalgamation, the Committee have not been able to provide for all the points which must ultimately be arranged with regard to it, and which it is proposed should be finally settled in a Bill to be introduced in the next Session. They are, however, desirous of specially calling attention to the following subjects, viz.:—

- (1) "That the earliest opportunity should be taken of carefully considering the constitution of the Dock Trust with reference to the altered circumstances in which it will be placed in consequence of this amalgamation."
- (2) "That they should have provided for the immediate equalisation of the rates of both sides of the river, with the full concurrence of the promoters of the Bill, had they not been apprehensive that, on technical grounds, the passing of measures which they considered of urgent public advantage during the present Session would have been endangered."
- (3) "That they were very sensible of the importance of accurately defining and limiting the arrangements consequent on the proposed transfer of the Birkenhead property from the Liverpool Corporation to the Dock Trustees; but as the whole matter will necessarily come under the consideration of Parliament next Session, they are unwilling to pre-judge this particular part of it."

In the Session of 1856, being the Session next ensuing the one in which the Birkenhead Docks Act, 1855, was passed, the Liverpool Corporation prosecuted a Bill in Parliament in relation to the Birkenhead Docks, purporting to be so prosecuted in obedience to such Act, and in accordance with the special report of the Committee above mentioned, but as no provision was made in the Bill for the transfer of the Birkenhead Docks to the Liverpool Dock Trustees, nor any provision for repealing the power vested in the Corporation of Liverpool of annulling any proceeding of the Liverpool Dock Committee, nor for declaring the Corporation of Liverpool to be trustees of the Birkenhead Docks for the public, and prohibiting them deriving any pecuniary benefit therefrom, the Bill was rejected by Parliament. In the latter part of the year 1856 the Corporation of Liverpool gave notice that they intended, during the ensuing Session, to make application to Parliament for a Bill in relation to the Birkenhead Docks, but as no provision was made in the Bill for carrying into effect the recommendations contained in the special report of the said Committee, a Bill, afterwards called "The Mersey Docks and Harbour Act, 1857," was promoted in opposition, in which it was recited that it was expedient "that the management of the docks of Liverpool and Birkenhead, and the control over pilotage, harbour lights, and all other matters conducive to the safety or convenience of the shipping frequenting the Port of Liverpool should, subject to the powers of the Conservancy Commissioners, be vested in an independent public body, elected by the persons that pay rates, for the maintenance of the docks and works; and that all rates and dues levied on shipping frequenting the Port of Liverpool, or on goods carried in such shipping other than rates and dues payable to Her Majesty,

should be applied for the benefit of the Port of Liverpool and of the shipping that frequent such Port." This Bill received the Royal assent on the 25th of August, 1857. The duty of carrying into effect the provisions of the Act was vested in a Board called "The Mersey Docks and Harbour Board," and such Board, it was enacted, should be a body corporate, with a perpetual succession and a Common Seal, and having a capacity to hold lands subject to the provisions of the Act. By this Act all the estate and interest in docks and other property at Birkenhead or elsewhere, which were transferred or intended to be transferred to the Corporation of Liverpool by the Birkenhead Docks Act, 1855, and all docks, lights, buoys, and other property at Liverpool or elsewhere, held by or in trust for the Trustees of the Liverpool Docks, together with all powers, rights, and privileges vested in the Corporation of Liverpool, the Liverpool Dock Trustees, or the Liverpool Dock Committee; powers of licensing and regulating pilots and of fixing pilotage rates, and of imposing or collecting town and anchorage dues; rights of appointing a water bailiff and of removing sunken vessels; together with the rights and privileges in respect of the Conservancy of the River Mersey as were then vested in or exercisable by the Corporation of Liverpool, were, upon and after the 1st January, 1858, vested in the Board. From this date also the Board were required to pay so much of the salary of the acting conservator appointed by the Conservancy Commissioners as was then paid by the Corporation, together with all other expenses then incurred or payable by the Corporation in respect of the conservancy of the River Mersey. The Act also provided that the Board should promote a Bill in the ensuing Session for consolidating the several Acts then in force, and for obtaining any additional powers that were necessary or expedient for carrying into effect the purposes of the Act of 1857 and for other purposes. This Bill was brought in and resulted in the Act known as The Mersey Dock Acts Consolidation Act, 1858, which received the Royal assent on the 12th July, 1858.

4480. Now will you tell us the number of members on the existing Board?—By the Act of 1857, as amended by the Act of 1858, the number of members on the Board is 28, of whom 24 are "elective" members, and four "nominee" members. By the Act of 1857 it was provided that a person to be qualified to be an "elective" member must reside within the borough or the Customs Port of Liverpool or within ten miles of the outward boundary of the said borough or port, and must pay within the year immediately preceding his election dock rates to an amount of not less than £50. This amount was subsequently reduced to £25. An "elective" member of the Board must be a British subject. The present limits of the Customs Port of Liverpool were fixed by a Treasury Order dated November 3rd, 1896, and, stated briefly, may be said to extend from the termination of the Port of Chester, i.e., the "Redstones" in Hoylake, and to continue up the River Mersey on the Cheshire shore to Ince Ferry, thence across the River to Dungeon Point on the Lancashire shore, and along the Lancashire shore to the southern boundary of the Port of Preston, namely, the inner northwest sea mark on the beach at Formby Point. The qualification of a dock elector entitled to vote at the election of an "elective" member of the Board is the payment during the twelve months immediately preceding the 1st of August in any year, either by himself or by some person on his behalf (and it is not necessary that the elector should carry on business at Liverpool or in the neighbourhood), in respect of rates legally demandable from him of an amount of not less than £10. A dock elector must be a British subject, or if a foreigner must be resident within the United Kingdom. A list is kept by the Board of all duly qualified dock electors, which is revised at some time in the months of September or October in every year by the barrister for the time being appointed to revise the list of burgesses of Liverpool, and provision is made for electors to object to names being on the list. Seven days previous notice of the time and place at which the Court for the revision of the list of the dock electors is to sit is given by advertisement in one of the newspapers published in Liverpool, Manchester, and Leeds, and by affixing a statement to the outer door of the Town Hall of Liverpool and to the outer door of the Town Hall of Birkenhead. The Board also send by post to the Town Clerk of each of the undermentioned cities and boroughs seven clear days at least before the first day on which

the Revision Court shall sit, a copy of the list of dock electors and a printed copy of the statement above referred to, viz., Manchester, Salford, Oldham, Huddersfield, Bradford, Leeds, Sheffield, Halifax, Blackburn, Burnley, Preston, Bolton, Bury, Stalybridge, Stockport, Wigan, Rochdale, Ashton-under-Lyne, Chester, Darwen, St. Helens, Hyde, Bacup, Heywood and Warrington. The list of dock electors is, before revision, fixed to the outer door of the Town Halls of Liverpool and Birkenhead, and after revision, printed copies are sold at a reasonable price to any person requiring the same. A dock elector is entitled to one vote only, and voting by proxy is not permitted. No person is entitled to vote at the election of members of the Board, unless his name appears upon the revised list of dock electors made during the previous year, and any person wilfully personating any person entitled to vote is liable to a penalty not exceeding £20. The four "nominee" members of the Board are appointed by the Conservancy Commissioners of the River Mersey, who are: The First Lord of the Admiralty, the President of the Board of Trade, and the Chancellor of the Duchy of Lancaster, for the time being. Each "elective" member is elected, and each "nominee" member is appointed for a term of four years, but at the expiration of that period is eligible for re-election or re-appointment. Six of the "elective" members and one "nominee" member retire by rotation on the 20th of December in each year. A meeting of the dock electors is convened for the 12th of December in each year for the purpose of receiving nominations to fill the vacancies caused by the retiring "elective" members, and notice of the date of such meeting is given to the dock electors by advertisements in newspapers published in Manchester, Liverpool and Birkenhead, and by notices affixed to the outer doors of the Town Halls of Liverpool and Birkenhead, and to some of the offices belonging to the Board. If more candidates are proposed than the number to be elected, a poll may be demanded; but if not, or if no poll is demanded, a declaration by the returning officer, who is the Chairman of the Board for the previous year or some person appointed by him, that the candidates are elected members of the Board is evidence of the fact. In the event of a poll being demanded, the Board send by post to the Town Clerk of each of the beforementioned cities and boroughs a notice of the time and place of taking the poll, with a list of the candidates, and cause such poll to be advertised in such newspapers as in the case of revision proceedings. Polling clerks are appointed by the returning officer, and proper polling books provided. The poll is opened at 10 o'clock in the forenoon of the appointed day at Liverpool and Birkenhead, and closes at 4 o'clock in the afternoon of the same day, except in the case of disturbance or riot, when the closing of the poll may be fixed to take place at such time as the returning officer directs. The poll at any place of voting may also be closed at any time before 4 o'clock, if one hour has elapsed during which no vote has been tendered at such place of voting. The name and address of every voter, and the manner in which he votes, are entered in the polling books, and at the close of the poll the returning officer sums up the votes, and as soon as possible publishes the names of the candidates elected by advertisement in some one or more newspaper or newspapers published in Liverpool, and by affixing a list of such candidates to the outer door of the Town Hall of Liverpool, and to the outer door of the Town Hall of Birkenhead. If from any cause whatever the place of any vacating member is not filled up at the poll, such vacancy is deemed to be a casual vacancy, and is dealt with accordingly. During any vacancy, and is dealt with accordingly. During any as if no vacancy had occurred, and any casual vacancy in the office of an "elective" member may be filled up by the elective members themselves. The appointment of a "nominee" member, in the place of the "nominee" member who retires by rotation on the 20th of December in each year is made by the Conservancy Commissioners, and any casual vacancy in the office of a "nominee" member is also filled up by the said Commissioners. A member chosen to fill a casual vacancy, either "elective" or "nominee," can only retain office so long as the vacating member would have retained the same if such vacancy had not occurred. Every new "elective" member who is elected, whether at the nomination or as the result of a poll, is entitled to enter upon and take office as an "elective" member on the 21st of December next after such election, and not sooner. The Board are required by the Act of 1857 to hold a meeting for the despatch of business at least once in

Mr. M. K.  
Burton.  
25 Mar. 1901.

Mr. M. K.  
Burton.

25 Mar. 1901.

every week, but no business is to be transacted at any meeting unless at least three members are present. All questions are decided by a majority of votes of the members present. Disqualification of members.—If any member of the Board: (1) Holds any office or place of profit under the Board; or (2) participates in the profits of any work done by the order of the Board; or (3) is concerned in or participates in the profits of any contract entered into with the Board; he ceases to be a member of the Board, and his office thereupon becomes vacant, except that no member shall vacate his office by reason of his being a shareholder in any company supplying water or gas by order of the Board, or being interested in any sale or lease of any lands or any loan of money to the Board, but no member is entitled to vote in respect of any supply of water or gas by any company in which he is a shareholder, or in respect of any question connected therewith, or as regards any sale or lease of lands or loan of money in which he is interested, and if he does so vote his vote is not counted, and he renders himself liable to a penalty not exceeding £20. The members of the Board receive no remuneration for their services, and they are exempt from serving on juries. The Board out of their number appoint a Chairman, who holds office for a year, and he is eligible for reappointment. The Board are authorised to delegate any of their powers to Committees consisting of such members of their body as they may think fit. Under this power Standing Committees are appointed, and between them attend to all the general work of the Trust. Special Committees are appointed, from time to time, as may appear to be necessary for particular occasions or purposes, the functions of such Special Committees ceasing upon the adoption or approval by the Board of any report or recommendation from them. The office of every Committee (unless sooner determined) ceases on the 19th of December in each year, and the Committees are reappointed at the first meeting of the Board held on or after the 21st of December; that is, the day upon which the new members commence to hold office. In addition to any powers acquired by the Board under the Act of 1857, the Board have been authorised, from time to time under various Acts, to borrow money at interest on the security of any rate or rates, or any dues forming part of their general receipts, and the amount so authorised to be borrowed was, at the 1st July, 1900, £24,914,966, and the amount actually borrowed £19,930,990.

4481. (Mr. Lyttelton.) When you say "To borrow money at interest on the security of any rate or rates," is that any rates of the City of Liverpool?—No; it is dock tonnage rates on the ships and town dues on the goods. The rate is received from ships and from goods; it has nothing whatever to do with the Corporation in any shape or form.

4482. (Chairman.) Can you give us a general due date?—No, I cannot, because it runs up to 20 or 30 years, and the annuities are perpetual.

4483. I think your board are required to submit to Parliament each year an account of receipts during the preceding 12 months?—Yes; but the Government have never at any time contributed, or been asked to contribute in any way, to the capital expenditure of the board; the board have at all times been able to meet their own financial liabilities.

4484. (Mr. Lyttelton.) Is there any power in your hands for the Government to so contribute a rate in aid?—None whatever that I am aware of.

4485. What is this contribution that you are speaking of? You say the Government have never contributed, or been asked to contribute in any way, to the capital expenditure of the board. What power is that?—That is merely a remark in case it might occur to anyone that as the accounts are submitted to the Government, the Government might be asked for something in regard to the accounts. It is to make it quite clear that we have nothing whatever to do with the Government. The Government have never offered, and have never been asked to give us anything at all. We do not want anything. For the purpose of securing the proper audit of the board's accounts twelve audit commissioners are elected and appointed out of the body of dock electors, and such elections are conducted in a similar manner to those in which members of the board are elected. In addition to the audit commissioners, the Board of Trade are authorised to appoint a special auditor, who may act either alone or with the

elected auditors in the auditing of the board's accounts. The procedure followed at the Port of Liverpool in connection with the docking and berthing of vessels, the discharge of vessels, and the manipulation of goods on the quays is as follows:—The docking and berthing of vessels.—This may be divided into three classes, namely: (A) transient vessels, that is, vessels which do not trade regularly to the port; (B) vessels belonging to a line which trades regularly to the port, and which have a particular berth appropriated to their use; (C) vessels using a berth in the board's "closed" or warehouse docks. With regard to Class A (transient vessels, steam or sailing), the general custom as regards docking and berthing is as follows:—The owners or agents of the vessel apply in writing to the harbour-master for a discharging berth for the vessel, and at a personal interview which usually follows the application, the system of docks which the vessel is to enter is decided upon, and the dock-master is then instructed by the harbour-master, by memorandum, telegraph, or telephone, to give the vessel a berth in turn on her arrival. Upon the arrival of the vessel in the river, the information as to the system of docks she is to enter is furnished to the master and pilot of the vessel by the owners or agents of the vessel through the medium of the boatmen and others employed by them in connection with the docking, etc., of the vessel. As soon as the vessel is at the dock entrance, with ropes out and all ready to go into the dock, the pilot gives up the charge of the vessel to the dock officials, and sends to the dock-master a form, known as a "docking note" (forms of which the pilot has with him), containing particulars of the vessel's name, register tonnage, extreme outside beam, maximum draught of water and least rise of floor, and to which is appended a memorandum drawing the attention of shipmasters to a few of the more prominent of the bye-laws for the regulation of vessels in the docks. This form is required to be filled up, signed by the captain, and witnessed by the pilot, or, should a pilot not be on board, by the chief mate. A copy of the bye-laws is placed on board every transient vessel on arrival and on the regular traders about once every six months. The vessel is then docked as soon as circumstances (turn, depth of water, etc.) will permit, and is placed by the ship's people at the berth to which her turn entitles her. With regard to Class B, that is, vessels belonging to a line which trades regularly to the port, and which have a particular berth appropriated to their use, in most cases notice, either verbal or in writing, is given by the owners or agents to the dock-master that the vessel is expected to dock on a certain tide, and in other instances, such as some of the coasting steamers, intimation is not always given, because the boats run with such regularity it is not necessary. As in the case of a transient vessel, the regular trader is passed by the ship's people, on docking, to the berth appropriated to the use of the line to which she belongs. The fact that the vessel has an appropriated berth renders it unnecessary to follow certain formalities (such as the berthing book application for stages, gas, etc.), which are followed when the vessels have not an appropriated berth, as parties holding appropriated berths are required to provide their own stages, and to have their own meter for the gas supply. It sometimes occurs that owing to want of room at the quay or in the shed at the berth appropriated to the line to which she belongs, the regular trader has to obtain accommodation in the unappropriated portion of a dock. In this event the vessel is treated as a transient vessel entering dock would be, but it is the custom for any transient vessel docking on the same tide to take turn before her. As to Class C, that is, vessels using a berth in the Board's "closed" or warehouse docks, application (which is nearly always verbal) is made by the owners or agents to the chief warehouse manager for a discharging berth, and when this has been arranged, the chief warehouse manager notifies the warehouse keeper, and the latter informs the dock master that the vessel is due, and indicates the berth at the warehouses at which the vessel is to be placed. In other cases the parties apply to the harbour master, who arranges the docking; the chief warehouse manager and the harbour master are in constant communication. With regard to a vessel arriving with a full cargo of grain and breadstuffs, the harbour master is authorised, provided there is room in the dock and a sufficient depth of water to enable the vessel to enter, to order her to the Grain Warehouse Dock (Waterloo Dock), Liverpool, to discharge, unless the owners or agents of the vessel

should elect to send the vessel to the Board's grain warehouses at the Birkenhead Docks for that purpose. As to the discharge of vessels and the manipulation of goods on the quays, these may also be divided into three classes:—Vessels from foreign ports; vessels from coastwise ports; and vessels discharged in one of the Board's "closed" or warehouse docks. The discharging of vessels from foreign ports is performed by master lumpers, who are licensed by the Board, and are employed by the owners or agents of the vessel.

4486. (*Chairman.*) What is a master lumper?—A master lumper is the party who does the discharging from the hold of the ship. The master stevedore is the man who stows the cargo; the master lumper is the man who unloads it from the ship.

4487. (*Sir John Wolfe-Barry.*) Does he employ his own labour?—Yes.

4488. (*Rear-Admiral Hext.*) Is he on board the ship or does he take charge of the goods afterwards?—He is in the hold of the ship. The master lumper by whom a transient vessel is discharged is usually a professional master lumper, but in the case of vessels belonging to a line which trades regularly to the port the master lumper is usually one of the managing owners, duly licensed, or in the case of vessels belonging to incorporated companies an officer of the company, duly licensed. The discharging consists of taking the cargo out of the vessel and delivering it over the ship's rail. This work is performed by means of the ship's own steam winches or by hydraulic cranes provided by the board and let out on hire, or by both. All work done on board in connection with the discharge is paid for by the owners or agents of the vessel. There are no fixed charges for this work, but such charges are mutually arranged between the master lumper and the owners or agents of the vessel by whom he is employed. Every person licensed by the Board to act as a master lumper is required before he shall be capable of acting as such to execute to the Board a bond in the sum of £200 for paying or satisfying the owners of goods unstowed or unshipped by him in his capacity of a master lumper, or by the porters in his employ or under his direction the amount of any loss, damage, or injury which such goods may sustain during unstowing and unshipping, and the owners of any goods sustaining such loss, etc., may sue in their own name the master lumper and his sureties upon the bond in the same manner as if the bond had been executed to them and not to the board. The appointment by the Board of master lumpers does not prevent the owner or master of any vessel from employing her crew in discharging any portion of her cargo nor render such master or owner or crew liable to any penalty for so doing. When goods are delivered overside into barges the work is performed by the master lumper (unless some operations are required to be performed involving the intervention of a master porter hereinafter referred to), and is carried out by arrangement between the owners or agents of the vessel and the consignees of the goods. As to the discharge of vessels from coastwise ports, the intervention of a master lumper is not necessary in connection with the discharge of goods from vessels from coastwise ports. Goods are usually discharged from these vessels and landed on to the quays by the ship's own appliances, and at the expense of the owners or agents of the vessels. Then as to the discharge of vessels in one of the board's "closed" or warehouse docks. No persons except those appointed and employed by the board, or the crew of the vessel, or other persons in special cases with the consent of the board are allowed to work within the walls of any warehouse dock in the unshipping and landing of the cargo of any vessel using such dock, and the master of any vessel having cargo on board and entering any warehouse dock is required to deliver to the superintendent of the warehouse, within 24 hours after the entrance of the vessel into the dock, a copy of the manifest of the cargo of the vessel, under a penalty not exceeding £5. The board have authority, however, to declare by resolution that their warehouse docks or any portion of them may be worked in the same manner and subject to the same bye-laws, etc., as open docks belonging to the board. Quite recently the board have done so by withdrawing the restrictions as regards the Albert Dock warehouses. That is one of the largest warehouses which we have in Liverpool. The work of discharging vessels in the warehouse docks is generally carried out by the board's officials. The discharging, as in the open docks, consists in taking the cargo out of the vessel and delivering it over the ship's rail. All work done on

board is paid for by the shipowner, and the rates are fixed by the board. As to the discharge of vessels generally, the board are authorised to appoint surveyors of cargoes and goods, and have so appointed a number of surveyors, and divided the dock estate into districts, and allotted a district to each surveyor. Every surveyor of cargoes appointed by the board is required, on the request of the owners or consignees of a vessel or her cargo, to examine the stowage of the cargo, and investigate the nature and extent of the damage (if any) which such cargo may have sustained, and also, when requested, to report upon and certify to the owners or consignees of the vessel or her cargo the state of the cargo in respect of its stowage, damage, etc. All surveyors of cargoes have full power at all times during the discharge of the cargo of any vessel to go on board and inspect any part of the vessel and her cargo, and if, on such inspection, he is of opinion that any part of the cargo has sustained damage by reason of improper stowage he is required, before leaving the vessel, to give notice in writing to the master or other officer in charge of the vessel that there is, in his judgment, improper stowage in respect of the goods mentioned in such notice. Persons obstructing or preventing any surveyor from inspecting any part of a vessel or her cargo are liable to a penalty of not exceeding £10.

4489. Is this decision of a surveyor final as between the master and the merchant?—It is generally accepted as final. A law suit may arise out of it, and then, of course, the surveyor is called to produce his certificate and to give evidence on it.

4490. But as a general rule it is final in practice?—It is in practice. With regard to the manipulation of goods on the quays and goods landed from vessels from foreign ports, the cargo of every vessel from any foreign or colonial port using any open dock, is required to be received, weighed and loaded off by one set of porters only, in the employ and under the directions and orders of one of the master porters licensed by the Board, and any person acting as master porter without being licensed by the Board is liable to a penalty not exceeding £50. Every master porter, immediately after he is licensed, and before he is capable of acting as such, is required to execute to the Board a bond in the sum of £500, to be conditioned for paying or satisfying the owners of goods received weighed or loaded off by such master porter, or by the porters in his employ, or under his direction, the amount of any loss, damage or injury which such goods may sustain during receiving, weighing, and loading off; and the owner of any goods sustaining such damage, etc., may sue, in his own name, the master porter and his sureties, upon such bond, in the same manner as he might have done in case the bond had been executed to him and not to the Board. A master porter is responsible not only to the Board, but also to each consignee for any goods committed to his care, and also to the owner of the vessel by which such goods may have been imported, for the correct weighing, taring, scribing, marking, and measuring, as the case may be, of such goods; and he is also required, when goods have been weighed or measured, to furnish, if requested, to each consignee and to the owner of the vessel a correct account in detail of the weight, measurement, and marks of such goods; and he is further, if required, to furnish to the Board an abstract of such account showing the total number of packages and the gross and net weight or measurement, as the case may be, of each mark or consignment of such goods, and at the same time to furnish to the collector or other proper officer of customs, a duplicate of such abstract. A master porter is also required, previously to receiving on the quay any portion of the cargo of any vessel in respect of which he may have been appointed the master porter, to appoint a competent landing clerk, whose duty it is to be present at all times when any portion of the cargo is in course of being discharged, and to record, in books to be approved by the Board, the marks, numbers, weights, and measurements of all goods discharged, the day when they are discharged, and the day and hour when they are delivered. Bye-laws are made by the Board from time to time for the regulation and good government of persons licensed by them to act as master porters, and for defining and regulating the amount of the charges allowed to be made by the master porters for work done by them. The manner in which it is decided who is entitled to act as master porter at any vessel is as follows:—As respects every steam vessel (except as hereinafter mentioned as regards entire

*Mr. M. K.  
Burton.*  
25 Mar. 1901.

Mr. M. K.  
Burton.  
25 Mar. 1901.

cargoes belonging to one consignee), the master porter is one or other of the following persons, provided they are respectively qualified, namely, the managing owner, the consignee of the vessel, or, in the case of steam vessels belonging to incorporated companies, then any officer of the company to which the vessel belongs. The owner of the entire cargo of any vessel, whether a steam or sailing vessel, may employ any licensed master porter he may think proper for such vessel, or act himself if he be licensed. As respects all other vessels, whether steamers or not, in every case where there is more than one consignee of goods by a vessel, the consignee of goods *bond fide* paying the largest amount of freight is, if qualified, the master porter. If the consignee above referred to is not so qualified, or if he decline to act or omit to give notice, in writing, to the owner or consignee of the vessel of his intention to act, before 12 o'clock noon of the day (exclusive of Sunday or any legal holiday) next after the report of the vessel at the Custom House, then the consignee of goods *bond fide* paying the next largest amount of freight is the master porter, if qualified. If two or more consignees of goods qualified to act pay an equal amount of freight, or if there is any difference among the consignees of goods as to the amount of freight to be paid by them, then the owner or consignee of the vessel decides which of the several master porters, qualified and claiming to act, shall act. If neither the consignee of goods paying the largest or next largest amount of freight is qualified, or, if qualified, if neither is willing to act, or if neither of them gives notice of his intention to act as above mentioned, then the owner or consignee of the vessel becomes the master porter if qualified and willing to act, otherwise he must nominate some other qualified master porter. There are a number of professional licensed master porters who undertake work on behalf of shipowners and merchants. In the case of regular lines of steamers, having appropriated berths, the master porter is usually one of the managing owners, or, in the case of steam vessels belonging to incorporated companies, an officer of the company. When a vessel commences to discharge, the master porter receives the goods at the ship's rail from the master lumper, selects to mark, examines for external damage and separates goods accordingly, weighs if necessary, delivers to carts if in attendance, or if not, stows the goods on the quay and delivers them subsequently to the consignees when applied for. Goods are only delivered to consignees by the master porter on the written order from the shipowner. The master porter is required to watch goods discharged from a ship for which he is acting as master porter until such goods are actually loaded off from the quay, except in cases where the goods belong to the master porter, or when all the goods remaining on the quay belong to one consignee, and such consignee gives notice to the master porter that he does not require the goods to be watched. The charge for watching, which is payable by the consignee, is 5s. per day or night. The charges to be made by master porters for work done by them are specified in the schedule of charges appended to the bye-laws made by the Board. All goods (except timber discharged at the timber quays, which is hereinafter referred to) are allowed to remain on the quays without paying rent for the following periods, namely:—At an appropriated berth, 72 hours; at an unappropriated berth, if discharged from steamers, 72 hours; at an unappropriated berth, if discharged from sailing vessels, 48 hours; calculated from 5 o'clock p.m. of the day upon which the goods are deposited on the quays—Sunday, Christmas Day, Good Friday, and other legal holidays not included. If goods are not removed from the quay (appropriated or unappropriated) within the above mentioned periods, they become liable to quay penalty rent at the rate of 5s. per hour for the first 24 hours, and 10s. per hour thereafter, irrespective of quantity, unless, in the discretion of the Board's Traffic Manager, the goods can be allowed to be placed on special quay rent, in which case the rate charged is, at the Liverpool Docks, one halfpenny per square yard per day on the area of the space occupied, and at the Birkenhead Docks a slightly lower rate. As a rule, a deposit is allowed by the Board to be accepted by the Chief Traffic Manager in respect of the quay penalty rent incurred, and the case is subsequently considered on appeal by the Traffic Committee of the Board, and (if the circumstances warrant) a reduction is made in the amount. Goods lying on the quay at an appropriated berth are not granted special quay rent except with the consent of the parties to whom such berth is appropriated. If goods remain on any quay so as to cause

an obstruction for a longer period than is necessary for removing them, the Board may remove the goods to one of their warehouses or other place of safety, and there detain the goods until the charges thereon are paid, and, in the event of the charges on the goods not being paid within 10 days after the removal of the goods from the quay, the goods may be sold by public auction. The Board have erected, on the quays of their docks, transit sheds, and such sheds have been approved for the reception of dutiable goods by the Commissioners of Customs. If any goods deposited in a transit shed are not, within 48 hours from the day on which they were so deposited, entered with the Customs and the order for landing lodged with the proper officer of Customs, the Board may, on the next following day, cause the goods to be entered at the Custom House, and having obtained the proper Customs authority, may cause the goods to be weighed or measured, so that they may be passed by the Customs landing waiter. The Board may also retain the goods as security for the payment of the Customs Duties, and of the Board's and other charges on the goods, and, if the goods remain in the transit shed, for a period of seven days, after being passed by the Customs' landing-waiter, the Board may warehouse the goods in any warehouse, whether belonging to the Board or not, which has been approved by the Commissioners of Customs for the warehousing of bonded goods. No charge is made by the Board for the use of any transit shed in respect of goods deposited therein, unless the goods remain longer than one day after being passed by the Customs' landing-waiter, in which case they become liable to a rent for each day, thereafter, after the rate of four times the amount set forth in the schedule of warehouse rates, rents and charges, as chargeable per week for rent on such goods in the dock warehouses. All operations in connection with dutiable goods are performed by master porters, as in the case of other goods. The Board have also provided a dépôt for the storage of goods in transit, pending the arrival of, or in readiness for, the outward vessel to receive them, and the charges payable to the Board in respect of goods placed in the dépôt are set out on page 76 of the schedule of warehouse rates, etc., above alluded to. Timber discharged at the appointed timber quays from either steamers or sailing vessels, is allowed to remain on the quay, free from the payment of rent for the following periods:—

Deals and Boards.	Other Descriptions of Timber.	
	During the period between the 1st of January and the 30th June.	During the period between the 1st of July and the 31st December.
72 hours	72 hours	48 hours.

Commencing from the evening of the day upon which the timber may have been landed on the quay—Sundays, Christmas Day, Good Friday, and other legal holidays not included.

If the timber is not removed from the quays within the above-mentioned periods it becomes liable to quay penalty rent and special quay rent, under the same conditions and at the same rates as other goods, except that the rate of special quay rent on timber removed from the quay on the margin of the dock across the roadway behind such quay on to the upper timber quay is one farthing per square yard per week on the space occupied. Deals, planks, boards, and railway sleepers of pine, fir, spruce, and pitch pine, etc., other than baulk and log timber, are landed and placed on the quay at the expense of the owners or agents of the vessel. The consignees of the timber select and load off, no master porter being employed, this being the practice of the trade. Baulk and log timber are taken from the ship's port or rail by the consignees of the timber, who do all the handling in connection with placing the timber on the quay, and afterwards measuring and delivering it. As to vessels from coastwise ports, goods discharged from vessels from coastwise ports are usually loaded off by the consignees of the goods, and at their own expense. It is not obligatory to employ a master porter in connection with the manipulation on the quay of goods discharged from steamers from coastwise ports. The goods are allowed to remain on the quays free of

rent for the same periods as general goods discharged from steamers and sailing vessels respectively from foreign ports, and if not removed within those periods become liable to quay penalty rent and special quay rent, under the same conditions and at the same rates as other general goods above alluded to. Now, as to goods discharged from vessels in one of the Board's "closed" or warehouse docks. The manipulation on the quay of goods discharged from vessels in one of the Board's "closed" or warehouse docks is generally carried out by the Board's officials. The usual operations are performed, namely, receiving from the ship, weighing, gauging or counting, selecting to mark, and loading off if carts are in attendance, or if not, stowing on the quay, and delivering subsequently to consignees when applied for. Goods are also housed by the Board in their warehouses direct from the ship, without being stowed on the quay, and also after having been stowed on the quay. The charges for the operations performed by the Board in connection with goods are set forth in the schedules of warehouse rates, charges, and rent. Goods other than grain are generally weighed at landing, and a record of the weights is taken by the Board, but it sometimes occurs that, owing to rapid despatch in the discharge or to other causes, this cannot be done. In this case the goods are then ordinarily weighed on delivery if the goods require to be weighed, and if instructions have not been received by the Board not to weigh the goods. If the goods (usually weighed) are not weighed at the time of landing or receiving a deduction is made from the usual charges. All grain discharged at and intended to be stored in the grain warehouses at the Waterloo Dock or Birkenhead is weighed by hopper at the time of housing, unless an objection to such mode of weighing is given to the Board prior to the commencement of such operation, in which case the grain is weighed by ordinary beam scale. Grain delivered from the quay is weighed at delivery only, unless instructions have been received by the Board from the consignees to weigh at landing, and, even when this is done, it is customary for the produce to be re-weighed on delivery unless delivery is taken direct from the ship. Warehouse rent is chargeable from and including the date upon which the first portion of the goods named in each housing order is landed, but if the goods have been on special quay rent the warehouse rent commences on and from the day following that upon which the special quay rent ceases. Goods may, at the discretion of the chief warehouse manager, remain on the quay on special rent at the same rates as at the open docks. A freight book giving the total weights of the different consignments or marks of cargo is furnished by the Board to the shipowner, and landing accounts giving similar particulars (in detail if requested, as regards package goods) are given to the consignees of the goods. Similar information as regards the total weight of the different consignments is also supplied by the Board to the Customs authorities. With respect to vessels and goods generally, vessels laden with petroleum are subject to the Board's petroleum bye-laws and to certain specific rules and regulations. In accordance with the Customs regulations, vessels from foreign ports are required to be reported at the Custom House within 24 hours from the time of entering the port, but vessels arriving from coastwise ports are not required to be reported or cleared within any specified time, but as a rule they report on arrival. All vessels entering the docks are liable to payment to the Board of Dock Tonnage Rates according to table No. 1, page 22, of the Tables of Rates and Dues on Ships, and pilotage rates are paid at the same time. Vessels paying dock tonnage rates may remain in the docks for the space of two months from the time of first going into any dock without incurring any further charge, but any vessel remaining in dock after that period becomes liable to dock rent of one penny per ton per week for the first six months dating from the expiration of the first two months, and twopence per ton per week afterwards. Any time the vessel may be in the graving docks is deducted. All goods imported from foreign ports and brought into the docks are liable to the payment of dock rates and town dues (see Table 5, page 27). These rates and dues are required to be paid before the delivery of the goods is allowed to be taken from the dock quays. An entry for each parcel of goods imported is exhibited to the Board, and after the rates are paid the goods are ready for delivery. Goods imported coastwise and brought into the Board's docks are liable to dock rates and town dues, but at the present time only town dues are being collected. All vessels coming into or going out of the Port of Liverpool and not entering into the docks are liable, according to the tonnage burden thereof, to the payment of harbour rates as set

forth in the schedule annexed to the Mersey Docks Act, 1874, according to the several classes of voyages described in such schedule, and such rates are to be paid to the Board by the masters or owners of such vessels. The maximum harbour rates set forth in the schedule above-mentioned are not, however, levied at present, and the scale of harbour rates actually demanded by the Board at the present time is as shown in the Table, which I will now hand in.

(The witness handed in a Table showing the harbour rates on vessels using the docks of the Mersey Docks and Harbour Board. See Appendix, 13th day, No. 1.)

In the case of vessels which enter the Board's docks, etc., and thus incur dock tonnage rates, the amount of the harbour rates applicable to the class of voyage performed is included in, and forms part of, the dock tonnage rates which the vessel has to pay as shown in this further table, which I hand in.

(The witness handed in a Table showing the dock tonnage rates on vessels using the docks of the Mersey Docks and Harbour Board. See Appendix, 13th day, No. 2.)

Out of this payment for dock tonnage rates, the full amount of the harbour rates is always credited to the Board's conservancy account, the funds of which account are entirely devoted to the maintenance of the light-houses, lightships, etc., and in the improvement of the port and harbour (other than the docks), for which purposes the harbour rates are levied. The Board have the sole property in, custody, and charge of the weights, scales, and other weighing materials used on the dock quays, and no other weights, scales, or weighing materials are allowed to be used on the quays except by coastwise vessels and for the weighing of grain, flour, palm-nut kernels, frozen meat, locust beans, cotton seed, onions, and nuts, or in some special cases by permission of the Board. The Board pay the whole expense of policing the dock estate, and the constables are supplied by the City of Liverpool as regards the whole of the Liverpool Docks, and by the borough of Birkenhead as respects the whole of the Birkenhead Docks only on a special requisition by the Board. The beats to be patrolled by the constables are subject generally to the Board's arrangements.

4491. (Chairman.) Is the working of the Mersey Docks and Harbour Board satisfactory, in your opinion?—Very.

4492. You have no improvement that you would suggest?—No.

4493. I should like to ask whether politics enter into the election of the Board?—Absolutely in no way whatever.

4494. You are of opinion that the public ownership of docks is preferable to private ownership?—I think so.

4495. Will you give us your reasons?—I think so, because my experience has been entirely confined to the results of the public ownership. I know very little about private ownership of docks.

4496. That is your conviction?—That is my conviction.

4497. Is it your opinion that management by a Trust is more advantageous than management by a municipality?—Yes, distinctly.

4498. Do you think it is advisable for wharves to be included in any proposals for dock management?—We have no wharves in Liverpool in the sense that, as I understand, you have them here. You have wharves in London to which we have nothing corresponding at Liverpool.

4499. Will you explain to us the lighterage system in force at the Port of Liverpool? Are any charges levied on lighters or on goods discharged into lighters?—As regards lighters themselves, I should imagine that is a small matter in comparison with the lighterage system in London. During the last twelve months about 125,000 of what you call lighters and what we call flats or barges, passed in and out of the docks at Liverpool. I should fancy that it is a very small number in comparison with the barges passing up and down the Thames. Those barges would come into the docks and bring goods for vessels. They are not charged any rates, but the goods which they bring pay dues exactly in the same way as if they had been carted to the dock and put down on the quay.

4500. In answer to my question as to whether any charges are levied on what you call flats, or on goods discharged into flats, your answer in

Mr. M. K.  
Burton.  
25 Mar. 1901.

Mr. M. K.  
Burton.  
25 Mar. 1901.

the first case is in the affirmative, and in the second case in the negative?—Will you allow me to make myself clear. Goods brought into the docks by barges pay dues if they are coming into the dock for outward shipment. There is very little traffic, in fact none at all, in the river at Liverpool of goods coming down in barges and being landed on to the quay.

4501. It is not what is called a barge port at all?—No. The goods which the barges bring down for transshipment for foreign vessels pay dock rates and town dues, just the same as if they had been brought to the dock quay in carts; but the barge which brings the goods does not pay any dues.

4502. Have you anything at all to say with regard to the Customs regulations?—No; nothing specially.

4503. Do you think they could be improved?—I do not know that they could. I have not heard any complaints or any fault found with the Customs.

4504. I am referring more particularly to the question of the times of working?—No. The Collector of Customs is exceedingly ready and willing at all times to do anything that is necessary.

4505. From your experience there is no complaint?—No; far from it.

4506. With reference to the discharge of vessels from foreign ports, you told us that the work was performed by means of the ship's own steam winches and by hydraulic cranes provided by the Board. I understand you have a good many two-storey sheds in Liverpool?—We have a considerable number.

4507. Do you find them a great success?—Yes.

4508. Are you adding to them?—We are adding to them very largely at the present moment.

4509. Any shed accommodation which you might put now would be two-storey?—No; not necessarily. We are adding some single-storey sheds that will be 150ft. or 200ft. wide. Some shipowners prefer the wide single shed and some the double; there is a difference of opinion.

4510. Which, in your opinion, is the better?—I prefer the double-storey.

4511. Have you any complaint at Liverpool as to lack of proper dispatch?—No, I cannot say that we have; very quick dispatch is given at all times.

4512. It is a matter to which you give particular attention, I understand?—Very much so.

4513. You recognise the importance to the shipowner is very great?—Yes.

4514. That is constantly brought home to you by the shipowner, I suppose?—Yes; the shipowner himself does the discharging. The Board itself, except in what we call our warehouse docks, does not discharge any ships.

4515. (*Rear-Admiral Hext.*) Will you tell us shortly what is the difference between the procedure in unloading in the Port of Liverpool and in the Port of London? I mean this: I understand that in your unloading, the ship loses responsibility the moment the goods pass the rail?—In Liverpool, yes.

4516. Do you know what happens in London?—No; I do not.

4517. What dues would be levied on overside cargo in a dock in Liverpool unloading from the ship straight into a barge?—Precisely the same as if they landed on the other side on to the quay. Water space is just as valuable to us as quay space.

4518. You say that if goods are not removed from the quays within a certain time, they become liable to a quay penalty rent. Do you find that goods are not removed, as a rule, in the allowed time, or that they are removed in the allowed time?—It is a very customary thing for goods to be allowed to remain a little longer on the quay for the purpose of convenience to anyone taking the goods away, but as a rule everyone is anxious to take the goods away.

4519. They do not remain, as a rule, long enough to have the extra charges upon them?—Plenty of goods remain on the quay on which the penalty is charged, but the majority of the goods go away.

4520. (*Mr. Peel.*) You say that if the goods are not removed within certain times, they become liable to quay penalty rent at the rate of 5s. per hour for the first 24 hours, and 10s. per hour thereafter, irrespective of quantity? I do not quite understand that. Do

you mean to say that is the charge made on the whole of the cargo of one ship?—Supposing there were 100 bales of cotton, the penalty charge spoken of would be 5s. per hour on the lot; that would be £6 for 24 hours. If it was 100 bales or ten bales, it would be the same penalty charge. It is not a question of quantity.

4521. Is it a question of space?—No. If it was 100 bales of cotton they would have to pay the same as if it was ten bales.

4522. (*Mr. Lyttelton.*) That is a rather curious arrangement, is it not?—That is the arrangement.

4523. Practically you have the same fine for an amount of goods that may immensely block you, and one that would hardly block you at all?—Yes; that is so.

4524. (*Mr. Peel.*) Is a certain space allotted on the quay to the cargo of each ship?—The master porter collects the goods on the quays.

4525. Now, as to the composition of the authority. Practically, I suppose, the same people are re-elected after their four years?—No; I can hardly say that. The Board would sometimes run for perhaps three or four years without an election, and then there is an election and changes take place in the body. Then, also, changes take place from resignations and from other causes.

4526. Do you find that members of the municipal councils of Birkenhead and Liverpool sit on this Board much?—I do not think at the present moment there is any member from Birkenhead. I think there is one member of the Liverpool Corporation who sits on the Board.

4527. They are practically quite separate as regards members?—Absolutely separate.

4528. Is any unloading done in the river?—Very little.

4529. Is it mostly done inside the docks, or is it done a good deal on the quays on the river?—In the docks on to the quays.

4530. But not on to the quays by the side of the river, which are shown on the map?—No. Those are what we call pier heads, but there is nothing done there.

4531. Practically they must come into one dock or the other?—Practically they must do so. There is nothing done at the pier heads, as we call them.

4532. I suppose the amount of the transhipment trade is not very great compared with the trade direct inwards or outwards?—By comparison it is not, but at the same time it is large.

4533. Could you give roughly a percentage of it?—No.

4534. Do you arrange, as far as you can, that certain classes of goods go to certain specific docks, where the arrangements for those classes of goods are the most convenient?—Quite so. The Atlantic trade, for instance, favour the northern docks, the Alexandra, the Langton, and the Huskisson. Some of the China boats would go to the south end and Birkenhead.

4535. That is partly owing to the way in which they have been built and the conveniences that you have for them?—Yes, you may take it that way.

4536. For instance, goods coming in bulk which have to be weighed?—It is not quite so much a question of goods, as it is a question of vessels. All the larger vessels must go into the larger docks.

4537. The qualification is according to vessels rather than according to goods?—Yes; the larger vessels must go necessarily into the larger docks.

4538. (*Sir John Wolfe-Barry.*) You mentioned that there were certain appropriated berths. On what basis are they appropriated?—On the amount of work that the firm who own the vessels can do at them.

4539. It being supposed that they will keep them properly employed?—They must.

4540. That is quite at the discretion of the Board?—Absolutely.

4541. You mentioned something about goods coming by barges paying the same as if they came by cart. Is there a specified charge for all goods coming into the dock by cart?—If they come to the docks to be exported, and are deposited on the quays, they pay these dock rates and town dues, whether they come by cart or not.

4542. Whether they come by barge or by cart?—Yes.

4543. That is quite different to London?—Apparently.

4544. I suppose a very large amount of the traffic comes by cart?—The largest.

4545. Where does the bulk of the cargo discharged at Liverpool go to. Does it go to private warehouses, or the Board warehouses?—The bulk of it goes to private warehouses. We have only comparatively small accommodation in the shape of warehouses. The four warehouse systems are the Albert, Wapping, Stanley, and Birkenhead. By far the larger quantity goes to private warehouses.

4546. The bulk of it goes by wagon and lorry, does it not?—Yes.

4547. There is not a very large quantity goes away direct by rail?—A comparatively small quantity, hardly anything direct.

4548. You said that goods discharged into a barge would have to pay the same rent as if they were discharged on to the quay?—The same dues. Goods discharged overside into a barge and taken away what we call up the river would pay exactly the same dock rates and town charges that they would pay if they were landed on to the quay and taken away by carts.

4549. There is no rent paid for 72 hours on the quay?—No.

4550. Then, except for delay in clearing quays, whatever payment was made would be paid by the cartage, or the charge if conveyed by barge. That would be whatever revenue the Board would get out of that traffic?—The revenue that we get would be the dock rates and town dues on the goods, and the incidental revenue that might be paid for goods delayed and remaining on the quays.

4551. Beyond 72 and 48 hours respectively?—Yes.

4552. (Mr. Lyttelton.) Take the case of a barge entering a dock. Would she declare the weight of her cargo?—No.

4553. Then how is it ascertained?—It appears on the ship's manifest.

4554. The dock rates and town dues are then assessed on that tonnage?—On the description which appears in the ship's manifest.

4555. That would be, *mutatis mutandis*, the same as when a cart arrives?—Precisely the same.

4556. Can you tell me the distinction between dock rates and town dues?—I hardly can.

4557. I suppose both go to the Trust?—They both go to the Trust.

4558. It is rather a name than otherwise now, I suppose?—It is a name more than anything else. It has been more than once suggested that they should be thrown together.

4559. Practically it would be the same thing?—Yes.

4560. For the payment of those rates and dues the barge in one case and the cart in the other would have the right of free quay space for 72 hours?—That is so.

4561. No remuneration is paid to the members of the Board?—None whatever.

4562. How long do they hold office?—Four years.

4563. Could you say of what classes the Board mainly consists? Are they shipowners or merchants?—As soon as a gentleman becomes a member of the Board his identity in connection with any outside combination ceases. May I put it in this way? A body outside, say, for instance the cotton people, or the sugar people, may send perhaps three or four or five members in, but when they get on the Board there is no cotton or sugar or anything else about it; they are members of the Mersey Docks and Harbour Board.

4564. But, as a fact, although they are not so designated, does the Board consist in the main of merchants or shipowners?—Representatives from the Steamship Owners' Association; representatives from the Shipowners' Association; representatives from the General Brokers' Association; representatives from the Cotton Association; and so with Corn, Provisions, and Fruit. That, perhaps, covers the whole ground.

4565. Is there any difficulty at all in getting what I may call the best men to serve?—No.

4566. (Chairman.) Do you have a representative from the merchant element?—Yes; perhaps you may look upon the General Brokers' Association as the merchants' element.

4567. (Mr. Lyttelton.) What is the experience of Mr. M. K. Liverpool as regards the desirability of the Corporation being the dock authority?—I do not know; that was almost before my day, and I have been there forty years. 25 Mar. 1901.

4568. It is a matter of history; perhaps you are familiar with the matter?—It was not a question so much of Liverpool as of people outside Liverpool who wanted to have the docks separated from the Corporation.

4569. On what experience was that based? You know perhaps the reason of the detachment?—In the latter part of the year 1856 the Corporation of Liverpool gave notice that they intended, during the ensuing session, to make application to Parliament for a Bill in relation to the Birkenhead Docks, but as no provision was made in the Bill for carrying into effect the recommendations contained in the special report of the said committee, a Bill, afterwards called the Mersey Docks and Harbours Act, 1857, was promoted.

4570. The recital of the Bill is that it was expedient "that the management of the docks of Liverpool and Birkenhead, and the control over pilotage, harbour lights, and all other matters conducive to the safety or convenience of the shipping frequenting the Port of Liverpool, should, subject to the powers of the Conservancy Commissioners, be vested in an independent public body, elected by the persons that pay rates for the maintenance of the docks and works"—That is so. That was promoted by the Manchester Chamber of Commerce and the Great Western Railway Company, I believe.

4571. Your view is that the opposition which resulted in the formation of a separate Board came from outside Liverpool, and not from within?—Yes.

4572. (Chairman.) You are perhaps aware that the See 4673-6. warehousing in London has decreased of late years?—Yes.

4573. Is that your experience of Liverpool in regard to the tonnage stored?—No, it certainly is not the case in Liverpool.

4574. Has it increased?—It must have done so. I am speaking very much without the book, because I have no actual statistics to go upon. The whole trade in the port has increased so greatly that the proportion stored in the warehouses must have increased.

4575. You say the tonnage stored has increased?—I should think so, distinctly.

4576. There has been a suggestion in other places that free trade and the very great prosperity of the country has led a port to form a kind of Clapham Junction or clearing house, goods passing through it and not being stored. Do you say that is not your experience?—I do not think so. No doubt more has been distributed, but I think proportionately more has been warehoused.

4577. I do not want to ask you for any particular figures, but is it your impression that the tonnage stored in a year is greater than it was five years ago, for instance?—That is so.

4578. (Mr. Ellis.) You said: "In 1855 the under-mentioned bodies were each of them prosecuting Bills in Parliament in relation to works undertaken or about to be undertaken by such bodies respectively, and such Bills were all referred to the same Committee of the House of Commons." Did the undermentioned bodies, namely, the trustees of the Birkenhead Docks, the Birkenhead Dock Company, the Liverpool Dock Trustees, and the Corporation of Liverpool promote Bills in Parliament in 1855?—There was a Bill promoted in 1855 which subsequently became the Birkenhead Dock Act, 1855. See 4479.

4579. My question is: Did those bodies promote Bills in 1855?—Yes.

4580. Those Bills were referred to a Select Committee of the House of Commons?—Yes.

4581. And that Committee of the House of Commons to which the above-mentioned Bills were referred made a special report, did it not?—I believe it did.

4582. I want you to read the first paragraph of that special report?—The Committee of the House of Commons to which the Liverpool and Birkenhead Bills were referred made a special report, as follows:—"The committee on group (D) of Private Bills, in considering the Liverpool Docks Bill, and the Birkenhead Docks and Liverpool Docks Bill, referred to them, have come to

Mr. M. K.  
Burton.

25 Mar. 1901.

houses were doing as well as they were doing four or five years ago, and I think the answer that I gave might be misunderstood. There is more business coming to the Port, and therefore there must be more business going to the warehouses; but if the question had been followed by another one as to whether the goods were being distributed more freely from the quays I should have said yes.

4674. (Chairman.) I was not referring to the outside warehouses?—I thought you were referring to the outside warehouses more particularly. We are not perhaps doing quite so much in our own warehouses. I could illustrate that very readily at once. At the Albert Docks, where they are divided into blocks No. 1, No. 2, No. 3, No. 4, No. 5, and No. 6, we have let one block off entirely as an ice store.

4675. Can you tell us any particular trade in which the tonnage of goods stored in the warehouses has fallen off?—No, I cannot, but our own warehouses have fallen off distinctly.

4676. Therefore you are disposed to qualify the statement you made?—Yes, I did not follow you.

4677. (Sir John Wolfe-Barry.) I think I understood from what you said to Mr. Ellis that when the Trust was formed in 1857 the concern as a going concern was at least equally as financially sound as it is at the present day?—Quite so.

4678. It was not resting upon any extraneous supports?—Not in the smallest degree.

4679. It was sound in itself?—Yes, it was sound in itself. Recalled, 4700

Mr. FRANCIS BROOKE GIRDLESTONE called and examined.

Mr. F. B.  
Girdlestone.

4680. (Chairman.) You are secretary and general manager of the Dock Estate of the Corporation of the City of Bristol?—I am.

4681. You are a retired officer of the late Indian Navy?—I am.

4682. How long have you held your present position?—Since 1875 as secretary, and as general manager since 1884.

4683. Are you well acquainted with the principal ports of the United Kingdom?—I am; and also with those on the Continent and in the United States and Canada.

4684. You are no doubt acquainted with the objects of the present Inquiry?—I am, and I have followed the evidence from the beginning.

4685. You have been good enough to send us answers to certain questions which were put with regard to the Bristol Docks?—I think I have given you a pretty exhaustive statement of everything in connection with the Bristol Docks, both from a commercial and an engineering point of view, although, of course, I am not an engineer.

4686. Will you tell us what you have to say with regard to the general working of the docks and the constitution of the controlling authority, and will you state the circumstances under which the Corporation became possessed of the docks?—Bristol became known as a port at a very early period, being the centre of a large district, and situated on a river only a short distance from the sea, its position was early recognised as a very favourable one for trade and commerce. That its great rise and fall and swift flow of tide conferred much advantage in the matter of navigation to and from the ocean was evidently also realised at a very early period of its history, the vessels of that day thereby being able easily and with but little manual assistance to drift up and down themselves the somewhat tortuous stream as it then existed. The first notice of any engineering work being carried out for the improvement of the inner harbour at Bristol was in 1239, when the ground for the trench in the Marsh of St. Augustine's was purchased by the citizens from the Abbot of St. Augustine's Monastery. That trench, which was made wide enough to accommodate shipping was an enlargement of the course of the River Frome from its junction with the River Avon, opposite what is known as Prince's Wharf, to Stone Bridge, about half a mile higher up, and was completed in 1247 at a cost of about £5,000—a large sum of money in those days. This, it is believed, was one of the first works of the kind carried out in England, and was looked upon then as a great undertaking. From time to time during the eighteenth century new landing places were made at the city quays, the most important being "The Mud Dock," at what is known as the "Grove," the wharf along the "Welsh Back," and a new wet dock called the "Merchant's Dock," near the Hotwells. The latter was finished in 1768, and was found to be very convenient for shipping, as vessels could be kept afloat in the dock at all times, there being a lock between it and the river. At the various quays in the city, however, vessels had still to lie on the mud at times of low water, they being built specially for the purpose of bearing the strain. This state of things was admitted to be very unsatisfactory, and various schemes of improvement were proposed. In 1792 Mr. Jessop, C.E., suggested making a dock at the site of the present Cumberland Basin. Nothing was done, however, till 1802, when, after a number of schemes

had been discussed, it was decided to apply for powers to make a new course for the river between Rownham and Totterdown, and to turn the old course through the heart of the city for a length of over two and a half miles into a floating harbour, with entrance locks and basin. A company, in which the Corporation and the Society of Merchants were shareholders, was formed, and an Act of Parliament was obtained in 1803, the estimated cost of the works, including land, being £300,000. The works were put in hand in 1805, and completed in 1809, but the difficulties having been unexpectedly great, the total cost reached about £600,000. The work was an unprecedentedly great piece of engineering for the period. It removed the greatest objections to the Port of Bristol—the necessity of grounding vessels, with the consequent liability to injury, and also the danger in case of fire from being unable to move vessels when aground, and provided a commodious wet floating dock of over 71 acres in extent for shipping, 59 acres of which were available for masted craft. Alongside the harbour thus formed, now styled the City Docks or Floating Harbour, many engineering and ship-repairing works, timber yards, offices and warehouses, both public and private, were gradually provided, a good deal of the quay and water space being in the very heart of the city. As years went on the unsatisfactory nature of its control by the company was widely realised. Owing to the high tariff of dues charged and the failure to carry out the new works necessary to accommodate the increasing size of vessels then beginning to be employed in the foreign trade of the United Kingdom, a policy due chiefly to the impecunious state of the company, the trade suffered grievously, and indeed by 1847 was well nigh stagnant; but after considerable remonstrance, pressure and agitation by the traders and citizens generally, an Act of Parliament was at length obtained in that year, whereby the Corporation obtained possession of the whole floating harbour, but with a compulsory condition to reduce the rates on both vessels and goods, power, however, being given them to supplement any deficiency thereby caused in the dock revenue by levying a rate-in-aid up to 4d. in the pound on the rateable value of the city. The new scale of dock dues came into operation on the 13th of November in that year, and a great demonstration to celebrate the event took place. In order to show the sweeping manner in which the Corporation dealt with the dues after they became possessed of the docks, it may be stated that on the 1st of January, 1849, they decided to abolish the town dues on 325 out of 350 articles scheduled. The dock dues were also lowered from two-thirds to one-half, and during the next few years many improvements carried out, and additional trading facilities afforded. Great strides were made in consequence of this bold policy, in ten years following the foreign tonnage having increased 66 per cent., and in the next ten years a further 62 per cent., the increase by the year 1870 in the foreign tonnage being from 97,106 tons register to 355,921 tons register, and in the coastwise tonnage from 398,673 tons register to 593,130 tons register. Under the Parliamentary powers obtained by the Corporation in 1865, a further large outlay has been made, and very considerable river and harbour improvements gradually effected; several sharp bends which formerly existed in the River Avon having been removed and many barriers of rock in its bed cleared away; larger and deeper locks at Cumberland Basin, and a considerable length of deep water wharf, contiguous to the Great Western Railway system, on the south side of the harbour, have also been constructed, and a complete

system of transit sheds, warehouses, granary, foreign animals' wharves, slaughter-houses, chill rooms, and hydraulic cranes provided. As the result of all this expenditure, and the work still in progress, vessels of 300 to 320 feet length, drawing 20 to 22 feet, with a carrying capacity of 3,000 to 4,000 tons, will shortly be able to come up the Avon without delay from King-road, and enter the City Docks at high water on all ordinary tides throughout the year; and when the whole scheme of improvements is completed, as is anticipated in another eighteen months' time, vessels of even greater length and capacity will be able to safely navigate the Avon, and find accommodation in the City Docks, and there will be far less detention at King-road when such vessels happen to arrive there at low neap tides. Simultaneously with these river improvements, new deep water berths and commodious wharves on both sides of the floating harbour, all connected with the Great Western Railway system, and served also by the Midland Company by means of their extensive system of capacious barges, are being constructed under Parliamentary powers obtained by the Corporation and the Great Western Railway Company respectively in 1897. In addition to the City Docks, as above described, the Corporation are the owners of a dock of 19 acres at Avonmouth on the Gloucestershire bank of the River Avon, and of one of 12 acres (deep water area) at Portishead, on the Somersetshire bank of the river, two miles below Avonmouth. As I have already told you, when the old City Docks were first constructed in 1803, the money was raised by a private company, in which the Corporation of Bristol and the old Guild of the Merchant Adventurers of Bristol, and a number of private traders had shares. That company was bought out by the Corporation of Bristol in the year 1847, and, since then, the old City Docks, and, subsequently to 1884, the Avonmouth and Portishead Docks (which are on the north and south sides of the river respectively), were also taken over by the Corporation from the two private companies who constructed them; and the whole dock estate is now the property of the Corporation of Bristol; that is to say, the whole of the wet docks within the Port of Bristol belong to the Corporation of Bristol. I have here maps on a large scale, which I will hand in.

*(The witness handed in a map of the Avonmouth Dock, and a map showing the City Dock and the Avonmouth and Portishead Docks.)*

4687. In 1847, then, the Corporation became possessed of the whole of the floating harbour?—Yes. The Corporation had from time immemorial been possessed of certain city dues taken in respect of vessels in the shape of water bailiffs', mooring, and other fees; and on the goods in the shape of town dues and wharfage dues.

4688. Now will you go on to tell us about the two docks which were constructed by private companies and taken over by the Corporation in 1884?—These two docks were constructed by private companies and taken over by the Corporation under Parliamentary powers in 1884, the object being the stoppage of the severe competition which then existed between the three different dock concerns, and which, although beneficial no doubt to some traders, entailed great loss to the citizens in the working of their City docks, and little or no pecuniary benefit to the companies themselves. The results aimed at have been attained, inasmuch as that competition has ceased, and it has been found possible to so readjust all the dues and charges as to secure a greatly enhanced revenue from the concerns, under one ownership and control, than could ever have been obtained when worked as three separate companies. Again, those vessels which can physically come up, and which before the amalgamation were being diverted to Avonmouth and Portishead, do now come up to Bristol, thereby adding largely to the indirect advantage of the citizens by better local trade and greater distribution of wages within the city area. Only the very large liners and vessels laden with mineral oils and those required to be discharged with great dispatch are, as a rule, now berthed in the Avonmouth and Portishead Docks. The terms arranged by the Corporation for the purchase of the Avonmouth and Portishead Docks were based on the net revenue which they thought they could, without detriment to the volume of traffic, derive from those concerns when worked as a part of a united dock undertaking, together with a small sum for goodwill. Avonmouth Dock was purchased for about two-thirds and Portis-

head Dock for about four-fifths of what they had cost their former owners. The funds for purchasing those docks were raised at a rate of interest varying from 2½ to 3½ per cent., by the issue under the powers given by the Bristol Dock Act, 1884, of debenture stock on the security of the dock estate revenue and the borough fund, which includes the dock and city dues.

4689. Will you tell us the advantages which you say the Port of Bristol has in having deep water close to the mouth of the Avon?—Owing to the considerable expansion now taking place in the North American trade at Avonmouth, and the greatly increased and increasing size of vessels now employed therein, the Corporation are contemplating the construction, at an estimated cost of about one and three-quarter millions, of another dock at Avonmouth of about 30 acres in extent, with a lock 850ft. in length, having direct access from the sea, with 3,200ft. of quay 200ft. in width, including railway lines, equipped also with commodious transit sheds and a graving dock, and suitable in all respects for the reception and discharge with great dispatch of the largest class of ocean-going vessels afloat or building, and capable of extension, if so required, hereafter. If, as was the case, the opening of Avonmouth and Portishead Docks in 1877 and 1880 respectively, and the carriage of goods therefrom by the railway companies at the same rates to inland places as from Bristol gave a great stimulus to the revenue and traffic of the port, both foreign and coastwise, by reason of the larger and more economically-worked class of vessels which shipowners were thus able to employ, and the cheaper freight and wider area of distribution which merchants thereby secured, the probability is that the further large scheme of dock extension now contemplated at Avonmouth, subject to the co-operation of the railway companies having access thereto, will result similarly. The port is again in the position of being unable to accommodate the greatly increased size of vessel plying in the North American trade, which forms one-half of its whole foreign trade. If it is true, as alleged, that cheaper freights can be secured by this type of vessel, local merchants may be prejudiced if accommodation be not provided for them at this port; hence the desire to obtain powers to build a dock of vastly increased lock and quay proportions, the scheme for which has just been passed by the citizens on a poll by three to one. The Port of Bristol enjoys considerable advantages, inasmuch as there is deep water close to the mouth of the Avon, and a straight lead thereto from the ocean. Vessels of 480ft. and 23ft. draught and of 450ft. length and 20ft. draught can enter the Avonmouth and Portishead Docks (using the caisson at the inner end) respectively towards the time of high water on any neap tide of the year, and of much greater draughts on other tides, and, as regards the City Docks, there are now but few tides on which a vessel drawing 20ft. cannot proceed direct from sea thereto. Another advantage the port possesses is a very central position, and consequent convenient facilities for the distribution of imported cargo to inland towns by canal or railway as far as Birmingham on the north, Reading on the east, Exeter on the south-west, and by coastwise craft to all the ports within and around the Bristol Channel, and the collection of minerals and manufactured goods for export from the Midland districts and South Wales. Avonmouth Dock is chiefly used by the larger Canadian and American liners, also for whole cargoes of grain from South American and United States ports, and for the United States mineral oil trade, which latter is conducted in tank vessels of 5,000 tons capacity. Portishead Dock is almost wholly used for whole cargoes of grain, chiefly from the Black Sea and Argentine ports, and for cargoes of naphtha from the United States. The tariff of dues and labourage charges is moderate, and this and the fact that there are no export dues has of late years given a great impetus to the liner traffic. I should just like to remark here that there are a great many tables given in the Appendices to the Minutes of Evidence on the fourth day of the proceedings of this Commission, in which certain figures are given by the London Chamber of Commerce in respect of grain and timber charges at the Port of Bristol. Having gone into these very carefully, I may say that they are exceedingly misleading; in fact, it is quite absurd to state what is stated in one case, namely, Table 20 of Appendix 8 on the 4th day. Talking of boards and board ends under 6in. in width, it says: "An inspection of which shows that on

Mr. F. B.  
Girdlestone.  
25 Mar. 1901.

Mr. F. B.  
Girdlestone.

25 Mar. 1901.

this article, as on most others, the charges in London are higher than elsewhere, with the exception of Bristol, which is the dearest port in the United Kingdom." I say that is absolutely incorrect. The comparison is not fair, because at Bristol the rate includes work which, in London, is performed at the cost of the ship. But, notwithstanding this fact, the rates for the better class of wood goods, that is, of more even sizes, are much less than the London rates. The fact is that the compiler has ignored the fact that, whilst in London and Liverpool the ship discharges on to the quay, at the port of Bristol the ship only discharges to the rail. So that, to compare the charges, you must add to the London charge the cost of bringing the cargo from the ship's rail to the quay. But, in the case of grain, the charges are still more inaccurate, and, as far as I can make out—though it is very difficult to follow them—it is because they have taken the wrong weight to the bushel. The weight to the bushel differs very much in the different ports.

4690. (Mr. Ellis.) Will you give us the name of the witness whose evidence you are challenging?—It is the evidence of the London Chamber of Commerce, and it is contained in the Appendix No. 8 of the fourth day. I think it was handed in by Mr. Coke. I think it is simply a mistake; I do not think it was done intentionally at all, and I think it arises from those two facts: that the difference between the customs of the ports has not been taken into account, and that the weights per bushel have not been taken properly. That seems to me to be so, as far as I can follow them. At present the Port is very largely an import one, a number of vessels which frequent it resorting after the discharge of their cargoes either at Bristol, Avonmouth, or Portishead Docks to Cardiff, Newport, Barry, or one of the other coal ports in South Wales for outward cargoes. As they can get stemmed at these ports as a rule on the same tide as they leave Bristol, shipowners trading to the Port of Bristol have as a fact advantages over several of the larger purely importing ports. As regards imports Bristol early possessed, and continues to enjoy, a large share of the grain, flour, and provision trade of the United Kingdom with Canada and the east and west coasts of the United States; also of the grain trade with India, South America, and the Black Sea ports. Bristol is also a large importer of wines, spirits, oils, seeds, marble, ores, green and dry fruit, esparto grass, valonia, and general goods from French, Spanish, and Mediterranean ports, timber and wood goods from the Baltic and North American ports, hides and tallow from South America and the Baltic, petroleum oil in bulk and naphtha in casks from the United States, and beet sugar and general goods from French, Belgian, German, and Russian ports. Of late years a considerable general trade by regular liners, chiefly in sugar and manufactured goods booked to inland towns in the United Kingdom on through bills of lading from the Continent, has been developed at the City Docks, and with the increased quay shed and rail accommodation now being provided this traffic may be expected shortly to attain far larger dimensions. The exports, which are chiefly by the large liners from Avonmouth, consist of coal, salt, feldspar, china clay, galvanised iron, tin plates, wire, oils, railway waggons, coarse pottery, hardware, and miscellaneous manufactured goods, the value of which shipped abroad during the year 1899 amounted to £1,355,498. With the numerous regular liners now plying from the Port of Bristol, and with improved inland navigation as proposed between Worcester and the Birmingham and Staffordshire districts, a much larger portion of the heavy goods, such as pottery and hardware, from those districts would, it is thought, be shipped from Avonmouth in preference to Liverpool or London. Up till recent years Bristol, it is believed, was the only dock concern in the United Kingdom owned by a municipality. Other municipal bodies have, however, now been authorised to own docks and provide terminal facilities, or to subscribe from municipal funds towards such works; for instance, Manchester, Boston, and Preston—and, I think, Aberdeen—are now in this category. At the leading Scotch and Irish ports, and at Liverpool and Swansea in this country, the control, as is well known, is in the hands of public trusts, chiefly elected by those who pay dues, which bodies raise their money on the security of the dock and harbour dues only, and without any guarantee from the borough funds.

4691. (Chairman.) Have the municipal funds at Bristol invested in dock enterprise resulted advantageously

to the citizens?—At Bristol that the municipal funds invested in dock enterprise have resulted very advantageously to the citizens is proved by the additional population, the increased value of the rateable property, and the many new industries started in and around the city, and, indirectly, by the increased labour which has been employed at continually higher rates of pay, and the increased foreign and home trade done through the Port of late years. The commercial advantages given by public ownership over private ownership of docks, wharves, and quays consist, in my opinion, of the rates being fixed alike to all customers under similar circumstances of there being no discounts or rebates allowed—that is, of all dues and charges being levied impartially and maintained at the published tariff, without fear or hindrance, and the absolute refusal to give any rebates, drawbacks, or other reduction from this published tariff. Again, a public authority, being able to raise its money on lower terms than private owners, and having no dividend to pay, has more interest in keeping the docks in an efficient condition and furnishing them either out of borrowed money or often, as at this Port, out of its ordinary dock revenue with the additional appliances and accommodation required from time to time by the ever-changing type of vessels and conditions of working traffic. Private owners seeking only to work the dock for dividends are rather prone to starve the works and to maintain a high scale of charges, which is against the trader's interest. They also hesitate to expend further capital until they are actually forced, either by a threatened loss of traffic or an inability to accommodate the ordinary vessels plying at the time in the different trades. The question of the advantages of ownership by a trust in preference to the municipality of the Bristol Dock Estate has often been the subject of local discussion, some thinking that a more progressive policy would be carried out by a trust constituted like those of some of the northern ports rather than by the Corporation, and for the following reasons: 1st. That competent administration could be elected by the various interests concerned without their being of necessity members of the Town Council. 2nd. That any scheme formulated for the improvement of the port would not run the risk of being rejected—

- (a.) By the failure to obtain, as is necessary under the Borough Funds Acts, a statutory majority of two-thirds of the Council; or,
- (b.) By a majority of the town's meeting; or,
- (c.) In the event of a poll being demanded at that meeting, by the result thereof being a large majority of citizens against proceeding with the Bill in Parliament necessary to carry out the scheme.

As against these objections it may be urged—

- (a.) That it is doubtful whether the members serving on a trust would differ much from those members of the Town Council who are now appointed annually to sit on the Docks Committee.
- (b.) That by municipal ownership the capital is raised at the lowest market rate by reason of its having as security the Borough Fund, or in other words, the ability to pledge the credit of the city.

And, again, if there should be any deficit on the working of the municipal-owned dock, the same can be made good by a rate-in-aid on the city. The problem of a Dock Trust in Bristol resolves itself, therefore, into one of dock finance. The Corporation cannot divest itself of its responsibilities towards the holders of their debenture stocks, even if a trust was willing to take over their full liabilities on this head, and it does not seem at all reasonable that they should remain responsible for the liabilities, and that an independent body over whom they have no control should possess the property and manage the estate. The capital liabilities of the docks stand at nearly two and a half millions, and the annual interest at about £82,500. The dock estate by itself, that is, without reckoning in the city dues on shipping and goods during the past eight years, shows, without providing for the sinking fund and renewal and depreciation funds, a deficit of about £100,000. That is in the eight years.

4692. In capital value, do you mean?—No, in revenue. That is on the dock estate *per se*. That is on the eight years, and without taking in the city dues. I must

explain with regard to the city dues that only one due, a consolidated due, is charged to the shipowner or to the merchant; but, for the purposes of the borough fund, when that money is received by the Docks Committee, whether from the shipowner or the merchant, that consolidated due is split into the dock portion and the city dues portion, and whereas the dock portion goes into one Committee's pocket, the city dues portion goes into the pocket of the Finance Committee of the Corporation and becomes part of the Borough Fund, and against that we draw a rate-in-aid. But against that, putting the two together on an average of years, if you take out the sinking fund, it will be found that the docks yield a profit to the citizens. That is the result of the united operation.

4693. (Sir John Wolfe-Barry.) Are the city dues in the nature of a rate on rateable property?—No, the city dues are a due on all ships and on all goods imported in those ships.

4694. All goods landed?—No, brought into the port, and the port extends 20 miles below the mouth of the river.

4695. The dock property is rated separately as a rateable property, I suppose?—Yes, but the purely dock dues have been constituted tolls in gross, and as such are not rateable to local rates.

4696. What is the point of keeping them separate now?—If the Corporation ever got rid of its dock property it would want to be paid separately for the city dues. Then the city dues are only leviable on the vessels and goods coming to the city docks, not on those entering the Avonmouth and Portishead Docks. For all purposes of the shipowner and the merchant there is only one consolidated due charged. As I say, the merchant and the shipowner know nothing about the city and the dock dues, they just pay the one consolidated dock due. If, however, the total harbour revenue of the Corporation be taken—that is, the revenue of the dock estate, plus the net city dues for the same period and the total expenditure, including the statutory obligation to provide a sinking fund to eventually discharge the capital liabilities—there is a deficit of £50,148. That would be a serious matter for a dock trust, because it is not certain that Parliament would allow a trust to set aside the obligation that the Corporation entered into to provide a sinking fund for liquidating the amount the Corporation was empowered to borrow for dock purposes. But it is not a serious thing for the ratepayers of Bristol to contribute the average sum of less than £6,500 per annum, because they are getting in return a valuable property, built up by the sinking fund, which during the eight years in question has increased about £70,408. The sinking fund is now about £150,000, all invested in gilt-edged securities. It may be argued that the present body of ratepayers are reaping no advantage from this. The reply to that is that the large expenditure of money made in connection with the docks during the last fifteen years has added materially to the prosperity of the city, and that although the present body of ratepayers are providing a good heritage for their children and successors, it should not be forgotten that they in their turn inherited the work which was done by their predecessors in the first half of the century. With reference to the personnel of a dock trust and the present members of the Docks Committee, it is not thought that that would be materially improved. Three-fourths of the present members of the Docks Committee would be eligible for sitting on the trust, and they probably would be the men who would be selected by the payers of dues to represent them, and it certainly is not always a disadvantage to have a few men sitting at a board who have no direct pecuniary interest in the proposals that come up for consideration, but whose interests are only those in common with the main body of citizens in whose midst the docks are situated. Even of the difficulties surrounding the financial part of the subject were not so great, there would be the further grave difficulties in getting a trust constituted unless the Corporation was prepared to support the application. At a time like the present, when Parliament is granting to municipal authorities the power to control and manage large commercial undertakings like gas, water, electric lighting, tramways, etc., it would, it is thought, hesitate to deprive the Corporation of the management of the docks unless it was at the solicitation of the Corporation itself, and that is not at all likely to take place. While the present system in Bristol has its disadvantages, those disadvantages are more than counterbalanced by the advantages derived from the use of the borough fund as security in raising capital for dock improvements and de-

velopments. That is the general opinion, I think, of the better class of the citizens. It is not quite my own personal opinion. The Dock Estate comprised, as before stated, of the Avonmouth, Portishead, and City Docks, is worked under the direction of a committee of the Town Council, elected annually by that body and consisting of 19 members thereof. In addition to dock management the committee is charged by the Council with the general supervision of the city quays, sheds, and the dues received therefrom, and the expenditure connected therewith, and also of all conservancy matters. The working is regulated by various Acts of Parliament and by by-laws and regulations made thereunder, and also by resolutions passed from time to time by the Town Council on reports submitted to them by the Docks Committee. The committee is broken up into sub-committees for dealing specially with all matters relating to finance, works, and traffic. These sub-committees investigate with the aid of the officials, the various questions in detail, and submit in due course reports and recommendations thereon to the general committee. The accounts are audited annually by two members of the committee, as well as by a professional firm of auditors, and an epitome thereof is then published in the local newspapers in accordance with the statutory obligations, and any citizen can, if he so wishes, obtain copies of these accounts.

4697. (Chairman.) Now, will you tell us about the principle of working?—The principle of working aimed at is not so much to make a profit as to increase the volume of traffic by keeping the tariff of charges low, giving great dispatch to the vessel, and providing from time to time (largely out of the revenue) such further sheds, cranes, quays, railways, telephones, etc., and other facilities as the ever-changing type of traffic and vessel in which it is conducted seem from time to time to call for. At the Port of Bristol the custom is for the shipowner to raise the cargo to the ship's rail—this is very important—the merchants taking it therefrom and landing it on to quay or into railway wagon, barge, cart, or shed. In the case of bulk grain the merchant has to do a certain amount of work in the hold, namely, trimming and bushelling. Whilst, as before stated, the Corporation, except at the granary berth at the Prince's Wharf, City Docks, do not perform laborage at the City Docks, at Avonmouth they do practically the whole of the operations both for the ship and merchant, and at Portishead Dock the whole of those for the merchant. As regards the operation performed for the shipowner, that is, loading and unloading from and to the ship's rail, the Corporation employ a stevedore, but as regards that for the merchant the work is executed by means of their own staff of clerks, foremen, and workmen. For general labour the pay at present is 6d. per hour, and for piecemeal work, which applies wholly to grain, the rates paid to the men are shown in this Table, which I will hand in.

(The Witness handed in a Table showing the rates for discharging grain in the Bristol Docks. See Appendix, 13th Day, No. 3.)

The efficient staff of officials, foremen, and labourers maintained by the Corporation, the rapid way in which the operations are conducted, the low tariff of charges, and the system of giving Corporation warrants for goods stored, undoubtedly contribute greatly to the success of the Port, and to the favourable view which shipowners and merchants take of it as a convenient and economical centre for importation and distribution of foreign produce. Where the work is performed by the Corporation the rates charged cover, as a fact, little more than the actual cost incurred, including shunting. In addition to the storage provided by the Corporation at each dock, there is extensive private warehouse accommodation in Bristol for grain and all other classes of goods. At the Avonmouth and Portishead Docks the Great Western and Midland Companies' trucks have direct access to the dock quays and vessels lying thereat. At the City docks only the Great Western Railway is directly connected with any of the deep-water berths. The Midland and London and South-Western Companies, however, collect goods by barge and cart to their depot at St. Phillips free of cost to the trader. This system of barging from ship's side is, as a fact, a great convenience from the dock company's point of view, as it enables goods to be delivered simultaneously from the off-side of the ship to the Midland Company, and on the quayside to the Great Western Company, and so saves quay space, and ensures greater dispatch and economy in handling cargo. The cost of placing it on to the railway truck to either company's system is the same to the consignee, as the Midland Company charge nothing extra for the act of

Mr. F. B.  
Girdlestone.  
25 Mar. 1901.

Mr. F. B.  
Girdlestone.

25<sup>th</sup> Mar. 1901.

barging to their depôt. By this means traders get practically at all three docks equal discharging and trucking facilities, and at equal cost, and this, coupled with the fact that the companies charge only the same rate to inland places from Avonmouth and Portishead as from Bristol, enables a very large "ex ship" trade in grain, flour, timber, and general goods to be conducted at this port. The lines within the dock premises, both at Avonmouth and Portishead, belong to the Corporation, and similarly on certain portions of the deep-water quays owned by the Corporation at Bristol; no railway company's locomotive is allowed on the Corporation lines within the two former docks, the haulage being all done by Corporation locomotives. No tolls in respect of this haulage are levied on the owner of the goods, nor is any payment received from the railway companies. The Corporation some years back sought by an action at law to make the railway companies pay the cost of the services, or, failing this, to supply the locomotive power themselves, but failed in the attempt, the courts ruling that a certain section of the Bristol Docks Act, 1884 (Avonmouth and Portishead Dock Purchase Act) freed the railway companies from all such liabilities. This shunting work entails a very considerable charge on the Corporation as owners of the dock estate. On the other hand, the railway companies claim that they give good value for this, inasmuch as the rates to inland places, as before stated, are the same from Avonmouth and Portishead as from Bristol, though entailing a seven and ten miles extra haul respectively. We handed over to the railway companies last year no less than 420,000 tons of goods, which cost us at least 6d. a ton for moving and shunting, for which we do not get a halfpenny from the companies, notwithstanding the fact that we have provided all the terminal facilities. That applies not only to Bristol, but to many other ports, and it is, no doubt, a great hardship and a very serious loss to the dock companies' revenue, and a very serious obstacle in the way of any independent dock company being able to raise sufficient revenue to provide the enormously increased and expensive works which are necessary to accommodate the modern large liner. It is an increasing factor in the difficulty of finding capital for a dock concern, and one which we in Bristol think the Government ought to look very carefully at, not only with regard to Bristol, but other docks in the kingdom. I see the Liverpool Chamber of Commerce are moving in the same direction that we are, namely, to get Parliament to recognise that dock companies ought to get a certain portion of the terminals which are taken by the railway companies from the traders. The Corporation own several large lighters and hulks, and use them chiefly for the purpose of giving dispatch to the liners discharging at Avonmouth Dock. There is no public system of lighterage. The lighters and barges plying in the port are owned by private firms, but are obtainable at moderate rates. There is, as a fact, great competition for all such work. The charge varies according to distance and bulk from 1s. 3d. to 1s. 6d. per ton, less being charged for large quantities and continuous business. The principal revenue of the docks and quays comes from dues on vessels and their cargoes taken in respect of entry to the port, and not for the use of any particular quay; also dues on animals from foreign and coastwise, transit shed rates, license fees on barges and boats, dues on vessels lying up, rates for use of the feeder canal (which connects the dock system with that of the Kennett and Avon Canal), for use of gridiron, patent slip and pontoon dock, also rents of properties and ferries. A considerable revenue is also derived in the traffic department from working the foreign animals' wharves, from performance of labourage for shipowners and merchants, for use of sacks, cranes, and miscellaneous plant and gear, from fines for goods left beyond the statutory period of 72 hours on the quays or in the transit sheds, and also from rents on goods stored in the warehouses and labourage performed thereon. In addition to the revenue from the dock estate, the city from time immemorial has had the right to charge certain city dues on vessels and goods resorting to the city docks; and out of these dues considerable sums have during the last 50 years been expended in improving the city quays, erecting sheds and cranes thereon, and providing other trading facilities. For purposes of collection one consolidated due only is charged to the shipowner or merchant, the separation into dock and city dues being made subsequently, and the shares apportioned accordingly to the

Dock Estate and Borough Fund respectively. Here it may be pointed out that whilst for the first 30 years subsequent to 1848 (the date of their taking over the city docks from private owners) the citizens had to contribute £8,000 to £14,360 a year towards the revenues of the dock estate by rates in aid, yet, on the other hand, very large sums were during this time paid in to the credit of the borough fund in the shape of the said city dues, and there were also expended out of the dock revenue so supplemented large amounts on new works and improvements, which, besides enormously increasing the trade and prosperity of the city, have also had the effect of increasing those city dues from £8,232 in 1849 to £22,819 in 1900. In addition a sinking fund wholly invested in gilt-edged securities, amounting now to about £150,000, has been built up. By means of this the citizens between 50 to 60 years hence will possess a very valuable dock estate practically unencumbered by debt. In regard to the financial results of the Bristol Dock Estate it is not possible to form a correct opinion without taking into account the whole revenue of the Port, that is, the revenue of the dock estate plus that from the city dues, which latter, though collected by the Docks Committee, are paid in to the credit of the Borough Fund. Joint accounts to show these results are made up annually and appended to those which are submitted to the Town Council of the dock estate only. Treating the account in this way, and which is really on the basis of a commercial undertaking, it is maintained that much of the capital expenditure made on the city quays and necessary to earn the ancient city dues has really been charged to the capital account of the dock estate, and as the city dues, which arise largely out of the grain imported in large modern steamers could not possibly have been earned unless this expenditure had been made, the income in city dues arising therefrom is, it is held, correctly credited to the revenue account of the dock estate. Stating the accounts, therefore, of the docks in the form in which they would appear if the concern was a company, and accepting the figures as they occur in the published accounts, the following results appear:—

	For the five years ended April 1895.	For the five years ended April 1900.
Total revenue - - - -	£ 895,394	£ 1,055,407
Total expenses - - - -	551,936	646,318
Net profit available for payment of interest on capital -	343,458	409,089
Interest actually paid on whole of the capital invested in the Bristol Docks - - - -	349,695	381,627
Surplus after paying interest on capital - - - -	—	27,462
Loss after paying interest on capital - - - -	6,237	—
Profit for 10 years - - -	£21,225	

In the financial statement of a company the revenue account would end here and the profits shown would also be much greater, because the Docks Committee have annually charged their revenue with many thousands of pounds which in a trading company would have been charged to capital. These accounts clearly prove that in ten years the Docks Committee but for the Sinking Fund would not have had any need to ask the citizens to make good any deficiency on revenue account, for, after paying all their interest, and after maintaining their property in an effective state of repair and making an extraordinary expenditure on works of £100,755, a large part of which would have been charged to capital account in a trading company, they had £21,225 in hand. This amount went towards covering the sum of £85,174 invested during these ten years on behalf of the citizens in trustees' securities on account of the Sinking Fund, the balance thereof, viz., £63,949, being the net sum which the citizens had to contribute during that period towards the dock and harbour funds. With reference to the general question of regarding the city dues as distinct from the dock property, it is interesting to note that for over 260 years the anchorage,

cannage, and plankage rates, and later the wharfage dues, which were created in 1606, were leased to the Society of Merchant Venturers. Prior to September, 1764, the society paid to the Corporation as a rent for those rates and dues £3 6s. 8d. per annum. In 1764 a new lease for 99 years was granted of all those rates and dues for a rent of £10 per annum. This lease lapsed in 1863, since which time the Corporation has collected them. When granting the leases it was in consideration of the society constructing new wharves and providing facilities for accommodating the traffic. Four of the most important modern wharves in the City Docks, viz., the Prince's, the Bathurst, the Dean's, and Canon's Marsh wharves, have, however, been built and charged to the capital account of the Dock Estate, whilst the city dues earned there have been paid into the Borough Fund, and it is only as a matter of procedure that the Docks Committee have had to ask for a rate-in-aid to pay the interest upon the capital outlay. But for the large expenditure charged since 1873 to the capital of the Dock Estate for making those wharves and for widening, straightening, and deepening the river and carrying out improvements at Cumberland Basin for giving access to the docks for larger vessels, the amount received for city dues to-day would undoubtedly be considerably smaller. The total tonnage of the port inwards in 1899 attained the respectable figure of 1,611,730 tons—a striking commentary on the wisdom of the policy adopted in 1847, and again in 1884, of purchase by the citizens of all private rights in the dock property within their port, and of their consent to bear additional taxation in the shape of city rates in the event of the revenue from dock sources proving inadequate after lowering the tariff of dues to meet the dock expenditure, including interest on the outstanding capital. There are two other matters I should just like to call the attention of the Com-

mission to in regard to revenue. The first is that the present system of measurement of tonnage has led, and is leading still more than formerly, to great anomalies in regard to the weight of goods carried in the ship. The modern liner now brings 2 to 2½, sometimes even 3, tons per register ton, which is the unit of taxation in regard to the vessel. The consequence is, as regards the Port of Bristol, that as compared with the measurement in force in 1838 we are losing £6,282 per annum by the clever way in which shipbuilders manage to build vessels of small registered tonnage, but tremendous carrying capacity. I can submit figures to the Commission illustrating this matter so far as Bristol is concerned, but it is a very serious matter for all ports, because the modern vessel requires an enormous expenditure, a bigger lock, a deeper sill, and prodigiously increased shed accommodation as compared with the vessel which was in vogue ten or twelve years ago. All the dock revenues of the country are suffering from this system of measurement. The dock authorities have to keep continually putting their hands into their pockets to provide for this bigger class of vessel, which is a proportionately much cheaper vessel for the shipowner to work. That is to say, the shipowner carries an enormously increased cargo at practically the same rate of cost for management, yet, notwithstanding his having this advantage, we, the dock authorities, are getting less and less revenue.

4698. (*Mr. Lyttelton.*) Have you ever raised that question in an action?—We have raised it before the Board of Trade many times.

4699. (*Chairman.*) It does not exclusively apply to Bristol?—No, it applies to all the ports of the kingdom, but I should think it affects London very much indeed.

*Mr. F. B. Girdlestone.*  
25 Mar. 1901.

Recalled, 4704.

(Adjourned till to-morrow morning, March 26th, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## FOURTEENTH DAY.

*Tuesday, 26th March, 1901.*

### PRESENT:

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTETTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. MILES KIRK BURTON re-called and further examined.

Mr. M. K.  
Burton.

26 Mar. 1901.

See  
4603-13.

4700. (*Mr. Ellis.*) You desire, I think, to add a figure to that which you gave yesterday?—If you please.

4701. You told us that £1,500,000 had been paid by the Mersey Docks and Harbour Board to the Corporation to cover the rights and privileges that were taken over?—Quite so.

4702. Then, I think, there was some other matter you wished to speak about?—The Mersey Docks and Harbour Board (Section 281 of their Consolidation Act, 1858) took over the whole of the debt, £6,134,000, borrowed by the old Liverpool Dock Trustees on the security of the dock rates. This was the consideration for the transfer of the dock undertaking under the

Board's Act of 1857. The Corporation and the Dock Trustees having no beneficial enjoyment of the estate under the old Acts, and the Dock Board holding the estate under similar terms by their Acts, the consideration for the transfer was the taking over of their existing dock debt. The only assets the Corporation could enjoy beneficially were the town dues, and to acquire these, as explained yesterday, the Board gave £1,500,000, but the Board can only apply town dues for dock purposes.

4703. Then the Port started on its enterprise with a capital sum in round figures of £7,600,000?—That is so, in round figures.

Mr. FRANCIS BROOKE GIRDLESTONE re-called and further examined.

Mr. F. B.  
Girdlestone.

4704. (*Chairman.*) Are you personally convinced, from your twenty-five years' experience, that there is an advantage in the municipal management of docks?—There is one great advantage, and I think there are a great many disadvantages. That is my personal opinion. I think that the advantage is that a municipal body owns a dock and borrows its money at the very lowest rates, having the security of the Borough Fund. I think also a municipal body gives no concessions or anything of that sort with regard to rates; that is to say, that the rates are fixed, and absolutely adhered to as regards both dues on ships and on goods. Then I think as the municipality is not working for a dividend, they are more anxious perhaps than a private company to maintain the dock concern in a high state of efficiency. Even if the dock revenue has to be supplemented by the town rates, that is perhaps better for the general community, because by low dues and the provision of plenty of facilities, greater traffic is attracted to the Port, leading to the greater employment of labour and more retail customers. From all this I should say that benefit is derived by every class of the citizens. On the other hand there are disadvantages, which I put as follows: There is a difficulty in managing a commercial concern efficiently when tied up by the Borough Funds Act, the powers of that Act not being sufficiently elastic to enable the money for new works to be easily obtained. You have to have town meetings, and meetings of the Statutory Committee of the Council, and generally a poll is demanded by some factious part of the Town Council. I do not think the powers under the Borough Funds Act are elastic enough in regard to the development of new traffic, new liners, for instance, or for the manipulation sometimes of the rates necessary nowadays to get goods on the system of through rates which is generally coming into vogue in connection with the American and

Canadian trades. Then the Committee's proceedings often meet with factious opposition in the Town Council. Occasionally, notwithstanding great consideration and a great amount of time spent by the committee, who, of course, know more of the wants of the dock estate than the other members of the Town Council, notwithstanding that they have often given very great consideration to questions and a great deal of trouble and care, those proceedings are annulled by the Town Council, for the committee, of course, on every important matter, after forming its own opinion, has to report to the Town Council and get its sanction for any new measures or any considerable change in policy. Again, I do not think in regard to labour, that a municipality gets as much work out of the men as a private employer would. Then I think there is very often a want of continuity of policy in a dock concern managed by a municipal body, the Board being constantly changed, and many of the men elected to the Town Council having no great stake in the city property. I think there is occasionally timidity on the part of Town Councillors to act for the real interest of the dock concern against public opinion. They are rather inclined to listen to public clamour, because, of course, they have to seek their seats every three years, and sometimes the fear of losing a seat makes them give way too readily to public opinion. Then there is a tendency in a rate-aided concern to extravagance in capital expenditure in order to meet public clamour for the provision of works in some cases not absolutely necessary from a dock point of view, or capable of proof as being likely to produce revenue. Those are, in my opinion, some of the disadvantages of a municipal working of a dock concern.

4705. (*Sir John Wolfe-Barry.*) You have been rather contrasting the Corporation management against the management of a private company?—That is so.

4706. You have not contrasted it with a trust representing the shipping interest and the trading interest of the place?—I think that a trust, members of which are elected by those who pay the dues on the vessels, and the dues on the goods, is really the best form of dock management. I think you get a higher stamp of men to sit on that Board. It is considered a great honour to sit on a Board, for instance, like the Mersey Trust or the Clyde Trust. I know that there you do get men of the highest stamp.

4707. Ad also men with a special knowledge?—Yes, men with a special knowledge of the requirements of shipping and dock traffic.

4708. I suppose there is very little barge traffic at Bristol?—We have a considerable barge traffic, but nothing like that of London. We get a small licence fee on every barge according to its carrying capacity. We do not get any dues on the goods conveyed in the barge, but as I said yesterday, in the Port of Bristol there is a due on every article brought into the port, whether it is landed on the quay or not. So that the goods that are conveyed in the barges from ships to a private or a public warehouse, or from one portion of the dock estate to another, as, for instance, between the City Docks and Avonmouth, or between Avonmouth and Portishead, have already paid dues, whereas in London there are millions of tons that do not pay anything to the dock concern at all.

4709. Does carted traffic pay the same?—Yes; everything that comes into the port pays dues. In fact, I think it ought to be a cardinal principle of a dock concern, that whatever gets the use of the docks, whether it is a ship or a ton of goods, ought to pay something to the docks.

4710. The history of Bristol is that there were two private companies competing with the Corporation?—That is so.

4711. And the Corporation elected to buy them up rather than face the competition?—They did face the competition for a considerable time, and lost very heavily. As many of the leading citizens had really promoted these two private docks because the Corporation would not then take the matter up, I think it was the general desire that these peoples' interest should be taken over. The outside docks were not in a very flourishing condition.

4712. Was the traffic of the port increasing during the time the competition was going on?—Yes; I think the competition did a great deal for the Port of Bristol. Just before the docks were actually taken over, practically there were no dues being charged, and in addition we were doing the labourage free. Then an injunction was granted against the Corporation to stop that. I think all that reduced the price we had to pay.

4713. You have said that the increase of tonnage to 1,611,736 tons is a striking commentary on the wisdom of the policy adopted in 1847, and again in 1884, of purchase by the citizens of all private rights in the dock property within their port. It does not follow that that increase is due to purchase by the Corporation at all, does it?—The purchase in the first case was followed by an enormous reduction of dues. The old company in 1847 were practically starving the trade, owing to the enormous dues they charged. The moment the Corporation bought the old City Docks, dues were reduced from 3s. to 1s. or thereabouts.

4714. I thought you said the traffic was increasing very much before the purchase?—Now, I am talking of the 1847 purchase. The traffic was stagnant then; it was practically going back really, but as the result of the purchase of the Avonmouth and Portishead Docks in 1884 there was a great stimulus to the traffic. I could show it to you in figures.

4715. Can you put in the annual rate of interest?—I have sent all those tables already. My present evidence only supplements the enormous mass of information which has been given previously. The foreign tonnage, for instance, in 1879, was 474,000 tons; in the year 1886 it had risen to 638,000 tons; in 1892 it was 700,000 tons; in 1897 it had risen to 818,000 tons, and last year we had 847,000 tons. The fact that, before these two outside docks, Avonmouth and Portishead, were built, there was no accommodation for the bigger class of vessel that was coming into regue. They could not get up the river, because the river was not then improved as it has been since, and practically

the limit of size, before those docks were opened, was 1,200 tons for a sailing ship and 800 tons for a steamer.

4716. Those increases are due to increased facilities in the docks?—Yes, we should never have got anything like this volume of trade had not the outside docks been built.

4717. Because they are suitable for modern shipping?—Yes, they are suitable for modern shipping.

4718. They were built by private enterprise?—Yes, one by the Conservative party and the other by the Liberal party, as is generally done in Bristol.

4719. I do not quite understand how you trace this rise to the purchase by the citizens of all the private rights in the docks?—I do not think it is entirely due to the purchase by the citizens.

4720. It is due, I suppose, to the development of the port in consequence of increased facilities?—Yes, I think the competition led to a great stimulus to the trade, and made Bristol more known in North America and Canada. Then, I think the purchase by the Corporation has led to good provision of facilities, far greater, probably, than a private company would have been able to give.

4721. From their having rates to fall back upon?—Yes. As a matter of fact, the Corporation has spent half a million of money on the Avonmouth Dock alone since the purchase in 1884.

4722. (Mr. Ellis.) You have been good enough to let us have a copy of your accounts?—Those are the annual accounts.

4723. Turning to page 4 of the accounts for 1900, you had at the end of April, 1900, which was the time of the closing of the account, a capital sum of £2,544,267?—That is so.

4724. Of which, £144,540 was added during the last financial year?—Yes, that is right.

4725. Turning to the other side of the account, you have a debt of £2,120,726 under one heading?—Yes, 3½ per cent. debenture stock.

4726. And under the other heading, 2½ per cent. debenture stock £375,583?—That is correct.

4727. And premiums on debenture stock are entered in the capital account as £51,123?—Yes.

4728. Then you have a contribution from the City Treasurer of £33,885. Where does that come from?—A few years back a portion of the old Dock Estate was closed up. There used to be a movable bridge in the very middle of the city called St. Augustine's Bridge. That movable bridge was over the Frome River, which forms a part of the floating harbour in Bristol. That portion east, or above the bridge, was closed up, and to compensate the Dock Estate for the loss of room and the loss of revenue, this sum was paid out of the Borough Fund to the Docks Committee, and went partly to cover the cost of other dock improvements near St. Augustine's wharf. It was only from one pocket of the Corporation to another pocket of the Corporation; it was to provide an additional wharf in substitution for that which had been taken from the Dock Estate by reason of this movable bridge being changed to a fixed bridge.

4729. A public advantage was carried out which, in justice to the docks part of the Corporation, required a transfer of money really?—Yes; there was great opposition on the part of the Docks Committee to this policy of closing a portion of the floating harbour. I think their opposition was got over to some extent by the promise that the borough fund should recoup the dock estate to a certain extent.

4730. When you use the words "borough fund," do you mean any additional rate was imposed during that year in respect of this £33,885?—Well, it came out of the rates; I do not know whether there was an increase that year, but it came out of the rates.

4731. That is a considerable sum?—Yes. It may have been spread over two or three years. I think very probably it was spread over two or three years.

4732. But you do not know?—I am not certain about that. Or it may have been that some land had been sold, and the money put into Consols, as occasionally happens, and that the Consols were sold and the money handed over to the dock estate.

4733. At all events that leaves the capital account with a balance to the good of £40,549?—That is so.

Mr. F. B. Girdlestone.

26 Mar. 1901.

Mr. F. B.  
Girdlestone.

26 Mar. 1901.

4734. Now, turning to the revenue and expenditure account. Is all the sum that was spent during the year in this revenue and expenditure account, whether it is on capital or revenue account?—There is a capital expenditure shown on page 4 of the accounts, and the expenditure charged to revenue on pages 5 and 6.

4735. What I really mean is, is there anything that you consider in the nature of capital expenditure included in the revenue expenditure account?—Yes; extraordinary expenditure.

4736. On ordinary expenditure you have £26,369?—Yes. That is for the dock estate only, not the dock estate plus the city dues.

4737. Then you have extraordinary capital, which you considered in the nature of capital account?—Some of it was for reconstruction of river walls, but as it was not likely to produce any increased revenue it was charged against revenue rather than against capital.

4738. Your general expenses appear to be £13,260?—Yes.

4739. Your traffic department, £73,419?—Yes, the Corporation do all the labourage practically at the outside docks, and a considerable portion at the City Docks in connection with the granary.

4740. The total expenditure amounts to £137,915?—Yes.

4741. Leaving a balance available to meet interest, etc., carried to net revenue account of £70,221?—That is so.

4742. Now will you turn to the revenue account? You have from dues on vessels entering the port £51,420?—Yes.

4743. On rates on goods from foreign ports and coastwise ports, rates on animals from foreign ports and coastwise ports, £43,883?—Yes.

4744. And there are various other amounts which go to make up a total, including the two sums I have mentioned, of £108,796?—Yes.

4745. In the traffic department, discharging and loading vessels, etc., and shunting, you have £82,815?—Yes.

4746. The warehouse department, £16,524?—Yes.

4747. Making a total revenue of £208,137?—That is correct.

4748. Then you have about 6s. in the £ on your gross income net revenue according to that?—That is so.

4749. Now turning to page 7, the net revenue account. You had an adverse balance at the beginning of the year?—Yes; we carried forward a debit balance of £1,903.

4750. Then you pay interest on stock, there are debenture stock expenses, sinking fund, and sinking fund dividends?—You will notice that the sinking fund is a very large item, £10,823.

4751. You take the interest on stocks and debenture stock expenses?—Yes.

4752. That amounts to £81,972?—Yes.

4753. The sinking fund is £10,823?—Yes. And in addition there are the dividends which have accrued on the accumulated sinking fund. The sinking fund is invested in gilt-edged securities. We set a certain sum aside according to the total to reproduce the capital in sixty years; and in addition to that, under the Act we have to add to it each year the dividends which have already accrued on the accumulated funds. How the accumulated fund is invested you will find on page 9.

4754. The total on the debtor side of the account is £99,537?—Yes.

4755. Including the adverse balance brought forward?—Yes.

4756. On the credit side you have the balance of revenue account £70,221?—Yes.

4757. Then there is some money at the bankers which produces interest amounting to £1,385?—Yes.

4758. Sinking fund dividends £4,174, balancing the amount on the other side?—Yes.

4759. And the borough rate £26,000?—Yes, that is a rate in aid.

4760. That is the charge that came upon the rate-

payers of Bristol during the financial year ending 30th April, 1900, in respect of this property?—Yes; but against that, as you will see on the joint account on page 17, there is a large amount of city dues paid in.

4761. This borough rate, of course, comes out of what you call the Borough Fund?—Yes.

4762. Is that a rate levied *ad hoc*?—Yes, it is a dock rate.

4763. When a householder or ratepayer of Bristol gets his demand note, it is specified what that is for, as in the case of a poor rate?—Exactly; so much poor rate, so much dock rate.

4764. That amounted to £26,000?—Yes.

4765. Can you tell us how much that is in the £?—Yes; on the rateable value of the City 1d. in the £ produces £5,800.

4766. Roughly speaking, then, it is between 4d. and 5d. in the £?—Yes, about 4½d.

4767. Then the ratepayers of Bristol paid a rate of about 4½d. in the £ during that financial year in respect of the dock?—Yes, in respect of the dock estate.

4768. With the qualification that I am coming to in a moment. To go back to the capital account, did you issue any particular stock in respect of that £144,540 that you spent on capital account during that financial year?—It is part of the 2½ per cent. debentures—part of the £375,583.

4769. The last of which you issued in 1897, apparently; is that so?—It was issued in pursuance of the powers of the British Dock Act, 1897.

4770. When was the last issued?—We have just issued the very last sum that we have powers for.

4771. Can you tell me the terms on which it was issued?—The last money (£28,000) was the balance which we issued at £82 for 2½ per cent. stock.

4772. You obtained it without difficulty?—Without any difficulty; but, of course, gilt-edged securities had fallen considerably in value then. I have issued a great deal at £88.

4773. (Chairman.) Was this last £28,000 a public issue?—No; that was taken privately. It is generally taken by solicitors in Bristol.

4774. Was it advertised?—We did advertise. There was a balance of £46,000 which we advertised to the highest bidder. We did not put any minimum price on it. The prices that came in were considered unsatisfactory, and we did not take them.

4775. How did you sell that £28,000? Did you sell it by private treaty?—I go round to some of the leading firms of solicitors or make it known that I have a small balance to issue. There are some trust estates that have money already invested in the stock, and the trustees often have sums to add thereto.

4776. (Mr. Ellis.) May we take it that those are about the terms, always having regard to the state of the market, on which you have no doubt you could raise money?—I have not the slightest doubt that I could get as much money as I wanted to-morrow at 2½ per cent. interest about £82, or, at all events, a considerable sum of money.

4777. Now perhaps you would like to turn to page 17, and explain that?—Page 17 you will find is headed "A statement showing the working of the docks estate, combined with the ancient city dues, port conservancy, and other matters connected therewith, for the year ended 30th April, 1900." On the right-hand side, taking the revenue first, there is the revenue which you have already referred to from the docks estate of £208,137.

4778. Your revenue of £208,137 is contrasted with the expenditure of £133,672, leaving a balance of £74,464?—That is so, for the docks estate.

4779. What do you do with that £74,464?—It is carried down below to net revenue No. 3 account.

4780. Now, will you go to No. 2 account?—No. 2 account is the city dues, etc., revenue; £23,023 from the city dues and £373 from pilotage fees. Against that there is an expenditure of £8,345, leaving a balance of £15,051 which is carried to No. 3 net revenue account.

4781. Now let us deal with No. 3 net revenue account?—First of all there is a balance from No. 1 account docks estate as above giving £74,464; and from No. 2 account city dues £15,051. Then interest on

balances at bankers, £1,385; dividends on sinking fund investments, £4,174. Then on the other side there is interest on the  $3\frac{1}{2}$  per cent. debenture stock, £74,346; and on the  $2\frac{1}{2}$  per cent. debenture stock, £7,626; debenture stock expenses, £663; renewal and depreciation funds, £4,243; sinking fund, £10,823; investment of sinking fund dividends, £4,174; making a total net revenue of £101,877.

4782. Then the result of the net revenue account No. 3, as I gather, is that the expenditure exceeds the receipts by a sum of £6,801?—That is so, and that is caused by the sinking fund. But for the sinking fund the dock estate plus the city dues yields a profit to the city. You cannot eat your cake and have it.

4783. The demand on the ratepayers of Bristol practically arises from the policy they have to carry on, as a public body, of extinguishing the debt?—That is so; in 50 years time they will have the whole of the dock estate practically free from debt, or I might say less than that—about 48 years. I would like to say a word about raising the interest. Taking it from the very beginning of the issue of this stock I reckon we have got our money for the dock estate on an average at about  $2\frac{1}{2}$  per cent.

4784. Are you a ratepayer of Bristol?—I am.

4785. I will ask you *qua* ratepayer now, and not as having any connection with the docks. Are you perfectly satisfied as a ratepayer of Bristol with the financial condition of this part of the Corporation's enterprise?—I am. I think it is a first-class investment on the part of the citizens, and one which has tended more than anything else to increase the importance of Bristol both as a manufacturing and a trading city.

4786. Do you think it is improving your property, as a ratepayer?—Most certainly, and even if there were a loss each year—that is to say, that the rates really had to be called upon for a subscription to the dock estate—I still think it would be a very wise investment, because it brings more trade, it brings more customers to the shops. There is more necessity for doctors and lawyers and insurance companies and so on.

4787. To use a term which we hear sometimes in Parliament, do you think that it is a profitable municipal trading?—I do think so. Of course, a great many people will not think so because they do not admit that the city dues are a portion of the dock funds. They say those belong to the Corporation irrespective of the dock estate. But they could not be earned at all but for this vast expenditure for facilities for big ships which the Corporation in another capacity have spent on the docks.

4788. I gather from you that one part of the docks is much more profitable than another?—Yes, that is so. The trade in big ships is really the most profitable part.

4789. Then you agree with this perhaps: That your reply with respect to this profitable municipal trading would be qualified entirely if the policy of the Corporation were an unwise one commercially?—I do not quite follow that question.

4790. If part of the enterprise is profitable and part is not profitable there exists an element of danger financially?—Yes, I think so.

4791. If an unprofitable extension were made by the Corporation your answer, as a ratepayer of Bristol, might be qualified?—It might. It requires, of course, very great caution in spending capital.

4792. It depends, in fact, upon what all commercial undertakings depend upon, namely, a proper policy?—Yes; but, of course, in a dock estate you cannot close the capital account. Ships are continually changing in type, and if you do not expend capital in order to accommodate that changed type of vessel bang goes your trade, or the profitable part of it. That would be the case with us if we had not made up our minds to embark upon a further capital expenditure of nearly £2,000,000.

4793. Everything, in fact, depends upon management?—It does.

4794. Is that the reason why you think that a trust is better than a corporation?—Yes, I do.

4795. That is the root of it?—It is.

4796. With regard to the Borough Fund, I understood you to say that you would like more elasticity *qua* Bristol?—Yes.

4944.

4797. But it is only *qua* Bristol, is it?—No, I think it is *qua* everywhere. The theory of the Borough Funds Act is that everything in the shape of dues must be paid into the Borough Fund; whereas in order to coax a new trade we should sometimes like to keep in hand something that ought to go into the Borough Fund. We might be inclined, for instance, to give some concession to a new set of liners, but under the working of the Borough Funds Act, we are prohibited from doing that. The dues must be paid into the city coffers.

4798. Then, side by side with this valuable sinking fund you are building up, is the City of Bristol increasing its other debts?—Yes; but not extravagantly. They are not the owners of the gasworks, or the waterworks, or the tramways, as other cities are.

4799. Some of those undertakings are very valuable?—Yes, and I think in not acquiring these properties we have made a very great mistake in Bristol. I think it was, perhaps, the dock debt that frightened them from incurring a further very large capital expenditure; but I think if they had purchased the waterworks and tramways a few years back they would have done very wisely.

4800. (Mr. Peel.) You said that the principle of working was to increase the volume of traffic by keeping the tariff of charges low, and giving good dispatch?—Yes.

4801. That is a very far-seeing policy. You told us further that the play of parties in the Corporation sometimes affected your policy; but it has not affected the general policy which you have described to us, has it?—No; although I might say this: but for politics I think one very unremunerative portion of the Dock Estate would probably not have been built. That is Portishead. I think if there had been no politics we should have been spared an expenditure of that kind. We manage things rather politically in Bristol. When the Avonmouth Dock was started by the Liberals, the Conservatives immediately set to work to build Portishead.

4802. You say that the question of the ownership by a trust in preference to a municipality has been much discussed, and that some think a more progressive policy might have been carried out?—Some people have thought so.

4803. What policy could be more progressive than that which you have just discussed? Is there any strong point on which there is a feeling that a more progressive policy might have been carried out?—There has been a great outcry for a scheme called "Dockisation," for actually damming the river up and making a huge dock between the mouth of the river and the old city, and I think the Progressive Party think that if the dock concern had been managed by a trust rather than by the municipality that scheme would have been carried out.

4804. You do not think so yourself?—No, I do not think so at all. In fact, I think they would have been more loth to carry it out than the municipality. I think a good many things might be advocated by a municipality, because they know the rates are behind them. As I said just now, I think it is one of the defects of a municipality trading that the capital expenditure is not quite so closely looked into as it would be by a trust. A trust is very cautious about spending capital if it does not see its way to earning the interest on that capital.

4805. On the other hand, the municipality has more authority, as it represents all the citizens?—Yes. But again in the case of a trust the members are more prominent than in the case of a municipal body. A municipal body changes every three years. Fortunately, we have had some very strong members of the Town Council on the Dock Committee for a good number of years. The strongest members of the Town Council have been on the Dock Committee, which has been a very merciful thing for the dock estate and for the citizens.

4806. (Chairman.) You say that the railway companies charge only the same rate to inland places from Avonmouth and Portishead as from Bristol?—Yes. We have a group rate, the same as in the case of Birkenhead and Liverpool.

4807. How is that done? Is it done by arrangement with the railway companies or among themselves?—It is among themselves. We had nothing to do with it. It is, of course, a great convenience to traders because they know exactly what the charge is from

Mr. F. B.  
Gardlestone.  
26 Mar. 1901.

*Mr. F. B. Girdlestone.*  
6 Mar. 1901.

either dock. They can order a cargo into Avonmouth, Portishead, or the city dock, according as the accommodation is plentiful or not.

4808. Is it a great advantage to you or not?—Yes, it is a great advantage to us.

4809. Then you said there was a contention on the part of the railway companies that this was a kind of consideration for your doing the shunting work within your estate?—I do not agree with them in that contention, and I do not think my committee agree. I think they did it very much for their own convenience.

4810. You say it is the railway companies who put forward that contention?—Yes.

4811. (*Mr. Ellis.*) We have not had any documents from the railway companies saying that?—No.

4812. (*Mr. Peel.*) I presume that was contended before Parliament?—It was contended in a court of law.

4813. (*Rear-Admiral Hext.*) You have told us that at the ort of Bristol the custom is for the shipowner to raise the cargo to the ship's rail. Are you acquainted with the way in which the cargo is handled in the Port of London?—In London it is delivered on to the quay by the ship.

4814. Which method do you prefer?—I think the delivery on to the quay by the ship is the best. That throws less expense on the consignee, but I suppose in the end it works back into the price of the goods. It makes it exceedingly difficult to compare the charges at one port with another. The custom of the port has always to be taken into consideration, and that, as I said yesterday, has I think been ignored in the statements compiled by the London Chamber of Commerce. They are not correct. Of course, it makes a great difference. The cost in Bristol between the ship's rail and the quay has to be borne by the merchant, whereas that in London has to be borne by the ship. That makes a great difference in the rates to be charged.

4815. But the facilities are much greater for sorting cargoes really in the Liverpool and Bristol manner?—Yes. This is only a matter of cost. The consignee takes from the rail in Bristol, and sorts on the quay. I suppose the ship sorts the goods in London.

4816. (*Sir Robert Giffen.*) With regard to the city dues and the dock rates, the city dues, I understand, go into the general fund of the Corporation?—That is so.

4817. But you levy a dock rate in order to go into the special account of the docks?—To supplement the dock revenue we have to call for a rate-in-aid from the citizens. Against that we pay in a considerable sum in city dues.

4818. But is not the effect of that that the dock rate so called is really levied in order to meet the general expenses of the Corporation?—No; the rate-in-aid is levied in order to supplement the revenue of the dock estate, not any other expenditure. I say that the money taken in city dues really belongs to the harbour. It ought not to be used for washhouses and libraries and that sort of thing. It ought to be used for the benefit of the ship and the benefit of the goods on the ship; but the effect is as you state.

4819. The so-called Dock Rate is a sum of about £25,000, levied practically for the general purposes of the Corporation?—That is how you look at it, but it is not the way I look at it.

4820. (*Mr. Ellis.*) Is your argument in respect of these City dues based on any Act of Parliament or on a custom. You say the City dues ought not to be used for wash-houses. On what do you base that. Is it a mere general argument, or do you refer to some section in an Act of Parliament or some custom or charter?—No. From time immemorial the citizens have owned those City dues.

4821. I am speaking of the ear-marking of the funds. That is your own opinion?—Yes, that is my own opinion.

4822. There is no charter?—No.

**Mr. ALFRED LEWIS JONES called and examined.**

*Mr. A. L. Jones.*

4823. (*Chairman.*) You are nominated by the Railway and Dock Rates and Charges Committee of the London Chamber of Commerce to give evidence before this Commission?—Yes, I am.

4824. You are senior partner in the firm of Elder, Dempster and Co., shipowners and merchants, carrying on business at Liverpool, London, Bristol, and elsewhere?—Yes.

4825. You are president of the Incorporated Chamber of Commerce of Liverpool, late chairman of the Liverpool Steam Ship Owners' Association, and a member of the London Chamber of Commerce?—Yes.

4826. Will you tell us how big a fleet your firm own and control?—At present we have running 116 steamers. I hand in a card showing their movements.

(*The witness handed in a card, dated 23rd March, 1901, showing the movements of steamers owned and controlled by Messrs. Elder, Dempster and Co.*)

4827. What is the total gross tonnage?—Over 374,000 tons. These steamers trade regularly between London, Liverpool, Bristol, some Continental ports, Canada, the United States, the West Indies, the Mediterranean, and the West African coast. I am well acquainted with the steamer requirements, facilities provided, and the port charges at London, Liverpool, Bristol, Hamburg, Antwerp, Rotterdam, and Bremerhaven. The business of London is, to a great extent an overside one; that is to say, cargo is delivered from vessels, either direct or via the quay, into lighters, which convey it to riverside wharves, up the canals, or into other docks. In the case of large steamers with a general cargo this leads to great delay either in the steamer or to the consignee in receiving his goods, as if the goods are sorted on deck and delivered overside into lighters the steamer is delayed; and if the steamer discharges all the cargo on the quay (paying for the use of the quay for sorting and delivering of the cargo to lighters) and departs, the berth is frequently required for another steamer, and the barges have often to wait a considerable time before they can get near that portion of the quay on which the goods are stowed, entailing delay to the steamers. The Dock Companies have complained that lighters and barges take away a large proportion of imported goods, which would otherwise be landed on

the quay and form a source of revenue to the docks; but I am of the opinion that the Dock Company are unable to handle any more of the imported goods than they do now. I am speaking with reference to the Millwall Dock, in which the steamers of my firm unload. At the present time, there are some dozens of barges in the dock loaded with grain and lumber on behalf of the Dock Company which they can apparently neither deliver to the consignee nor find suitable warehouse accommodation for. The complaint that barges lying about in the dock hinder the movements of steamers is undoubtedly true, but it will be seen that the Dock Company contributes in some part to this themselves. The following remarks refer to the steamers of my firm discharging at Millwall Dock from Canada. Owing to the continual breakdown of hydraulic cranes considerable loss of time and expense is incurred. I hand in a statement showing delays to steamers.

(*The witness handed in a table showing the detention to certain steamers belonging to Messrs. Elder, Dempster, and Co., through breaking down of cranes and waiting for Dock Company's craft at Millwall Dock. See Appendix, 14th Day, No. 1.*)

The grain porters employed by the Dock Company to discharge grain work from 8 a.m. to 6 p.m., and will not work after 6 p.m. (though they would be paid overtime) excepting they can finish the steamer on the same evening. If these men would work overtime, the same as the stevedores do, considerable saving of time to the steamer would result. Dock Company's men on quays receiving cargo from, and delivering to, steamers commence work at 8 a.m. and finish at 6 p.m., but stevedores commence at 7 a.m. and finish at 5 p.m.; consequently the Dock Company levies a charge of 10s. 6d. per hour from 7 to 8 a.m. (see their regulations), as we must have the men on the quay to take delivery of cargo. This is a charge which ought not to be made. In my opinion the Dock Company's men should commence work at 7 a.m. the same as the stevedores. I hand in a statement showing the hours worked at various ports, which may be of interest.

(*The witness handed in a table showing the hours of labour worked at various ports in England and on the Continent. See Appendix, 14th Day, No. 2.*)

See 696.

See 704.

See 704-3.

There is very inadequate accommodation for storing and piling deals and lumber at the dock, and hardly any quay space for receiving same from the steamers. The wood for storing has, therefore, to be discharged into barges, which in busy times are often not unloaded and the wood piled away by the Dock Company until several months after the departure of the steamer bringing it, causing loss through delay to owners and consignees, who are naturally unable to obtain their goods until the barges are unloaded, and the wood sorted out ready for delivery. The inability to dock vessels drawing, say, 25ft. to 26ft. of water, except on top of spring tides, is a very serious matter. The steamers have either to wait at Gravesend until there is sufficient water or to lighten. Both operations are very expensive to owners. At neap tides it is only possible for steamers drawing about 20ft. to dock.

4828. (*Mr. Lyttelton.*) Are you still speaking of Millwall Dock here?—Yes. Whereas at Avonmouth vessels drawing 24ft. can dock at the lowest neap tide, at spring tides there is a depth of 41ft. At Bremerhaven there will shortly be 23ft. of water available irrespective of tide. Hamburg entrance channel has a depth of 23ft. It was 14ft. in the seventies. Rotterdam has an entrance channel with a depth of 25ft. At Liverpool vessels drawing up to 24ft. can dock on an 11ft. 2in. neap tide. Another cause of delay to steamers discharging wood and other cargoes is the fact that in very many cases the stevedores have to bring the barges receiving same alongside the steamer. Lightermen are supposed to put those barges alongside the steamer, but it is a very common thing for those men to be absent when their craft is required. While those barges are being put alongside the work aboard the steamer is not going on. The complete lighting of the dock is a matter which should be rapidly pushed on. At the present moment it is only partially lighted, and it is, in my opinion, impossible to work expeditiously under such circumstances. It is only quite recently that the Company have commenced the lighting of the dock. The reason why the steamers of my firm go to the Millwall Dock in the face of the above drawbacks is that there is no other suitable dock in London where steamers loaded with similar cargo can be accommodated. Many of those steamers are 470ft. long by 56ft. beam, and carry 18,000 tons measurement. The steamer's cargoes consist of cattle, grain, wood (deals), and general cargo, a considerable portion consisting of deals which shippers will only send to a dock that has accommodation for storing same, and the only docks that take deals in any quantity for storing are the Millwall and Surrey Commercial Docks. Tilbury Dock is too far away from town for the purpose. The only other dock that could accommodate these vessels as to size is the Royal Albert Dock (controlled by the London and India Dock Company), which is fully appropriated to other lines, and, even if it were not there is no accommodation there for storing a portion of the cargo (namely, deals) brought by these vessels.

4829. (*Chairman.*) Will you be kind enough to tell us any particulars that may occur to you as to the want of dock accommodation in London?—To illustrate the want of accommodation in London, I would point out that early in 1900, when one of my firm's vessels ("*Lycia*"), chartered to the Government to load stores to the Cape, was in the Joint Committee's Victoria Dock she was unable to obtain proper accommodation, and the Admiralty shipping agents afterwards arranged for all boats loading stores for the Cape to go to Millwall Dock, and the latter, bad as it is, has done much better for them. Then there is the case of the "*Montreal*." She arrived on August the 6th, and she sailed on the 24th August. Then the next arrival is the 25th September, and she sailed on the 9th October. That ship has been here two voyages; she discharged some 6,000 or 7,000 tons of deadweight, which, with her cattle and other space, would be equal to about 18,000 tons, and the quickest we could get that done in was about 14 days.

4830. (*Mr. Lyttelton.*) What do you say would be reasonable?—We could do the same work in Liverpool in five or six days. To show exactly what we do in Liverpool the "*Lake Champlain*" arrived on the Sunday, and commenced to discharge at one o'clock; she put out about 8,000 tons of cargo, and loaded about 2,000 tons of coal, or something like that, and sailed on Tuesday at mid-day with Strathcona's Horse. I hand in a statement showing the time taken to discharge

vessels in London during the last year, and also charges connected therewith.

(*The witness handed in a table showing the time taken to discharge certain vessels belonging to Messrs. Elder, Dempster, and Co., in the Millwall and Surrey Commercial Docks during the year 1900. See Appendix 14th day. No. 3.*)

4831. (*Chairman.*) Have you prepared a memorandum showing the cost of discharging cargo vessels at different ports?—Yes. I will hand in Tables which will show that the proportion of time that vessels are able to work in London is small compared with the time they are detained in the docks. In Avonmouth, or in Liverpool we should discharge about 3,500 tons a day; in London we should discharge about 500 or 600 tons a day.

(*The witness handed in a Table showing the comparative port charges, and the time occupied in discharging a modern cargo steamer of a tonnage of 3,388 tons gross and 2,202 net, at various ports in England and on the Continent. See Appendix 14th day. No. 4.*)

(*The witness also handed in a Table showing the comparative port charges and the time occupied in discharging a modern cargo steamer of a tonnage of 9,040·77 gross and 5,146 net, at various ports in England and on the Continent. See Appendix, 14th Day, No. 5.*)

4832. These days in the Table are the time it takes to discharge, are they; three days as against 14?—Yes. Our port charges in London would be practically the same as they are at Avonmouth and Liverpool, but we should lose eleven days on working the ship, and all the expenses of the cargo and other expenses are going on. See 5628.

4833. (*Sir Robert Giffen.*) You take about as much time at Hamburg and Rotterdam as you do at London?—Yes, but our expenses are very much less there. At Hamburg our expenses would be £350.

4834. (*Chairman.*) To what expenses are you referring?—The port charges, and the cost of handling the cargo.

4835. (*Sir Robert Giffen.*) At Hamburg it is £353 as against £361 in London?—Yes, that is so.

4836. And the chief difference is not in the port dues but in the stevedoring?—Principally. The conditions affecting the various ports are so different that it is almost impossible to usefully compare them, but, with a view of showing the disadvantages from which shipowners suffer in visiting London, I have prepared the tables showing the cost of handling two modern cargo vessels at Liverpool, Avonmouth, Hamburg, Rotterdam, Antwerp, Bremerhaven, and London, which I have handed in. It will be seen that London costs about double as much as such a port as Rotterdam, and that, while London costs about the same as Liverpool and Avonmouth, the dispatch is about five times as bad in the case of a large vessel at London.

4837. (*Chairman.*) Now, will you tell us anything you have to state with regard to port dues?—As regards port dues, one point of material difference between British and Continental ports is, that while British harbours, docks, and wharves are administered on the basis of cost, or even profit by the municipality, public or private companies, trusts, etc., in the case of foreign ports they are subsidised by the community, so that the ship pays directly almost nothing for their use, which largely accounts for their largely increased transit trade of recent years. Then, again, no light dues are charged at Continental ports which tells against the home port where shipowners have to pay, not only 2½d. per ton general lights, but also in the case of a port like Liverpool, local lights in addition. But besides this, at British ports, vessels carrying cargo above the tonnage deck (whether in the shelter deck or above it) pay dock, tonnage, and light dues, on the cargo so carried. That is a very material point. This is a very important consideration in the case of vessels carrying 1,000 or 1,500 tons of so-called deck cargo. A Continental ports the ship is charged merely on her registered tonnage, irrespective of what deck cargo she may have. As regards port dues, in some cases port dues for the use of the harbour or river are charged separately, as in the case of London, from dock dues, whereas at other ports, for instance, Liverpool, they are charged at an inclusive rate of 1s. 4d. per ton. I have had a good deal of difficulty in arriving at an estimate, because I have not had both types of vessel at all the

ports mentioned, but the estimates are accurate enough for purposes of comparison. They have been submitted to my agents at the various ports, and agreed by them. As regards pilotage, the most expensive pilotage in England is certainly that of London. I have never been able to understand why we should have to employ two pilots to assist a vessel during her run from Dungeness to London, whereas at Liverpool we have only one. No doubt this accounts for the pilotage at London costing double what it does at Liverpool. I draw special attention to the fact that at Liverpool no charge is made for the use of the steam pilot boats, whereas at Dungeness we have to pay £2 15s. 0d. for putting a pilot on board a comparatively small vessel of 2,000 tons net register. Now, this is a question with regard to cattle. To illustrate one disadvantage from which the Thames suffers, I may mention that if a ship lands her cattle at a Liverpool wharf without going into dock she pays 4d. per ton wharfage, but at London she would pay ½d. to ¾d. per ton. Thus Liverpool, with a 14-mile channel to the bar to be dredged, obtains 3d. per ton more than London, with a 20-mile channel to Gravesend. A further illustration is to be found in the case of a vessel with a cargo consisting of live stock, cheese, and timber, visiting the two ports. At London a ship must wait for the tide to make Tilbury or Thames Haven, go up to Deptford (perhaps on a succeeding tide), and, finally, perhaps wait for a third tide to make the dock. At Liverpool she can go right alongside the cattle wharf at low water, putting in the time until high water by landing her stock, and dock at high water, thereby perhaps saving two tides. At Hamburg goods are discharged in the stream, or in the middle of the dock, for distribution by means of coasting vessels to other North European ports, vessels also receive cargo from lighters. For instance, in 1899, over 600,000 tons of sugar were shipped from Germany to England, of which the greater part was transhipped at Hamburg from lighters into the export steamers. At Rotterdam goods are discharged into large lighters or small steamers for distribution over the canal system of Holland and up the Rhine; also to United Kingdom ports. At Avonmouth Dock (situated at the mouth of the Severn, about seven miles from Bristol) the custom is to deliver general goods either direct into railway truck or temporarily into warehouses, awaiting delivery by rail or water, to Bristol and district, while bulk goods, such as timber, are delivered into barges and sent up to Bristol or Gloucester. A new dock is in contemplation at Avonmouth, and the hope has been expressed that the Port of Bristol may, by means of the railways, supply London. As regards stevedoring, elevators in London are only used to a limited extent, while at Liverpool we would never think of using anything else for bulk grain. This, of course, makes an immense difference in the time necessary for landing grain cargo. Elevators have not been adopted at Avonmouth or at either of the foreign ports mentioned. The cost of stevedore work depends largely upon the conditions of labour. Where there is free labour and where the men are more or less in their rustic condition (as at Hamburg, Rotterdam, and Bremen) rates and also overtime are comparatively low. Where Unions have arisen and restricted the conditions as at London, Avonmouth, and, to a certain extent, Liverpool, the lumpers and porters do not work in harmony, and the cost is naturally much increased and the efficiency not correspondingly greater. As regards the handling of cargo, the systems are entirely different at the various ports. At Avonmouth the Dock Company insists upon taking charge of any cargo landed, and charging for it at tariff rates. After the cargo passes the vessel's rail goods are handled at the expense of the consignee. At Liverpool, after the cargo passes the vessel's rail, it is taken charge of by the master porter, who delivers it to the consignee to the order of the shipowner, charging tariff rates for handling which consignees pay. At Hamburg cargo may be discharged free from quay charges overside, but, where the vessel is placed alongside a quay, and the cargo is discharged on to the quay, the municipality levies dues upon the registered tonnage of the ship and also upon the cargo which it takes charge of and delivers. In my figures I have included the cost of these quay dues, less what is recoverable from the consignees by customs of the port. This, of course, I have deducted in order to place Hamburg on the same basis as other quay discharge ports. At Rotterdam, cargo is discharged both on the quay and overside, the charges on the cargo, after leaving the ship's rail being for account of the consignee. At Antwerp the condition of affairs is almost exactly similar, only that of recent years the

quay accommodation having become altogether inadequate, the consignees have insisted upon cargo being lightered—a much slower operation than quay discharging—with a view to saving demurrage on the ships, which, of course, involves worse dispatch for the shipowner, and has much prejudiced the Port of Antwerp. At Bremen—or rather Bremerhaven, where the dock for large vessels is situated—the cargo is all sent away, mainly up to Bremen and the interior by means of the railway. Dispatch is usually a question of getting the railway company to provide facilities for rapid removal, or allow piling. The following figures are interesting as illustrating the ability of the various ports to deal with the big ship of to-day, which will be even larger in future:—

- London . . . There is accommodation in the Millwall Docks, where we are compelled to take our cargo, for 6 steamers of 470 feet long, 56 feet beam, and 18,000/40 cubic feet tons, whereas at other Ports the whole range of the docks is open to us.
- Liverpool . . . 31 steamers (12 in the Langton Dock alone) of this size can be accommodated.
- Bremerhaven . . . Can or will shortly be able to accommodate 9 steamers, Avonmouth 9, of 400 feet, Hamburg 48, Rotterdam 30, Antwerp 21.

4838. You tell me you have been speaking with reference to the Millwall Dock, at which the steamers of your firm unload?—Yes.

4839. Why do you use these docks exclusively?—Because we cannot get any other. The nature of our cargo is such that the other docks will not take us.

4840. Have you ever asked them to do so?—Yes.

4841. I trust you will appreciate that we understand that you make these statements from your own experience?—Yes.

4842. There is a very large amount of capital concerned, and we are therefore anxious not to have anything said which is not very deliberate. You will understand that?—Quite right.

4843. For instance, you refer here to the continued breakdown of hydraulic cranes, by which you tell us considerable time is lost and considerable expense is incurred?—Yes. See 8470.

4844. Why did you not use your own cranes?—It is not an easy thing to use our own cranes. We have these hydraulic cranes alongside the quay.

4845. But you say they break down?—Yes.

4846. Why do you not use your own cranes?—We should not be able to land as easily with the cranes on the ship as with hydraulic cranes. At Hamburg you will see a whole forest of hydraulic cranes all along the quay.

4847. You have to use your own cranes in other British ports, have you not?—We do, if necessary, but if we can get a better appliance than our own winch to use we take the hydraulic crane.

4848. Do you suggest that London is at a disadvantage, as compared with other British ports, in the matter of hydraulic machinery?—I think it is. See 8471.

4849. With reference to the grain porters, to whose hours of work you make reference, that is a labour question, is it not?—Yes.

4850. That has nothing to do with the regulations of portation?—No; it has reference to the dock regulations. They have their own regulations. I do not know how far they would be able to get the men to fall in with them, but according to their own dock regulations themselves the hours start at an unsuitable time.

4851. That remark also refers to the lightermen, who are supposed to put their barges alongside the steamers, but are very often absent when they are required, as you have told us?—Yes.

4852. That has nothing to do with the regulations of the dock, I suppose?—I am not speaking so much about the regulations of the dock as endeavouring to give you all the information I can as to the defects of the Port of London.

4853. But you have told us that one inconvenience to which you are put is caused by the hours of labour of the grain porters?—Yes.

4854. Then you refer, later on, to the men?—One gang commences at 7 o'clock and the other com-

mences at 8 o'clock; and the one finishes at 6 o'clock and the other finishes at 5 o'clock.

4855. Then, later on, you told us that the reason why the steamers of your firm go to the Millwall Dock, in the face of the drawbacks, is that there is no other suitable dock in London where steamers of similar character can be accommodated. Why should you not go, for instance, to Tilbury?—The consignees would not take delivery of the cargo there.

4856. Then it is the consignee, really, who obliges you to go to Millwall?—It is the custom of the trade.

4857. But it is the consignee?—It is the consignee who is the man that I have to study.

4858. I am asking you as a question of fact. It is the consignee, really, who obliges you to go to Millwall?—It is the consignee, of course, because, if I did not go to where he wants me, he would not give me the goods to carry.

4859. He tells you to go to Millwall?—I have to go where I am sent.

4860. That being the case, how does it come about that, as you have told us just now, you have asked other docks to accommodate you?—We have tried to get into other docks.

4861. But you have told us the consignees wanted you to go to Millwall?—But they might take a dock further down the river.

4862. You have referred to the only other dock which could accommodate vessels of the size, which you say is the Royal Albert Dock, which is fully appropriated to other lines?—Yes.

4863. You say you have asked to go there?—We have asked to get into other docks.

4864. (Mr. Lyttelton.) What would be the good of your getting into the other docks if the consignee insists on your going to Millwall?—But the consignee might take another dock lower down. Even in Liverpool, where really we have enormous quay space, we fill up one place and go to another.

4865. But, if I have appreciated the answers which you have given to the Chairman, your consignee insists on your going to Millwall unless he can get you further up the river?—Yes.

4866. Then I do not quite see how it becomes material for you to enter the Albert Dock, which is lower?—We think we should get better accommodation in the Albert Dock. We would rather go to the Albert Dock if we could get there; but we cannot get there.

4867. (Chairman.) But you say you have asked?—Yes.

4868. Have you officially asked?—Yes.

4869. You have officially asked, and been refused?—Yes, that is so.

4870. You have handed in a table, which you say shows the time taken to discharge vessels in the present year?—Yes.

4871. I suppose it would not be unfair to suggest that part of this delay is owing to the lightermen's strike. Would it not be last year?—I think there was a lighter-men's strike. I am not sure about that.

4872. With reference to the port dues and light dues, I suppose that is a matter for the Trinity House?—A portion of it. In Liverpool we have the Trinity lights to deal with, and the local lights. In London, I think they are all Trinity.

4873. Do you find it more expensive in London or not?—Liverpool is more expensive than London by about 2d. a ton, because we have the two lights to pay there; we have the Trinity light and the local light.

4874. Then, as illustrating one disadvantage from which you say the Thames suffers, you mentioned that if a ship lands her cattle at a Liverpool wharf without going into dock, she pays 4d. a ton wharfage, but at London she would only pay ½d. to ¾d. per ton. That seems to be a little contradictory?—In Liverpool we come straight in on the one tide. We drop alongside the cattle wharf, and in an hour or an hour and a-half we put our cattle out; but here you have to cruise all about the river. Then, if you miss your tide you have to lie at Gravesend. Then you go to Deptford, and put the cattle out. Then you may have to wait another tide before you can get to the dock, whereas we do the whole operation on one tide in Liverpool.

4875. Then you went on to tell us that Liverpool with

a 14-mile channel to the bar to be dredged obtains 3d. per ton more than London, with a 20-mile channel to Gravesend. That is the channel above Gravesend?—Yes.

4876. What about the 30 miles below Gravesend; do not they want dredging?—Gravesend is where we should be blocked. I am quite sure that if the Liverpool men had to do with the London river, the London river would have more water.

4877. In your statement you have omitted any mention of the 30 miles below Gravesend?—Yes.

4878. But those 30 miles, I think you will admit, are not without want of dredging?—The first block we get is Gravesend.

4879. Is not that perhaps owing to the care which is taken of your interests below. Do you not think your illustration, as it stands, is a little bit unfair to London? You talk of London as if it had a 20-mile channel above Gravesend?—I do not pretend to deal with the channel below Gravesend, but I am very strong on this. I do not think it is to the credit of London that she has not dredged this river. It is a tremendously important thing to me. The loss to me on the "Montreal's" two voyages would be something like £1,000 if I lost ten days. That ship is worth £100 a day at least.

4880. And the principal complaint is want of prompt dispatch?—Yes, that is the great thing.

4881. That is the head and front of your complaint, is it not?—Yes, in Liverpool, I could do it in three or four or five days. I could do it in three in Bristol or Avonmouth, of which we all complain a great deal, and which we are trying to set right. I was amused at the previous witness's statement that they are going to have a tremendous trade there, and I think we may claim to have made a good deal of it. It is because we cannot get facilities in London that we are obliged to go to the next best port.

4882. Do you prefer going to Bristol to coming to London?—Yes—Avonmouth. Why should I not prefer to go to Avonmouth? My port charges are the same, and I get dealt with in three days, and I get my coal about 4s. a ton cheaper.

4883. You told us that a ship must wait for the tide to make Tilbury, and go up to Deptford on a succeeding tide?—Yes.

4884. Of course it is impossible to land cattle at Tilbury?—Yes, we have to land our cattle at Deptford.

4885. Are you aware that an application was made to the Board of Trade some time ago with reference to a proposal to land cattle at Tilbury?—No, but it should not be at all surprised to hear it.

4886. With reference to the accommodation in London, you gave us particulars of the accommodation in the Millwall Docks. Will you tell me how in your opinion the equipment of these docks compares with that of the other London docks?—Unfortunately, I cannot get any other London dock to have any experience of.

4887. You have not any personal experience of any other dock?—Not much. We had a little experience with one of our ships, the "Lycia." To illustrate the want of accommodation in London I have pointed out that early in the present year when the "Lycia," which was chartered to the Government to load stores to the Cape, was in the Joint Committee's Victoria Dock, she was unable to obtain proper accommodation, and the Admiralty shipping agents afterwards arranged for all boats loading stores for the Cape to go to Millwall Dock.

4888. Then I may take it that what you want to convey to us, and what you have conveyed by oral evidence as a prominent shipowner in England, is that your principal complaint is want of proper dispatch?—And general accommodation.

4889. You say the general accommodation is bad?—I think the progress made by our foreign competitors is very largely owing to the want of accommodation given by these London docks. London is a very great port, and if London is restricted in the depth and size of her ships, and Hamburg and Rotterdam—those two ports in particular which are going ahead tremendously—are able to get facilities which we cannot get, it is a tremendous drawback to the British shipowners and British commerce altogether. I might go further, because you may look with certainty to the future producing very much larger ships. The economical ship is the large ship, and unless you can provide for the large ship you cannot compete for the carrying trade. The carrying trade is not protected like a railway. Anybody can come into it

Mr. A. L. Jones.

26 Mar. 1901

Mr. A. L.  
Jones.

26 Mar. 1901.

who can produce a machine cheaper than his neighbour, and his neighbour is always looking for something that can do it cheaper. Then, again, the Englishman does not care what he ships his goods in, whether under the German flag or the French flag. You do not find that feeling with a German or a Frenchman; he will endeavour as far as he can to ship his goods under his own flag.

4890. You have told us about the want of accommodation and the want of proper dispatch. Now do you complain of the dredging?—Yes.

4891. And about the dues; do you complain of them?—The dues are not so important as dispatch. That is the first thing. Deal with your cargo first of all. What does it matter what you charge me if I cannot come to you?

4892. I take it from what you tell me that you would be willing to pay in reason for prompt dispatch?—Certainly.

4893. You have big vessels, and you want them to be able to turn round and get off?—Yes. Take the "Montreal," for instance. Supposing I save half what I lost—£500—and supposing you put 1d. or 2d. or 3d. on the tonnage dues, it would be nothing compared with getting that ship turned round. And when you are running in a regular trade and a ship got out of her turn for two or three days, she would lose her turn altogether. I hope you will not think that I am endeavouring to give evidence except as to what really impresses me as useful in the interests of the nation. I think it is a national question. I have no interest in any docks.

4894. (*Sir Robert Giffen.*) I should like to ask you with reference to your statement that the charges at British ports are increased when deck cargoes are carried, that you have to pay dues on a larger tonnage of the ship than if such cargoes were not carried. Is that a very material point with reference to the trade of this country and foreign ports? Are those cargoes carried to such an extent as to make a material difference?—Yes. It is a very serious thing.

4895. Then it would be very unsafe for us to take a comparison of tonnage dues say at Hamburg or Rotterdam, and tonnage dues at ports in this country—I mean the rates that are charged—without knowing that they are all liable to be qualified by this consideration which you have just put before us?—I think so.

4896. I merely wanted to know how far this was a material and important thing for us to bear in mind when we are dealing with quoted rates?—And there is another thing that I should like to add as a large shipowner. I am not only interested in trying to put London to the front, but I want the same thing to apply to all our British ports. I want Liverpool to go ahead. Liverpool is spending six millions of money, and she is not doing it too soon. Then, again, Bristol is going to spend some millions, after about two years discussion, and she would have been better off if she had done it earlier. The ships of the present day are changing very rapidly, and will presently change again to something bigger, and the dock companies—and, in our opinion, especially in London—have made no effort to deal with the changed circumstances.

4897. Is the number of foreign ports which can take in big ships or send away big ships increasing materially?—I do not think that is so. I think the ports that I have named are the ports that are competing closely with us. I think the chairman referred to our going to Tilbury. It might be better for me if I went to Tilbury, as I have only one particular trade to compete for, but I had better go across to Hamburg. I can bring my cargo from Hamburg to the London Dock almost as cheaply as I could from Tilbury. Then I should have two strings to my bow. I should have the German trade and the English trade.

4898. Then, in that case, you want not only big docks to take your ships, but big docks close to the centre from which you distribute your goods?—Yes.

4899. So that a big dock at Tilbury is not so important as a big dock where the Albert Dock is?—No. Take the cargo of one of our steamers discharging at Tilbury; supposing half the cargo might be a transit cargo to go into other ships at other London docks, if I have to lighter from Tilbury I am almost as bad as a man at Hamburg. When you get your cargo on board the ship it does not matter much whether you go 100 miles or 150. It is the cost of handling the cargo.

4900. Then the chief foreign ports from which big ships come are New York, and one or two more. Is not that so?—There are Montreal, New York, Philadelphia, Baltimore, and many other places.

4901. Have you the very largest ships coming from Montreal?—I do not know what we shall do with it, but we hope to run a weekly line to London of 18,000 ton steamers from Montreal. We run a weekly line to Aronmouth and a weekly line to Liverpool.

4902. (*Chairman.*) Is that timber?—A large quantity of timber. We use the timber for filling up. We have cheese, butter, lard, bacon, peas, and corn—everything you can think of.

4903. (*Sir Robert Giffen.*) Does that apply to South American ports as well?—No, we do not get the big ships from there at present. The River Plate, and Monte Video, and those ports, cannot take big ships at present. They are limited to draught of water, and they are limited to markets.

4904. And as regards ports east of the Suez Canal, as to the size of the ships they are limited to the depth of water in the canal?—It is just a question whether you could not go round the Cape. The canal dues are so heavy, and if it is a big ship the coal difference is so very small that you might go round the Cape. It is a toss up round the Cape or through the Canal.

4905. What we wish to arrive at is the extent to which the big ships will go?—The big ship would work round the Cape, and beat the ship through the Canal.

4906. And you think that is a development to which we may look forward?—Certainly.

4907. Now, I wish to ask one or two questions with regard to the tables which you handed in at Question 4831. Are you quite sure that the light dues are included?—They are not included because it would not be fair to the foreign port.

4908. You mentioned in the course of your evidence that the light dues were very important?—I have taken considerable trouble in preparing these tables, because I am exceedingly anxious to give this Commission every possible information I can. If there is anything more I can get for the Commission I shall be delighted to get it.

4909. (*Chairman.*) You have told us that the hydraulic cranes and electric appliances abroad are far better than those in London?—Certainly.

4910. Then that being the case and presuming from what you have told us that it is one of the reasons for delay in discharge, will you explain to us why it takes you 14 days to discharge in Rotterdam, Hamburg, and Bremerhaven as well as in London?—Because the cargo is not handled in the same way. In Liverpool the great object is dispatch, and you bundle all the cargo on to the quay. In Hamburg the merchant will have his cargo sorted, and he gives you a lot of trouble, and the result is a lot of delay.

4911. Is that the reason of the great difference in time?—Yes.

4912. So that really it has not very much to do with hydraulic cranes?—No, but it would have if you were able to put your stuff on the quay; many of the German liners put their stuff alongside the quay.

4913. Then to obtain the prompt dispatch which you want in common with all the other shipowners, you want to be able to put your stuff on the quay?—Yes, quay space, lighting, and draught of water; and you must not be altogether too much in the hands of your labour unions.

4914. (*Sir Robert Giffen.*) Is the great expense of stevedoring in London entirely connected with the labour unions?—Yes.

4915. Not in any way arising from the higher wages that are paid in London?—Your labour union gives the men the higher wages, and he works fewer hours. In Hamburg the rate is 4s. 8d. a day, and in London it is 6s. to 7s. a day.

4916. But still that is a question generally affecting the labour market, and there may be other causes for keeping up the wages in London, as they are much higher in everything else, I believe?—Yes, but in discussing the Port of London I think it is only fair that I should put the difficulties that we experience.

4917. (*Mr. Peel.*) What is the largest ship that you have?—About 19,000 or 20,000 tons measurement. That is about 10,500 to 11,000 tons dead weight.

4918. Is the size of your vessels determined by the amount of water in the Thames, and the difficulty of getting into the Millwall Dock?—Yes. If I were not afraid of the ports I would certainly have very much larger ships.

4919. When you say "ports" you mean London?—London especially.

4920. But when you are actually considering the size of a new vessel, that is what you would consider—Millwall?—Not Millwall. First of all the draught of water in London; that is a very serious thing; you want more water.

4921. (Chairman.) You qualify your statement by saying it is not only in London, you think, but it is the general ports of the world as well. It is not only the River Thames, is it?—I was asked when I was building a ship whether the fact that the River Thames being defective in draught and general working, would limit my idea with regard to the ship, and I say I think it would.

4922. (Mr. Peel.) You have told us that it was largely the question of the consignees that determined you to go to Millwall, but you said that besides that, this was the only dock that gave you proper facilities?—It is the only dock that I can get into at all, bar Tilbury.

4923. When you talk about facilities, do you mean enough warehouse or shed accommodation, or quay accommodation?—Any man with any experience of docks, would shudder to bring a big ship into any one of these London docks.

4924. I am talking of the Millwall Dock now?—The Millwall Dock is not at all the dock that it should be.

See 6905. 4925. Could you give me that information rather more specifically?—It has not the quay space.

4926. I suppose the great thing that you want is depth of quay?—Yes.

4927. You told us, I think, that you sometimes put out a certain amount of cargo on the quay, and then moved on to another berth, and then on to another berth?—Yes.

4928. That really means that there is not sufficient depth of quay to accommodate the whole of the cargo at one berth?—I think that one of these modern ships with her thirteen steam winches working, and her hydraulic power, would block any quay in twelve or thirteen hours, if you could not get any other quay to go to, you would have to stay where you were, until you got your stuff out.

4929. At Millwall is the ground floor of the warehouse used as part of the quay space?—Yes, but it is ridiculously small in these days for anything in the way of modern working.

4930. Have you, as shipowner, any particular preference for the jetty system in the dock, as opposed to the quay side?—I think the jetty system is a very good one, but I do not care what the system is as long as it gives me quay space to discharge my ship. With modern appliances for working, I do not care whether it is a jetty or a quay.

4931. Has the proportion of the goods that you bring to London for transhipment varied much in the last few years?—We get very little transhipment stuff at all now. I think that London is losing its transit trade.

4932. In your own line is the amount of transhipping trade you do less, as compared with the other trade that you do at the present time?—I think that the amount of transit trade is less. In Bristol we are doing a very large transit trade, and in Liverpool also, but not so much in London.

4933. As regards the figures shown in your table, taking a ship of 5,146 net tonnage, the time for discharging is just the same at Hamburg, Rotterdam, Antwerp, Bremerhaven, and London?—Yes.

4934. But when you turn to the case of the steamer of a net tonnage of 2,202, it is seven days at Hamburg, five at Rotterdam, six at Antwerp, four at Bremerhaven, and six at London. It seems so very different at those ports for a vessel of that size. What is the explanation of that?—The explanation is that in London you may deal fairly well with a small cargo when you cannot deal with a big ship. You may deal with a 2,000-ton ship, but not with a 10,000-ton ship.

4935. Does that apply to those other ports as well; they vary just as much among themselves as London does?—The time is much the same in comparison. In

Hamburg and Rotterdam they are seven and five days, and at London six, and Liverpool three.

Mr. A. L. Jones.

4936. Bremerhaven is four?—Yes.

4937. That is a considerable difference with a comparatively very small vessel?—Bremerhaven is a better port to work at; it has very good docks.

26 Mar 1901.

4938. If you take the larger vessel, it is exactly the same as the others, fourteen days?—Then you come to the larger ship again with your quay blocked. I must say on behalf of the dock companies it is only fair to tell you again that the present ship, which is the ship of the future, has developed very quickly. In my time I remember when 2,000 bales of American cotton was considered a fair cargo for a ship; now we are struggling because we cannot get more than 30,000 bales in a ship.

4939. Supposing you were much less limited than you are by the difficulties of ports and so on, you, yourself, would be strongly in favour of vastly increasing the size of the ship?—Certainly. I do not think there is any limit to the size of ships, excepting the port.

4940. (Mr. Ellis.) You have gone over the drawbacks and the difficulties of the river, and the want of facilities in the docks. I want to ask you a few specific questions, and then a few broad and general questions. With regard to the channel, one can quite understand; you want a deeper channel?—Certainly.

4941. Now, with regard to navigation. You complain that you should have two pilots instead of one?—Yes.

4942. Have you any other complaint as to the navigation?—No.

4943. Have you anything to say about lighting and buoying?—No, not at present.

4944. With regard to jurisdiction and control, have you read Sir Thomas Sutherland's evidence?—I have not read it.

4945. You are a large shipowner?—I am about the largest, I think.

4946. Sir Thomas Sutherland was very distinct in his opinion that the questions of buoying and lighting, which are now partly under the Thames Conservancy, and partly under Government, should be both under one Board. Do you agree with that?—Certainly. I am on the Advisory Committee of Trinity House; I may tell you we do not quite agree with the system of charging the lights; we disagree with it altogether.

4947. I am going rather to the point of unification?—Certainly. I would be very strong on unification. I would be very strong on undivided responsibility.

4948. Then you do agree with Sir Thomas Sutherland?—Certainly.

4949. It is a very important point?—It is. I think that where you have divided responsibility, you do not get the same working; that is to say, that one-man concerns do generally a great deal better than others.

4950. I raise the point because you have not dealt with it?—No.

4951. Do you consider that in respect of the channel and navigation relatively to the increasing size of the steamers, the river of London is deteriorating?—I really could not answer that question, but certainly it is not improving according to the necessities of the case.

4952. In your opinion it ought to be?—Certainly, from a national point of view.

4953. Is it relatively deteriorating?—I should think it is deteriorating if it is not going ahead, if the necessities are going ahead. The demands of the port are not being met, so that what might have been of value yesterday would be of no value to-morrow.

4954. Then with regard to the docks and wharves, you have given your various wants of facilities under a number of different heads. I put to you the same question with regard to this:—Is London *qua* docks and wharves and that want of facilities deteriorating or standing still or improving?—Standing still, and it is getting worse because it is not keeping pace with the demands. Unless you keep pace with the demands you are going to the bad.

4955. Then have you anything in your mind with regard to the remedy for all this?—I would endeavour to take example from places where they have succeeded. Liverpool has fairly well succeeded with her trust. It seems to me that in London you have a sort of thing like a draper's auction to offer to the public. You have a lot of odds and ends. You want to put

Mr. A. L.  
Jones.

26 Mar. 1901

them altogether under one management. Whether you have the County Council or what you have I would leave with somebody better able to judge, but I think the docks would be far better managed under one management than under the different managements you have got. For instance, in Liverpool if we want a berth for a ship we go to the harbour master. He has all the berths appropriated, and if you are not going to use a berth you will get somebody else's ship in your berth. The harbour master assembles all his dock masters in the morning and allots a berth to you. In London you cannot do that.

4956. (*Chairman.*) In short, the subdivision of authority is what you complain of?—I do. I think it is a mistake.

4957. (*Mr. Ellis.*) Have you any opinion with regard to the division of the river into two districts, the upper and the lower. I will read you the motion of Sir Thomas Sutherland, made on the third reading of the Thames Conservancy Bill in respect of this, and then I will ask you if you agree with it: "That the Bill be re-committed to the former Committee, and that it be an instruction to the Committee to insert provisions in the Bill for establishing distinct statutory Committees of the Conservancy Board to manage the upper river and the lower river (including the port and harbour), to define the limits within which the jurisdiction of such Committee should respectively extend, and to provide for allocating to purposes of the lower river, port, and harbour, the income arising therefrom." It divides the thing into two compartments?—Yes, all under one Board, with statutory Committees of that Board. I know Sir Thomas Sutherland very well, and have the highest opinion of his judgment, and perhaps he might be better able to judge of that than I can be; but I distinctly object, so far as I am concerned, to any divided responsibility.

4958. Sir Thomas Sutherland mentioned the upper part of the river?—Yes.

4959. By undivided responsibility and unity of management I apprehend that you mean all that concerns the port and trade of London?—I think so.

4960. You would put that all under one authority?—I would do exactly what you have at Liverpool with the Mersey Docks and Harbour Board. That has answered admirably. You have a body of men there that are beyond doubt very able and are doing very successfully with a very difficult time in the age of ports. It is a very hard thing to see our magnificent ports, built most expensively, being knocked to pieces because they are useless, owing to their size, but that is what is taking place. I think that the port which has common sense will face the difficulty at once, as a man would face a ship that is of no use when she ceases to pay—let somebody else buy her; but you cannot get somebody else to take your docks; you have to condemn them.

4961. Speaking with the authority that attaches to you, and with the experience you have behind you, you desire to put before this Commission your opinion that a Bill should be brought before Parliament dealing with these matters?—That is the case.

4962. (*Mr. Lyttelton.*) I suppose the evils you have been speaking of you know to be recognised by the docks in London?—I have a sort of sympathy for the docks because they get bullied by everybody and paid by nobody. I do not know that they deserve either. I do not know that they deserve the bullying, and I was going to say I am sure they do not deserve the paying, because they have not provided what the public want. It is a very serious thing for us as English people to see our dock system going back.

4963. It is not a matter of controversy, is it, that larger quays and better appliances are desirable at the docks? That is admitted on all sides, is it not?—Not only desirable, but essential.

4964. The difficulty is the difficulty of finance, is it not?—I know of no difficulty of finance where the port wants docks for these ships.

4965. Under the existing system?—I do not care what the cost is. I would say whatever the cost is, bring your port up to date. I suppose, of course, you will not pay too much.

4966. In the existing financial state of the docks the obstacle is the question of money, is it not?—I think the dock companies have found that out.

4967. I do not know whether you are making a recommendation, but of course we should like your opinion. Is your recommendation to place the docks under one management, a trust or a municipality?—The Port of London as regards its docks. If you have divided responsibility in the way in which Sir Thomas Sutherland mentions, I do not think you will get the same sort of working as you would get by putting it under one control. Whenever I take a man to do anything I let him have control of it, and when I find he is not able to do it I get somebody else, and I would do the same with this. I should think it would not take very much to buy up the docks. I do not know what the face value of them would be to-day, but I know what it will be to-morrow.

4968. That is what you wish to advocate?—Certainly. I think you should modernise yourselves.

4969. What do you say as to the wharves?—Take them in. If you have the wharves loose I do not think you will get what you want.

4970. Have you considered the cost?—I do not consider the cost. I think the matter is so vital to London that the cost is a small thing. I do not think that you would pay too much, as I said before; I take it you will have some powers by which you will get what you want without paying too much.

4971. You have complained of the system of double pilotage?—I think it is a pity to change the pilot.

4972. The pilot comes in at the opening of the estuary and comes up to Gravesend and then another comes aboard?—Yes.

4973. Is that the custom?—It has been the custom.

4974. Do you know what the origin of that custom was?—No, but it is the custom to-day, and I think it is necessary that one pilot should bring the ship from Dungeness to where she is going to. You have to stop to get the pilot over the side and get the other pilot on board, and it all means a waste of time.

4975. With reference to the custom of Liverpool and London as regards unloading upon the quay it is natural that the shipowner should have his views upon that as a shipowner, but I wish you for a moment to speak divested of your character as a shipowner. Do you think the custom of Liverpool, that the ship's responsibility should end when she brings the goods up to the ship's rail, is the better one?—It does not end in that way at Liverpool. The ship lands cargo on the quay, and then the master porter takes it.

4976. When the cargo is landed on the quay all the sorting is done by the merchant, is it not?—No. In Liverpool we have an independent man called a master porter.

4977. But he represents the consignee?—Yes.

4978. And the consignee pays him?—Yes; he is a sort of man between the shipowner and the consignee.

4979. Practically the charge of sorting falls upon the consignee?—It does.

4980. You approve of that, I understand?—I think the system in Liverpool works very well. I have worked there for 40 years, and I have never had any difficulty with it.

4981. Provided you had sufficient quay space in London, would you wish that custom to prevail here?—That is the custom in Liverpool, but there again I do not believe in divided charges. I would rather have one charge to do the whole work, freight, master portage, and everything else. A man should pay, say, 40s. a ton, and have nothing more to do with it. That is what I would prefer, but that would not be popular in Liverpool. I do that with some trades that I work in West Africa. We bring our cargo there; it is a very divided cargo; it has to go to a great many places. A man who ships 50 casks of palm oil by our steamer pays his freight on the bill of lading, and after that pays nothing more; I carry it without further charge. For instance, I bring my ocean freights free to Liverpool, and I make my local traffic pay for my through traffic; thereby I get a lot of through traffic, and I have brought the whole of the West African traffic to Liverpool. There used to be West African traffic to London.

4982. You have drawn a sharp contrast between the custom which prevails in London and the custom which prevails in Liverpool, that in one case the ship could sort the goods on the quay at her expense, and in the other case the consignee, through the master porter, sorts the goods on the quay at his expense. I want to know which system you approve of, and on what

grounds?—I think the Liverpool system is better, because the master porter is an independent man; of course, he is liable to the Mersey Docks and Harbour Board under a licence.

4983. Is that your only reason?—I do not think that it makes very much difference. I would rather have the through and through charge.

4984. Does it not make any difference with regard to the more speedy release of the ship?—I do not think it does.

4985. As you have laid almost the whole weight of your evidence on the question of despatch, and you have illustrated the matter of despatch by the unloading, I thought you would probably think the question of unloading on the quay had a relation to the question of despatch?—Neither system would help you much in despatch. Give me the quay space and I will make the master porter place the cargo, as far as he is concerned, if he has got the space on the quay. But no system can deal with the cargo if you have not space to put it.

4986. Given ample quay accommodation you think it immaterial whether the sorting is done by the ship or by the consignee, is that it?—I think it is immaterial.

4987. (*Mr. Ellis.*) I gather you think that the extremely costly vessel, the cost of which is increasing, is too costly a storehouse to be kept lying idle with goods in it?—Certainly. I get so much a ton for taking my cargo from New York to London. The sooner I get rid of it the better. If I stay in London 14 days I do not get any more for it.

4988. (*Rear-Admiral Hext.*) We have had proposals of wharves on the River Thames. Which do you advocate, as a great shipowner—docks or wharves?—Would the wharf be accessible at all states of the tide?

4989. Just so?—That would be a very great point. If you can give me a quay in the river where the ship can lie alongside safely, and approach it at any state of the tide, that would be a better system than dock gates, where you have to wait for the tide. If you can get a jetty in the river that is approachable for the consignee and the consignee will take his cargo there, that is better.

4990. I am putting the main question: Would you as a shipowner prefer discharging and unloading in a dock or alongside a quay?—I do not object to it if there is sufficient space for the ship to lie. I would rather have a jetty, because you say I can go to it at any state of the tide.

4991. Have you calculated the cost and trouble of mooring the vessel, slackening the chains, and the wear and tear and danger of lying alongside a quay with a heavy rise and fall of the tide?—I do not think there is so much in that. With equal facilities I would rather go into smooth water in a dock, but the jetty system might be very useful. As regards slackening of chains and all that kind of thing, I could get to that jetty at any state of the tide.

4992. I want to get from you quite clearly whether you, as a shipowner owning large vessels, would prefer in the Thames a system of wharves or a system of docks?—They both have advantages.

4993. But I ask you which you would prefer?—Of course we work at jetties at other places. We work at a jetty in Hamburg, we work at a jetty in Rotterdam, and in all those places which are tidal harbours. We are working at a jetty in the Scheldt at Antwerp. Mr. A. L. Jones.  
26 Mar. 1901.

4994. I simply ask you which you prefer?—I think certainly the Antwerp system is very good. I have been there very often, and seen the steamers come up at all states of the tide.

4995. (*Chairman.*) Antwerp you do not speak so well of in your evidence?—At Antwerp, owing to the large cargoes and the quay space, the consignee tries to protect himself by overside delivery. In that case you do not get your cargo away so quickly.

4996. (*Rear-Admiral Hext.*) Why has not Liverpool developed more quays instead of going in for large docks?—Liverpool is rather difficult to work. There is very little water at low water. I do not think you could work in the river.

4997. Do you prefer docks or do you prefer jetties?—I think that the Mersey at Liverpool is a much more open river than the Thames. I do not think you could put a jetty in the Mersey as you could put a jetty in the Thames.

4998. It is a rather important case, and we wanted to get shipowners' opinions about wharves or jetties, therefore I wanted a decided answer?—I do not object to wharves at all. We work at wharves at all those places, and there is no difficulty. I do not think there would be any difficulty in London in working at wharves.

4999. (*Chairman.*) We may take it, to sum up the questions that have just been put to you, that from a practical business point of view your opinion is that apart from the question of cost, into which you naturally do not go, you are convinced that something ought to be done to the Port of London?—Most decidedly.

5000. Both as regards docks and wharves?—Most decidedly.

5001. And that, further, dealing only with what I may call the seagoing portion of the Thames, that is, the portion which is used by sea-going ships, your opinion is that the whole control ought to be in the hands of one authority?—I think so.

5002. That is to say, the Thames Conservancy, the Trinity House, or whoever they may be—vestries and so on—ought all to be grouped together under one head?—I would rather qualify that. I would not give the control to some incompetent body.

5003. I did not suggest that?—You said it might go to any particular body.

5004. I ask you whether it should be centralised really?—Yes I think it should, but in Liverpool we get a very good class of men on the board. We have shipowners, or merchants, and leading citizens, who sit there for nothing. They give their time, and do not get anything for it.

5005. We must presuppose that the people are good people; but your evidence is that it ought to be under one authority?—I think so.

Mr. THOMAS RIACH MACKENZIE called and examined.

5006. (*Chairman.*) You are general manager and secretary of the Clyde Navigation?—Yes.

5007. How long have you held that position?—I have been secretary for eleven years. I was appointed general manager as well quite recently. There was no general manager in the early part of my connection with the Trust.

5008. You have already been good enough to supply us with answers to certain questions which were put to the Clyde Navigation?—Yes.

5009. We should like to hear from you a general statement with regard to the Clyde navigation?—A body of 25 gratuitous trustees, incorporated by Act of Parliament, manage the undertaking. The trustees are partly nominated and partly elected. The trust is not worked for profit. The Clyde trustees are the only navigation authority within their territory. Their powers include:—(a) Deepening, widening, and straightening the river; (b) its lighting and buoying;

(c) the construction of docks; (d) the borrowing of money for works; and (e) the levying of rates on all vessels and goods. There have never been any municipal or other guarantee rates of any kind. The undertaking consists chiefly of (1) the improved waterway of the river Clyde, from Albert Bridge, about the centre of Glasgow, down to Newark Castle, near Port Glasgow, a distance of 18 miles, with the riverside quays, mostly in the city, over four miles in length, including both sides; (2) three tidal docks, namely, Kingston, the earliest, Queen's, the next, and Prince's the latest—having a total water area of 74 acres, a land area of 66 acres, and  $4\frac{1}{2}$  miles of quayage. There are no wet docks; (3) three modern graving docks, the most recently constructed being one of the largest in the kingdom; and (4) fully 200 acres of riverside land, owned and held by the trustees for dock extension, partly authorised, and in contemplation. The use of the waterway, quayage, and sheds is given by the trustees in return for the rates on the vessels and goods.

Mr. T. R. Mackenzie.

Mr. T. R.  
Mackenzie.  
6 Mar. 1901.

Cranes, tramways, etc., are charged for at prescribed rates. The loading and discharging is not done by the trustees; nor are they storekeepers. The sheds are only for goods in transit. Glasgow is mainly a general port, but a considerable and developing mineral trade is also done. Last year the tonnage of vessels arriving at the harbour was 4,361,597, and of goods imported and exported 7,215,368. The Port of Glasgow, except for the competition of Greenock, 20 miles from Glasgow, and the Ayrshire ports, chiefly Ardrossan, has hitherto enjoyed immunity from competition. To this it may be largely ascribed that the trustees have been able to increase accommodation and reduce rates, and so make the port a success. The amount expended on capital account is £7,430,702. Of this £5,790,187 is borrowed from the public at fixed moderate rates of interest. Of the considerable balance of £1,640,515 nearly a million and a-half has been provided out of the savings of revenue. The revenue last year was £441,419, there being on the year's transactions a surplus of £42,237. With regard to the present constitution, this was created by the Clyde Navigation Consolidation Act, 1858. That Act vests the undertaking in 25 trustees as a body corporate. They are:—The Lord Provost of Glasgow, *ex officio*; 9 Town Councillors of Glasgow; and 15 members, "representative of the shipping, mercantile, and trading interests of Glasgow," namely, 2 chosen by the Chamber of Commerce, 2 chosen by the Merchants' House, 2 chosen by the Trades' House, and 9 chosen by the shipowners and harbour ratepayers. Sixteen are nominated trustees, that is, chosen by the Town Council, and the three bodies respectively; and the remaining elective trustees, that is, elected by qualified shipowners and harbour ratepayers. The term of office of the Lord Provost and Councillors is so long as they remain in office as such; of the shipowners and ratepayers' representatives three years; and of the six representatives of the three houses two years. All the trustees are eligible for re-election. The Lord Provost and Councillors are elected to the Town Council for three years at a time. Three of the nine shipowners and ratepayers representatives retire annually, and one each from the three houses; but there are year by year few changes—the members continuing in office for considerable periods. Last year it happened there were no changes at all. As regard the elective trustees, the qualifications of shipowners and ratepayers' trustees are:—(1) Ownership of 250 tons of shipping registered at Glasgow, or (2) payment of £25 a year of Clyde dues on ships or goods. The qualifications of an elector of such trustees are:—(1) Ownership of 100 tons of shipping registered at Glasgow, or (2) payment of £10 a year of Clyde dues on ship or goods. Trustees and electors must reside or have their place of business within three miles of the Parliamentary boundary of Glasgow. Agents within these limits paying the requisite amount of dues for principals outside are qualified as electors or for election as trustees. The poll at contested elections, which do not occur often, is taken under the Ballot Act, like a Parliamentary or municipal election, the voting being all in person, and not by proxy. The constitution of the trust prior to 1858 was as follows:—Down to 1808 the operations, commencing as far back as 1611, to form a navigable river and harbour were carried out exclusively by the magistrates and Town Council as the municipality. They had obtained an Act of Parliament in 1758, and another in 1770. In 1809 an Act was passed creating the magistrates and town councillors statutory trustees of the navigation, and authorising the transfer to them of the river and the then existing quay or harbour. The price paid was £17,115. The transfer was duly carried out, and the financial responsibility of the Town Council as the municipality then ceased. The magistrates and town councillors continued to be the sole statutory trustees from 1809 to 1825. Under an Act in the latter year the first change took place by "five other persons interested in the trade and navigation of the river and Firth of Clyde," being added to the statutory trustees, and directed to be appointed annually by the Town Council. This was the constitution from 1825 to 1840. The next change was made by an Act in the latter year. That Act altered the constitution by appointing to be the sole trustees for carrying into execution the Acts of 1758, 1770, 1809, and 1840, the Lord Provost and five Bailies of the city, the Dean of Guild, and Deacon Convener of the city, fifteen members of the Town Council, and the ten following persons who it was declared should not be members of the Town

Council of Glasgow, namely: the chairman of the Chamber of Commerce of the city, three persons to be appointed by the Merchants' House of Glasgow, two to be appointed by the Trades' House, two by the Bailies and Birley men of the Barony of Gorbals, one by the magistrates and Council of the Burgh of Calton, and one by the magistrates and Council of the Burgh of Anderson, making the number of trustees 33. This remained the constitution till the passing of the Act of 1858. That Act admitted for the first time the shipowners and harbour ratepayers to direct representation. The subject of further changes on the constitution is being brought before Parliament this Session by a Provisional Order promoted by the Clyde trustees. It is proposed to admit six additional shipowners' and ratepayers' representatives, and the Provost and a Town Councillor of Renfrew. This will raise the present number of trustees from 25 to 33, as it stood from 1840 to 1858. This proposal is put forward by the trustees as the result of prolonged negotiations proceeding on a demand of the shipowners' and ratepayers' electors for additional representation, and under an agreement for taking over Renfrew Harbour. The Corporation of Glasgow have lodged a petition strongly objecting to any change on the constitution. The burghs of Govan and Partick, both closely adjoining Glasgow, the County Council of Lanark, and the Glasgow Trades' Council, all petition for representation. What the outcome of all this may be it is, of course, impossible to say. The Provisional Order proposes to extend the three mile limit, within which electors must have their place of business to a radius of 17½ miles from Albert Bridge, Glasgow; that is, reaching downwards in a straight line as far as the western limit of the Trustees' jurisdiction. This extended radius embraces the environs of Glasgow.

The Lord Provost is Chairman, *ex officio*. He alone, or in his absence, the chairman of a meeting of Trustees has a casting as well as a deliberative vote. The Deputy-Chairman is appointed by the Trustees annually. Ex-Lord Provost Üre, the present Deputy-Chairman, has held that position for the last fifteen years. The administration by the Trustees is mainly carried out through committees. Standing committees are appointed annually. They are the Committee of Management, being all the members of the Trust, and the Committees on Finance, Law and Parliamentary Bills, Works, Harbour, Ferries, Rates, and Stores. The Deputy-Chairman of the Trust is always appointed the Chairman of the Committee of Management. There are conveners of all the other committees. The Chairman and Deputy-Chairman of the Trust and of the Committee of Management are *ex officio* members of all committees. Committees are, as occasion arises, appointed by the Trustees for special purposes, and the standing committees appoint sub-committees from time to time. The whole Trust is, of course, the fountain of authority. The duties of the various committees are not prescribed in detail, but are indicated by their names. The Secretary brings the various items of business before the respective committees. The powers of the Committees are, in the main, deliberative and recommendatory, but their conclusions are almost always adopted by the Trustees. The Committee of Management meets as often as necessary, not always once a month. The other standing committees meet all, at least, once a month, and mostly twice and sometimes oftener. The quorum of the Trustees and Committee of Management is nine, of the committees three. An ordinary meeting of the Trustees is held monthly, at which newspaper reporters are present, when the business of the various committees during the month comes up for approval, and other competent business is transacted. The executive staff is composed of the following chief officials: General Manager and Secretary, Treasurer, Engineer, Harbour Master, Collector, Traffic Superintendent, and Mechanical Engineer. The officer who is General Manager and Secretary attends all meetings. The Treasurer is attached to the Finance Committee; the Engineer and Mechanical Engineer to the Works Committee; the Harbour Master and Traffic Superintendent to the Harbour Committee; and the Collector to the Rates Committee; the Traffic Superintendent is also attached to the Ferries Committee. The Law and Parliamentary Bills Committee is attended, as required, by the solicitor, who is not an official of the Trust, but a lawyer in private practice. The General Manager has the oversight of all the officials and departments, and of all the affairs of the Trust. The officials work in co-operation with him. The chief duties of the

Mr. T. R.  
Mackenzie.  
26 Mar. 1901.

various officials are defined. Their work consists in carrying on the ordinary business of their departments, and such special work as the Committees have in hand from time to time. The initiative in important matters is taken by the Trustees, but the General Manager may, of his own accord, bring up any subject for their consideration, or that of Committees; the officials report to the General Manager on any questions arising in or affecting their departments. The whole head office, or indoor staff, numbers 60. There are about 1,700 out-door employees connected with the various departments, casual workmen employed in the construction of new works being carried out by the Trustees not included. As to powers of the Trustees, these have been obtained from time to time under numerous Acts of Parliament. Briefly stated, these powers are: (a.) Works. (1) The deepening, widening, and straightening of the river until a depth of at least 17ft. at neap tides is obtained. (2) The buoying and lighting of the navigation. (3) The construction of riverside quays, tidal basins, and graving docks. (4) The equipment of the harbour with sheds, cranes and other appliances, and tramways. (5) The maintenance of the whole undertaking. (b.) Borrowing of money for works. By the Act of 1858, £1,504,000 was the maximum at that time authorised, and it has been increased from time to time till it is now seven and a quarter millions. (c.) Rating. The levying of dues on all vessels and goods, and for the use of cranes, tramways, graving docks, and ferries not exceeding prescribed maxima.

The tidal range of the river, taking the six summer months, averages about 11ft. 4in. at springs and 9ft. 11in. at neaps. The greater part of the navigable channel of the river has a depth on the centre line of not less than 22½ft. at average low water of ordinary spring tides, corresponding with one of 32½ft. at Port Glasgow, and 33½ at Glasgow, both at high water of spring tides. There is not less than 19ft. at any part of the centre line. The existing width at bottom of the navigable channel varies from 300ft. at the Port Glasgow or sea end, with a depth of 20ft. at low water, to 170ft. at the Glasgow or upper end, with a depth of 19ft. As showing the capacity of the access from the sea, and dealing with the year ending 30th June last, the tonnage of the largest vessel that entered the port was 6,725 tons nett, or over 10,000 tons gross. The maximum draught inwards was 26ft. 6in., and outwards 25ft. 8in. I would like to qualify that a little. That was not a trading vessel. She was built on the Clyde, and came up to our graving docks, and went out again, but she was not a trader. However, I have looked into this matter a little further, and I can tell you of a vessel called the "Enrique," which entered, drawing 27ft. 6in. That was a trading vessel. No vessel of any description up to the maximum draught grounded or was detained over the tide for want of water in the river. We have liners trading to America, the gross tonnage of which is 4,666. These generally require from 25ft. to 26ft. of water, and we are able to give it. The number of vessels piloted drawing 22ft. and upwards was:—

INWARDS.

	feet.	feet.	feet.	feet.	feet.	ft. in.
Draught	22	23	24	25	26	26 6
Number	100	90	73	31	3	3 0

OUTWARDS.

	feet.	feet.	feet.	feet.	ft. in.
Draught	22	23	24	25	25 8
Number	136	69	28	3	3 0

With regard to the intended depth and width, the depth is being improved so as to have a navigable channel of not less than 22½ft. throughout at low water of ordinary spring tides. The bottom width in course of formation ranges from 500ft. at the sea end, gradually narrowing to 120ft. towards the upper end of the navigation. As to the past progressive improvement, in 1755 the river was in a state of nature, there being

in the 5½ miles from Glasgow downwards to Renfrew 12 shoals, four of them with each only 18in. at low water and one with only 15in. The first Parliamentary authority for deepening the river was obtained in 1770, empowering the Town Council to make the river from Glasgow to Dunbuck Ford, a distance of about 12 miles, at least 7ft. deep at neap tides. The work was begun in 1772. The next step towards further deepening was taken under the Act of 1809, authorising at least 9ft. at neap tides from Glasgow to Dumbarton Castle, a distance of about 14 miles. The third advance in deepening was authorised by the Act of 1825, sanctioning at least 13ft. at neap tides from Glasgow seaward to Port Glasgow, a distance of about 18 miles. The next Act dealing with the improvement of the river was that of 1840, authorising the deepening of the harbour and river throughout to at least 17ft. at neap tides, and laying down lines for future widening. With the exception of the Acts of 1857 and 1873, sanctioning special widenings at detached places, the Act of 1840, as continued by the Act of 1858, contains the authority under which all deepening and widenings have since taken place, and is still being carried out. It appears from what has been stated that the first deepening authorised was 7ft., the second 9ft., the third 13ft., and the fourth and last 17ft., and that under these powers the navigable channel of the river has been mostly, and is in course of being altogether, deepened to 22½ft. The progressive deepening of the river and harbour may be seen from the following figures:—

In 1821 the greatest draught of any vessel was	13½ feet.
" 1831	" " " " 14 "
" 1841	" " " " 17 "
" 1851	" " " " 18 "
" 1861	" " " " 19 "
" 1871	" " " " 21 "
" 1881	" " " " 22 "
" 1891	" " " " 23 "
" 1900	" " " " 26½ "

In the beginning of the nineteenth century high water took place about two hours later at Glasgow than it did at Port Glasgow. By the improvements up to 1837 this interval was reduced to one hour twenty-three minutes, and by the continued operations on the river the interval is now only one hour. Since 1755 the low water line has fallen at Glasgow the astonishing amount of about 8½ft., all due to the deepening and improvement of the river, this amount diminishing in a seaward direction. Since 1755 the bed of the river has been lowered as follows:—

At Glasgow	-	-	-	20 to 29 feet.
" River Kelvin	-	-	-	29 "
" Renfrew	-	-	-	28 "
" Newshot Isle	-	-	-	27 "
" Erskine Ferry	-	-	-	24 "
" Dungleass Castle	-	-	-	29 "
" Dumbuck Ford	-	-	-	27 "

and the general result is that the bed of the river from Glasgow to Port Glasgow is now practically level. With regard to the sea channel; from the lower end of the Clyde Navigation to the lower end of Greenock Harbour, a distance of four miles, a navigable channel has been dredged by the Clyde Lighthouses Trustees, with a depth of 23ft. at low water of spring tides, a minimum width on bottom of 300ft., and side slopes varying from 23ft. in depth for a minimum width of 100ft. on either side.

As to the harbour and docks: The limits of the harbour embrace about two and a-half miles of the river extending from Albert Bridge to the River Kelvin, with its quayage, and Kingston and Prince's Docks entering off the south side, and Queen's Dock off the north side. The harbour is divided into upper and lower. The upper harbour is the part between Albert Bridge and Glasgow Bridge, a distance of 800 yards. It has a quay 500 yards in length on a part only on the north side. The depth at low water is only about 10ft.; the headway of the centre arch of Glasgow Bridge is 18ft. at high water and 28ft. at low water. Thus the upper harbour is only available for small vessels. Still, there was a gross revenue derived from it last year of £3,164. The lower harbour embraces the river between Glasgow Bridge and the Kelvin, with the three docks: (a) It

Mr. T. R.  
Mackenzie.

26 Mar. 1901.

riverside quays, occupying the whole of the north and most of the south side, extends to 6,284 lineal yards. The earliest record of the length of quay is in 1792, when 120 yards were added to the then existing length of 262 yards, making 382 yards. In the extension from time to time of the riverside quays, four shipbuilding yards had to be acquired at considerable cost. The gross revenue from the riverside quays last year was £149,030. (b) Kingston Dock. Although the extension of the quays along the riverside sufficed for the development of trade for many years, the idea of a dock was early entertained; for so far back as 1806 Telford reported on the subject, which continued to be discussed from time to time, until in 1840 an Act was passed authorising the construction of Kingston Dock. I should here explain that this and the other two docks are really tidal basins, there being no gates or locks, and that the question of gates or no gates was carefully discussed many years ago, when the conclusion came to was that tidal basins were preferable, which has been the form of construction deliberately adhered to since. Although the Act was passed in 1840, Kingston Dock was not constructed and opened till 1867. It has  $5\frac{1}{2}$  acres of water space, 830 yards of quays, and has a depth of about 10ft. along the face of quays and 14ft. at centre of dock, both below low water. The quays are formed of timber wharfing; but the entrance, 60ft. wide, is built with masonry, and is spanned by a single leafed passenger and vehicular swing bridge, worked by steam power, for which no toll is charged. The gross revenue from the dock last year was £9,138. (c) Queen's Dock. The Act for Queen's Dock was passed in 1870, but it was 1877 before it was opened for partial use, and in 1880 it was wholly available. This dock is on the north side of the river; it has a water area of  $33\frac{1}{2}$  acres, 3,334 yards of quays, and has 20ft. depth at low water. The entrance is 100ft. wide; spanned by a single-leafed passenger and vehicular swing bridge, worked by hydraulic power, for which no toll is charged. There is an outer or canting basin 1,000ft. long by 695ft. wide, and two inner basins, the one 1,866ft. long by 270ft. wide, and the other 1,647ft. long by 230ft. wide, with a pier between them 195ft. wide. The quays are all of masonry, the greater portion being founded on concrete cylinders. The revenue from this dock last year was £107,434. (d) Prince's Dock. The Prince's Dock was authorised by the Act of 1883; but its form, before more than the entrance was partly constructed was materially altered by the Act of 1890. It was utilised in sections as completed, the first portion being occupied by shipping in 1892 and the last portion being ready for traffic early in 1900. This dock, which is on the south side of the river, has 35 acres of water and 3,737 yards of quays. In arrangement it consists of an outer or canting basin 1,450ft. in length by a width of from 500 to 680ft., and three basins each 200ft. in width and 1,200, 1,460, and 1,500ft. in length respectively. The north basin has a depth of 20ft., the centre and south basins 25ft., and in the outer basin the depth varies from 20 to 28ft., all below low water, the latter depth being given along west quay, which is devoted partly to the fitting out of the largest class of vessels, and accordingly is provided with a steam pillar crane capable of lifting 130 tons. The entrance is bell-mouthed in shape, with a minimum width of 156ft., and it is not crossed by a bridge. The quay walls are of masonry and concrete, all founded on concrete cylinders. This dock is being rapidly occupied. The gross revenue from it already last year was £100,293. When the dock is fully utilised I expect on a moderate estimate that we will get at least another £60,000 a year out of it. Except where open quays are necessary and more convenient, all the quays are provided with modern sheds. They are almost all single-storied sheds and 60ft. wide; but at Prince's Dock there are five two-storey sheds, one 1,664ft. long and 70ft. wide, and four of 1,152ft., 1,252ft., 1,442ft., and 1,476ft. long respectively and 75ft. wide. The sheds are usually placed 15 to 20ft. back from the face of the quay. The total floor area of the single storey sheds is 24 acres, and of the two-storey sheds at Prince's Dock  $22\frac{1}{2}$  acres, together  $46\frac{1}{2}$  acres. The quays are well provided with cranes. There are five steam cranes chiefly for lifting engines and boilers in fitting out new vessels, two of 130 tons lifting capacity, one of 75 tons, one of 60 tons, and one of 50 tons. For coal shipping there are four 20-ton hydraulic and two 25-ton steam cranes, and a 20-ton hydraulic hoist is about to be placed at Prince's Dock. At the General Terminus Quay the Caledonian Railway Company have five steam cranes for this pur-

pose. For the ore trade there are 23 steam and seven hydraulic cranes. For general traffic there are, besides those above mentioned, nine steam cranes and 24 hydraulic, ranging in lifting capacity from 15 tons to 35cwt. In some cases of appropriated berthage firms had been allowed by the trustees to provide and use their own cranes, which are all steam portable. Stevedores are allowed to use their own steam winches on the quays, and in many instances vessels' own gear is used. At the two-storey sheds, Prince's Dock, the trustees have provided shoots and lowering appliances for transferring goods from upper floors. The shoots are more in favour. They are very admirable appliances, I can assure you. I was in Liverpool the other day, and I mentioned to my friends there how popular the shoots are for lowering goods from the upper storey.

5010. Do you happen to know whether they are in use at Liverpool too?—I do not think so. At any rate, not to any extent if they are. For the weighing of goods, weighing machines are placed by the trustees around the harbour, and of the 30 machines 19 of them are suitable for railway wagons also. All the quays are provided by the trustees with water-supply pipes, the water passing through meters from the city mains; and the trustees have men in attendance to supply water to vessels at prescribed charges. The quays are equipped with hydraulic capstans where necessary, and planks, stages, and rhones also are supplied at prescribed charges. The harbour and dock tramway system, which belongs wholly to the trustees, is connected with the Caledonian, North British, and Glasgow and South Western Railways.

5011. With regard to the tramway system, I suppose you refer only to the dock tramways?—Yes, it is not the Corporation tramways. When I speak of tramways, these are our own tramways. Haulage is not done by the dock authorities. The railway companies run over and use the tramways, at a fixed uniform rate of toll of one halfpenny per ton, irrespective of description of goods or distance. The railway companies fix the charge to the public for the whole distance, including terminals.

5012. (Mr. Ellis.) Have you had any difficulty at all in working or allowing tramways to be used by the railway companies?—None whatever. The Olyde Trustees, do no haulage of any sort. Railway companies come on with the trains and work under regulations.

5013. Is that all under one superintendent?—Yes.

5014. And is the superintendent employed by you or by the railway companies?—By us; within our own territory we are the authority.

5015. And the railway companies come into your territory, but obey the orders of your authority?—Yes.

5016. Have they running powers?—Yes.

5017. But they do not control?—They do not control.

5018. And there is no friction?—No. I would like to explain here that the very moderate sum of one halfpenny per ton was introduced by the trustees in order to encourage railway traffic. We have very considerable powers under the Acts of Parliament to charge higher rates; but, in order to encourage railway traffic, we reduced it to this low figure. The harbour is provided with three graving docks alongside of each other on the south side of the river. Two of them enter off the harbour, and the third one is entered from Prince's Dock. The first dock was authorised in 1868, and opened in 1875, the second dock authorised in 1873, opened in 1886; the third authorised in 1890, opened in 1898. The leading dimensions of the docks are as follows:—

	No. 1.	No. 2.	No. 3.
	ft. in.	ft. in.	ft. in.
Length of floor - - -	551 0	575 0	880 0
Width of entrance at top - -	72 0	67 0	83 0
Depth of water on sill at high water springs.	22 10	22 10	26 6

No. 3 dock has a pair of inside gates, whereby it can be divided, and so form an outer division 460ft. in length, and an inner of 420ft. The timber trade is specially provided for at two places. At Yorkhill, on

the north side, there are 285½ lineal yards of quayside, and 14 acres of storage ground. At Shieldhall, on the south side of the river, there is a wharf 381 yards long, and 22 acres of storage ground. Deals are frequently discharged at the ordinary berths, but not for storage there. With regard to cattle lairage; the foreign animal trade is provided for at Yorkhill. There are 177 lineal yards of quayside, and an area of 23,596 square yards leased to the Corporation of Glasgow, who are the local authority under the Contagious Diseases (Animals) Acts. The local authority have erected there extensive lairage and other buildings. Irish cattle are landed at the ordinary berths of the Channel steamers. As to maintenance; for the maintenance and repair of the undertakings, there is a large staff of artificers and labourers. The trustees have a workshop on the riverside seven miles below Glasgow, in charge of the mechanical engineer, for the repair mainly of the dredging plant and ferry boats. From 300 to 400 men are employed there. There are also harbour workshops, under the engineer and mechanical engineer, with a staff of about 250 men, for the repair of cranes, capstans, sheds, wharves, etc. Several classes of material are provided under annual contracts, fixed after public competition, and other things are ordered from time to time after offers have been invited from the leading firms dealing in the material required. With regard to the dredging department; the dredging and maintenance of the navigable channel and of the harbour and docks is undertaken by the Trustees. They have a dredging department, under the engineer, with plant and employees. The cost of the dredging, so far as applicable to new works, is paid out of capital, and, so far as applicable to maintenance, which is the chief dredging expenditure year by year out of revenue. You can easily see that dredging expenditure is a very large item in the expenditure of the Clyde Trustees year by year. The river is practically altogether canalised the whole length of our jurisdiction, so that it always has to be kept up artificially. It really has been created.

5019. (Sir Robert Giffen.) How far does that go?—To Garrochhead, near Arran, on the way from Millport, going towards Arran.

5020. (Mr. Ellis.) Quite out to sea?—Quite out to sea. There is a great depth of water there. There was a good deal of agitation before that site was fixed. Until this change was effected we used to put our dredging into Loch Long, quite in the upper regions of the Firth, with villa residences on either side. The result of that agitation was that we were taken out of there, and we have now gone to Garrochhead; but we have introduced very much larger hopper barges, with the result that, although they go a longer journey, it practically comes out about the same.

5021. (Sir Robert Giffen.) It is not any more expense?—It does not turn out to be any more expense.

5022. (Rear-Admiral Hext.) What do the larger ones carry?—1,250 tons. I will hand in particulars of the dredging for the last 10 years, giving the quantities of silt and new material, and of dredging for third parties, and the total cost per annum.

(The Witness handed in a Table giving particulars of the dredgers belonging to the Trustees of the Clyde Navigation. See Appendix, 14th day. No. 6.)

(The Witness also handed in a Table of the quantities and cost of dredging and depositing by the Clyde Navigation Trustees' Plant during ten years ended 30th June, 1899. See Appendix, 14th day. No. 7.)

The schemes of the city for the purification of the river, which are well advanced, are expected to considerably reduce the amount of dredging required. The dredgings, since 1893, have been deposited at sea, at a site arranged with the Board of Trade, 46 miles from Glasgow Bridge.

(The Witness handed in a Map showing the old and new depositing places.)

As to workshops, the Trustees have repairing workshops on the riverside at Dalmuir, about seven miles from Glasgow, occupying about seven acres, and employing about 350 men. A chief part of the work there is the repair of the dredging plant. With regard to finance, down to the present time the Trustees have been authorised to borrow for capital purposes seven and a quarter million pounds, of which, after deducting the capitalised value of feu duties and sinking fund, one million is unexhausted. Of the five and three-quarter millions borrowed, nearly two mil-

lions are permanent funded debt, bearing interest at rates varying from four per cent., the maximum allowed by Statute, to three per cent.—the greater part being at the latter rate—or an average overhead rate of £3 6s. 9½d. per cent. The other three and three-quarter millions are on terminable loans for periods of years, bearing interest at an average overhead rate of £3 4s. 2d. per cent. The funded debt and the terminable loan are thrown together. We borrow at an average rate of 3½ per cent. Under the Statute the trustees may fund all or any part of the whole money borrowed or authorised to be borrowed, and the practice has been to fund debt when rates of interest were easy. All borrowed money, whether funded or repayable, irrespective of date of borrowing, ranks *pari passu*. The security is the rates, works, lands, and property of the trustees. As regards the sinking fund, it did not come into operation until 1884, all savings of income prior to that date being applied direct for new works. The rate of the sinking fund in any year is the average of the annual surpluses of the preceding ten years if there is as much surplus, and if not, the amount of such surplus. No sum exceeding £5,000 is allowed to remain invested or deposited longer than six months without being applied in paying off debt. By the sinking fund £311,600 has been applied in extinguishing debt since 1884. The total revenue last year was £441,419, the expenditure £399,182, and the surplus £42,237. I should like to explain with regard to the revenue. When we are adjusting our surplus we invariably give capital the benefit of the doubt. We do not charge capital excessively. We had rather put it to revenue than otherwise. That applies very specially to dredging. The leading sources of the revenue may be grouped as follows:—(1) Dues on vessels; (2) dues on goods; (3) miscellaneous. Of the total revenue from vessels and goods about one-third is derived from vessels and two-thirds from goods. The main items of ordinary expenditure are:—Interest and feu duties, £200,000; harbour maintenance and miscellaneous, £160,000; dredging, about £37,000. An auditor of the accounts is under the Statute appointed annually by the Sheriff. The progressive financial position of the Trust, at each decade since 1850 was:—

Year.	Total Debt.	Revenue.	Ordinary Expenditure.	Surplus.
	£	£	£	£
1850	678,659	68,875	51,301	17,574
1860	1,195,655	97,983	83,974	14,009
1870	1,834,667	164,093	124,106	39,987
1880	3,802,456	223,709	215,128	8,583
1890	4,614,748	356,202	326,787	29,415
1900	5,790,187	441,419	399,182	42,237

The annual accounts, with balance-sheet, are available to the public.

5023. (Sir Robert Giffen.) In this comparative table does the "ordinary expenditure" include what you set aside for the sinking fund?—No. The surpluses that you find noted in the last column are the surpluses struck before the sinking fund is paid.

5024. (Mr. Peel.) Is that all applied to the extinction of the debt?—No; I will give you an illustration. In the year ending 30th June, 1900, the surplus was £42,236, and that was applied in this way: £35,238 went to the sinking fund, and the balance of £6,900 was carried to revenue reserve account. Then I will also hand in a table giving particulars of the gross revenue and expenditure for each of the last ten years in the form of the Harbour return (No. 30), in Local Taxation Returns 302 III., 1899.

(The Witness handed in a Table showing the gross revenue and expenditure of the Clyde Navigation Trustees for the ten years ending 1899. See Appendix, 14th day. No. 8.)

The capital expenditure on works, lands, plant, etc., stands at nearly seven and a half millions. The difference between that sum and the amount borrowed, namely, nearly one and three-quarter millions, has almost all been provided out of surplus revenues. The principal items of capital expenditure will be found in the balance-sheet. Then as to rating, the existing rating powers of the trustees on vessels and goods are those conferred by the Act of 1858.

5025. (Chairman.) Are all vessels liable for dues?—Yes; all vessels of every description are liable for due.

Mr. T. R.  
Mackenzie.  
26 Mar. 1901.

Mr. T. R.  
Mackenzie.  
26, Mar. 1901.

The tonnage on which the dues are based is the net register tonnage. A separate rate is levied inwards and outwards. The rate is the same whether the vessel is loaded or in ballast. The geographical divisions are foreign, coastwise, and local. (1) Foreign:—The rate on a vessel arriving from or departing to any place out of the United Kingdom of Great Britain and Ireland is 4d. per ton each way. (2) Coastwise:—The rate on a vessel arriving from or departing to any place in the United Kingdom of Great Britain and Ireland is 1½d. per ton each way. (3) Local:—The rate on a steam vessel arriving from or departing to any place within a line on the Firth of Clyde between Ayr and Campbeltown is ¾d. per ton each way. Then as to launching rate, the rate on all vessels coming into the river or harbour from any shipbuilding yard eastward of the western limit of the trustees' jurisdiction is also ¾d. per ton. For the various rates mentioned a vessel may remain in the harbour 24 lawful days; but for every week thereafter an extra charge is made of 1d. per ton. All these rates are maximum rates, and are the rates actually levied since 1858 and at present. In addition to the above rates on vessels, power was given by the 1858 Act to levy a wet dock or tidal basin rate of 6d. per ton each way. This rate by the Act of 1868 was, as regards the tidal basins, reduced to 3d., and authority was also given to wholly remit the charge. This left untouched the rate for wet docks, but there is, as yet, no such dock. A discretionary power of exemption was conferred by the Act of 1899 in the case of vessels coming in with cargo and leaving again without having discharged any part of the cargo. A few such instances have occurred, and the dues on the vessels outwards have been remitted, the inwards rate on the vessels being levied. Vessels between the sea and places on the river above the trustees' jurisdiction, merely passing through, are under the Act of 1858 exempt from rates. In actual fact, this exemption had never much significance. Such instances were limited, by the depth of the upper reaches, to vessels of not more than a few feet draught. They were never frequent, and have ceased now. From what has been stated it will have been seen that all vessels of every description and size are liable for, and pay, Clyde dues. The exemptions are a trifle in money. They are quite nominal. Then as to goods. All goods conveyed upon or shipped or unshipped in the river or at the harbour are liable for dues. It will be observed that these words are notable, inasmuch as they cover goods not only shipped or unshipped, but also "conveyed upon." The dues are those specified in the detailed schedule annexed to the Act of 1858. They range from 3d. per ton to 1s. 6d. coastwise, and from 4d. to 2s. foreign. Coastwise and foreign are the only classifications. Unenumerated articles are by the 1858 Act put at 1s. 6d. coastwise and 2s. foreign; but the Act of 1868 provides that such articles are to be rated in accordance with the rate in the schedule on the articles nearest in description and value. The rates actually levied are in many instances considerably below the statutory maximum rates. The statutory rates and the actual rates levied at present are shown in contrast in a comparative rates book. No reduction or increase on existing rates can be made unless special notice of the proposed change is given to the trustees, and unless the resolution to make the change is carried by a majority of two-thirds of the trustees present at the public meeting of the Trust at which the business comes up. Notwithstanding the wide powers of rating goods just described, there are certain exemptions, viz.: (1) Goods not unshipped contained in a vessel coming to complete its loading; (2) goods not unshipped contained in a vessel coming to partially discharge; (3) goods not unshipped contained in a vessel coming to and departing from the harbour without breaking bulk; (4) goods transhipped either directly or after lying on the quay, but without having been removed therefrom, the rate one way only (always the higher) being charged; (5) goods in vessels using the upper harbour, which is the small portion between Glasgow Bridge and Albert Bridge, available for small vessels only, may in the discretion of the trustees be allowed to pass for half dues, provided the vessels ply only inside the cloch, which is about seven miles below the trustees' jurisdiction, and in actual practice only half rates are charged. Under Section 37 of the Clyde Act of 1825, total exemption from rates on both vessels and goods in all time coming between the Forth and Clyde Canal, and the lowest stage was given by payment to the trustees by the canal proprietors of a redemption price of £2,061. Under Section 108 of the Clyde Act of 1858 the trustees paid the magistrates and Town

Council of Dumbarton £5,000 as the price for the extinction of the right of exemption from payment of harbour rates at Glasgow enjoyed by the resident burgesses of Dumbarton. Although in detailing them, the exemptions on goods look somewhat formidable, they are not so in fact, as they amount to a very small percentage of the rates levied. Of course, there is the universal exemption at all British ports of Government vessels and Government stores.

5026. Now will you tell us about the stages of the river?—There is a provision in connection with the levying of dues on both vessels and goods, contained in the Act of 1858, dividing the river into three stages, viz.:—First stage:—From the upper limit of the navigation down to Renfrew. Second stage:—From Renfrew to Dalmuir Burn. Third stage:—From Dalmuir Burn to the lower limit of the navigation. The corresponding rates are:—First stage: Two-thirds of the full rates. Second stage: One-sixth of the full rates. Third stage: One-sixth of the full rates. The stages are shown on the map of the river. The practical operation of the stage rate is this:—The most of the traffic is between Glasgow Harbour, which is in the first or upper stage and the sea; hence the full rates are incurred and levied. Between the second or middle stage and the sea, the traffic is not of much account, being, in fact, confined to rafted timber for the shipbuilding yards and lightered traffic to Paisley. The Clyde Trust Revenue for the middle stage last year was £744. Between the third or lower stage and the sea the traffic is to and from Bowling and to and from Dumbarton, and the revenue last year for it was £864. Traffic arising and terminating in a stage is practically nil, and between the one stage and the other is infinitesimal. This is a very important point. Although the trustees' authorised dock at Clydebank is in the middle stage the levying of the full Glasgow rates is sanctioned by Parliament. The miscellaneous rates are not of much account. They are the usual things that are found at all harbours—graving docks, cranes, tramways, and so on. As to the collection of rates, the dues on vessels are paid by the shipowners or agents. The dues on goods imported and exported are sometimes paid by the shipping agent and sometimes by the owner of the goods, as may be arranged, but, in practice, mostly by the consignees, except in the case of the channel trades, where the goods are carried on through freight inclusive of Clyde dues. The tonnage of goods is checked by a staff of weighers in the service of the trustees, and where the goods are handled by licensed weighers and measurers, they supply returns. In practice no difficulty is experienced in the prompt collection of the dues on vessels and goods and all other rates, and scarcely any bad debts are made.

5027. Have you anything to tell us about reductions of rates?—The trustees have never during the last 40 years increased the rates on any article, but have from time to time made reductions. Special reductions were made during the last four years on the rates on iron, coal, grain, timber, cement, etc., representing to traders on the goods imported and exported last year a saving of over £28,000.

5028. Do you find that those reductions have benefited your trade?—Yes, very much.

5029. Will you give us the number and tonnage of vessels entering and leaving your port last year?—The number and tonnage of vessels entering and leaving the port last year are as follows:—

	NUMBER.			TONNAGE.		
	Coastwise.	Foreign.	Total.	Coastwise.	Foreign.	Total.
<b>INWARDS:</b>						
Sailing Vessels .	478	74	547	56,640	69,125	125,765

Graud Total .	28,594	2,966	31,560	4,729,254	4,031,439	8,760,693

5030. (Sir Robert Giffen.) Do these ships include all vessels, both foreign and coastwise?—Yes. These vessels include everything that uses our navigation. The passenger traffic now from, say, Brodmielaw navigating our river is very limited indeed. Most of the railway steamers ply from the lower ports; they do not come from Glasgow. We still have the "Columba," the "Lord of the Isles," and so on.

5031. And the boats going to the West Highlands?—Yes. I will hand in a table of the number and tonnage, on the graded scale, of vessels entering the harbour during the past five years.

(The Witness handed in a Table of Statistics of vessels entering Glasgow Harbour for five years ending 1900. See Appendix, 14th Day, No. 9.)

5032. (Chairman.) Now, will you tell us with regard to the goods?—The goods dealt with at the Port are of a very miscellaneous nature, the principal, according to the revenue therefrom, being fine goods, iron and steel, grain, timber, coal, ores, provisions, oils, and fruits. I will hand in an account showing the quantities of the various articles imported and exported for the last two years.

(The Witness handed in a specific account of the quantities of the various articles imported and exported at the Port of Glasgow for the two years ending 30th June, 1900. See Appendix, 14th Day, No. 10.)

I will also hand in a statement showing the progress of the harbour from 1860 to 1900, giving the length of quays in each year, the tonnage of vessels and goods, and the total revenues.

(The Witness handed in a statement showing the progress of Glasgow Harbour from 1860 to 1900. See Appendix, 14th Day, No. 11.)

Now I come to the question of the conduct of traffic, and will deal first with traffic under the Harbour Department. The Harbour Department is under the charge of the Harbour Master, who has 25 outdoor deputies stationed at various places. The berthing of vessels and the laying down of cargo for export is regulated by this department, and also the use of the graving docks. A special feature of the working of the harbour is that established regular lines, both foreign and coastwise, have berthage, with corresponding shed accommodation, specially allotted to them for exclusive use. Thus when, from the nature of their business, regular lines require and are able to occupy, berthage all the year round, they apply for and receive during the pleasure of the trustees, an allotment of berthage specially for themselves. The giving of appropriated berthage is authorised by statute, and is found to be a convenient arrangement in conducting the business of the Port. These allotted berths yield large revenues from the ordinary dues on vessels and goods, but no special rent or other charge is made for the accommodation. In this manner there are allotted berths as follows:—

Channel trades	-	-	-	2,565 lineal yards.
American lines	-	-	-	2,895 " "
Other overseas lines	-	-	-	1,999 " "

The coal and ore trades are specially accommodated on the south side of the harbour at the general terminus and Prince's Dock, and on the north side at Queen's Dock, about 2,686 lineal yards of quayside in all. The timber trade, both as regards berthage and storage, is specially accommodated at Yorkhill and Shieldhall, the total warfage being 667 yards. The foreign animals traffic is specially accommodated at Yorkhill, where the local authority (the Town Council of Glasgow) have lairage buildings. For casual traders nearly one-half of the whole quayside, measuring about 6,944 lineal yards, is left unappropriated. Then I will next deal with the conduct of traffic under the traffic superintendent's department. The traffic superintendent and his staff see to the timeous removal of the goods from his quays. That is always a delicate operation. The statutory time cargo may remain on the quay is 48 hours after discharge, four days being allowed for discharging; but on application by the consignees this time may, at the option of the trustees, be, and is in practice, extended as follows, namely:—

Above 100 tons, and not exceeding 200 tons,	48 hours.
" 200 " " " "	350 " 72 "
" 350 " " " "	500 " 96 "
" 500 " " " "	650 " 120 "
" 650 " " " "	800 " 144 "
" 800 " " " "	168 "

If more than four days are taken to discharge a corresponding deduction is made from the scale of extended

time for removal of the cargo. No charge is made till the extended time is exceeded, when what is known as quay rent is incurred till removal. The quay rent is a penal statutory charge of 2s. 6d. per hour for the first 24 hours, and 5s. for every hour thereafter, be the quantity large or small. The statutory charge is really 5s. per hour for the first 24 hours, and 10s. for every hour thereafter, but in point of practice the charge that we have created under a bye-law is what I have stated. Then I qualify that again by saying that the charge is invariably largely modified, on application, in every case by the Rates Committee, so that becomes really a nominal levy. For export cargo six days is the time for laying down goods before shipment. Although limited storage in sheds and on the open quays is sometimes allowed, and for short periods in special circumstances, the trustees have no warehouses in the ordinary sense, nor do private parties have them on the quays, the sheds being only intended for goods in course of import or export. The department has charge of the timber yards, the assignment and use of the cranes, and the regulating of the traffic on the tramway.

5033. (Sir Robert Giffen.) Have you much timber?—We have a considerable trade in timber. We have a large yard at a place called Yorkhill, and we have a very special yard at Shieldhall, which is exclusively devoted to the timber trade. It is rather lower down the river, perhaps about two miles from Glasgow Bridge. Then with regard to the loading and unloading of vessels, no labour for loading or unloading vessels is undertaken by the dock authority, except cramenen and coal porters attending the coaling cranes. The shipowner acts as master porter, making his own arrangements and charges. Stevedores, measurers, and weighers are licensed by the trustees under the statute, and no one is allowed to act as such without a licence unless he is in the regular employment of the shipowners in any of these capacities. The charges for the work are not regulated by the trustees. Under this method ample free competition exists. The work of loading and discharging at the harbour proceeds day and night as may be found necessary. It may be mentioned that a vessel was loaded with 8,400 tons of cargo and bunker coal in 56 hours by one appliance, an average of 150 tons per hour. There are instances of steamers in the American trade carrying 4,000 to 5,000 tons of grain and general cargo discharging in from 36 to 48 hours; and of steamers carrying the same quantity of ore discharging in 30 hours. Then, going to the question of policing, lighting, and cleansing, the harbour is policed by the marine division of the City of Glasgow. The total number of constables engaged at the harbour is 150. The lighting and cleansing of the harbour are done at the expense of the trustees. The trustees in respect of doing these services are allowed, under the Glasgow Police Act, 1866, an abatement of 4d. per £ on the gross annual valuation. Gas is still the chief illuminant at the harbour, but electric lighting is being gradually introduced, and is already provided at Prince's Dock and general terminus for the mineral quays by an installation belonging to the Trustees, and at Queen's Dock mineral quays by current purchased from the city. The cleansing is done by the city cleansing department, under arrangement with the trustees, at cost price. As to ferries and harbour steamers, below Glasgow Bridge cross-river communication is by means of ferries. These are both passenger and vehicular, and belong to and are worked by the trustees, with the exception of a vehicular ferry at Renfrew belonging to the Renfrew Town Council, and one at Erskine belonging to the late Lord Blantyre's successor. The charges for the trustees' ferries are considerably below the maximum authorised by statute, and are very moderate. In 1883 the trustees instituted, under statute, a system of harbour passengers steamers, known as "Cluthas." These cluthas carry from 235 to 360 passengers, and ply between Victoria Bridge and Whiteinch, a distance of three miles. There is a uniform charge of 1d. for the whole or any part of the distance. These systems of cross ferries and harbour passenger steamers are endeavoured to be conducted so as to meet their own expense. With regard to pilotage, pilotage of all vessels exceeding 60 tons net register is compulsory within the 18 miles of Clyde Trust jurisdiction, but is non-compulsory below that limit. The pilotage authority is called the Pilot Board. It is composed of 16 members, namely: Eight chosen by the Clyde trustees, of whom the Lord Provost of Glasgow for the time being is one; five chosen by the Greenock Harbour Trustees, of whom the Provost of Greenock for the time being is one; and the remain-

Mr. T. K. Mackenzie.

Mr. T. R.  
Mackenzie.  
28 Mar. 1901.

ing three are the Provosts of Port Glasgow, Dumbarton, and Rothesay, *ex officio*. The full extent of the Board's jurisdiction is the river and Firth of Clyde within a straight line drawn due east and west from the southernmost point of the island of Little Cumbrae, about 45 miles from Glasgow. The constitution and powers of the Board are contained in the Clyde Navigation Act, 1858 (138-143), and the Merchant Shipping Acts. They license pilots and grant pilotage certificates, and have a separate code of bye-laws relative to pilots and pilotage. The pilots are of two classes, namely, river pilots and deep-sea pilots. The river pilots are for the compulsory district, the deep-sea for the non-compulsory. The business of the Board is conducted by committees of management at Glasgow and Greenock, each dealing fully and exclusively with its own district, that of Glasgow being the compulsory and of Greenock the non-compulsory waters. There is a pilot master at Glasgow, with a deputy at Greenock, for the river pilots, and a pilot master at Greenock for the deep-sea pilots. There are fixed rates of pilotage. Ten per cent. of the river pilots' earnings is retained, out of which the expense of administration is defrayed, and the balance goes to the river pilots' superannuation fund. The good government and proper navigation of vessels between the western limits of the Clyde Navigation Trustees' jurisdiction and the western limits of their own jurisdiction is within the scope of the Board's powers; and under power granted by the Clyde Navigation Act of 1887 they have a separate code of bye-laws regulating the approach of steamers to the passenger piers on the Firth. The Board is in every respect a pilotage authority within the meaning of the Merchant Shipping Acts. The secretary of the Clyde Trust is by usage secretary of the Pilot Board. A copy of the bye-laws of the Board, including the pilotage rates, has been forwarded to the Commission. As to towage, the harbour authority does not provide towage. The tugs belong to private companies, who make their own charges, the harbour authority not interfering. These charges are shown on the card of towage rates, also forwarded. I understand that regular traders get considerable reductions on these rates, but that is a matter of private arrangement between them and the towing companies. Then I come to the harbour extension schemes. At present a new dock is in course of construction at Clydebank, for the accommodation, mainly, of the coal and ore trades, which will relieve the harbour further up, and set the mineral quays there free for general traffic. This dock, sanctioned in 1899, is on the north side of the river, about six miles below Glasgow Bridge, and will have about 17 acres of water area, and 1800 lineal yards of quayside. The entrance will be 200ft. wide; the outer basin 600ft. by 600ft.; the inner basin 1,700ft. long by 300ft. to 200ft. wide; the total area, including land and water, will be 60 acres. The Parliamentary estimate, including land, is £515,000 odd. In all, 60 acres of land are held by the Trustees in connection with the dock. In the present Session of Parliament, the Trustees ask sanction for the transference to them, of powers obtained by the Renfrew Town Council in 1899, to make a dock there about 5½ miles from Glasgow Bridge, on the south side of the river. In the first instance, about 50 acres of land will be utilised for this dock, and my Trustees have the option for three years of taking 60 acres additional riverside ground for extending the dock. Besides the areas at Clydebank, other riverside lands have been purchased by my Trustees, and are held in reserve for dock and wharf purposes. On the south side there are 134 acres at Shieldhall and Shiels, and on the north side there are 21 acres at Merklands, a little below the harbour.

5034. (*Chairman.*) Have you any remarks to make with relation to the specific account that you have put in?—No, except that it gives all the details, if anybody likes to look over it.

5035. We should like to know if you are of opinion that public ownership of docks is preferable to private ownership?—I should fancy that depends very much on the circumstances of the particular locality.

5036. As far as your own experience goes?—Glasgow, I think, is an instance of a successful harbour authority, originally exclusively municipal and then gradually modernised by the admission of other interests—shipping and ratepaying interests.

5037. Would you say that the Clyde is a case of a dock ownership transferred from a municipality to a Trust?—That is so.

5038. And that Trust has been found beneficial?—Very. It is not at all for profit. All that the Clyde Trustees have to do is this: they have to provide facilities for the business, and make sure that they get sufficient revenue to pay the interest on the capital borrowed; and they have always been able to do that very successfully.

5039. The navigation of the River Clyde by this Trust has been based solely on its own credit, has it not?—That is so. That is its special feature. There is no guarantee rate or municipal rate, or anything of that sort. But when you mention that, I may say as an illustration of the benefit that would accrue to a Trust like the Clyde Trust if there were a guarantee rate, in the first place that would make a Trust investment, and, in the next place, the Trust would be able to borrow more favourably. A case in point at the moment in Glasgow is this: the Municipality is advertising for loans for four years at three per cent., and in all probability they will get the money. We are advertising for money which we require at the term, and we have to offer 3½ per cent. So that, if you have a guarantee rate behind you it is always an advantage.

5040. (*Mr. Ellis.*) Even if there is a good margin you think it is an advantage to have it because of the possibility of your falling back upon it?—Yes. Mind you, I am not suggesting for a moment that Glasgow needs to make, or ought to make, any move in the direction of getting a guarantee rate, because we have always had such ample surpluses, and always been able to pay our way so thoroughly that we have never really seriously entertained the idea.

5041. (*Chairman.*) Will you describe to us the system of lighterage which is in force?—We have extremely little lighterage on the Clyde—almost none at all.

5042. Are any charges levied upon the lighters?—Yes; we have no dumb barges. We have nothing of that kind.

5043. Are any charges levied on the goods delivered into lighters?—Yes; but you will observe that when goods come in if they are put into lighters and taken away, then the dues are not charged on the goods both ways. They get exemption one way, whichever pays us best. If they come in foreign we charge the foreign rate, and when they go out by lighter the goods are exempt; but the lighter always has to pay.

5044. (*Sir Robert Giffen.*) Where do the lighters go?—There are almost none of them. They go, for instance from Glasgow to Greenock, or they might go to Paisley.

5045. There is no lighterage above Glasgow Bridge, is there?—No, there is no traffic at all above Glasgow Bridge.

5046. It is quite unlike London in that way?—Yes, it is altogether different.

5047. And you have no canals coming into Glasgow like the Regent's Canal in London?—No, there is nothing of that sort. Of course, there is the Firth of Clyde Canal, but it is down low, at Bowling.

5048. (*Sir John Wolfe-Barry.*) Do you light the Clyde and its estuary up to the limits you have given in your statement?—Yes.

5048A. Down to Little Cumbrae?—No. The Clyde Navigation Trustees' jurisdiction ends at Newark Castle, that is just immediately above Port Glasgow. Our pilotage is quite a different thing altogether.

5049. You light and buoy for the whole of your territory?—Yes, for the whole of our jurisdiction of 18½ miles.

5050. And outside in the Firth of Clyde?—The Clyde Lighthouse Trustees come in. They come in immediately below us.

5051. Are they a separate body?—Yes. They are a body very much like the Clyde Trustees. They are both elective and nominated.

5052. At any rate, they are two separate authorities?—Yes.

5053. And outside that again comes the jurisdiction of the Northern Lighthouse Commissioners?—Yes.

5054. Is there any inconvenience from having two authorities for lighting and buoys?—Not in our circumstances. Greenock and Port Glasgow and all the other different bodies on the Firth would be required to be represented on any Board dealing with the navi-

gation below our own jurisdiction, and that is why you have this separate trust, the Clyde Lighthouse Trust.

5055. Are the Clyde trustees represented on the Trust?—Not officially. For Glasgow, for instance, on that Board there are six elective trustees. These gentlemen are really shipowners, as I see by the list. Then for Greenock you have three elective trustees; for Port Glasgow you have two of that class; then you have trustees appointed by public bodies, for instance the Merchants' House at Glasgow one; he is nominated. The Glasgow Chamber of Commerce appoints two, and the Greenock Chamber of Commerce appoints two. Then you have a third class, trustees *ex officio*: the Lord Provost of Glasgow, he is chairman of the trustees of the Clyde Navigation; the Provost of Greenock, as chairman of the Port and Harbour of Greenock; the Provost of Port Glasgow as chairman of the Port Glasgow Harbour Trust, and Sir Michael Robert Shaw Stuart, of Argowan House; that is a proprietary interest.

5056. That body deals with the lights below your jurisdiction, does it?—Yes, the buoys, the removal of wrecks, and the dredging. They made the deep-water channel right along the front of Greenock so far as it is necessary, and they are bound to maintain it.

5057. Are they bound by statute?—Yes. They levy dues, but the dues, owing to the tremendous tonnage of shipping passing there, are extremely light. They are only 3d. a ton on foreign shipping, and the half of that for Glasgow, and so well off is this body that they have been able from the beginning of this year to make a further reduction of 25 per cent. So that in no sense does lighting become in any way burdensome.

5058. To what depth do they dredge their channel within that jurisdiction?—23ft.

5059. Not more than 23ft.?—No; that channel was imposed by Parliament; it is several years ago, and people were not looking forward then to the great size and draught of vessels that we now know we have to provide for. I would like to say, so far as the Clyde Trustees are concerned, that although they have not formulated any special scheme of widening and deepening beyond what I have mentioned here, they are certainly keeping their minds on this—that they must look forward wherever they can to making a navigation from bank to bank of 600ft. and a depth greater than what we are proposing, of 22ft.

5060. Do you mean the bottom width?—No; 355ft. at the bottom and 600ft. at the top.

5061. (Sir Robert Giffen.) Is there any authority that has to do with the navigation below Greenock?—It is open frith; it is what we call a pilot board. The pilot board is exclusively the navigation board; it licenses the pilots.

5062. But parts of the channel require to be attended to, do they not?—No; not below Greenock. They require lighting and buoying, but the Lighthouse Trust goes down as far as Cumbræ.

5063. (Sir John Wolfe-Barry.) In order to carry this out, you will not only have to deal with your own authority, but the authority lower down?—It would be of no use our doing a thing of that sort without getting an improved arrangement for the lower reach as well.

5064. Are the charges made by these authorities separately?—The Lighthouse Trust collect their dues and expend them.

5065. They are not made into a consolidated rate?—Nothing of that kind.

5066. You said that the Clyde trustees did not warehouse goods?—That is so.

5067. Are the goods taken by cart and lorry to private warehouses in and about Glasgow?—Wherever they require to be stored they are.

5068. I suppose a great deal goes away by train?—No; the great proportion of our traffic is cart traffic; the rail traffic is not very large.

5069. Where is it carted to—for consumption in Glasgow?—Largely, I think.

5070. Or for warehousing?—There are warehouses owned by public companies in Glasgow, but I do not think a great deal of it is warehoused. Of course, grain is warehoused, and things of that sort. These are the figures:—Irrespective of minerals and pig-iron, the

proportions of general goods dealt with by rail and cart are—by rail 272,380 tons, that is 5.9 per cent; by cart 4,341,814 tons, or 94.1 per cent., showing that it is really a cart traffic.

5071. Is that inward and outward traffic?—Yes, traffic of all classes.

5072. (Sir Robert Giffen.) But the railway would have a larger share of the mineral traffic?—Yes; all the mineral traffic is done by rail over those tramways.

5073. When the transfer took place from the Corporation to the Trust, was the Corporation in the enjoyment of an income from the docks which was sufficient for all purposes?—Yes.

5074. Were the rates at all called upon?—The rates were never called upon.

5075. Never in the history of Glasgow?—Never in the whole history of the Trust.

5076. But in the history of the Corporation?—No; the Common Good, as it is called in Glasgow, was responsible if there had been any shortage, but there never was.

5077. As they proceeded with these important dredging operations, they only proceeded at a rate having regard to the traffic, that it was not to be a burden which they could not bear?—Quite so.

5078. It was in proportion to the traffic of the port?—It was very gradual.

5079. They had the rates behind them at the time they started?—Oh, no.

5080. Were the rates of the Corporation never chargeable?—Never, from start to finish.

5081. Or the Common Good?—That is merely some estate or means that the city have which they can devote to general purposes; it was merely a security. The rates of the city were never at any time pledged for the Clyde Navigation Trust, and I think from the very beginning the Trust was called the "Parliamentary Trustees of the Clyde Navigation." It was always to that extent separate from the municipality.

5082. At some time or other, was not the Corporation responsible? Were not they the undertakers?—To the extent which I have said—the Common Good of the City.

5083. But nothing further than that?—Nothing further than that.

5084. Is there any borough rate in Glasgow—a rate for the benefit of the Corporation?—Of course, all taxes in Glasgow are to carry on the Municipality of Glasgow in its different aspects.

5085. That would be the Common Good?—No; the Common Good is a very peculiar thing. It is a Scotch estate, as it were. Our Royal Burghs had given to them grants of land in the olden time, and these became very valuable, and were feued out, and income was derived from them. That is the Common Good, something of that kind. That is an illustration of what the Common Good is; it is nothing derived from taxation. Would the Chairman allow me to say that, while I have said what I have said about there being no financial obligation on the part of the Corporation of Glasgow with regard to the Clyde Trust, all honour is due to the early pioneers of the Trust, who were the Corporation of Glasgow, and who to this day take the deepest possible interest in it, and are still largely represented on it, and who would be extremely sorry to see themselves deprived of that representation.

5086. (Mr. Ellis.) With reference to your evidence as to the constitution of the Clyde Navigation, let us get this clearly. When the Corporation of Glasgow obtained this representation of nine out of 25 no responsibility with regard to the property of the Corporation of Glasgow was carried over to the new body?—None whatever.

5087. You are going for some changes in the constitution. Are we to take it that from 1858 to the present time there has been no application made to Parliament for any changes in the constitution?—That is so, and, as far as I am aware, no agitation either. The agitation has been quite a recent thing.

5088. Has it been perfectly satisfactory?—Yes.

5089. The Trust have had full powers?—Yes.

5090. Have the outside public been satisfied?—There has been no notice, at any rate, of dissatisfaction.

Mr. T. R. Mackenzie.

26 Mar. 1901.

*Mr. T. R. Mackenzie.*

26 Mar. 1901.

5091. The procedure adopted is by Provisional Order. Is that under the new Scotch Procedure Act of 1899?—Yes.

5092. You prefer that to a Private Bill Committee?—I would not like to express any opinion on that point. We have had no experience of it yet.

5093. For reasons sufficient to yourselves you have chosen to go under that?—No, we had no choice in the matter.

5094. I will drop that point if that is your view?—We allowed the Chairmen of the Houses to do just exactly as they liked. We made no representation either one way or the other with regard to whether the inquiry should proceed in London or Glasgow.

5095. Has the Inquiry been opened?—Not yet.

5096. You referred a moment ago to outside agitation. Has that application arisen in consequence of something outside—some desire of other localities, for instance?—No, not localities—shipowners and ratepayers, who provide the income of the Trust, claim that they should have a larger representation than they have at present. They have nine out of 25. As to the outcome of the agitation and negotiations, the Clyde Trustees by a majority vote decided to agree to the admission of six extra shipowners and ratepayers.

5097. Then the Burghs of Govan and Partick, the County Council of Lanark, and the Glasgow Trades Council all petition for representation?—They all want to get inside the Clyde Trust.

5098. One can understand outside bodies. What is the Glasgow Trades Council exactly; is that what we understand in London as an association of trades' unions?—I do not think it is a corporate body.

5099. Is it, if I may use the term, capital or labour?—Labour.

5100. The Clyde Navigation Trust proposes to extend the three-mile limit for electors. Does it make any other proposal?—In what respect?

5101. As to further powers of any kind?—I think not.

5102. It is merely to extend the area?—At present it is a very limited area; it is only three miles outside the Parliamentary boundary, and in order to take people in directly who really do business with the port, and not to compel them to be represented by the agency vote, it has been thought to be a very wise arrangement to take the limits of our own territory and a circle round.

5103. It is very much like Glasgow extending its borders for this purpose?—Yes, the Port of Glasgow is doing so.

5104. It is a question of area; it is not a question of further powers?—It is not a question of powers at all; it allows a man within that area to be his own representative.

5105. Is the Provisional Order confined to that simple matter of extending the area?—No; the Provisional Order deals in the main with the transfer of the dock to the Clyde Trustees, and with the constitution of the Clyde Trustees in so far as the admission of additional members is concerned. This extension of the circle within which the electorate is to exist is incidental to the constitutional change.

5106. What I want to get at is this:—Is the body being recognised in any way as regards powers?—No; nothing of that kind.

5107. It would be merely added to it if that were carried?—With regard to the extension, I should like to make it clear that the only point is this. A man who at present is outside the three-mile limit, can only be represented as an elector by means of an agency vote. This enables all people residing or having

business within the extended area to be their own direct representatives.

5108. Now passing for a moment to the accounts. I think your capital expenditure up to the present time is £7,430,702?—Yes.

5109. £126,772 of which has been spent within the year?—That is so.

5110. You made a remark a little while ago about charging the dredging to revenue rather than capital. I see in the sum of capital expenditure for last year there appears to have been a sum of £7,000 only for dredging?—Yes.

5111. Is that all that goes to capital account for dredging?—In that year.

5112. In the revenue account you appear to have charged for dredging £36,956?—Yes, the difference of the whole account.

5113. Therefore all that justifies your remark that you rather load revenue than capital?—Yes.

5114. Those two amounts added together make the whole of what you have spent in dredging during the year?—That is so.

5115. There is an amount in your revenue account on the credit side for water, which I do not quite understand. It is £7,284; what does that mean?—We get water from the Corporation of Glasgow, and we sell it out again to the vessels; this is the income for that.

5116. (*Sir John Wolfe-Barry.*) You make a modest profit?—A modest profit.

5117. (*Mr. Ellis.*) Speaking generally, the accounts show a very healthy state of things financially?—That is what we think in Glasgow, at any rate.

5118. I am putting that to you as a question?—Yes, I think so.

5119. You have no difficulty in raising money?—None.

5120. (*Mr. Peel.*) With reference to the Traffic Superintendent's Department, you say that if more than four days are taken in discharging the corresponding deduction is made from the scale of extended time for removal of the cargo. The shipowner, you said, later on, acts as Master Porter and attends to the discharging of the vessel?—Yes.

5121. Therefore if he takes more than a certain time, the consignee is penalised; he has less time for taking cargo away?—As a rule you never find any delay on the part of the shipowner in discharging his vessel; he is very prompt.

5122. He might, perhaps, be unable to get the labour or something of that kind; there might be some difficulty, might there not?—I do not think so. We try to equalise matters as fairly as possible between the shipowner and consignee.

5123. Then for export cargo, you say six days is the limit of time for laying down goods. What charge is made for that?—Nothing. Supposing you know a vessel is coming in, the charterer goes to the Harbour Master and says such and such a vessel will be in to load up on such and such a date, and the cargo is allowed to be put down six days in advance, by degrees, and she gets her berth as soon as she arrives.

5124. And if it is longer than six days it is charged for?—No, we simply do not allow it in the working of the harbour.

5125. Is that for laying down on the quay?—Yes, for export.

5126. In sheds, too?—Yes.

5127. (*Rear-Admiral Hert.*) What distance do your dredging operations extend to?—18½ miles.

5128. Do you dredge for the whole of that 18½ miles?—Yes, the whole of it.

Mr. DOUGLAS OWEN called and examined.

*Mr. D. Owen*

5129. (*Chairman.*) You are Secretary of the Alliance Marine and General Assurance Company, Limited?—Yes.

5130. You have written several works, I believe, upon shipping, dock and port facilities?—Yes.

5131. And you have given considerable attention to the subject-matter of the present Inquiry?—That is so.

5132. You have also, at the request of Lord Rothschild, visited and reported upon the dock facilities at various foreign ports?—Yes.

5133. You have visited Liverpool, Bristol, Antwerp, Bremerhaven, Bremen, Hamburg, and Copenhagen?—That is so.

5134. Will you tell us what your opinion of the

position of London as a port is; do you think that it has arrived at a state when some remedy ought to be taken?—I think so, decidedly.

5135. Your opinion is that the conditions have changed?—The conditions have changed very rapidly of late, and will change more.

5136. Do you point out that the convenience of situation remains the same?—Yes.

5137. While the absence of competition and the fitness of the river and docks are no longer what they were?—That is so. The permanence of the convenience of situation will not of itself suffice. It must go in conjunction with the absence of competition and the fitness of the river and docks. As regards absence of competition, it is out of our power to prevent the new competition which has arisen out of altered conditions which London has been, and must be, powerless to influence or, at any rate, to control. The fact, looked in the face, is very grave for London. It is therefore doubly necessary that, as regards the fitness of river and docks, London should be beyond criticism. As regards absence of competition, formerly ships used to come to London, the principal market, and discharge there. Then their cargoes were sent across to Antwerp, Rotterdam, Hamburg, etc. As regards Antwerp, the abolition of the Scheldt dues at once made the port a competitor of London. Steamers went to Antwerp to discharge instead of to London. At Hamburg, Rotterdam, etc., competition set in with Antwerp, and now all are competing one against the other, and all with London. Vessels go direct to these ports, huge German cargo vessels, an entirely modern creation, and also British ships. These foreign ports are bursting with prosperity. Antwerp is turning the trade from her doors, and is about to add  $1\frac{1}{2}$  miles of new quay frontage. The same story is true as regards Hamburg, etc. They have stolen the trade which should have come to London. They are spending lavishly to improve their harbours; they are dredging feverishly and adding dock upon dock, getting bigger quay frontage.

5138. Is that a fact undisputed?—That is a fact.

5139. Could you enlarge on it, and produce any proofs?—Yes; I can produce some proof, I think. I will make a note to do so, but, in what I have said, I really have not done the subject full justice. They are going to add to the quays and make new docks, I believe.

5140. You say that Antwerp and Hamburg have taken trade which would otherwise come to London?—Undoubtedly.

5141. You tell us that the big ships now dread London?—Yes, they do dread London. I think, perhaps, that what I am saying rather relates to the future when ships will get bigger, than to the immediate present. I do not think that the condition of London has done any harm to big ships at this stage.

5142. You tell us there is competition going on at Liverpool and Southampton?—Yes.

5143. Your suggestion being that the trade, in the future, will be carried on by big ships?—Yes; and that London is becoming unfit for big ships.

5144. Will you give us your idea as to the general fitness of the ports?—This question of fitness divides itself under two heads. First of all, the fitness of river approach, and then the fitness of dock accommodation and of the dock system generally. I do not think I need say more than this, the tendency is to build ships bigger and bigger, and they inevitably will be built bigger and bigger until they are restricted by the size of the port that they have to visit. No doubt, if London is not made sufficiently deep, it will check these big ships that would come here, and there will be a tendency for them to go elsewhere.

5145. You do not go so far as to say that the mischief has already been done?—No, I do not; I do not think it.

5146. You tell us that you complain of nothing practical having been done to give effect to the recommendations of the Commission of 1894?—I feel very strongly on that; it is a very discreditable state of things.

5147. Have you any theory or proposals as to the raising of the necessary funds?—I suggest that the funds should be provided by those who will most benefit by their outlay. Principally and first come the consumers; next the shipowners, and finally the nation at large. The whole nation is interested in the maintenance of the Port of London.

5148. Would you prove that so as to make, for instance, Southampton and Liverpool agree? You say the whole nation is interested in the maintenance of the Port of London?—Yes; surely, whether people of the nation live at Southampton or Liverpool, London has always been the great port of the Kingdom; and it is in the interest of every Englishman that London should maintain its pre-eminence; I only mean it in that sense. As regards the nation, a lump sum or an annual contribution could be paid out of the national purse. As regards consumers, a toll or tax could be levied on the value of all goods coming to the port. It could be easily collected by a special Customs entry Stamp, to be affixed to every entry form. Taking 1,000 farthings to the £, and the London imports at £160,000,000, £160,000 would be raised by a stamp at a farthing in the £ on imports. Such a tax would be practically costless to collect, and would be absolutely unfelt by consumers. Similarly this would be the case with exports. In case of need, direct trans-shipment goods could be exempt.

5149. You have perhaps heard the evidence of Mr. A. L. Jones?—Yes; I was present, and I listened to it all.

5150. Would you agree with what he told us as to what we might call the "big ship" question?—Yes.

5151. Are ships relatively cheaper the bigger they get?—Yes. This means the cutting out of the smaller ships.

5152. How is that, will not the smaller ships remain for coasting?—They will, of course, always act as ferry boats to carry goods from port to port; but I am speaking rather of over-sea traffic. There must be always small vessels for small purposes.

5153. You tell us that the only limitations to be imposed on the growth of ships are the ability to find cargo at the loading ports, and the depth of the ports?—Yes. The principal European ports of the future must be the ports which can take the big ships. The trade will go in the big ships as far as it can be carried, and the smaller ships will have to do the distribution, as at present. Unless London can take the big ships they will go to Antwerp, Southampton and Liverpool, and these ports will then supply London. London, with its large population behind it, must always be a big port, but it may have to get its trade from better ports by short voyage vessels instead of direct. The effect of this on London will be that, instead of getting her cargoes at the lowest cost of freight and insurance, London will have to pay, in addition to the freight and insurance to the port of discharge in the big ship, the freight and insurance from the port of discharge to London in the coastal or cross-Channel ship; and, of course, the expenses of double handling. This is what London has got to face. It may be said, surely this is looking rather far ahead. Yes, but if this principle had been acted on half or a quarter of a century ago, things would not now have arrived at their present pass. It seems, then, to come to this, that the port of the future will be the port which can give the greatest satisfaction to the owners of big ships. Shipowners will not send their vessels to a port which obstructs or even imperils their ships and delays them, unless paid extra to do so. The practical result will be that lower freights will be quoted to popular ports. In these days, 2s. 6d. a ton more or less in freight may easily decide which port a ship shall be ordered to. The port which shipowners begin to hate is already in a perilous condition.

5154. Do you think they prefer Liverpool or Antwerp?—They greatly prefer Liverpool or Antwerp, and much as they dislike Hamburg, they would as soon send their ships to Hamburg as to London.

5155. What are the reasons for disliking Hamburg?—The reason they dislike Hamburg is, first of all, its geographical situation; and the river is bad, especially in winter, when it is particularly bad. The biggest ships, certainly most of the big ships, have to lighten about a couple of hours below Hamburg. Of course, that is very much against the convenience of shipowners; they dislike that. In winter, too, the ice is a very serious objection. Then over and above that, some shipowners complain that they are practically blackmailed by the cargo people in Hamburg. There is a certain fixed rule regulating, in the case of certain ships, the amount of discharge per hour, and although the ship may be capable of discharging the cargo with her own cranes very much faster, they

*Mr. D. Owen.* say, "No. Although you could get on quicker, you will have to wait for us or pay us for taking delivery quicker."

26 Mar 1901.

5156. Now what do you say as to London's sorts of trade?—There are four sorts of trade: (1) Destination, local consumption trade; (2) inland or coastal trade; (3) Continental transshipment trade; (4) oversea transshipment trade, for instance, the East or Australasia, via London to United States.

5157. (*Sir Robert Giffen.*) You make no mention of the export trade?—No; I simply had the import trade in my mind. Of course there is the export trade. Broadly stated, London's local consumption trade is secured to her, and probably this is the bulk of the trade of the port. So long as the local demand exists the trade must come to supply it. There is, however, always the danger, however remote, that local needs may be supplied through other ports. There is no doubt at all that a great deal of overseas produce is now transhipped to us from Antwerp and Hamburg, which formerly we used to receive direct from the East. Very much of this comes up the Thames in Channel or North Sea steamers.

5158. (*Chairman.*) What do you say with regard to inland or coastal trade?—Produce comes to London for the Midlands, for Bradford and other places. If it cannot come in the big ships of the future it will go to Southampton, Liverpool, or Antwerp. Already Liverpool is bringing wool from Australia to Liverpool, and thence by rail to Bradford, which used to come to London and go to Bradford by rail or coastwise. Bradford buys in Australia, and only gets her wool via London because, and so long as, London is a convenient port. In this sense London is not a market.

5159. Have you any remarks you would like to make with reference to the Continental transshipment trade?—No; I do not wish to say anything special about it.

5160. Then with regard to the oversea transshipment trade?—Considerable cargo comes to London from Australia and the East to be put on board steamers for America. This trade will come to England in the cheapest, that is the biggest, ships. If London cannot take these ships, the trade will go to Liverpool or Antwerp, and the transshipment will be made there. I have no doubt that large shipments from the East and Australia to America are in fact now made through Hamburg and Antwerp instead of through London.

5161. What do you suggest against the possibilities which you have foreshadowed under those four headings, Destination trade, inland or coastal trade, Continental transshipment trade, and oversea transshipment trade?—The first thing must be to make the river fit for the biggest ships. The second to remove the obsolete laws and customs which saddle shipowners with cargo charges on shore, thus disgusting the shipowners, and at the same time putting it out of the power of dock companies to earn any income on the goods so handled. I will explain this presently. Shipowners dislike the port, and with the competition of other ports, English and Continental, what it is, the position is full of gravity. It is said that it will cost £2,000,000 to bring the river up to date. Whatever the sum, £2,000,000 or £4,000,000, we should spend the money without hesitation. We ought to spend lavishly and at once. I should like to compare the conditions of London in former times. There are three kinds of ports: (1) Land carriage, as, for instance, Liverpool; (2) Water carriage, as, for instance, London; (3) Mixed carriage, as, for instance, Antwerp. That is as viewing them from within. Seeing them from without I should classify them as: (1) Destination port, for example, Liverpool; (2) Distribution port, for example, Copenhagen; (3) Mixed destination and distributing port, as, for instance, London. Ships carry to Liverpool cargoes wanted by cities back of Liverpool; to Copenhagen cargoes wanted by cities of the Baltic littoral, and by Scandinavia, as well as by Danish ports. Formerly London was a distributing and collecting port, as being the world's trade focus, the world's market. The cargoes came to the biggest market. The Low Countries and the Continent bought in London and sent goods to London for shipment. London was the "Goods Exchange" for Europe to a large extent. Foreign produce formerly was largely a prohibitive luxury only available to the few. Foreign ports had no use for shiploads: they wanted parcels; shiploads came to London. The development of production, cheapening of transport, abolition of duties, increase of population, spread of wealth, and the introduction of steam factories, altered the situa-

tion. The Continent became able to swallow whole shiploads, but Continental ports being undeveloped and unhandy, and the force of ancient usage being very strong, cargoes continued to come to London. In 1863 the abolition of the Scheldt dues threw open Antwerp, which at once began to compete with London. The Suez Canal was opened, trade increased enormously, and ships began to be ordered, with full cargoes, to Antwerp. The new departure extended to Hamburg, Rotterdam, Havre, and other places, and all these ports began competing furiously with one another, and all with London. Moreover, the practically new ports of Marseilles, Genoa, and Trieste now intercept cargo which formerly passed through the Straits of Dover, and these ports are greatly developing. This competition, powerful as it is, is still in its infancy. Continental ports are spending lavishly on improvements, and already British shipowners prefer Antwerp to London, and would as soon go even to Hamburg as to London. It seems inevitable that the business of London as a port of distribution will decline.

5162. Then do you say that trade is not being driven to the Continent?—No; I think it is nonsense to say that trade is being driven to the Continent. I say it seems inevitable that the business of London as a port of distribution will decline. The altered conditions are drawing trade to the Continent, and will continue to do so. Trade is drawn to the Continent, not driven from London. I think I am right in saying that the Chamber of Commerce says that bad management has driven the trade from London, and they say that is the sole, or at any rate the chief, explanation. I do not think so at all. My opinion is that the docks have very little to do with it. The reason is that the ships carry the trade direct to the Continent. Formerly this was impossible. Goods arriving in London which are taken to wharves or warehouses pay no dock charges at all.

5163. Do you know that that is really the case?—That is the case; that is what is ruining the docks. As it stands, the wharves can underquote the docks. Consequently, if goods are driven straight to the Continent, it is because, not merely the docks, but the wharves and the private warehouses are too dear. Therefore, if there be any blame it rests as much on the wharves as on the docks. My belief is that there is no blame either to the docks or to the wharves. Conditions have changed, adversely to London. I should sum it up with regard to distribution and general transshipment by saying that London is losing its supremacy, and will lose it more and more. London no longer holds the whole pack of cards. I think it is a serious position for London. Then as regards the prosperity of London, I say it is the magnitude and increase of the trade necessary to London which is largely responsible for the lack of enterprise under which the port is suffering. The port was sure of its trade, of which competitors could not rob it. The Continental ports were all in competition one with the other. They have gone ahead with extensions and improvements, while London has remained stationary, and now Antwerp has in popularity outstripped London. English shipowners prefer going to Antwerp. I repeat that this development of the Continental ports is being pushed forward with the utmost vigour. I will hand the Commission some tables which have been kindly supplied to me by the Board of Trade.

*(The Witness handed in a table of the tonnage of sailing and steam vessels which entered and cleared (with cargoes and in ballast) ports of the United Kingdom, Germany, Holland, and Belgium, in the years 1875, 1885, and 1898. See Appendix, 14th Day. No. 12.)*

I compare the years 1875, 1885, and 1898, to show the growth of the national trade comparatively in the cases of the United Kingdom, Germany, Holland, and Belgium. Comparing 1898 with 1875, the United Kingdom has increased 96 per cent., Germany 156 per cent., Holland 270 per cent., and Belgium 239 per cent. And whereas in 1875 the united trade to ports of Germany, Holland, and Belgium was only 44 per cent. of that of the ports of the United Kingdom, in 1898 it has become 67 per cent. by steady growth.

5164. (*Sir Robert Giffen.*) The absolute tonnage of the United Kingdom is as great as the increase in the other three countries together. Is not that so?—We have increased 44,000,000 tons, and they have increased 41,000,000 tons.

5165. It is the tonnage, not the percentage, that you

are dealing with?—Yes; your criticism is perfectly correct. Then I have another table taken from the Board of Trade "Merchant Shipping" returns, showing how the steam tonnage of the different States mentioned has grown, comparing 1898 with 1870. English tonnage has multiplied itself 5 times; German tonnage has multiplied itself 12 times; Dutch tonnage has multiplied itself 10 times; Belgium tonnage has multiplied itself 9 times.

*(The Witness handed in a table of the steam tonnage which entered and cleared (with cargoes and in ballast) ports of the United Kingdom, Germany, Holland, and Belgium, in the years 1870, 1880, 1890, and 1898. See Appendix, 14th Day, No. 13.)*

5166. How much of the tonnage for Belgium is Belgian, and how much of it is under the British flag?—I do not know.

5167. *(Chairman.)* That is a very material point?—Yes, I do not know how you will be able to get at it. Lamport and Holt of Liverpool trade from Antwerp, and some years ago they transferred for mail purposes a certain section of their discharges under the Belgian flag, and there are certain reasons why they should keep them there.

5168. *(Sir Robert Giffen.)* The question I put to you with regard to the previous table might also be put here?—Yes, it is even more applicable here. These figures are only intended to illustrate the development, during recent years, of the competition with which the United Kingdom has now to contend for the world's carrying trade. In 1870 England's steam tonnage was ten times as great as that of Germany, Holland, and Belgium collectively. In 1898 it was only five times as great. The trade of Germany, etc., has increased, and the shipping tonnage has also increased; a combination of cause and effect. I give these figures largely to deal with the argument that the defects of the dock have driven trade to the Continent. I say it is not so at all. The real reason lies in the development of those countries themselves, and not in our own deficiencies.

5169. *(Chairman.)* Then you agree with what has been said by the shipowners as to prompt despatch. You lay considerable stress on that?—I do not think the importance of it can be exaggerated.

5170. Would you go so far as to agree with the shipowners that they would not mind paying more if they could get the goods away quicker?—That is so; they only want to turn round and go away.

5171. Can you tell us about any of the suggested reasons for the delays in London?—That is a very big question, and yet it is not a difficult one.

5172. Perhaps you would rather like to put your remarks under two heads: one, the customs of the port; and the other, the physical disabilities, the two-storey sheds and the cranes?—Yes. Of course, you cannot compare London and Liverpool; the one is a water-carriage port and the other a land-carriage port. You cannot compare the two. Then with regard to the customs of the port, I should say that the shipowners have it quite in their own power to alter them if they please. They have only got to alter their bill of lading and then they can at once alter the custom of the port, which is at present what they complain of. It is in their own hands.

5173. But taking all the delays and defects of London, you would put your remarks under two heads: one, the customs of the port, the bill of lading, and so on, and the other, the complaints of defective machinery, or defects in navigation; physical difficulties?—Are you speaking of the river, or the docks?

5174. Both. I am talking of the port of London. The Liverpool story I think we have heard. You tell us that Liverpool is a shipowner's port, and you think that popularity among shipowners should be aimed at?—Undoubtedly.

5175. Now, will you tell us about the difficulties of the navigable channel of the Thames?—Really I am

not competent to speak upon that. I have only a *Mr. D. Owen*. general impression, or rather I may say a general conviction. I had rather the shipowners spoke upon that. 26 Mar. 1901

5176. Do you say that the cranes are altogether too few in number?—I am not at all sure of it. One goes down to the docks and one sees a long ship, which, according to one's experience at Liverpool or perhaps Antwerp, would want to have at least three or four or five or possibly six cranes at work at the time, and she has perhaps only one or two. Then somebody says, "There are not cranes enough at the dock," and sometimes the quays are so much blocked with cargo that the cranes cannot be moved about, and perhaps cannot be got to the particular ship.

5177. But that is a point upon which you do not lay great stress from your own knowledge?—No, I do not.

5178. Have you anything to say about the Liverpool bill of lading? Are you aware that the Atlantic Transport Company have written to the Press in justification of docks?—Yes; I have seen their letter.

5179. Stating that 14,000 tons of cargo have been discharged in three or four days?—Yes. I think that is a great feat, highly creditable to the dock company, and the dock company are justly proud of it. I think there is nothing to complain of. The explanation of it is that the Atlantic Transport Company use, I believe, the Liverpool bill of lading, which entitles them to discharge on to the quay at the consignees' expense of sorting and delivery; and the Line engages three or four whole sheds for one steamer. Then there are the cranes. I admit that Tilbury is fairly well equipped with cranes, but you will notice that the steamer takes three or four sheds. If the use of the American bill of lading were general, these sheds would not be available for a single steamer. That illustrates what I say, that a barge-carriage port can do with small shed accommodation, and that if discharge be made direct into shed, and the cranes be adequate, shipowners have no occasion to complain. Then as to the expense. I have stated that the Liverpool bill of lading is used by the Atlantic Transport Company, and I believe that over and above the freight the consignees pay 1s. 6d. per ton for sorting. Where does the dock come in? My impression is that it does not come in. The shipowners lease the shed area, and charge the consignees the actual cost of sorting, about 1s. 6d. per ton. Of course the docks get the shed area rent, but this is nothing like what they would get if they did the sorting themselves and charged either a profit or quay dues. As regards Tilbury Dock, I do not think I have anything special to say.

5180. Can you tell us any other causes of delay?—Shipowners complain greatly of obstruction caused by barges. They laugh aloud at the system which permits barges to obstruct the shipping of the port. It may be asked if shipowners complain of having to discharge into barges why should they not protect themselves by a clause in their bill of lading or charter party? Contract overrides custom. I believe shipowners would like to do so, but competition is too keen, and cargo interests are very united at any attempt to touch consignees' pockets. It costs 1s. 6d. to 2s. per ton to discharge on to the quay, and the cargo people prefer that the shipowners should pay it; but the Atlantic Transport Company has succeeded in overcoming this resistance. Of course, they are engaged in the American trade, and they have brought the American trade customs with them to London, and they have been strong enough to say, "We will carry on trade under these customs or we will not." Then to return to the question of delay. I have seen evidence on behalf of the London Chamber of Commerce complaining of great delay in discharging ships in London. Probably there was some foundation for that complaint. The Chamber ascribe the blame to the docks, but it may easily be that the docks had nothing to do with it. Quite likely it is the old question of overside discharge into barges, I think the Chamber should be asked to define their complaint.

5180a. There again the docks will have an opportunity of speaking for themselves?—Yes.

Recalled 5181.

(Adjourned to Monday next, April 1st, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## FIFTEENTH DAY.

Monday, 1st April, 1901.

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTETTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HENT, K.C.I.E.

CECIL OWEN, Esq., *Secretary*.

Mr. DOUGLAS OWEN recalled and further examined.

Mr.  
D. Owen.  
1 April 1901  
See 5139

5181. (*Chairman*.) Will you continue your evidence, Mr. Douglas Owen?—Perhaps I may remind your lordship that at your last sitting you asked me a question about Antwerp, and asked me to give further information upon that. May I do so now?

5182. Certainly?—If you remember, I stated that the Antwerp people were going to make  $1\frac{1}{2}$  miles more open quays. I made that statement because when I was over there about a year ago I saw the port engineer, and he told me so, and evidently it is approximately correct. I wrote to a friend of mine, a Mr. Franck, a leading barrister at Antwerp, asking him to get me the information. He saw the burgomaster, and I have this morning received this letter from him. He is a very accurate man, and I guarantee that his letter is accurate. He says: "I have just obtained from our authorities the following information: (1) We are building on the river, south from the existing quays, 2,000 metres more, which will be fitted with cranes, rails, etc. Of these 2,000 metres, 300 are in use, 250 more will be placed at the disposal of the municipality within one month, and then be fitted with cranes, etc., the remaining 1,450 metres will be finished about the end of the year, but it may take twelve months more before they are entirely furnished with cranes, etc. Taking into consideration the service rendered by the existing riverside quays, it is expected that these 2,000 metres of quays shall supply the necessary accommodation for some 2,000,000 tons (at the entry of the port) yearly increase. (2) No progress has been made with the 'Grande Coupure.'" I daresay you know about the Grande Coupure. It is a question of cutting a canal, and practically diverting the course of the river through this canal, and turning the canal into open quays. There is a good deal of objection to that. It is a question which has been dividing Antwerp for some years. It is really the history of their congestion. There has been no doubt that more accommodation was needed, and it has been a question of what form that accommodation should take. I believe the King's proposal is the Grande Coupure. Those who oppose it say: "We are dealing with a very dangerous and treacherous river, and if you are going to try an experiment with a river of this kind, you do not know what will happen." Belgium has really been divided into two parties on that question. Then he continues "My personal opinion of the position is that the Grande Coupure will not be made. The city is opposing the scheme as firmly as ever, although the expenditure to be made by the Government would not be less than some 100,000,000 francs, but the risk is too big, and the river too good to try such experiments. But the city is willing to take any other measures to enlarge and deepen the channel. This is my personal view of the situation. (3) Pending the debate on the Grande Coupure the Government and the Municipality have agreed on the building of a new dock which will have 2,000 metres

of available wharves, and supply accommodation for an increase of yearly tonnage (entering the port) of about 1,500,000 tons. This work has begun of about 150 hectares to be expropriated, of which two-thirds are already bought by the public bodies concerned. As soon as the remaining third will be public property the excavations, etc., will commence. The dock is expected to be ready with all accommodations within five years." Then as to the next question I asked him for some information as to the safety of the quays. He has given me information with regard to that, but that will probably arise later on, and then perhaps you will question me. Then he goes on after that question: "Nothing else worthy of notice has come within my knowledge. The accommodations, which are partly delivered, partly in a state of preparation, and partly resolved upon, and the preliminary measures begun with, will be able to meet within the next years an increase of 500,000 gross tonnage in the yearly movement of the port, which is more than we may dare to expect. Afterwards we shall be supplied with the accommodations to be built as soon as the Government and the Municipality will have agreed on the general plan of future enlargements." Then he adds as a postscript: "I have just received some more useful information, namely: 1st, that to enhance the place"—that is, the room "at the disposal of ordinary shipping it is resolved that the dock now in use for tank steamers shall be withdrawn from that destination, whereas special accommodations will be built on the river-side for the oil trade; 2nd, that with the same aim new accommodations will be built for barges and small craft in the vicinity of the southern quays." So that there are great measures in progress in Antwerp.

5183. When we adjourned at our last sitting, I think we were talking about the delays in the docks. Have you anything to add on that subject?—I say it is misleading to blame the dock people. If I may refer to another matter I may say that I am aware of the argument that the docks near the Tower are commonly full, that they supply the needs of a small class of vessel, and that therefore they are not obsolete; but that argument is unsound. The small ships use these docks, not because they (the ships) are too small for the deep docks, but because the big vessels cannot get into the Tower docks. If the navigable channel of the river were deep and wide enough, and the docks were deep enough, the big vessels would come into them. The docks of London will always be filled with small ships if the big ships cannot get into them. Small ships can fit in even into a full deep-water dock: you do not want a small dock for them. To argue that because a dock is full of small ships it cannot be regarded as obsolete, is misleading and dangerous. Then I made a note about the roadways, but I cannot speak with any great authority on that. It is rather a result of casual observation and information I have obtained.

see 2271;  
1751.

5184. Is it your opinion that they are not sufficiently wide?—I think they are entirely insufficient in the neighbourhood of the docks. I think the City Corporation and the County Council have let things slide in that respect. I think the evidence of shippers and carters would be useful as to this. Then with regard to the railway facilities, I consider them inadequate, more especially at the up-river docks. They would be more inadequate if barges were less general. Possibly the want of railway facilities has served to promote the growth of barge traffic. I think it likely that the railway companies in possession blackmail railway companies outside by making them pay heavily for the use of their metals. The result of that would be to drive the outside railway companies to carry goods to their own wharves or docks in barges, instead of sending them away direct. I know that in Birmingham, which has relations with London on a good many points, a strong feeling exists that the railway rates on goods from the Thames are unduly high. I believe that some question of the kind is in fact being fought out at the present time before the Railway Commissioners. I have not studied the subject, but I consider that it calls for investigation. It is most necessary that any obstacles to prompt clearance and dispatch of goods should be removed. Then I have a note on the subject of London's trade. It might be asked if London is so unsatisfactory a port, how is it that trade has so increased? Well, it must be remembered that London has not always been unsatisfactory. It is the gradual development of big ships which has brought things to a head. But the port was bound to grow as the population behind it increased. Increased population means necessity for increased supplies; and the increase of population has been vast. The following figures serve to illustrate the growth of London and the surrounding belt and residential cities fed by London.

	1801.	1891.
London and belt	1,115,000	5,638,000
Brighton	8,000	142,000
Hastings	3,000	56,000
Eastbourne	2,000	35,000
Reigate	2,000	22,000
Tilbury	700	12,000

5185. (Mr. Lyttelton.) What do you call the belt?—That I cannot exactly tell you. It is an expression used by the writer of the paper. It is an expression he uses for the radius.

5186. (Chairman.) I suppose he would now take in Surbiton, Kingston, Norbiton, and other places?—

5187. (Mr. Peel.) He probably means the area supplied by the water companies?—No; he has nothing to do with the water companies at all. I cannot say what he means. He speaks simply of the belt. He takes a certain radius, and I suppose he would take the same radius in 1801 as in 1891, or it would be no fair comparison.

5187A. (Chairman.) Where do these figures come from?—From a paper read on the 20th November to the Royal Statistical Society by Mr. Welton, F.C.A. The population from 1801 to 1891 has increased five-fold, and with it, of course, the four-footed population, all of which require to be fed. If the population has increased fivefold, consumption of foreign produce per head of population has also apparently increased fivefold or more, and this is only half the story. I give these figures as an illustration. Speaking of wheat and flour, the consumption of pounds in weight per head of population in 1800 was 35, as against 255 in 1896; tea, in 1800, 1½lbs.; in 1896, 5½lbs.; sugar, in 1800, 18lbs.; in 1896, 85lbs. The wheat and tea figures I have calculated out on the Blue-Book figures of the "Customs Tariff, 1800-1897." The sugar figures are worked out in the book itself. So that with, say, a five-fold increase of population, and a five-fold increase of consumption per head, the trade of the port will in the century apparently have increased by 2,500 per cent; that is, 25 needed in 1900 for every 1 in 1800. Of course, I am not speaking mathematically, I only want to demonstrate the necessary growth of the port. The enormous growth of the population, the abolition of duties, the cheapening of supplies, the opening up of new sources of supply, and the increase of wages

and wealth of the country are all causes which have combined to increase the pour of trade into London. Then I say that the destination trade of London is likely still to increase, but Antwerp, Hamburg, Rotterdam, and Bremen, and the Mediterranean ports will increase much more rapidly, and become more and more wealthy and important. There is room for all, but London's pre-eminence will become less and less. Would you also like me to give the history of the docks' impecuniosity?

5188. If it touches on your evidence, I should like to ask you what you have to say as to free water?—When the first dock was made—I think it was the West India—an Act was passed requiring all the West India trade to go into that dock. Of course, that would have the effect of ousting all the wharfingers who had previously taken the ships of that trade, so a clause was introduced into the Bill providing that the dock should be free water to the lightermen, so that they should be able to come in at any time—come and go. That was the object of that.

5189. Can you tell me whether you know of any dock in the world which is charged for sea water or river water?—I am not using it in that sense. I mean the use of the water was to be free to the barges.

5190. You have already touched on the subject of the Liverpool bill of lading?—Yes.

5191. Now will you tell us if there is any reason why this Liverpool bill of lading should not be more universally used in London?—It is the cargo people. As it is, the cargo people get their cargo delivered to them for nothing. The effect of the Liverpool bill of lading will be to make them pay for handling it on the quay, whereas at present the ship pays it.

5192. You have mentioned the custom of the port in your evidence several times, and many other witnesses have done the same thing. Is not the custom of the port simply an arrangement between the shipowner and the consignee?—The arrangement is founded on the custom. It has been always the custom in London that the bargeman shall receive his goods into his barge.

5193. It happens to be the fact that that is the case by arrangement between the shipowner and the consignee, but there is no reason why they should not have the Liverpool bill of lading if they choose?—Absolutely none.

5194. And you think it would be greatly to the advantage of the Port of London if that were extended?—Yes.

5195. (Sir Robert Giffen.) Did you observe the bill of lading which was put in by the manager of the General Steam Navigation Co.?—No; I did not, but that, I imagine, would not be the Liverpool bill of lading. See 34 0.

5196. It gave the shipowner the option of delivering the goods in any way he chose?—It would give him the option, but he would have to exercise it at his own cost, I take it.

5197. Perhaps you did not observe the clause?—No, I do not think I saw it. I do not remember reading it, but should certainly say it is not the Liverpool clause. The shipowner may insist on the right to deliver on the quay, if he pleases, but that does not mean that it is to be at the consignee's expense. That is quite another thing. It may be a convenience to the shipowner to put his goods on to the quay, and then into the barge, or into the barge direct, and he wants to be in a position to say to the consignee, "No, I am not going to put my goods straight into the barge. I am going to put them on the quay first, and then into the barge." Upon which the bargeman would say, "Well, do it at your own expense."

5198. (Mr. Lyttelton.) As a matter of history have you any theory to account for the growing up of this custom in London?—No, I should say it was always there, London always was a barge port. Barges would come alongside the ship when the ship came in, and the goods would be delivered overside. Then when the closed docks were made the barges had the right to go in, and the same process would go on I imagine. There was no occasion to deliver on to the quay. There was no hurry about the thing.

5199. Then do you consider the custom to have had its origin in the free water clause of 1799?—I think the custom was before the free water clause.

5200. (Sir Robert Giffen.) But still you have not

Mr.  
D. Owen.  
1 April 1901

Mr.  
D. Owen.  
April 1901.

compared the clauses of the bills of lading?—Not for this special purpose, but I am very familiar with bills of lading clauses of all kinds.

5201. It struck me that the clause which was shown to us by the manager of the General Steam Navigation Company gave the shipowner absolute power in the matter?—I do not know whether the General Steam Navigation Company's steamers go into the dock at all. For the most part they go to their own wharf.

5202. But still this was a general trade?—Probably it was a short sea trader's clause, not meant for the case of steamers going into dock at all. I do not know, but I should think it is very likely so.

5203. (Rear-Admiral Hext.) Then practically you advocate the Liverpool bill of lading and custom because it gives quicker dispatch to the steamers?—Yes, unquestionably.

5204. (Chairman.) As to barges, you told us that when they come into the docks they for the most part pay nothing at all?—Yes, that is so, I believe. There are certain rights of charge, but if they are exercised at all I do not believe they amount to anything.

5205. Now, as to the practical result of the 1799 Act?—That means that the barges to the number of some 142,000 in a year pay little or nothing to the docks, and their cargoes similarly pay nothing.

5206. Who pays the barges?—In most cases the wharfingers pay them. Having no cost of dock construction on them, the wharfingers can afford to bear the lighterage themselves in order to get the goods. They can afford to under-quote the docks and fetch the goods away from the docks at their own cost, without charging the goods owners. The result is that the docks have been starved, and that money which ought to have been spent on them has not been spent, with the result that the docks are greatly behind the times, and that shipowners are highly discontented with the port. But shipowners have no right to complain, it is largely their own fault. Of course, it is their own fault; but it may be from pressure put on them by cargo owners. If they adopted the Liverpool Bill of lading they would escape paying the cost of sorting and delivery, and would have no obligation to discharge into barges.

5207. Why do they not?—It is very hard to say. People in some cases are very ignorant of the strength of their position; but, more especially, I think it is the pressure of cargo interest. The cargo interest is not generally united, but in a matter of that kind they call a meeting at Cannon Street and become one man to put pressure on shipowners.

5208. Will you tell us your opinion as to the suggestion of a tax on barges?—Personally, I am opposed to taxing barges. In my idea they might as well tax the carts and trucks that come on to the dockland. It is a mistake to tax facilities. Barges are the backbone of the port, and the port owes much of its prosperity to them. Barges now are very large, and are growing larger, but that makes no difference. It is better for the dock companies; for it is better to have one big barge than two little ones. As it is, the docks are too full of barges. I would put a toll on all goods in barges, and would treat barge goods the same as wheel goods. I would no more tax barges by water than carts by land, and would no more allow goods to come free by water than by land. I would be consistent. I would put a toll on every package that uses or derives benefit from the docks.

5209. The same as at Liverpool?—Yes, the same as at Liverpool. I would render the use of barges less necessary by increasing and throwing open the railway access to the docks; but I am decidedly opposed to a tax on barges. I would give barges the utmost facilities, and would study the well-being of barges in London the same as Liverpool studies the well-being of the ships; but I would frame regulations for them, and would entirely alter the present system of licensing lightermen. It makes the lightermen overbearing autocrats, monopolists who practically tyrannise over the trade of the port. Of course, on this point, wharfingers can give better evidence than I can.

5210. We have already been told that every package that comes to Liverpool waters, whether to the river or to the docks, has to pay dues. You approve of that, do you?—Yes, and on that depends all the prosperity of Liverpool, which should not be forgotten.

5211. Do you think that the increase in the size and draught of ships has greatly increased the cost of working the docks?—Yes; there is no doubt about that.

5212. But you think that is a matter more for the docks?—Yes.

5213. Now will you give us your opinion as to the advisability of a trust?—I believe in a trust entirely in principle, but as regards London I do not think the present is the time for the change. If the docks were making large profits and were diverting from the public users of the dock money which ought to go in the reduction of the rates, I should say yes, make your trust, you cannot make it too soon. But the boot is entirely on the other leg. The docks are working at a loss. At any rate, I submit that the position of the port now is a very critical one, and I think for that very reason it is not a time for swapping horses. The critical condition has nothing to do at all with the system of ownership or management. It has existed for 100 years, and London has prospered under it.

5214. But not necessarily by reason of it?—No, not necessarily by reason of it. I grant that.

5215. Do you think it would be difficult to convert the London dock system into a trust of any sort?—I think it would certainly be difficult to do it all at once at any rate, and I do not see what would be the advantage. I do not see that a trust in the present state of affairs could give any advantage to London which the private ownership does not give. There is no reason why with restricted powers of absorbing profits a private ownership should not be as satisfactory as a trust. The Thames Conservancy was a trust, and the Metropolitan Board of Works was a trust. It seems not impossible that a private syndicate charged with the improvement of the Thames, endowed with the necessary powers, and limited as to its share of dues, might have been as satisfactory as the Thames Conservancy.

5216. You say the prosperity of Liverpool is due to the fact that they can charge on every package?—Yes. The management of the trust consists entirely of dock ratepayers. There is no County Council, no Corporation, no municipality in it at all. Everybody understands his business. I say that what is the matter with the London docks is not the management, but the want of money. Put the present owners into a position to earn money, and they can do all that a trust could do. The formation of a trust would in itself be very costly, and the first step of the trust would be to increase the dock charges right and left. One very important step on the road to a trust has already been taken by the amalgamation of the two biggest docks, the London and the India. If the other two docks could be merged with them, the difficulty and the cost of converting the whole of the docks into a trust would be greatly diminished. I think that ought to be done. I think all the docks ought to be merged into one. If the Articles of Association, or the statutory powers do not authorise further amalgamations, then an over-riding Statute should be made giving the powers, and some kind of pressure should be exercised to induce the dock companies to fuse themselves. I see no present advantage in a trust. It will take years to bring the docks up to date, and the present experienced managers can do the work better than anybody else. All they want is money.

5217. Do you propose any alternative?—Yes. I would give the docks the needful increased powers of earning, with a stipulation requiring certain annual expenditure on improvements and new works; also with the provision that when the property shall have reached a certain value the Government or City authorities shall be empowered to take it over. Meantime the system could be gradually so arranged as to facilitate conversion into a trust eventually.

5218. What are the needful powers to which you refer?—First of all I would enable the dock companies to charge an octroi. I have already explained that in my writings, so I think you are probably familiar with it.

5219. I take it from what you have told us that your opinion is that the unification of responsibility and authority is a great advantage?—Undoubtedly.

5220. You plead for the constitution of a consolidated authority?—I think so. I think there should be one head of the whole of the docks, as Mr. Burton, of Liverpool, said, or as one of the shipowners, Mr. Jones, said. When he arrived in Liverpool, Mr. Jones said, he had only to go to a head man, and he would have a berth allocated to him at once, and in London there are so many heads to be consulted.

5221. When you say that, you are talking of the docks?—Yes.

5222. I am talking of the whole authority?—That is another thing. I misunderstood your question. I do not myself see any advantage, at any rate any immediate advantage, in having the same management for the docks and the river, to the port generally. I think at some future time it would be an advantage, but I do not see that there is anything to be gained by it now. My own idea is that it would be much better, in the present state of things, to cast one's plan for the formation of a universal trust at some date or certain time to be fixed, and in the meantime smooth away these difficulties to which attention is called. In my opinion, some of them have had a great deal too much attention called to them. With regard to several things which have been mentioned in writings, I have never heard of any inconvenience being suffered. I think the thing is exaggerated, but, at the same time, I say there are certain points in which the authority should be made more uniform.

5223. You do not think it is a *sine qua non* that there should be one consolidated authority over the Port of London?—No. I think it would be a good thing in the future, but if we had it to-morrow I do not think it would make any difference to the Port.

5224. Then your suggestion at present is limited to the fusion of the dock companies?—So far as the Port is concerned I would fuse the dock companies, and I would give them power to earn as much money as would enable them to bring the docks up to date. That is the first thing that is wanted. If you have a trust, you would have the same thing.

5225. When you speak about bringing the docks up to date, do you include under that head the necessity of dredging the river, which has been pointed out to us several times?—No; the dredging of the river has nothing to do with the docks.

5226. Who do you suggest should pay for that?—It is a question of raising dues from somebody. At present the Thames Conservancy has the power, but it does not exercise it, because it has not got the money.

5227. Do you suggest that the *octroi*, which you tell us ought to be put on all goods, should pay for the dredging of the river?—When I was speaking of the *octroi* I was referring rather to raising money for dock purposes. My idea is that the funds should be provided by those who are the most benefited by the outlay.

5228. Then you say, I understand, that it will take years to make the docks up to date. Will it be possible to have wharves, as at Antwerp?—The wharf question is a very big one. I do not see what you would gain by it at all. There is a good deal of misapprehension about open quays. Several witnesses have said: "Oh, yes, we should like open quays. They are a great advantage, because they save the cost and delay of docking and undocking, and the delay and expense of discharging." For the life of me I cannot see how it is to be done. And further they say—and this is the great charm of the programme—that a ship can come along a wharf at any state of the tide. A ship cannot come anywhere unless she has water to bring her there. Take, for instance, the Albert Dock. At low water off Albert Dock there is, say, 12ft.—I am not sure of the figures, but call it 12ft. Supposing you had an open quay where the dock entrance is, how could a ship come there at any state of the tide? How could a 25ft. ship go into 12ft. of water? It is a fallacy. There is no difference between coming to the entrance of a dock lock and coming to an open quay. It is absolutely the same thing: you must have water there. Take Tilbury, for example. There are 26ft. of water, I think, at the entrance of Tilbury Lock. As a matter of fact—I do not know whether it is a matter of practice or not—a ship drawing 23ft. could come in at any state of the tide. How would she be better off if she had an open quay there? What is the difference? There is not any. The whole thing is a fallacy, as far as I can make out.

5229. (Rear-Admiral Hext.) Do you know any open docks in the world—I mean docks with no gates?—Tidal docks?

5230. Yes. Do you know any tidal docks in the world working where the rise and fall of the tide is very considerable—say 20ft.?—No, I do not think so. I do not know any. Of course, at Antwerp sometimes on the open quay you may at certain states of the tide or wind get as much as 21ft., even as much as 25ft., they tell me; but ordinarily I think it is 13ft. May I say

this as regards open quays? At Antwerp they have an open quay, and at Bremen and Hamburg they have tidal docks. Why they should have a river quay at one place and a tidal dock at the other I do not know; but it has occurred to me that the reason is probably this, and if so it is material for London. In the case of Antwerp, Antwerp is right on the stream. She can carry her open quays right above on the river, or right below on the river; it does not matter. But at Hamburg and Bremen they are at the end of their tether as regards navigation. The navigation comes up to them and cannot get a bit further, and I suppose they know that they cannot, except at very great expense of dredging, carry their river quays up above the town, and so, in order to keep the port compact, they cut tidal docks. At Bremen, and more especially at Hamburg, it is a series of tidal docks like the palm of one's hand. There is the harbour, and the tidal docks running out like one's fingers all round. Hamburg is convenient. I think there are ten miles of tidal dock quays there. If you imagine those ten miles carried down the river, Hamburg would be a good deal less compact and convenient. Take London: if London were down at Gravesend, and it were decided to have either tidal docks or open quays, it would not matter whether you carried your quays up the river or down the river. It would be much about the same thing. But London is already far beyond the deep navigation. It is quite out of the question to carry open quays above London. If you are going to carry them down the river the front is already taken up for some miles, and you would have to carry the quays for miles down the river. What would be the good of them when you have got them there? You must have the depth of water. Supposing you have a quay with 16ft. at low water, what is the good of that to a ship drawing 25ft.? As far as I can see, with a ship drawing 25ft., no quay would be any good above Tilbury. Now, I should like to refer to the question of expense and time. I cannot speak as an expert, but my impression is that when a ship goes into one of these London Docks it takes her half an hour, or possibly three-quarters of an hour, and the same coming out. That is not a great amount of time to save. When she is inside she has all the advantage, and the comfort and security of a closed dock, with no rising or falling against quays. I think the shipowner would very gladly submit to the delay of half-an-hour, or three-quarters of an hour for the sake of the advantage of a fixed quay, and lying in security in a dock. I do not see where the advantage as to time there comes in, particularly. Then with regard to discharging; one of the witnesses said it would save the time of discharging in a dock. It seems to me that if you get a discharge at one side of a ship on to a quay, and a discharge on the other side into barges in the river, it does not make any difference whether that is a tidal dock quay or a closed dock quay. There is one side of the ship against the quay. Whatever the nature of the quay, you have some kind of accommodation, and on the other side as regards the water it is much the same. It seems to me that it would be against the convenience of discharging to discharge into a stream running at three or four knots an hour. It would at any rate be so in the case of a ship with general cargo. We know from experience in the docks, and anybody can see it, that there would be a certain barge alongside, and certain cargo would be discharged into it; then all at once the end of that lode or vein of cargo is reached, and they say to the "Kate," or the "Jane," or whatever it may be, "You haul off and let the 'Alfred' come along." Then the "Alfred" comes in, and that process goes on all the time. How would that be in a stream running at three or four knots an hour? They would say to the "Jane," "Haul off": then what is to become of the "Jane" in the stream? She would be carried away by the flood. From whatever point of view you look at it, I do not think there is any gain in open quays at all. I myself started with a contrary opinion, but I have changed my mind for sufficient reason. Then with regard to the cost, I asked the port engineer at Antwerp, M. Royers, when I was there, what the cost was, and he said: "The cost of our quay accommodation in Antwerp is about three times what the dock accommodation would cost—some of it five times." I did not ask him why five times, but if you will allow me I will read an extract from a letter in the "Shipping Gazette," I think about the 1st February, from the Antwerp correspondent of the "Gazette":—"Reference was recently made in this column to 2,000 metres of river quays which the Government has been constructing for the past three years at the southern extremity of

Mr.  
D. Owen.  
1 April 1901.

Mr.  
D. Owen.  
11 April 1901.

the river front. This measure was taken to temporarily relieve the traffic while some steps were taken as to the final extension of the port. Owing apparently to defective engineering, the first 100 metres finished broke away and slipped into the river about a year ago. This involved a serious delay, and has only just been remedied. Another accident occurred yesterday to further delay the completion of the work. For a distance of over 150 metres the land along the quay wall has sunk to a distance of more than three feet. Steamers were alongside working, and the railway lines and movable cranes were in jeopardy for some time, though some 200 workmen were speedily sent to the spot to fill in the sunken ground." That is only from a newspaper, and, of course, I know it is not evidence, but in writing to Mr. Franck I said I should like to know if it was true, and I asked him if there had been any accidents happening to the quays, and he said: "There have been two accidents at the South Quays of which I spoke. The first one was important, and delayed the delivery of the work; the second one seems of less consequence." So that I think one may take it that the newspaper report is true, that 100 metres slipped bodily into the river and 150 metres settled 3ft. And one must remember that the Antwerp people are not tyros in this kind of work; it is their speciality—they understand it. It is a very serious thing to have a quay slipping into the river, so one can understand that when the Dock Engineer told me that the quays had cost three times, and in some cases five times, as much as the docks, he may as regards the latter have had in his mind parts where the quay slipped bodily into the river. Of course, I do not know how the foundations of the Thames may compare with the foundations of the Scheldt, but that has something to do with it, no doubt. In any case, it seems to me that the cost of building quays must be greatly more than that of constructing closed docks. One of the witnesses the other day, Mr. Varco Williams, seemed to like quays, but he said he had found the cost to be prohibitive; there was a difficulty about the foundations, and it meant that the walls had got to be 50ft. in height. That is quite true. Of course, a closed dock impounds the high water. Supposing you want to build a dock to contain a ship drawing 25ft., and you excavate the dock to that depth, you impound the high water into it, and the ship lies there. Supposing there was a rise and fall of 20ft. in the tide, and that ship were to lie outside the dock in the river, she could do so, assuming there was the depth. But there would be that to be added to the dock quay. The dock is up in the air, and the ship is lifted up to it from the river. She is only there at high water. You have all the difference between low water and high water, or something like it. The quays would be like fortifications, and, of course, if you have a shifting foundation, or an unstable foundation, the cost would be very great. Also the deeper you get with your quay wall, obviously the greater weight there is to carry and the thicker it has to be, and the cost of material would be very great, and the cost of the labour would be very great. But over and above that the actual cost of construction is very much in favour of the dock. If you are going to build a dock you build it on dry land. You excavate your quay, and you build your quay on dry land. If you are going to build it along the river front, a great part of it has to be built underwater. The dock engineer at Antwerp told me it had to be built with the assistance of compressed air. I dare say caissons would do, but in either case it must be exceedingly expensive. So that I think when he said the cost of the quay walls at Antwerp was three times and sometimes as much as five times the cost of the dock, it is not difficult to understand. So that I think when these London witnesses come to the Commission and say that they recommend Antwerp quays for London because of the cheapness of building, they cannot have considered the subject at all.

5231. You deny that that is the fact?—Yes, absolutely.

5232. Do you know any instance in London of quays having collapsed?—No, I cannot imagine that a quay built on dry soil would collapse. I know there were difficulties at Tilbury, and I think the quays there were built on piles.

5233. Have you anything to say with regard to the cargo charges, you told us that in your opinion the labour charges have practically nothing to do with the question?—I do not think they have.

5234. What have you to say with regard to the charges made by the dock companies and lighters?—As regards the charges for lighterage, I heard bitter complaints at Bremen, though my own opinion is that they were exaggerated; but with lighterage a close borough, a

monopoly to the freemen of the Watermen's Society, it may easily be that lighterage is dear in London.

5235. What is your opinion as to the lighterage system?—I think it is a farce. It is altogether out of date. At any rate, that is so as regards the Watermen's Company.

5236. Have you read the evidence of the Chamber of Commerce with regard to dock charges on cargo?—Yes. As far as I understand it, the Chamber of Commerce complains of excessive quay dues. I have not investigated the complaint, but if two-thirds or three-fourths of the goods which use the docks pay nothing at all for the use, it would not be wonderful if the dock companies saw no reason for making a very light charge on the remainder. If they are to charge nothing on waterborne goods, and next to nothing on quay goods, how are the docks and quays to be kept in order? It seems to me very much like the case of water companies for every four pints of water they supplied giving three of them free, and only charging on the fourth. In that case I think we should not get the fourth very cheap. But I imagine that the competition of the wharves, which can get the goods free of quay charges, is likely to be a powerful lever in preventing the levying of exorbitant quay dues by the dock companies. There is no reason why goods should pass over dock quays even if required at an up-town warehouse. The consignee can send his barge for them and take delivery into his carts across a wharf quay. As a broad statement, the allegations of the Chamber of Commerce seem too vague.

5237. Have you made any comparison of the dearthness of the docks of London as compared with those of Liverpool?—Practically there are no charges in London. I have already explained that in London the shipowners have to pay 1s. 6d. or 2s. a ton after discharge, cargo charges, which in Liverpool fall on the cargo owners. So far, therefore, as concerns cargo which goes to wharves, etc., in barges, the cargo people pay nothing to the docks at all. It is the ship owners who exclaim at the dearthness of London, and justly. My own belief is that cargo-owners use the shipowners' cry to strengthen their own protestations against any proposal to put on to cargo dock charges which the consignees would have to pay. I believe the cargo people's cry to be meretricious. The Chamber of Commerce can give information as to that.

5238. What is your opinion as to what ought to be accepted as the dock system of the port?—I think that no scheme for a new dock will solve the difficulty as regards the present docks. The first step is to determine what ought to be accepted as the dock system of the port. Then new docks must be made on that system, and the old docks gradually adapted to it. And not only will a new dock not solve the difficulty of the old docks, but the more the river is improved the greater will become the difficulty with the old docks. Bigger ships will come into them, bringing bigger cargoes, requiring a greater number of barges to handle them. So that the effect of improving the river will be to add to the difficulties of the docks. Just as the docks have been going from bad to worse during one or two generations, so must it be a long and tedious process to bring them up to date. You cannot sweep away the old docks and substitute new ones for them. It must be a gradual process of improvement. The old buildings must in course of time be swept away with a view to the construction of barge canals and two-storey sheds.

5239. Can you say if any plan has been formulated as to this?—I know of none except one which I formulated myself, which I will mention presently. I wrote a paper for the "Shipping Gazette." In the case of the Albert Dock, the most important up-river dock, the improvements should, I think, not be difficult. In the Victoria Dock, with its projecting jetties, improvements will be rendered less urgent if the Albert Dock is modernised, especially if a new, that is additional, dock is constructed. The Victoria Dock system is good enough so long as it is possible to leave one side of each jetty clear for barges, in the intention of the original plan of the construction. It must be remembered that to modernise the Albert Dock will be to greatly increase its capacity. To expedite the departure of the ships, and give prompt removal to their cargoes, must be in effect to increase the capacity of a dock. As regards the other docks, it will be more difficult to modernise them, but though it may not be possible to make ideal docks of them, it should be possible to greatly improve them. I confess that I have not studied the question of, or the possibility of, the improvement as regards these other docks; it must in any case be a process both of time and expense, but my general impression is that they can all of

them be improved. Of course, the widening of the roads to the docks and the improvement of railway facilities will have to be a part of the general scheme. Briefly, in my opinion, the complaints of shipowners, cargo owners, and lightermen all go back to one and the same thing—delay; delay in discharging, delay in getting the goods out of the docks, delay in loading barges, delay of ships in entering and leaving; and the delay is approximately due to this: that the barges cannot get to the quays to take the goods away, because the quays are occupied by the ships. When one ship leaves another takes her place; the goods accumulate on the quays, blocking the crane-rails, whilst the barges accumulate in the docks waiting a chance to come up to the quays. The result is a general deadlock; ships, goods, and barges are all delayed. Merely to regulate the barges will not touch the spot. To expedite the discharge of ships will only add to the accumulation of cargo on the quay. There is only one remedy, and that is to provide barge canals of ample width at the back of the dock sheds. The cargo can then be landed, sorted, and delivered into the barge and taken away without any delay. Now with permission I will hand in a sketch in section of my proposed dock quay shed, railway, canal, and wagon way. (*The witness handed in a sketch.*) I think the sketch explains itself. The shed is of two storeys, with a platform extending over the quay, as at Copenhagen. There are the usual crane rails on the quay front, and also cranes on the edge of the raised platform, one leg on the ground, on a special ground crane rail. Cargo can be delivered on to either floor on the shed. At the back of the shed is the railway as usual. The metals are sunk so that wagons can use the railway track as usual. Delivery can be made from either floor of the shed into the trucks or carts. Just across the railway track is a canal quay and a wide canal. The canal should not be less than 80ft. wide to allow, say, four barges abreast. Cargo can be delivered from either floor of the shed to the barges in the canal. On the other side of the canal is a wagon road. At intervals across the canal are bridges, so that the wagons can come into the sheds without being led all along the railway track. To allow of the bridges being flat, the canal must have ample space between the water surface and the quay edge for the passage of empty barges. This will mean a corresponding increase in the height of dry quay-face of the docks. In a dock plan embracing so many more or less conflicting interests, as of sheds, railways, carts, and barges, an all-round compromise of method has to be arrived at. My scheme intends such a compromise. Then I submit a ground plan of the dock showing the canal. (*The witness handed in a ground plan of the dock.*) It will be noticed that the canal runs at the back of each of the two rows of sheds, that is, on either side of the dock. There are, in fact, two canals, one for each long quay. Each canal enters the dock at each of the two corners nearest to it. Barges, therefore, can lie either in the canal, or, when convenient, in the dock alongside the ship. There is a special lock—this is the great point—allowing barges to enter the canal direct from the river, at a point half-way between the ship-locks to the dock. Barges can be locked in and out of the dock at all states of the tide without interfering with the passage of ships. The plan, as sketched, explains itself. There is, however, one item of the plan or plans which does not clearly appear, namely, a special passage way for foot passengers, clear of the quay and its encumbrances. The inconvenience to foot passengers in London at, for example, the Albert Docks is extreme. They are not considered at all. A walk along the open cargo quay is always highly inconvenient, and sometimes dangerous. An up-to-date dock for a water carriage port requires a special covered way for workmen, employees, and visitors. I propose to carry an alley way the whole length of the dock under the angle of the roof of the sheds, with a covered gallery from shed to shed, and with stairways to the ground against one end of each shed. My sketch of the shed elevation shows by dotted lines where the alley-way would run. I have also endeavoured to indicate it by parallel lines in the ground plan showing the sheds. Apart from the right which employees, ships' companies, and others have to safe and convenient coming and going at the docks, the more you facilitate and expedite the passing to and fro in and about the docks, the more will dispatch generally be accelerated.

5240. And you consider this suggestion of yours is practicable as to existing docks on the River Thames?—It is practicable in the Albert Dock and the Victoria Dock. I have not considered it with regard to the others.

4944.

5241. Have you taken any expert's opinion on the subject?—No. I have talked with experts when I have had the plans, and been down and looked at things, and so on.

5242. Have you anything to say on the subject of open berths and closed docks?—My remarks will deal with the river aspect. If you are going to dredge the river up to 25ft., or whatever the depth may be, it does not seem to me to matter whether you have quays or docks if you are going to put the question of cost on one side; but as it stands now, the depth of the river is an absolute bar to ships coming up to the quays at any stage of the tide, as people say.

5243. We have already touched on the question of the provision of funds. I do not know whether you have anything further to tell us on that point. In your opinion the improvement of the river and the roadways will cost several millions?—Yes. If you ask me where the money is to come from, in my opinion I should say the bulk of it from London and its environs in the form of local or municipal rates or taxation. Next, a similar but modified tax on towns within the supply radius, such as Brighton, Croydon, Eastbourne, and from all other towns within the radius, a possibly graduating tax according to the distance from London. Next, from tonnage dues on ships coming to the port, and also from tonnage dues on ships leaving port for the coast and the continent. It is difficult to draw the line, no doubt, but it could be done. Finally, a certain proportion ought to be provided out of the national purse, the whole nation being interested in the question of maintaining the port of London. Or, in the alternative there might be an *ad valorem* toll or tax on all goods arriving at the port. Taking the foreign and continental trade to the port at £160,000,000, a farthing in the £ would yield £160,000 per annum, and would be unfelt. It could be done by the sale of "Customs Entry" stamps, to be affixed to the entry forms at present used.

5244. (*Sir Robert Giffen.*) What is your idea of the additional income that is required for the purposes that you mention?—I cannot say. I have not formed any opinion. I am not able to.

5245. You have mentioned that one farthing in the £ on imports would come to £160,000 more. Would that be sufficient?—I did not mean to suggest any sum. I only meant to illustrate the value of a farthing. If a farthing in the £ would give you £160,000, a penny in the £ would give you four times the amount, and to say that a penny would be felt as a tax on goods would be absurd.

5246. As you have given some thought to these matters, I should like to have your opinion as to what the total additional amount is that is required to put the port of London in a proper condition, and to keep it in a proper condition?—I could not possibly give you an opinion, and I think the more I thought it out the less I should be likely to arrive at one. It is beyond me altogether.

5247. (*Chairman.*) Would you like in concluding your evidence to sum up the conclusions at which you have arrived under the respective heads?—Yes. I have classified them:—(1) Improved river approach. That should be proceeded with immediately. (2) Provide wide barge canals at back of transit sheds, with access from dock to canal. Where possible, give special access for barges between dock and river. (3) Abolish or deny the right to overside discharge in the case of mixed cargoes. That is a question for ship-owners. (4) Give increased shed-room and quay space. (5) Secure regulation of the barges. Thoroughly investigate and revise the present system of limiting number of, and licensing, lightermen. (6) Improve the existing docks, and dredge deeper where needful. (7) Put a new dock in hand. (8) Put the docks in a position to earn enough money to bring the docks up to date. I think that ought to be put first, really. (9) Throw open the present narrow road approaches to docks. The County Council ought to see to that. (10) Increase the railway approaches, and especially secure that companies owning present approaches shall not charge other companies unduly for use of their ways.

5248. Have you anything to say as to the question of the lightermen's complaint that the shipowners can limit their liability while they themselves cannot?—I have seen that that was a complaint. They say that if they run into a ship they are liable to an unlimited extent for the damage they do to the ship. Supposing

Mr.  
D. Owen  
1 April 1901.

Mr.  
D. Owen.  
1 April 1901

they stove in an engine-room plate bulkhead on a P. and O. steamer they are liable to their last farthing personally, whereas if a P. and O. steamer damaged them they could only get £8 a ton on the ship's tonnage. But £8 a ton on a P. and O. steamer's tonnage would satisfy any barge claim. But there is no real comparison; there is no common basis between the two. As a matter of broad principle I take it that no man ought to be able to limit his liability for wrongs done to another. There was an exception made to that in the case of ships solely on the ground—I think it was under an Act of 1734—that it was expedient in the national interest to encourage merchants to own ships. Evidently at that time there was a feeling that merchants were afraid to engage in the business of ship owning, because of the liability attaching to it, so that a limit of their liability was imposed. Gradually in the course of years that liability has been shifted about, and now it is £8 a ton on the wrong doing ship's tonnage, with, in the case of loss of life, another £7. Lightermen say they ought to be put on the same footing, but I do not know that the business of owning lighters is seriously interfered with, or interfered with at all, by the present state of the law. The lightermen have no difficulty in insuring themselves, or at any rate I have never heard of any difficulty. The number has increased, as we have been told very largely, and I do not think that the inconvenience of which they speak is a practical one; and if it were I think they would have to bear it. I do not see why they should be relieved. Of course, there are two aspects of the question. There is one in the case of damage done to an innocent third party, where a barge runs into another barge or a ship, and there a lighterman cannot protect himself, and his common law liability, as he says, makes him liable in full for any damage he does. But he is like a shipowner, in this respect, that, as regards any damage done to his own cargo on board he can contract himself out of it. If the ship gets into collision the ship is always liable up to £8 a ton; but with regard to her own cargo there would be a clause in her bill of lading exonerating her from the perils of navigation, and practically in the case of a large and increasing number of lightermen their contracts with goods owners are made on the same basis; that is, on a basis known as a "no recourse against lightermen basis." That number is increasing, and I should think that in the course of time the position with lightermen will be the same as the position with ships; that is, they will contract themselves out of the liability for damage done to their own cargo. I do not know whether in the question you asked you were referring to that, or to the question that they raised as to being able to choose their own servants.

5249. No. That is another question altogether. Have you any views you wish to express as to the Watermen and Lightermen's Company?—I think it is easily summed up by calling it an absurdity. It really is. You might as well, in the interests of the Honourable Company of Tallow Chandlers, cause the "Twopenny Tube" to be lighted with tallow candles.

5250. Do you think the present practice interferes with or retards the progress of the port?—Yes, I think it does, because it makes lightermen much too much the masters of the situation.

5251. Then your opinion is that it is not in the interests of the port that the present arrangement should continue?—No. I should abolish it absolutely. I see no reason at all why a wharfinger should not have an absolutely free choice to choose his own men, the more especially as he personally is responsible for any damage, that is to say, damage done to third parties' cargoes on other vessels. As regards damage done to cargo on his own barge, that is another thing. As I have said, he contracts himself out of it. I should personally be inclined to say give the wharfingers absolutely free and uncontrolled power to choose their own men to navigate their craft, but place some counter-vailing limit or check on it as regards their rights to contract themselves out of all liability for the cargo they carry.

5252. (Mr. Peel.) I want to ask you one question about the roadways that you think ought to be improved. Have you at all considered the question of expense there?—Not at all. I should say it ought to be done whatever the expense.

5253. Perhaps you have not considered either the question of where these roads should run to or from?—My idea is to widen the existing roads. If you go to

St. Katharine's Docks you see the roads that the traffic has to pass over, which could be widened to a great extent by moving back the dock fortification.

5254. But as to the general expense of widening these roads, I understand you think it ought to fall on the County Council or the Municipal Authority?—I simply go on the general principle that that is the effect of widening roads; the municipality does it. I do not see why widening a road for a dock should be different from widening a road for other purposes.

5255. And at the same time you would not give the municipality any additional source of revenue for so doing?—I do not know. I have not considered that. They have their own power to increase their rates if they like.

5256. Then you say that the existing system of ownership and management has lasted 100 years, and London has prospered under it. That statement needs qualification, does it not? From previous witnesses we have heard that at certain points the dock accommodation has kept up with the increasing traffic, but I suppose you would hardly say that it does so at present. You said: "But just as the docks have been going from bad to worse during one or two generations, so it must be a long and tedious process to bring them up to date." That is hardly consistent?—I said the port had improved.

5257. The docks are a large portion of the port?—I was dealing with the port as a whole; the port of London. I assume that the port was never so prosperous as it is at the present moment.

5258. At the same time you say that the docks have been going from bad to worse?—That is true.

5259. You have said you thoroughly approve of a trust as regards Liverpool, and you apparently object to a trust controlling the docks and wharves in London. What are the special conditions in London which make you so averse to it in London?—I do not think I said I was averse to it. I said I was entirely in favour of the principle of a trust for London or anywhere else, but I said I do not think the present is the time to introduce it. I said my idea would be to introduce it gradually, instead of all in a heap.

5260. You said that the first step of the trust would be to increase the dock charges right and left. On what considerations do you base that?—First of all it is quite certain that no trust would have any power of raising money unless either by the security of city rates or rates of some kind or another, or else by an increased power of charging. I think it is practically admitted now that there must be increased charges put upon goods. That would necessarily be the first thing. What London is suffering under is the want of rates put on goods. Only 25 per cent. of the goods pay anything.

5261. (Sir John Wolfe-Barry.) I want to follow out your idea of forming a trust a little further. Supposing a trust were formed, would you bring into the trust the whole of the property of the dock companies?—Every bit of it.

5262. Then you would bring in the warehousing interest as well as the quay interest?—Unquestionably. You cannot separate the two.

5263. Do you think it is impossible to separate the two?—Yes.

5264. Then as respects the private warehouse owners on the river, they would be competing with the trust?—Unquestionably.

5265. And that you see no difficulty in?—I see great difficulty. I think if a trust took over the warehouses it would have to proceed to get rid of them—to pull them down or let them. To a great extent they would be required for dock improvements.

5266. What warehouses are you speaking of? Are you speaking of the dock companies' warehouses?—Yes, simply of the dock companies' warehouses.

5267. But why should they pull them down if they were not required for dock extension?—I should say in that case let them. You cannot in fairness have a Dock Trust competing with private owners.

5268. You say you could not in fairness have a trust competing in the matter of warehouse facilities and charges with private owners?—No.

5269. Then if you make a trust of the dock property you would have to denude the trust of the warehouse property?—Yes.

5270. That you think would be advisable?—Yes.

5271. And I think you go as far as to say almost necessary?—Yes, and inevitable.

5272. Therefore, what would remain in the trust would be the water way of the dock and the quays, and transit sheds, and matters of that kind, but you would separate the warehouse interest altogether from the docks?—Exactly; so that the whole dock system, as far as the trust system is concerned, would be like Tilbury Dock, where there are no warehouses.

5273. You think that there is great unfairness in a Dock Trust competing with private owners?—Yes.

5274. Why have you considered that there should be a division of authority in the river. Take the case of dredging. Is not the case of dredging the river bound up with the working of the docks?—There is no question of it.

5275. Supposing the authority for dredging had been the dock authority in former times, do you think the river would have been left in its present condition?—I should think it would have been very much worse, because they would have had no money to dredge with.

5276. But I am assuming that they would have had enough money?—Then they would have given adequate water up to the dock sills.

5277. Their interest would have been undoubtedly to keep the entrance to the docks open?—Yes, at all states of the tide.

5278. Just as at Liverpool, where the Dock Trust have spent enormous sums of money in dredging the bar?—Yes.

5279. Which is an indirect advantage to the docks, and a direct advantage to the port?—Yes.

5280. Now, take the case of lighting. One of the great complaints of the shipowners is the great charge for lighting?—I am afraid that is an aspect of the subject that I have not considered at all. I really do not know anything about the lighting.

5281. Supposing the welfare of the port is bound up in the charges which fall on the shipowners, and very heavy charges are made for lighting, does it not seem to you a reason for consolidating the lighting with the dredging in the one trust?—It would certainly be convenient. Undoubtedly it would be convenient, but so long as the different trusts or powers were represented on one another's Boards, and they acted in a friendly way together, I cannot see that it makes any very great amount of difference.

5282. You mean that the trust would have the right to fix the amount of money charged to the ship owner?—Perhaps I did not understand you. I was imagining one trust for the lighting and another trust for the dredging.

5283. I am imagining the very reverse?—I say it would no doubt be more convenient to have one trust for the two, but I do not know that it can be put any higher than that it would be more convenient.

5284. I put it to you that the question of charging that to ships is a very important matter?—You mean that there should be one charge to cover the dredging and the lighting.

5285. It might be that the charges put upon ships for lighting charges are higher than the port will stand as a commercial business?—It is perhaps conceivable.

5286. Would it not be a very unfavourable thing that there should be one authority for the dredging, another for the lighting, and another for various other purposes, so that the persons in authority on the trust would have no voice with regard to those charges?—Yes, I think so.

5287. Then you do not seem to see any difficulty in the consolidation of all those matters, provided, as you say, it is done at a suitable time?—Yes, that is absolutely my view.

5288. You would rather be in favour of the consolidation of all those interests?—Absolutely.

5289. Now, I want to ask you one or two questions about the open quays merely to make plain what I think is in your mind. An open quay on a tidal river with an assumed rise of tide of 25ft., and a depth alongside the quay of 30ft., must have a depth of quay wall very much greater than the depth of the quay wall in a dock?—Quite so.

5290. Measured by the rise of tide?—Something like it.

5291. Thus, if a height of wall of 40ft. were sufficient in a dock you would have to contemplate a height of wall of about 60ft. or 65ft., in a tidal quay to be equally accessible?—Yes, on those lines. Of course, I know Tilbury has 40ft., but you have only ships of 30ft. If you go to 40ft. you are putting 10ft. on to the dock.

5292. I was taking it in this way. First of all you have 30ft. alongside the quays for the shipping, have you not?—30ft. in the dock?

5293. Yes. Then the coping must be higher than the water?—Yes, 5ft. That is 35ft.

5294. Then you have to contemplate some possible deposit in the dock?—Yes.

5295. Which we will take at 5ft.?—It is rather extreme to call it 5ft.

5296. That makes 40ft.; and if you have the same quay in the open river you must have 50ft.?—You have to add about 20ft. for the rise and fall of the tide.

5297. In addition to that the length of quay space which could be given is obviously limited all the length of the river course, for open quays?—Clearly.

5298. Whereas, if you go and cut into the land you may extend the number of lineal yards of quay to any extent you like?—Yes.

5299. Quite independently of the length of the river itself?—Nothing to do with it at all.

5300. And in that way a dock could be concentrated near the place where the convenience is greatest and much better than by constructing docks?—Yes.

5301. Tidal or otherwise?—Yes.

5302. But in the case of the Thames, having a rise of 25ft. it is not a convenient thing for tidal docks?—It is 20ft., is it not?

5303. Well, say, 20ft.?—Whatever it may be.

5304. Now, I want to follow out your plan about the canal. How far off the ship would the canal be?—You have, first of all, your quay. Then you have your shed, then you have your quay the other side of the shed, and then the canal.

5305. What would that amount to?—I suppose the dock quay would be about 40ft., the shed 120ft., and then perhaps 20ft. again for the canal quay—something like that.

5306. That would be 180ft. distant from the ship's side?—Yes.

5307. Then all the goods would have to be wheeled or trolleyed, and in some way taken over that distance?—Yes. 40ft. is the ordinary width of dock quay, I think, and 120ft., I think, is the width of the shed. If goods are going away by train they have 160ft. to go on the quays.

5308. That is if traffic is going by train?—Yes.

5309. Not barge traffic?—No.

5310. Barge traffic is discharged over side?—What goes into the shed has to be carried across the quay, and into the shed, and on to the other side.

5311. Then what goes on the canal would have to cross the lines of rails at right angles?—Yes, right across, but, of course, those lines of rails are not continually being used by trains. As a matter of practice at different docks they are not very often occupied by wagons.

5312. There is not a very large amount of railway traffic goes away from the dock, is there?—No, I should not think so.

5313. Then the distance you would have to take all the goods would be about 180ft.?—Thereabouts.

5314. Would you forbid the barges to come alongside the ship on the other side?—No, not at all. They would go along the same as usual. The complaint is that shipowners in order to save time are obliged to land their goods on the quay and sort them in the shed.

5315. To some extent?—To a very large extent. The P. and O. Company, I think, put about 30 per cent. overside straight, but they have made a study of it. In the case of an ordinary steamer coming she cannot afford the time to discharge overside. She runs the goods straight into the shed.

5316. Then all that could be put out on the other

Mr.  
D. Owen

1 April 1901.

Mr.  
D. Owen.

1 April 1901.

side of the ship would be put out?—Yes, just the same as at present. In the case of sugar or grain the difficulty does not arise. It is where you have to sort the cargo. It is the general cargo ship that makes the difficulty.

5317. Have you ever been to Marseilles?—Yes, I have been there several times, but I have never studied the docks there.

5318. Have you seen where the ship is boomed out and barges come in between the ship and the quay side?—Yes, I think I remember that.

5319. Apart from the additional swing of the cranes to reach the hold of the ship is there any objection to that?—There is the initial objection still there. How are you going to sort the cargo. The cargo must be landed to be sorted. You cannot sort your cargo on board ship.

5320. But supposing it goes on to the quay, and goes direct back from the quay into the barges, it has not to go 180ft., and cross several lines of railway?—No, but Marseilles and London are different places. There is plenty of room at Marseilles. There is no pressure.

5321. But this is a new scheme where you might propose to have the requisite amount of space?—Yes, but I am proposing it for London not for Marseilles. If the conditions are what they are at Marseilles by all means do it there.

5322. If you want to land cargo and put it back into the barges afterwards, is it not more convenient to put it back over the quay side than to take it 180ft.?—Yes, only the ships are so big. What are you going to do with the cargo? You will block the whole quay if you leave it there. You had better put it into the shed.

5323. I assume you put it into the shed, and then bring it back?—Does it matter very much whether you bring it back to the barge alongside the dock quay or take it to the canal quay?

5324. The difficulty is that you have to cross two lines of railway, and go 180ft.?—I do not think the railway matters, and as to trundling across the floor of the shed, what is it after all?

5325. It all means money, does it not?—A very small sum of money. I do not mean to say that that scheme is ideal, but it is the best I can think of. I can see none better; there are so many conflicting interests to reconcile.

5326. There is no doubt that every ship owner demands more quay space?—That is so.

5327. The great object at the present time is to have a great amount of quay space to discharge these large ships and save demurrage?—Yes.

5328. And every demand is always for greater and greater width, and two storeys?—Either width or two storeys. You must have the space somehow.

5329. If you had the width, two storeys would not

be so good as additional width, would it?—I think two storeys would be better, because you have the double discharge going on at the same time.

5330. (Mr. Lyttelton.) Your general proposal as regards cost, I see, is that the consumer shall pay?—Yes.

5331. And you have taken a great expenditure as necessary?—Yes.

5332. That would be a charge on the goods?—Yes.

5333. I see you indicate also a further opinion that London at large, or even the nation at large, ought to pay something?—I think it would not be unreasonable that it should. Personally as far as I am concerned I should be quite willing to see everything taken out of the goods.

5334. Of course directly you get a charge on London, which would be a charge on the rates, you have the question of representation?—Yes.

5335. That is a difficulty that you acknowledge you would have to face?—Yes.

5336. And if further you made a charge on the Imperial Exchequer you would also have similar questions?—Yes, from Liverpool and elsewhere.

5337. Supposing Liverpool or Bristol to be in a similar condition of impecuniosity, would you regard that as a national question?—That is very difficult to say. It might be a national question. I think it would not be for the good of the nation, for instance, that owing to the want of funds either Liverpool or Bristol should be allowed to decline. But it is a difficult question.

5338. Is there any specific reason in your mind for drawing a distinction between Bristol and Liverpool, and London?—No, except that London is the capital, and London is England.

5339. Supposing what you suggested just now to be adopted, and supposing there was a further charge upon goods, I presume a large amount of goods must necessarily, in any event, charge them what you will, come to London?—Yes.

5340. And I suppose there is also a large class of goods which may go to London, or may go to Southampton, Bristol, or Liverpool, or other competing ports?—Yes, to some extent. The Midland cities are a sort of Tom Tiddler's ground for the various ports.

5341. Have you considered the effect upon London of raising the charge upon goods in competition with these other ports?—I do not think it would have any effect at all.

5342. Do you think the traffic would bear it?—Absolutely. My idea is that Southampton and Bristol would be only too pleased to put their rates up a bit. At present they only keep them down because of London. In any case the few pence put upon the goods would not make any difference at all. It would be a mere bagatelle.

Mr. ROBERT URWIN called and examined.

Mr.  
R. Urwin.

5343. (Chairman.) You have been the secretary of the Tyne Improvement Commissioners since April, 1880?—Yes.

5344. What position did you hold previous to that?—I was secretary to the Newcastle Committee of the North-Eastern Railway Company and mineral traffic manager.

5345. You have been good enough to supply the Commission with answers to a number of questions which were put with regard to the docks on the Tyne?—Yes.

5346. We should now like to hear from you as to the constitution of the Tyne Improvement Commission, and as to the general working of the Commissioners' Docks?—Prior to the year 1850 ("from time whereof the memory of man runneth not to the contrary," to quote the words of Section 27 of the River Tyne Improvement Act, 1850), the Conservancy of the Port of Newcastle-upon-Tyne, and of the River Tyne, was vested in the Corporation of Newcastle-upon-Tyne. In that year the River Tyne Improvement Act, 1850 (13 and 14 Victoria, chapter 63), entitled "An Act for the improvement and regulation of the River Tyne, and the navigation thereof, and for other purposes," was passed, and eighteen Commissioners, to be called "The Tyne Improvement Commissioners," were appointed to carry out the powers thereby conferred upon them, namely:—

4 Persons named in the Act. Two not to be replaced on their death or resignation. Successors to the other two to be appointed from time to time by the Admiralty (now by the Board of Trade).

6 Persons to be appointed by the Newcastle Council.

2 Persons to be appointed by the Gateshead Council.

3 Persons to be appointed by the Tynemouth Council.

3 Persons elected by the Improvement Commissions of South Shields.

13

These Commissioners were appointed the "Conservators of the port, and of the River" (the limits of which are defined by the Act to extend from Hedwin Streams to Spar Hawk in the sea, including all streams, havens, creeks, bays, and inlets within the flow and reflow of the tide), and all the rights, powers, privileges, authorities, immunities, duties, and responsibilities whatsoever, vested in the Corporation with respect to the Conservancy of the port and the river, and the improvement, maintenance and repair

of the port, and the river and the quays, banks, and shores thereof, except so far as regards rates, tolls, and dues, were vested in the Commissioners. The Act incorporated parts of the Commissioners' Clauses Act, 1847, parts of the "Harbours, Docks, and Piers Clauses Act, 1847," and parts of the "Companies Clauses Consolidation Act, 1845," and empowered the Commissioners, *inter alia*, to "build, purchase, hire, and employ vessels to be worked by steam, or otherwise, for dredging, scouring, cleansing, and deepening the bed of the river, so far as they lawfully can or may," and to make bye-laws for regulating the removal and disposal of ballast brought by vessels into the port, and for regulating the supply of ballast to vessels. It also enacted that certain ancient dues received by the Corporation of Newcastle-upon-Tyne should be carried by the Corporation to the credit of a separate and distinct account, to be called the "Tyne Improvement Fund," for carrying the Act into execution by the Commissioners, and that certain principal sums (amounting to £67,349), borrowed by the Corporation, and expended by them in the improvement of the river, and the interest thereon, and also the price (£12,000) of certain lands at Howdon, contracted to be purchased by the Corporation for the purpose of executing certain works for the improvement of the river, together with all costs and charges in connection with the purchase, should be borne by the Tyne Improvement Fund, and authorised the Commissioners to borrow £30,000 additional on the security of the Tyne Improvement Fund. By the Tyne Improvement Act, 1857, the Commissioners were incorporated under the name of "The Tyne Improvement Commissioners." Since the Commission was formed in 1850, several additions to the number of its members have been made, and the electorate has been enlarged. During the first 25 years of its existence, in which period the powers of the Commissioners had been enlarged, and the trade of the Tyne, and the dues received by the Commissioners, had considerably increased, there was no direct representation of dues

payers on the Commission. Owing to a desire expressed by merchants, shipowners and traders, for representation on the Commission (not because of any complaint of inefficient administration by the then existing Board) the Tyne Improvement Act, 1875, was promoted and passed, and the first increase in the number of Commissioners took place. By that Act it was provided that six additional members should be elected (every three years) by the three classes of payers of Tyne dues, namely, shipowners, coal owners, and traders, making a total of 24 Commissioners. The dues payers were at the same time empowered to elect an auditor of the Commissioners' accounts. In April, 1881, one of the life members named in the Act of 1850 died. As by this Act, his place was not to be filled the number of Commissioners was thus reduced to 23. The next extension of the Commission took place in 1886, when the claim of the Corporation of Jarrow (which had been incorporated on the 4th June, 1875), to representation, was met by the addition of another member, to be appointed by that Corporation, under the provisions of the Tyne Improvement Act, 1886. The total number of Commissioners was thus again brought up to 24. The third and last extension was made 12 years later, when the Tyne Dues Payers, having demanded increased representation, and promoted a Bill with that object, the Tyne Improvement (Constitution and Works) Act, 1898, was passed, by which the number of representatives elected by ship owners, coal owners, and traders, was increased from six to 15, thus bringing the total number of Commissioners up to 33, to be ultimately reduced to 32, on the death or resignation of the last surviving life member, nominated in the Act of 1850, whose place is not to be filled. Excluding the life members, therefore, the representation is now divided equally between the riparian municipalities and the payers of Tyne dues. The following table shows the various changes which have taken place in the constitution and membership of the Commission from its commencement up to the present time:—

Mr.  
R. Urwin.  
1 April 1901.

## TYNE IMPROVEMENT COMMISSIONERS.

Under Act of	Life Members.	Elected annually by the Corporations of						Elected every Three Years by Dues Payers.				GRAND TOTAL.
		New-castle.	Gates-head.	Tyne-mouth.	South Shields.	Jarrow.	Total.	Ship-owners.	Coal-owners.	Traders.	Total.	
1850 - - -	4	6	2	3	3	—	14	—	—	—	—	18
1875 - - -	—	—	—	—	—	—	—	2	2	2	6	6
1886 - - -	—	—	—	—	—	1	1	—	—	—	—	1
1898 - - -	—	—	—	—	—	—	—	3	3	3	9	9

Present Constitution.	3	6	2	3	3	1	15	5	5	5	15	33

\* Successors to two of these to be appointed from time to time by the Board of Trade. No successors to the other two, on their death or resignation, so that ultimately the number of Life Members will be reduced to two, and the total number of the members on the Commission to 32.

5347. Who are the persons eligible to be Commissioners?—Persons eligible to be Commissioners are:—Life members: Appointed under the River Tyne Improvement Act, 1850. Municipal representatives: Persons who are members or qualified to be members of the several Councils. Dues Payers' representatives: Persons whose names are on the list of any class of electors, or persons nominated in accordance with Section 7 of the Tyne Improvement Act, 1890, as amended by Section 51 of the Tyne Improvement Act, 1897. The three classes of dues payers, namely (1) ship-owners; (2) coalowners; and (3) traders, are respectively described to be:—(1) Persons (including in such expression partnerships, co-ownerships, and companies)

residing or carrying on business in the district situate within five miles from any part of the port of Newcastle-upon-Tyne, as defined by the Tyne Act of 1850, paying Tyne dues (which district is referred to as the Tyne District), and being registered in the books of the respective Custom Houses of the ports of Newcastle-on-Tyne, North Shields, and South Shields (which custom houses and ports are referred to as the three custom houses, and the three ports) as owners or part owners of vessels registered as belonging to the three ports respectively. (2) Persons (including in such expression partnerships and companies) being owners, leasees, or occupiers of coal mines, who deliver or put on board vessels on the Tyne, or in any of the docks

Mr.  
R. Urwin.  
1 April 1901.

thereof, coal, coke or cinders. (3) Persons (including in such expression partnerships and companies) residing or carrying on business within the Tyne district, and paying Tyne dues, rates, tolls or charges. Lists of electors in the three classes of dues payers are prepared by the Commissioners every third year from statements supplied by the shipowners and coalowners, and accounts of the dues paid to the Commissioners by the traders—for the twelve months ending on the 31st December, preceding the year of election. The voting power of electors in each of the three classes of dues payers is defined in section 14 of the Tyne Improvement Act, 1890. Shortly stated, it is as follows:—Scale of votes: Electors on the list of shipowners are entitled to one vote for the first 100 tons of net register tonnage, and one additional vote for every additional 250 tons up to a maximum of 18 votes, that is 4,350 tons register. Electors on the list of coal-owners are entitled to one vote for 10,000 tons of coal shipped, and one additional vote for every additional 25,000 tons up to a maximum of 18 votes, that is 435,000 tons. Electors on the list of traders are entitled to one vote for payment of £10 of dues (other than dues on ships and ballast), one additional vote for every additional £25 of such dues paid up to a maximum of 18 votes, that is 2435 of dues paid.

5348. Now, will you tell us as to the committees that are appointed?—For the purpose of carrying on the work of the Commission, there are seven committees, who are appointed every year, and who report regularly their proceedings to the Board. First there is a "Finance Committee," which meets every fortnight, and oftener if required. Then there is a "Dredging and River Works Committee," which meets every month, which has charge of all the works connected with dredging and improving the river. Then the "Docks Committee" meets every month, and has charge of the administration of the docks. Then there is a "Piers Committee," which meets every month, which has charge of the two Tyne piers on the north and south sides of the harbour entrance. Then there is a "Harbour and Ferry Committee," which meets every month. We took over certain ferries in 1863 from a private company—to destroy a monopoly really. That committee has charge of the ferries, and also of the moorings in the river. Then there is a "Harbour Lights, Buoys, and Beacons Committee," which meets every three months. In 1883, the Commissioners took over the High and Low lighthouses, the leading lights in the Tyne, and certain buoys and beacons, and a committee was appointed to look after that business. Then there is a "Parliamentary Committee," which meets as often as required. Then besides those committees there are several sub-committees appointed from time to time to deal with certain subjects which arise.

5349. Now, will you tell us as to the general working of the Commissioners' Docks?—The dock system of the Tyne Improvement Commissioners is situated on the north side of the river Tyne, and comprises:—(1) The Northumberland Dock, constructed under the authority of the Tyne Improvement Act, 1852, and opened for traffic in June, 1857. (2) Four river staiths, eastward of the Northumberland Dock, constructed under the authority of the Tyne Improvement Act, 1867, two of which were opened for traffic in March, 1874, and two in May, 1891. (3) The Albert Edward Dock, eastward of the river staiths, constructed under the authority of the Tyne Improvement Act, 1872, and opened in August, 1884, by their Royal Highnesses the Prince and Princess of Wales. An additional river staith is at present under construction by the Commissioners. These docks and staiths have all direct connection with the North-Eastern Railway, and with certain private colliery lines. They form one system, and are worked in common, under one management. The executive staff is controlled by a dock superintendent, an assistant dock superintendent, a dock master, two deputy dock masters, and various foremen. The entire dock estate consists of 357½ acres. The water area of the docks (including basins) is 84½ acres, and the land area of the docks is 273 acres. It contains about 40 miles of railways and sidings; 17 coal shipping staiths; three brick built warehouses—one on the dock quay at the Albert Edward Dock for the storage of grain and general merchandise; and two in connection with the Northumberland Dock (situated about a mile from both docks) for the storage of nitrate of soda, guano, and general merchandise; and 12 wooden sheds at different parts of the Dock Estate for the storage of deals, battens, and boards, "under cover," besides a considerable area of ground

which has been drained and levelled, and made available for the storage of deals, battens and boards, timber, props and other goods, in the "open." Part of this ground is let by the Commissioners to merchants and others on short tenancies, at annual rentals. In other cases, rent is charged for the space occupied at monthly or other intervals.

5350. Have you a plan of the Dock Estate?—Yes.  
(The witness handed in a plan of the Dock Estate.)

5351. What is the staple export of the docks?—The staple export at the Commissioners' Docks is coal and coke. The other exports consist chiefly of bricks, grindstones, chemicals, lead, iron plates, pig iron, and cement. The imports consist chiefly of timber, pit props, deals, battens, and boards, telegraph poles, and grain, provisions, nitrate of soda, and guano. For the year 1900 the exports of coal and coke amounted to 3,307,200 tons, the exports of general merchandise to 71,809 tons, and the imports of general merchandise to 175,500 tons. For the working of traffic within their dock estate the Commissioners have 10 locomotive engines and 420 wagons, 10 steam and 20 hydraulic cranes, and 9 hydraulic hoists, besides several hydraulic capstans.

5352. (Sir Robert Giffen.) Do those figures with regard to exports include what was exported by the docks belonging to the railway company?—No. I may mention that the entire exports of coal from the Tyne, which includes the docks you refer to and our own docks also, for the same year 1900 amounted to 14,520,929 tons.

5353. So that your dock had about a fourth part of the business?—Yes.

5354. (Chairman.) Now will you tell us the method of working as to coal and coke?—From the plan which you have before you, you will see that the Commissioners have certain standage sidings. The method of working is as follows:—Coal and coke, for shipment at Albert Edward Dock and river staiths is, by arrangement with the Commissioners, led over their railway to standage sidings provided by them in connection with their shipping staiths, a distance of nearly a mile, in the wagons and by the locomotives and men of the North-Eastern Railway Company and the colliery companies, whose railways connect with the Commissioners' Dock system. From these standage sidings the laden wagons are taken by the Commissioners' men to the respective staiths, and unloaded or "teemed" into the vessel. The wagons when emptied are run from the staith head to sidings on a lower level, from which they are removed by the locomotives of the North-Eastern Railway Company or the colliery owners as the case may be. The coal and coke is trimmed in the vessel by "trimmers," who are appointed by the Commissioners, but paid according to a recognised tariff of charges by the owners of the vessel. At Northumberland Dock the coal shipping staiths and the railways leading thereto belong partly to the North-Eastern Railway Company and partly to colliery companies, who make their own arrangements for loading and shipping the coal, and for trimmers. At Albert Edward Dock the Commissioners have recently provided on the dock quay a 23-ton hydraulic crane, by means of which heavy goods, or a wagon laden with coal or coke, can be lifted and swung over the hatchway of a vessel lying alongside.

5355. Does this arrangement also apply to the General Merchandise Dock?—No, that is entirely as far as coal is concerned.

5356. Now, will you describe the mode of dealing with the general merchandise traffic other than coal and coke?—To and from Northumberland Dock and the North-Eastern Railway it is worked by the North-Eastern Railway Company's locomotives and men, in railway wagons, over the Commissioners' railway, between its junction with the company's system and exchange sidings provided by the Commissioners on the Dock Estate, a distance of about a mile. To and from Albert Edward Dock and the North-Eastern Railway it is worked by the railway company's locomotives in railway wagons, over the Commissioners' railway, between the junction with the company's system and exchange sidings at the dock side, a distance of about a mile. Traffic to and from collieries in direct communication with the Commissioners' Docks is conveyed over the Commissioners' railways to and from the exchange sidings in the wagons, and by the locomotives of the North-Eastern Railway Company or the colliery owners. Between the exchange sidings and the docks, and other parts of the Dock Estate, the traffic is worked by the Commissioners' locomotives and men. Traffic between ship and warehouse, and storage sheds, and storage ground on the Dock Estate is worked by the

Commissioners' locomotives and wagons, except where it is transferred direct from or to ship and the warehouse at Albert Edward Dock, by the dock cranes, or where it can be carried by hand to or from ship or storage ground, in which cases the manual labour is supplied by the Commissioners or the merchants. Wagons are loaded and unloaded by men engaged directly or through a contractor, by the Commissioners or the merchant. The cases wherein the merchant does the work are practically confined to wood goods. Wagons loaded to be forwarded by rail are shunted by the Commissioners' locomotives into the exchange sidings, from which they are taken by the North-Eastern Railway Company or the colliery companies, as the case may be. For traffic to be forwarded by the North-Eastern Railway the Commissioners' officials make out and hand consignment notes to the company's agent stationed at the dock. Traffic to and from the docks is invoiced, and carriage rates thereon are charged by the North-Eastern Railway Company. For traffic to and from colliery railways having direct connection with the dock system an account for the Commissioners' charges is rendered by them to the merchant ordering the traffic to be forwarded. For discharging and loading vessels, and for storing the cargoes in the warehouses and sheds, or on the storage ground, the Commissioners provide cranes and other appliances (with men to work them), and employ contractors, who are responsible for obtaining a sufficient number of suitable men for the handling of the cargoes. In some instances the shipowner or the merchant supplies the necessary manual labour himself. All stowing on board vessels is done by the crew, or men employed by the shipowner.

5357. You have told us that in the year 1850 the Tyne Improvement Commissioners replaced the previous port authority?—Yes. There was an outcry against the Newcastle Corporation prior to 1850, and the result was the passing of the River Tyne Improvement Act, 1850, whereby eighteen members were appointed as Conservators for the improvement and maintenance of the River Tyne.

5358. Has the transfer been found beneficial?—Yes, as instanced by the large development which has taken place in the trade and commerce of the port.

5359. Is the constitution of the Commission satisfactory in your opinion?—Yes. The last increase in the constitution was as late as 1898, and, as I have intimated, the representatives from the riparian municipalities were made 15, and the dues payers' representatives 15, in addition to the three life members, the three being reduced to two when one of them dies. I should like just to mention a figure or two to show the development. When the Commission took over the Conservancy, in 1850, the gross revenue receipts amounted to £15,470. In 1875 when the first increase in the constitution took place there was £177,873 of gross revenue. The next increase that took place was in 1886, when the gross revenue receipts amounted to £262,556. In 1898 when the last increase took place, our revenue amounted in round figures to £375,000. Last year the gross revenue was £383,506.

5360. Will you explain the system of lightering in the docks, and tell us whether the Commissioners levy any charges upon lighters or upon goods discharged into lighters?—We levy a charge upon all goods discharged into lighters, in addition to which we levy a charge on the lighter itself of 1s. per lighter up to 50 tons. If a lighter carries more than 50 tons we charge a penny per ton above 50 tons.

5361. So all goods coming into the docks pay some dues?—Yes.

5362. (Mr. Lyttelton.) Has the North-Eastern Railway Company a monopoly there?—Yes.

5363. No other company has running powers?—No other railway company. I believe the North British under an arrangement with the North-Eastern have running powers in certain eventualities from Morpeth down to our dock. The North-Eastern work the traffic satisfactorily, and therefore there is no need for the North British to exercise their running powers. In addition there are two or three colliery lines which communicate with the dock without the intervention of the North-Eastern Railway Company.

5364. (Sir John Wolfe-Barry.) The Corporations that are represented are not contributory in any way, are they, as Corporations?—No.

5365. And never have been?—No.

5366. But the special circumstance at Newcastle, touching the Corporation of Newcastle, is that they

are dockowners, is it not?—No. The Tyne Commissioners are the only dockowners in addition to the North-Eastern Railway Company.

5367. Are the Corporation owners of quays?—Yes, at Newcastle they have what is called the Town Quay—a quay which existed long before the Tyne Commission was formed, which has since been very greatly improved, and at which a large amount of traffic is discharged, and on which there is a large private warehouse. At least it is a private company which owns it. It is a large grain warehouse.

5368. Then their interest is as large owners of riverside property?—Yes.

5369. Are the other corporations owners of riverside property?—Gateshead in 1854, after a large fire which burnt down a lot of property, formed a quay, but they have never done a great deal of business at it. The traffic seems to be on the wrong side of the river. I do not know how it is, or why it is, that they do not succeed, but they never have done very much. Then at North Shields there is a small quay, and at South Shields, between South Shields and Tyne Dock, there is a small quay, and at Blaydon, in the upper reaches of the river, there is a small quay.

5370. It seems rather peculiar to the Tyne that half the total number of Commissioners are representatives of corporations?—I think the reason for that may be taken to be this: the river was formerly administered by the Corporation of Newcastle-upon-Tyne exclusively, and when the agitation took place and the Act of 1850 was passed the Corporations of North Shields and South Shields and Gateshead were prime movers in addition to the merchants and shipowners of the district; and I suppose it has been regarded as a satisfactory arrangement that if they balanced the representation of Newcastle by other corporations, the case would be met, the corporations at that date, I suppose, representing the trade of the district. That is the only explanation I can give you. But since then in 1875, and again in 1898, the dues payers have been introduced in numbers equal to those of the corporations.

5371. Is it not somewhat peculiar to the Tyne that the corporations should have such a preponderating voice?—No, I do not think it is peculiar to the Tyne. I rather think that on the Clyde Commission corporations are largely represented.

5372. They are represented?—And very largely, I think, in proportion. I do not remember the proportions exactly.

5373. Then with regard to the work done since 1850 and the revenue, I suppose some of the expenditure has been on docks?—Yes. We have spent about a million and a half on docks, and the railways, and the river staiths, which are all connected with the docks, as shown upon the plan; and we spent nearly three millions of money upon the river in dredging, deepening, widening it, and cutting off promontories; and we are still going on completing the works.

5374. What dues do you get out of ships that do not go into your docks?—We get what we call a river tonnage due on all vessels entering and leaving the Tyne with cargo. I can hand in a copy of the tariff containing the Tyne Commissioners' "River Tonnage and other Dues."

(The witness handed in a copy of the tariff.)

In addition to that, every vessel using the Tyne, having to pass the Tyne piers, pays what we call a pier due; and in addition to that also, the Commissioners are entitled to levy, and do levy, an old due of a farthing a ton upon every vessel for the provision of moorings and of river police. Under the Newcastle-upon-Tyne Port Act, 1845, the Newcastle Corporation, who had been urged by the shipowners, were authorised to establish a river police and to put down moorings; and the shipowners consented at that time to a rate of one farthing per ton register being levied upon every ship, and we have continued that charge ever since.

5375. The pier due, I suppose, is in respect of the great improvement in the breakwaters?—Yes. It was originally for the purpose of forming the piers. Under our Act of 1852 for that purpose we got power to levy a due, and we have continued to do it ever since.

5376. What is the aggregate of all these tolls that are levied on ships that do not go into the Commissioners' Docks?—I can tell you what it was last year.

5377. I mean the aggregate per ton?—That is a difficult question to answer, but I can give it you approximately. For the year 1900 we had outward with cargo

Mr.  
R. Urwin.  
1 April 1901.

Mr.  
R. Urwin  
1 April 1901.

7,535,898 register tons, and we got £118,248 of dues. That works out at 3·76d. per ton.

5378. About 3½d. per ton?—Yes, about that.

5379. Why is it difficult to calculate that?—It is not difficult to calculate what I have given you at all, but what I have in my head as your meaning is what was the average rate we were getting from vessels which also used our docks.

5380. No. I wanted to know what have the ships paid for facilities which they use whether they are going into your docks or not. That you say is about 3½d. per ton?—Yes.

5381. You are the exclusive dredging authority, are you not?—Yes.

5382. Are you also the lighting authority?—Yes.

5383. Are you the exclusive lighting authority?—Yes, we are the exclusive lighting authority within the port.

5384. Are the lighting dues included in the 3½d. per ton?—Yes, but they are very trifling. Under an old Act of 1801 there were tariff dues authorised, which the Trinity House of Newcastle-on-Tyne operated; and when we by mutual arrangement took over the Trinity House in 1883, the High and Low leading lights in the Tyne, we took over the power to levy these dues, and we have continued to levy them ever since.

5385. Then you took the duties of lighting over from the Trinity House?—Yes.

5386. Was that considered advantageous as an arrangement?—Yes.

5387. Do you also light the river all the way up as far as the ships go?—No. We have no guiding lights excepting on the two ends of the Tyne piers, which the Commissioners themselves erected, and one on the south side of the harbour entrance, called the Groyne Light, which was erected by the Trinity House before we took the lighting over.

5388. Is there no lighting of the river further up than that?—No, there are no guiding lights at all.

5389. If there were any guiding lights would you be responsible for them if you thought them necessary?—Yes, we have power to do that.

5390. The Trinity House have nothing whatever to do with that?—No.

5391. You are also the ferry authority, are you not?—Yes, with this exception. We took over in 1863 what were called the North and South Shields ferries. There were two lines of ferries between North and South Shields, and one further west, between Whitehill Point (near to the Commissioners' Docks) and South Shields, and we have continued to work them in the interests of the public ever since. But in 1862 the Tyne General Ferry Company, as it is now called, was promoted, and it sought power at that time to provide cross-river, as well as up and down river, accommodation. The Commissioners of that day, having the idea that it would create a monopoly, resisted that, but they agreed to their having the power on a journey from a point up river down to Tynemouth, for instance, to call on the way at the landing stages on each side of the river, and take up passengers intending to go down or up the river.

5392. Speaking generally with regard to the navigation of the Tyne, all the powers and privileges are consolidated in the Tyne Commissioners, are they not?—No.

5393. Is there any conflicting authority?—There is no conflicting authority, but the pilotage, for instance, has a separate Board under The (Tyne) Pilotage Order Confirmation Act of 1865. That was before there was very much improvement made in the river. That has worked very well. I believe we work in harmony with them and they with us.

5394. Are the Tyne Commissioners represented on the Pilotage Board?—Yes, there are 17 members on that Board. There are five representing the Trinity House of Newcastle, who originally had the pilotage under their jurisdiction.

5395. That is not the Trinity House of London, is it?—No. There are six representatives from shipowners on the local register, there are two sent by the Tyne Commissioners, two by the licensed pilots, that is pilots licensed to pilot vessels in and outside of the river, and there are two representatives sent by the Board of Trade. That is 17 in all.

5396. Were the people who used to do the lighting the local Trinity House?—Yes, the Trinity House of Newcastle-upon-Tyne.

5397. (*Mr. Peel.*) The great bulk of your trade is coal trade, is it not?—Yes.

5398. Then I suppose you do not do very much warehousing?—As I have said, we have a warehouse at the Albert Edward Dock.

5399. But do you find that the amount of the warehousing you do is less than it used to be in relation to the amount of general trade?—No. It is not very large at the best, but it is increasing. It has increased since we opened the Albert Edward Dock. That dock was opened in 1884, and I think the amount of warehousing has gradually increased, and the other conveniences which I have set out in connection with the Northumberland Dock have been more fully occupied than they were in earlier years.

5400. Is the coal that comes brought mainly by the railways?—It is brought mainly from collieries on the North-Eastern Railway, and the North-Eastern Railway Company provide wagons and locomotives by which that coal is brought to our docks.

5401. Then it is not brought by lighter into the docks?—No. There is a very trifling amount brought in in that way. If anything is brought in in that way it is under these circumstances. Say, for the sake of argument, a vessel is loading a particular kind of coal or goods, or take the Norwegian mail steamers which run from our docks. In certain cases I have known bunker coal has been craned into the dock for them, but it is comparatively small. It is nothing to speak of. All the shipment of coal practically is by staiths, as we call them.

5402. (*Rear-Admiral Hext.*) In the case of barges unloading to a ship or barges loading from a ship in the stream do you charge them anything?—If they use our buoys we make a charge upon the vessel. I think it was in 1890 we took power to make a charge upon vessels loaded thereto or unloaded thereto. Where a vessel used our moorings which were put down for the purpose of mooring ships waiting for cargo at a particular staith or jetty, and used them for the purpose of a wharf practically or a loading place, we obtained power to levy a charge on the ship, which we now do.

5403. Do you make any charge on the barge?—No, not upon the barge. We take it upon the vessel loading or discharging cargo from or to the barge.

5404. Do the Commissioners receive any fees?—No; all their services are gratuitous, and I must confess they put in a good deal of time.

5405. (*Sir Robert Giffen.*) How much of your gross income of £333,000 comes from your own docks?—In the year 1900 we had £71,834 from the dock system. That is gross revenue.

5406. I think you told Sir John Wolfe-Barry that you had £118,000 from shipping not coming to your own docks?—Then I misunderstood Sir John if that is so. I will give you the exact proportions.

5407. Will you give us the principal items making up the £383,000 gross income?—For the year 1900 from shipping entirely, whether in the river or our own docks, including shipping in and out of the Tyne, we earned £195,208, which is practically 50·90 per cent. of the total.

5408. And the greater part of that shipping would be shipping that did not come into your own docks?—Yes. Of the 14,520,929 tons of coal shipped last year nearly seven millions is shipped at the Tyne Docks belonging to the North-Eastern Railway Company, and between one and two millions is shipped at Dunston Staith, which is higher up the river, also belonging to the North-Eastern Railway Company. We shipped 3,307,200 tons, and the rest was shipped at private coal shipping staiths on the river. I may mention for the information of the Commission that this amount is made up mainly in this way. The Tyne Commissioners are authorised to levy a Tyne Export Due of 1½d. on all coal exported. That means, including the dock due on the coal shipped at the Commissioners' docks, £88,242 in addition to what I have given, which is 23 per cent. of the total receipts. Then dues upon goods amounted to £62,187, representing 16·21 per cent. of the total. Then there are miscellaneous items making up £37,867, or a proportion of 9·88 per cent. of the total receipts for the year.

5409. But the figures are not arranged in such a way that you can tell us how much comes from goods and shipping using your own docks and how much from other goods and shipping?—No, but I shall be very pleased to get it for you and hand it in.

5410. I think it might be convenient that we should

know that?—I will have that taken out, and will hand it into the Commission.

(The witness handed in a statement of the Tyne Improvement Commission Consolidated Fund Revenue receipts, showing percentage of dues received from shipping, coal, goods, and miscellaneous (river and docks separately) in 1900. See Appendix, 15th day, No. 1.)

5411. What are your principal items of outlay?—Of course you are speaking of revenue outlay?

5412. Yes?—I may mention, to begin with, that we originally had, and have yet, for our own internal purposes, four funds. One fund, called the Tyne Improvement Fund, which is a fund for the improvement and maintenance of the river and works in connection therewith. The second fund is what we call the River Moorings Fund. That is a fund under which all charges for putting down moorings and maintaining moorings come. Then the third fund is the Tyne Piers Fund, which, of course, speaks for itself. The fourth fund is the Northumberland Dock Fund. Although we have two docks, and river staiths, by our Acts authorising these, they are one concern, and all income and outlay is charged to the "Northumberland Dock Fund." Taking the year 1900, in the Tyne Improvement Fund, the largest item out of a total of £77,000 was for maintenance dredging. The charge we made to revenue for maintaining the channel which had already previously been dredged was £36,250, out of a total of £77,705. Then we had salaries and collection of dues, £6,390; port and harbour charges of a general character, £7,700; engineering and contingencies, £4,000.

Then under that head came the North and South Shields Steam Ferries, which represent an expenditure of £12,303. Then there are Imperial taxes, and so on, and sundry other items, making up £77,705. The maintenance of river police involved £3,634.

5413. I think perhaps you are going more into detail than is necessary. Will you give us some larger items?—These are the two largest under that head. The Tyne Piers Fund only aggregated £7,376 all told. Then, going to the Northumberland Dock Fund, the whole of the expenses in connection with the import and export of traffic at the docks, such as the shipment of coal and the labourage, where the Commissioners bear the charges, aggregated £38,406.

5414. Where do you get the £383,000 of income expended?—I am endeavouring to explain that all these items aggregated together represent £153,394. Then the interest which is charged to revenue on our mortgage debt amounted for the year to £154,569. These two items together aggregate £307,963, which left us a surplus of £75,642 upon the year, which amount is expended upon works. Instead of borrowing to that extent for works we apply the revenue surplus year by year.

5415. Have you expended anything in addition out of borrowed money of late years?—Yes. What we have done is this: With regard to our capital account, we have standing against it a sum of £5,733,251. We have met that out of surplus revenue, to the extent of £1,581,768, the residue of £4,151,482 having been met out of borrowed money.

5416. Since 1850?—Yes.

Mr. JOHN DIXON called and examined.

5417. (Chairman.) You are the Docks and Marine Superintendent of the Southampton Docks, and have held that position since their purchase by the London and South-Western Railway Company in 1892?—Yes.

5418. You are also Specific Commissioner of the Southampton Harbour Board?—Yes.

5419. You were also formerly General Superintendent of the Swansea Harbour Trust, 1868 to 1892; manager of the Sharpness New Docks and Birmingham Navigation Company from 1885 to 1887; general manager of the Bristol Port and Channel Dock Company, Avonmouth, from 1878 to 1885; general manager of King's Lynn Docks and Railway Company, from 1869 to 1878; and prior to that Assistant-Superintendent of the North-Eastern Railway Company's Tyne Docks?—Yes.

5420. Will you describe to us the position of the Southampton Docks and the accommodation?—The Southampton Docks are distant from the English Channel 26 miles, two-thirds of this distance being the Solent, inside the Needles, and one-third the Southampton Water, which gives access to the docks, before reaching the Rivers Itchen and Test. Access to the docks is marked by gas and bell buoys from the Needles through the Solent and up Southampton Water, and there is an available depth of 30ft. at low water of ordinary spring tides. The tidal range at ordinary spring tides is 12ft., at extraordinary springs 13ft., and at neaps about 9ft. With the exception of the inner basin, the quays and docks are accessible without locks or gates, the depth being at low water (ordinary spring tides), in the outer dock 18ft., Empress Dock 26ft., and at New Quays 28ft. The entrance to the Empress Dock is 165ft. wide, to the outer dock 150ft., and to the inner basin 60ft. The inner basin covers 10 acres, the outer dock 16, and the Empress Dock 18½, whilst the open quays at present constructed are some 6,000ft. in length. Of the present graving docks, five in number, four are approached through the open docks and one from the River Itchen, and the company are constructing a sixth dock, the approach to which will be from the River Test. They are respectively 250ft. long with a depth of 15ft., 400ft. long with a depth of 21ft., 430ft. long with a depth of 25ft., 500ft. long with a depth of 25ft., and 750ft. long with a depth of 32ft., and a maximum width of 110ft. The sixth graving dock (in course of construction) will be 800ft. long, 90ft. wide at entrance, and the depth of water on blocks will be 33ft. at H.W.O.S.T. The whole of the dry docks belong to the London and South-Western Railway Company. There are large repairing engineering factories in the possession of the Royal Mail Steam Packet Company and the Union Castle Mail Steamship Company, and the works of the various shipbuilding

and repairing firms are within a reasonable distance of the dry docks. The port authority is the Southampton Harbour Board, and its jurisdiction extends over the Rivers Itchen and Test, and Southampton Water, to an authorised line near Calshot Castle, and includes the quays of the Harbour Board. The railways connecting with the docks and also with the quays of the Southampton Harbour Board are owned by the London and South-Western Railway Company, and thus connected with all the principal railways in the kingdom. The railways round the docks and quays are all worked by the London and South-Western Railway Company. The present dock authority is the London and South-Western Railway Company, to whom the docks were transferred on the 1st November, 1892, and are managed under the Southampton Docks Act, 1871. Vessels are generally loaded and unloaded by the London and South-Western Railway Company, the dock authority, but in some cases, with their concurrence, the work is performed by the shipowners. This applies to labour on the docks. The labour on board ship is in nearly all cases performed by the shipowners. Previous to 1892 the work was all done by the old dock authority. When the railway company acquired the docks they left it optional. Pilotage at Southampton is compulsory, and is controlled by Commissioners, consisting of the Collector of H.M. Customs, Commander H. Mansell, R.N., and Commander E. Pilkington, R.N., under the control of Trinity House, London. The maintenance of the Rivers Itchen and Test is under the control of the Southampton Harbour Board, who are the Conservators of the port. This body consists of the Mayor, Recorder, Aldermen, and Common Councilmen of the Borough, and of ten specific Commissioners. The rates of pilotage are as under:—From Lepe Buoy to Lee Point to Eling, Redbridge, Northam, or Chapel, 1s. per foot extra. If a vessel inward bound be not boarded until E.N.E. of Calshot Castle, only one-third of rate. From Southampton to sea, 17ft. and under, 6s. per foot; 17ft. to 20ft., 7s.; above 20ft., 9s. Removing in Southampton Water, from Southampton to Redbridge, Eling, Northam, or Chapel, and *vice versa*, 1s. per foot; to Hamble, Bursledon, Lepe, or Beaulieu, and *vice versa*, 1s. 6d.; proportionate for any intermediate distance. The above rates are subject to a reduction of one-fourth in respect of steam vessels and vessels towed up. Pilots retained on board while at anchor, 7s. 6d. per day. From line drawn from Lepe Buoy to Lee Point to Southampton, Hamble, or Bursledon, 17ft. and under, 1s. 6d. per foot; 17ft. to 20ft., 2s. 6d.; above 20ft., 3s. 6d. The buoying and surveying of the various channels are under the control of the Southampton Harbour Board. Powers exist under the Special Act

Mr.  
R. Urwin.  
1 April 1901.

Mr.  
J. Dixon.

Mr.  
J. Dixon.  
1 April 1901.

of Parliament, as well as under the Harbours, Docks, and Piers Act, 1847, to make bye-laws; but with the exception of the regulations for shipping in the docks it has not so far been found necessary to make use of such powers. I have forwarded to the Commission a copy of the Dock Regulations and Harbour Board Bye-laws. The docks are lighted by electricity, and goods are discharged and shipped and work frequently carried on at night, including the repairs and refitment of ships in the graving docks, and coaling of vessels. In fact, during the busy seasons, the work does not cease from midnight on Sunday night until the following Saturday night. Hydraulic cranes are on all the quays, and hand and other cranes in all the warehouses. Their powers range from 30cwt. to, say, 12 tons. There are also sheer-legs that will lift up to 80 tons, and others ranging from 20 tons. We have also a 30-ton travelling crane, which is specially used in the No. 5 Graving Dock in lifting shafts and heavy pieces of machinery. Grain in bulk is unloaded from vessels by elevator, and conveyed by travelling bands to the whole of the warehouses. Our rates on grain cover the use of machinery. The hydraulic cranes on the quays lift direct from the holds of ships and deposit either into railway trucks or into the doorways of warehouses. There is a considerable area of ground set apart for the piling of deals, etc., and in addition thereto there is extensive shed room for the storage of wood goods under cover. Mineral oils are not dealt with by us. Very extensive provision is being made for cold storage and lairage. The several companies using the port have, of course, their own cold stores for their own purposes, and the American line have also provision for their imported meat trade. The extensive system of warehouses in the docks is the property of the London and South-Western Railway Company. The work at Southampton Docks is very varied. The fruit trade involves immediate despatch, and is practically not warehoused, and this applies equally to Channel Islands and French products. On the other hand, American goods are put into warehouses, also grain, wine, and maize, which is not to be delivered for a considerable time after being landed, whilst West Indies products are housed for a longer or shorter period, as required. The provision of warehouses is under the Southampton Docks Act, 1871. Rent is in all cases charged when goods remain for the convenience of the importer. To ensure correct delivery of cargo, there is necessarily a short time (about seven days) involved in the handling of it, and rent is not then enforced. I have forwarded to the Commission a schedule of dues charged on shipping, also of the charges on goods, according to schedule in Southampton Docks Act, 1871. Vessels are charged harbour dues as well as dock dues; but on goods there is no charge but that of the dock authority. It is the rule with the dock authority to give equal facility to all parties and dues are levied in all cases to make the payments equivalent. The granting of exceptional privileges is not permitted. The tonnage of ships is ascertained from their register. The tonnage of goods is ascertained by weighing, or measuring, as the case may be, according to the kind of merchandise. Goods brought by ships trading to Southampton are invariably despatched by rail, and not into lighters. The Southampton Harbour Board quays are not under the control of the dock authority, and regular lines of ships, principally coasters, trade from there. The railway traffic is worked by the London and South-Western Railway Company. Ships belonging to His Majesty have, of course, free use of water space, and ships that have loaded at the docks and returned disabled have privileges under the Harbours, Docks, and Piers Act, 1847. The tugs at Southampton are the property of a local steamship company. I am unable to give you their rates, as it does not fall within the province of this railway company to hire them. The following are particulars of the tonnage of vessels which entered the docks during 1900:—

	Number of Vessels.	Gross.	Net.
Under 500 tons - - -	887	240,672	116,438
500 tons to 1,000 tons -	677	504,745	232,150
1,000 tons to 2,000 tons	1,107	1,445,132	630,199
2,000 tons to 4,000 tons	102	315,499	200,808
4,000 tons to 6,000 tons	238	1,217,962	734,664
Over 6,000 tons - - -	192	1,801,786	989,564
Total - - -	3,203	5,525,796	2,903,823

5421. Are the hours of the Customs officials the same as at other ports?—Yes, the hours of the Customs officials are the same as at other ports; but they do not regulate the working hours of labour in the docks. At Southampton they are practically continuous. The work is continuous, and the Customs House hours are practically continuous. The arrivals in dock and discharge of steamers over 2,000 tons burden, during the week ending 2nd February, 1901, were as follows:—

Royal Mail Steam Packet Company:

31st January. S.S. "Atreto" from West Indies. Tonnage:—Gross, 5,366, Net, 3,068. Cargo, 1,330 tons. Commenced discharge 31st January, finished discharge the 2nd February.

Union-Castle Mail Steam Ship Company:

29th January. S.S. "Doune Castle," from Hamburg. Tonnage:—Gross, 4,046, Net, 2,613. Cargo, 110 tons. Commenced and finished discharge the day of arrival.

1st February. S.S. "Dunvegan Castle," from Portsmouth. Tonnage:—Gross, 5,958, Net, 3,428. Cargo, nil.

1st February. S.S. "Scot," from Portsmouth. Tonnage:—Gross, 7,815, Net, 4,278. Cargo, nil.

2nd February. S.S. "Tantallon Castle," from the Cape. Tonnage:—Gross, 5,636, Net, 3,048. Cargo, 750 tons. Commenced discharge 4th February, and finished the 5th.

American Line:

27th January. S.S. "Noordland," from New York. Tonnage:—Gross, 5,150, Net, 3,867. Cargo, 840 tons. Commenced discharge 27th January, and finished the 28th.

Cunard Line:

28th January. S.S. "Aurania," from the Cape. (Trooper.) Tonnage:—Gross, 7,269, Net, 4,030. Cargo, 70 tons. Commenced and finished discharge the same day.

Rotterdam Lloyd:

28th January. S.S. "Soembing," from Rotterdam. Tonnage:—Gross, 5,142, Net, 1,815. Cargo, 4 tons. Commenced and finished discharge the same day.

P. & O. Steam Navigation Company:

28th January. S.S. "Nubia," from Cape. (Trooper.) Tonnage:—Gross, 5,914, Net, 3,824. Cargo, 26 tons. Commenced and finished discharge the 28th January.

5422. Southampton is one of the few examples in England where the dock management is in private hands, is it not?—Hull is another case. Hull is in the hands of the North-Eastern Railway Company, the same as Southampton is in the hands of the London and South-Western Railway Company.

5423. Do you consider that private ownership of docks has any advantages over public ownership?—I have a very strong opinion that the ownership of docks by railway companies—not a private dock company—is an advantage. The instance of Southampton itself is a case in point against Dock Company ownership. The old Dock Company had no resources to fall back upon, and the result was, they got into a state of impecuniosity, out of which the railway company had to lift them.

5424. You have told us that the warehouses belong to the railway company?—Yes. There is an extensive system of warehouses there.

5425. Are you of opinion that in any scheme of dock management warehouses should be included?—Yes, certainly.

5426. You mentioned that the ordinary range of spring tides was 12ft. Is it not the fact that there are double tides at Southampton?—Yes, there are four tides a day.

5427. Does that give you a longer time of high water?—We have practically a period of four hours of high water, twice a day.

5428. (Sir Robert Giffen.) Are there tidal basins at Southampton?—We have only one pair of gates. There is not a lock.

5429. Have you any accounts of the Southampton Harbour Board?—I have the accounts of the London and South-Western Railway Company.

5430. I am speaking more of the harbour than the railway?—I will hand in the last published harbour accounts. (The witness handed in the harbour accounts.)

5431. Will you state whether you have a surplus or a deficit on the Harbour Board?—They pay their way very well. They pay interest on all their bonds.

5432. How much interest do they pay?—About four per cent.

5433. What is the amount altogether?—£8,105, and that includes bank charges, £118.

5434. The chief income and expenditure account in connection with the docks would, of course, be kept by the railway company?—Yes.

5435. Do they publish separate accounts of the matters?—They do not publish detailed accounts, but the receipts and expenditure are shown in our half-yearly accounts—the railway company's account.

5436. Can you tell us how they work out?—If you take the last half year the docks receipts were £127,000 and the expenditure £92,000.

5437. Where would the capital expenditure of the docks appear?—£1,422,000 we paid for the docks, and our total expenditure since 1892 up to the 21st December, including the purchase of the docks, was £3,056,768. We have spent more over the docks since we bought them than we paid for them.

5438. Then that apparent surplus of an income of £127,000 and an expenditure of £92,000 does not include the expenditure of interest on capital spent in the construction of the docks?—No, about 2½ per cent. is what we make upon our productive capital.

5439. (*Sir John Wolfe-Barry.*) When the docks were taken over by the London and South Western Railway Company in 1892, I suppose they had fallen rather behind the requirements of the times, had they not?—Yes. They had no means of raising capital, or, at any rate, they could not raise it at all. The railway company had assisted them already, and they thought something had better be done, and that they had better take them over.

5440. The London and South Western Railway Company, being, of course, greatly interested in the prosperity of the docks at Southampton?—Yes.

5441. And although, perhaps, the return on their expenditure does not appear to be very much when looked at from the point of view of dock receipts, yet, when looked at over the whole system of the London and South Western Railway it may be very advantageous to the railway company?—It is a feeder decidedly. Private companies cannot afford to carry on such a business at 2½ per cent., but a railway company of course can.

5442. In many cases a dock of this kind is something like a great railway station?—Yes, it is a huge railway terminus.

5443. Has the traffic greatly increased since 1892?—It has increased considerably. The tonnage of shipping which entered the docks in 1892, which was the year of the transfer, was 2,369,000 gross, and last year it had increased to 5,525,758.

5444. Therefore it would appear that the policy of bringing the docks up to modern requirements has produced a very largely increased traffic?—Yes.

5445. And I take it that the expenditure which has been incurred on the docks since they were purchased has been all in the direction of bringing them up to the requirements of modern shipping?—Yes, the destruction of all wooden sheds and the construction of brick warehouses and double storey sheds, and the supply of hydraulic power and electric power. Of course the old Dock Company when we took it over was hopelessly behind modern requirements.

5446. Then the result of the expenditure has been a very large increase of traffic?—Yes.

Mr. CHARLES JAMES MORE recalled and further examined.

5459. (*Chairman.*) You now appear before us in order to put in an estimate of the cost of the work which would be necessary to deepen the river to 30ft. up to the Victoria and Albert Docks, in accordance with the promise given by the Chairman of the Conservancy at Questions 1440 to 1447 and 1474 to 1480?—I do.

See 7483-4. 5460. Will you kindly give us that estimate?—This is my report to the Conservators on the subject containing the estimate which the Chairman referred to:—

20th February, 1901.

To the Conservators of the River Thames.

Gentlemen,—As directed by the order of the Board, dated the 26th November last, I have prepared and

5447. Who does the dredging below the docks so as to give the 30ft. of water up to the docks?—The Harbour Board or the railway company did, by arrangement with the Harbour Board. It was the Harbour Board's business, but with our large interest in it we agreed to bring the five fathom line up to Southampton, we practically paying one-half of the cost. The cost of doing that was about £42,000, and we found about £22,000 out of the £42,000.

5448. That was an example of the work which was thought to be necessary for the full development of the docks?—That was so. It was for the ships that we expected to come. Thirty feet is enough for present requirements, and we have that at low water, of course. There is one significant figure appearing in the traffic. In 1892 the steamers which used the port took in 179,520 tons of coal, principally Welsh. Last year the steamers using the port consumed 495,449 tons, which is a very considerable increase.

5449. Has that anything to do with opening the Severn Tunnel?—No, the bulk of it comes by water. As a matter of fact, 355,000 tons out of that 495,000 came by water last year.

5450. Is there any private warehousing done at Southampton?—Yes, there are warehouses there which are leased by local merchants; for instance, Fear, Colebrook and Co., and Jefferey and Lewis. There is a considerable grain trade done at Southampton.

5451. And you compete with them, I suppose, for warehousing?—No, we have no competition. The effect of the purchase of the docks by the railway company has been to stop all competition. Formerly the Harbour Board used to compete with the dock company.

5452. You have warehouses and private owners have warehouses, you say?—Yes.

5453. If there is a cargo of goods, I suppose a private warehouse owner would like to get it into his warehouse?—Well, he can take it. We do not put any impediment in his way.

5454. The manager of the docks would point out the advantage of warehousing on the dock property?—Certainly; but we take the grain from his docks to his own private warehouse for a small charge.

5455. Do you mean on the rails of the company?—Yes, because we ultimately get the carriage of it, whether it comes from his warehouse or ours. Personally, I would prefer that he should take it to his own warehouse.

5456. You do not get the warehouse rent unless it comes into your warehouse?—No, but we have the room.

5457. (*Chairman.*) Can you tell us the amount of dredging that is done, and its annual cost?—Do you speak more particularly of the cost of the dredging of the Harbour Board?

5458. Yes?—It is a small matter. We have one other great advantage at Southampton besides the double tide. The ebb tide only lasts about three and a half hours against the flood tide five and a half or six hours, so that what is brought up by the flood tide is carried out by the extra scour that we have by the short ebb. The cost of the dredging of the Harbour Board last year was £6,296; but that £6,296 was an exceptional item. The net dredging only amounts to about £1,000 a year for the Harbour Board, and our dredging the docks is about £2,000 a year on revenue account. Of course, we have a tremendous amount of dredging on capital account.

submit herewith an estimate of the cost of providing a channel 30 feet deep at low water of spring tides between the Nore Lightship and the Albert Dock, and having a minimum width of 1,000 feet up to Gravesend, and 600 feet between Gravesend and the Albert Dock entrance.

The total quantity of material which would have to be dredged to make this channel as far as Gravesend is 7,807,000 cube yards, and the quantity between Gravesend and the Albert Dock is 12,342,000 cube yards, making a total of 20,149,000 cube yards, the cost of dredging which I estimate at the sum of £1,514,838, as set out in detail on the annexed statements.

Mr.  
J. Dixon.  
1 April 1901.

Mr. C. J.  
More.

Mr. C. J.  
More.

1 April 1901.

In considering the question of the plant required to carry out this dredging, I have assumed that the dredging for the deepening of the channel opposite the Leigh Middle could be carried out by contract as the material is known to be silt or sand, and would be most economically removed by suction dredgers.

The dredging between the Chapman Light and the Albert Dock entrance amounts to 14,292,000 cube yards, and if the work were spread over ten years, three powerful dredgers and twelve steam hoppers, each of about 700 cube yards carrying capacity, would be required.

The limit of ten years would cover the whole of the dredging operations, but the work could be so arranged that the channel might be deepened up to the Tilbury Docks in from two to three years from the date of commencing the work.

A tender and a steam surveying vessel would have to be provided, the cost of which is included in the estimate.

I have also provided for the insurance of the dredgers, hoppers, and other craft for a period of ten years, and the estimate includes a sum of £20,000 for the extension of wharf accommodation and increased plant which would be required to carry out the necessary repairs to the dredgers, hoppers, and other vessels employed.

#### Training Banks.

As pointed out by the Lower Thames Navigation Commissioners in paragraph 47 of their report dated the 25th March, 1896, it is improbable that a channel of the depth of 30 feet at low water could be maintained through the shallows to the south of the Leigh Middle without the construction of a training bank to direct and control the tidal currents between Canvey Island and Shoeburyness.

In designing such a work care must be taken to place it in a position where it will exercise the most beneficial effect on the navigable channel whilst interfering as little as possible with the access to Leigh and Southend and the sea frontage extending between these places.

This can only be determined after a prolonged series of observations on the directions of the tidal currents, which cannot be satisfactorily carried out except during calm, clear, and settled weather.

The cost of the bank would also depend to a great extent on the nature of the soil on which it is constructed, and to ascertain this borings would have to be made along the line decided on.

In the absence of this necessary information any estimate of the cost of the training bank must be a very rough approximation, and it is only in consequence of the strongly expressed desire of the Commissioners to have such an estimate that I have ventured to deal with the matter on the inadequate data at present accessible.

For the purpose of making this estimate I have laid down alternative lines for a training bank, which are shown in red and blue on the accompanying charts.

The section adopted for calculating the quantity of material required is also shown on the chart.

I estimate the cost of a bank constructed in the position shown by the red lines at about £135,000, and a bank constructed in the position shown by the blue lines at about £82,000.

In the latter case, however, the bank would probably have to be extended eventually to a greater distance than is shown from Canvey Island, and as it would then enter deep water, the cost would be considerably increased.

I have the honour to be, Gentlemen,  
Your obedient servant,  
(Signed) CHARLES J. MORE, Engineer.

THAMES CONSERVANCY,  
20th February 1901.

**ESTIMATED COST OF DEEPENING THE RIVER THAMES SO AS TO PROVIDE A CHANNEL HAVING A DEPTH OF 30 FEET AT LOW WATER OF SPRING TIDES UP TO THE ALBERT DOCK ENTRANCE. (QUESTION No. 1440.)**

The minimum width of the channel to be 1,000 feet up to Gravesend and 600 feet between Gravesend and the Albert Dock.

#### SUMMARY

Cost of Dredging as per Statement No. 1	-	-	1,050,038
Cost of Plant as per Statement No. 2	-	-	349,800
Insurance of Plant for 10 years at £5,000 per annum	-	-	50,000
Working Expenses of Tender for 10 years at £2,000 per annum	-	-	20,000
Working Expenses of Survey Vessel for 10 years at £2,500 per annum	-	-	25,000
Enlarging Conservancy Wharf and providing extra machinery in workshop	-	-	20,000
Total Cost of Dredging	-	-	1,514,838
Cost of Training Walls between Canvey Island and Shoeburyness, as per Statement No. 3, say	-	-	135,000
			<u>£1,649,838</u>

#### STATEMENT No. 1.

##### QUANTITIES OF MATERIAL TO BE DREDGED, AND ESTIMATED COST OF WORKING DREDGERS AND HOPPERS.

Between the Nore Lightship and the Chapman Light through the "Yantlet" Channel—	£	£
5,857,000 cube yards at 10d. per cube yard	244,042	
Add 10 per cent. for Contingencies	24,404	
		268,446
Between the Chapman Light and Gravesend—		
1,950,000 cube yards at 11½d. per cube yard	93,438	
Between Gravesend and the Albert Dock—		
12,342,000 cube yards at 1s. per cube yard	617,100	
		710,538
Add 10 per cent. for Contingencies	71,054	
		<u>781,592</u>
		<u>£1,050,038</u>

NOTE.—Through the Leigh Middle Channel there would be 667,125 cube yards less dredging, which would reduce the cost by £30,575.

#### STATEMENT No. 2.

##### ESTIMATED COST OF PLANT REQUIRED FOR DREDGING.

It is assumed that the dredging required between the Nore Lightship and the Chapman Light might be done under Contract, the material to be removed being sand and silt.

Between the Chapman Light and the Albert Dock Entrance the quantity of material to be dredged is 14,300,000 cube yards.

Assuming that one dredger and four steam hoppers could dispose of 500,000 cube yards of material in a year, if the dredging operations were extended over ten years, three dredgers and twelve hoppers would be required to do the work.

The cost of a dredger if taken at £28,000 and the cost of a steam hopper capable of carrying 1,000 tons, or say 700 cube yards of heavy material, is taken at £18,000.

#### ESTIMATE.

	£
3 Dredgers at £28,000 each	84,000
12 Steam Hoppers at £18,000 each	216,000
Steam Tender for Dredgers	10,000
Survey Vessel	8,000
	318,000
Add 10 per cent. for Contingencies	31,800
	<u>£349,800</u>

Say £45,000.

5461. Have you seen the estimate of Sir Alexander Binnie for similar work, which is given at Question 3086?—I have.

5462. Have you any observations to make upon that estimate?—I think so far as we can compare the two the quantities are very nearly the same for the part between Gravesend and the Albert Dock. So far as the estimate for the cost is concerned I have taken it out at 1s. per cube yard. There is not very much difference really between us on the whole.

5463. Then with regard to Questions 1691 and 1692, you promised to give us an estimate of the cost of providing extra moorings from Barking Reach to North fleet Hope?—Yes. That is included in my estimate.

5464. Then with regard to dredging, you promised to give us a statement of the amount dredged during the years 1894 and 1899. Can you give us that?—Yes, I will put it in now.

(The Witness handed in a statement showing the quantity of material dredged by the Thames Conservancy dredgers below London Bridge for the six years 1894 to 1899. See Appendix, 15th day, No. 2.)

5465. Have you any further remarks to make with reference to the statement you have put in?—Not with reference to this, I think.

5466. (Sir John Wolfe-Barry.) With regard to what you say as to the construction of a training bank, you say the position can only be determined after a prolonged series of observations on the directions of the tidal currents, which cannot be satisfactorily carried out except during calm, clear, and settled weather. Is it proposed by your Board to proceed with those observations?—I think we should. In this coming summer we shall certainly take a series of observations there.

5467. We may take it that you are really going to do it?—Yes, you may take it that we will.

5468. Does the same remark apply to the question of the borings?—Yes, we should also do that when the summer weather comes in, if the Commission desire it. We had not settled to do that, but if the Commission wish it, of course we could do so. It will have to be done if ever the scheme is carried out.

5469. It is a necessary thing to do?—Yes, quite necessary.

5470. I see you take the total cost for deepening the River Thames so as to provide a channel having a depth of 30ft. at low water of spring tides, up to the Albert Dock entrance, the minimum width of the channel to be 1,000ft. up to Gravesend, and 600ft. between Gravesend and the Albert Dock, and you estimate that at £1,649,838?—Yes.

5471. May I ask you whether you have formed any idea as to the time which the operations will occupy?—Yes, I have stated in the estimate that, assuming one dredger and four steam hoppers could dispose of

Mr. C. J. More.

700 1 April 1901

See 1703. }

*Mr. C. J. More.*  
1 April 1901. 500,000 cube yards of material in a year, if the dredging operations were extended over ten years three dredgers and twelve hoppers would be required to do the work.

5472. And the time would be proportionately less if more plant were used?—Yes, but that is the basis on which I estimated for the plant.

5473. You have to increase the amount of plant, and to that extent you have to increase your estimate for the depreciation of the plant?—That is so.

5474. (*Rear-Admiral Hext.*) You spoke about cube yards. What is the proportion of the cube yard in the tonnage?—A cube yard would be about a ton and a third, or something of that kind. It depends on the material. It varies greatly in weight. Some would be more than that.

5475. After the river is dredged to the proposed depth have you thought what it would cost to keep it at that depth?—I think myself from Albert Dock down to Gravesend—at any rate—the river would maintain itself at that depth, because we have already many reaches where we have that depth, and even a greater depth than that. Of course, when you come to a channel like the Leigh Middle that would be a most expensive thing to keep open. I may say that going beyond the Albert Dock higher up it would be a very difficult thing to maintain a 30ft. channel there.

5476. (*Sir Robert Giffen.*) Looking at the conditions of the river and the prospects of an increase of shipping business, would you recommend that the works should take ten years?—I have mentioned that you might begin by deepening the channel from Gravesend to Tilbury Docks, which would take from two to three years. You might concentrate your plant on that. The higher part of the river would be done in ten years, but it ought to be done from Gravesend to Tilbury in very much less than ten years.

5477. Then the trade of the port would, you think, benefit, although the works extend over ten years?—Yes. That would enable you to get to Tilbury Docks within two or three years.

5478. (*Sir John Wolfe-Barry.*) I see in what you call your statement No. 1 you put down a sum of £268,446 for dredging between the Nore Lightship and the Chapman Light through the Yantlet Channel?—Yes.

5479. Am I right in supposing that the bulk of that is through what is called the Leigh Middle Shoals?—Nearly the whole of it.

Mr. GEORGE AMBROSE POGSON called and examined.

*Mr. G. A. Pogson.*  
5491. (*Chairman.*) You are the British Vice-Consul at Hamburg?—Yes.

5492. We have received answers to the several questions submitted by us to the British Consul-General at Hamburg?—Yes.

5493. And we are now desirous of obtaining some further information with regard to that port. Will you describe to us the method of working employed there?—I have brought with me maps of the port, which the Commission have before them. I should like to say that the Hamburg Republic has about 700,000 inhabitants, and they have the sole government of the port. The dock was constructed between 1880 and 1888, after all parts of the world had been visited, so that it contains the most modern scientific improvements. It is about 58 miles from the mouth of the Elbe, with a mean lowest depth of 16½ft. of navigable channel, ranging to about 25ft. 3in. at high water. There are ten tidal basins in Hamburg Docks—no locks—these tidal basins having a water area of about 332 acres. The total acreage with the quays in the new basin now under construction comes to 1,133 acres.

5494. These particulars, I think, we already have in the answers to our questions?—Yes. They are all there more or less.

5495. Will you tell us whether the harbour administration is worked at a profit?—No, it is not. That is private information from the Senate, but it is on the best authority. The expenses exceed the receipts.

5496. Can you tell us the amount of the loss per annum?—It is not published. No special balance sheet is published. It does not appear in the Budget at all.

5480. It does not, I presume, exactly follow that if the training wall were made you would have to do so much dredging?—No; it is possible that you might save a great deal of dredging. I may say that it appears to me that the proper course would be to make the training wall first, and it might be so successful that it would do away with a great deal of dredging.

5481. Therefore it is quite conceivable that the amount required might be less at any rate in that locality?—Yes, it is quite problematical what dredging there would cost.

5482. You have, I think, something like 60ft. of water at the Chapman Light?—There is a hole there.

5483. Then you come to 40ft. of water, where the river begins to widen out?—Yes.

5484. And then it is reduced to about 25ft. ?—25ft. to 26ft. in the deepest part.

5485. Then below the point where the training wall might be supposed to stop you begin to get depths of 60ft., 50ft., 40ft.—ample depths of water?—Yes.

5486-7. Therefore it is quite conceivable that training the channel from the Chapman Light down to somewhere nearly opposite Shoebury you might possibly do without dredging the channel?—Yes.

My lord, I was going to ask to be allowed to explain something which has been said by the pilots who have been called with regard to the dredgers. They are not Conservancy dredgers; they dredge for the purpose of obtaining ballast for sale. They belong to private owners, and are not there for the purpose of improving the channel. They are under the control of the Conservancy Harbour Masters, and they work under the Thames Conservancy licence, but they are not our dredgers. Five of them are for raising ballast and three for sand.

5488-9. Do you tell us that those are the only dredgers of which the pilots complain?—I think they mentioned those specially. They are in the Lower Hope. If your lordship cares, I could put in a copy of the licence which we grant to show the conditions under which they are worked.

5490. (*Chairman.*) Yes, we should like to have that. Will you put in now?—Yes.

(*The witness handed in a form of dredging licence granted by the Thames Conservancy. See Appendix, 15th day, No. 3.*)

5497. Does the Government consider that the benefits accruing owing to the influx of trade compensate for that loss?—Undoubtedly, since they continually increase the facilities of the harbour, which is being done at the present moment at very great expense. The German Government have, according to Mr. W. H. Gastrell, our Commercial Attaché at Berlin, spent at Hamburg and other German ports since 1888 about £24,428,000 on harbour accommodation for increased shipping. Some £15,000,000 of this sum has been expended at Hamburg on such works; at Bremen, Vegesack, and Bremerhaven £5,700,000; at Altona, £450,000; at Geestemünde, £800,000; at Danzig, £400,000; at Stettin, £1,400,000. See 774

5498. Was that expended by the German Government or by the local authorities?—Partly by the Hamburg State and partly by the Imperial authorities.

5499. Will you explain the system of lighterage in force?—The lighterage is generally in the hands of private people. No charges are made by the authorities for goods passed over the side of the vessel into lighters. If removed off the quay there are certain charges made. I have made a translation of the Regulations since the answers to the questions were forwarded to the Commission, which I hand in.

(*The witness handed in a translation of the Regulations as to Quay Traffic and Dues in the Port of Hamburg. See Appendix, 15th day, No. 4.*)

5500. The charge is for goods from lighters on to the quay?—Yes; and into lighters from the quay.

5501. Now will you tell us, if you please, if the barges are registered?—The barges have a number, in the same way as the vehicles in London, for the purposes of identification.

5502. And for no other purpose?—They do not pay any fee. I do not think that they pay for a licence. I think they are only numbered, and they pay a nominal fee for that number. The fee is a few marks only.

5503. Can you tell us the amount and cost of the dredging that is done in the river?—The Hamburg State possessed at the end of the year 1900 eleven dredgers, and the dredging of the river and the harbour costs Hamburg £40,000 to £45,000 annually.

5504. Is that for a period of several years?—That is on the average.

5505. An average since 1888?—For the last ten years.

5506. Can you tell me the amount of the dredging that has been done?—During the past ten years from 1,900,000 to 2,800,000 cubic metres of sand, clay, and other refuse annually from the bed of the harbour and from the Elbe.

5507. Now with regard to the quay traffic, can you give us a statement of the rates levied?—The quay dues are contained in the translation of the regulations that I have handed in.

5508. Have you ever heard of any cases where goods are conveyed to Hamburg and then transhipped to London in preference to being sent direct to London?—I think it is an increasing custom forced upon merchants by the heavier charges in London upon direct shipments from other countries. I am able to give the Commission some information on that point, but I have not permission to give the names of the firms generally.

5509. Then I am afraid we cannot take it. You must either give the whole of it, or not at all?—I am allowed to pass it round to the members of the Commission?

5510. No; that will not do?—It is a firm established in London and New York and Hamburg.

5511. We must have it in its entirety or not at all?—Then may I give you a statement from my own knowledge?

See  
5629-30.

5512. Yes?—The instance I will give you is that of some sewing machines shipped from New York this year. One parcel from New York to Hamburg and thence to London, and one to London direct. *Via* Hamburg they went from Hamburg by the General steam Navigation to Harwich, and thence to Liverpool Street at a total cost of £20 11s. 7d., whereas the direct shipment for the same weight and the same goods at the same time came to £25 8s. 1d. There was a bitter complaint about an amount of £6 16s. 9d. for dock dues, delivery, and cartage, and also a complaint about the "London clause." Not being able to explain the London clause, I applied for, and received this morning two bills of lading from the Atlantic Transport Company, containing that clause. I may say that the actual freight to London in one case was £16 16s. 9d., and the freight to Hamburg 307 marks, which we may call £15. There was a charge *via* Hamburg of dock dues, 13s., and transhipment charges 20s., raising it to £17. The carriage from Hamburg to Harwich and thence to London was £3 18s. 2d., allowing the goods which had been placed on board at Hamburg to be received, I believe, at Aldersgate Street within 60 hours of their being put on board at Hamburg, whereas it is stated by the merchant that it took over a fortnight from the arrival of the goods in London to the time that he was able to receive them. He would have saved £5 in the freight and a fortnight's time in the receipt of the goods if they had been sent the other way.

5513. (Sir Robert Giffen.) What are the charges in London in addition to the freight?—Through the London clause a charge accrued as per bill of lading of 1s. 9d. for 40 cubic feet, amounting to £2 4s. 10d. That was occasioned by the London clause in this American bill of lading.

5514. What was that for?—I have heard that it is a common clause on goods sent to London.

5515. But what affected this is a sum of money, you say, in addition to the freight?—Yes; the London clause charge is £2 4s. 10d.

5516. But what is it for doing?—This is the clause: "The steamship owners shall at their option be entitled to land the goods within mentioned on to the quays or to discharge them into craft hired by them immediately on arrival and at consignees' risk and expense."

5517. (Chairman.) Is this the case you are mentioning from your own knowledge?—Yes.

5518. You say your correspondent told you that he complained of that particular bill of lading. Is that it?—He complained that the London clause with regard to the carriage of goods from New York to London was a drawback.

5519. (Sir Robert Giffen.) That extra charge was made for landing the goods on the quay. Is that what it means?—Or into lighters at their option. It seems to be a compulsory clause bringing in a charge of £2 4s. 10d., and the dock dues amounted to £6 16s. 9d., raising the direct charges to £25 18s. 1d., as against £20 11s. 7d. *via* Hamburg.

5520. Will you enumerate those charges again?—London clause charges as per bill of lading, £2 4s. 10d.; dock dues, delivery, and cartage charged by the London and India Docks Joint Committee at 5s. 4d. per 40 cubic feet, £6 16s. 9d., as against dues at Hamburg amounting to 13s., transhipment charges 20 marks—roughly £1; and through rate, Hamburg-Harwich to London, £3 18s. 2d.

5521. (Chairman.) How do you make up the £25?—£16 16s. 9d., £2 4s. 10d., £6 16s. 9d., amounting to £25 18s. 1d. *Via* Hamburg, 307 marks, or £15, freight, 13s. dock dues. £1 transhipment, amounting exactly to £16 13s. 5d., plus £3 18s. 2d. from Hamburg to Liverpool Street, I assume.

5522. Has the operation of the Merchandise Marks Act, in your opinion, been injurious to London ship-owners?—I should answer that question in the affirmative unhesitatingly.

5523. Are you able to suggest any remedies for the alleged disadvantages of the Act?—There seems to be a want of unity in the carrying of it out throughout the British Empire and the colonies as well, since we can get no international agreement on the matter.

5524. Can you suggest any remedy?—We ought to manage to get an international agreement on the matter by all manufacturing countries.

5525. (Sir Robert Giffen.) A part of that charge by the London dock company that you mentioned was for cartage. Can you tell us where the cartage was to?—It says here: "Charged by the London and India Docks Joint Committee to Aldersgate Street."

5526. To the destination?—Yes.

5527. In the case of the goods by way of Hamburg the charge was not to Aldersgate Street, but to Liverpool Street, was it not?—"Through rate, Hamburg-Harwich to London, domicile." That would be also to Aldersgate Street.

5528. Including the cartage?—Yes.

5529. Are you quite sure of that?—It is mentioned here. "Through rate, Hamburg-Harwich, to London, domicile." It must be Aldersgate Street, the address of the merchant himself.

5530. (Mr. Peel.) What is the rate at which the stream runs at Hamburg?—The distance from Hamburg to Cuxhaven is 58 miles, and the tide takes four hours and twenty-one minutes.

5531. (Sir John Wolfe-Barry.) That is the speed of the tidal wave. The question was, what is the speed of the current of the river?—The current would be nearly the same, would it not?

5532. (Mr. Peel.) You say the depth of the water in Hamburg Harbour at high water is 25ft.?—Yes.

5533. What is it at low water?—16½ft.

5534. When you say "Hamburg Harbour," what do you include under that?—From the entrance to the harbour to the sailing ship harbour. Some of the older docks or tidal basins are not as deep as those under construction. Those under construction are having the walls of the new basins constructed so that another 5ft. depth can be added afterwards if necessary.

5535. You say 16½ft. is the minimum depth at mean low water. That is found off Schulau?—At Schulau and Blankensee.

5536. The larger vessels have to lie there, I suppose?—Yes, sometimes.

Mr. G. A.  
Pogson.

1 April 1901.

Mr. G. A. Penson.  
1 April 1901.

5537. Does the Elbe silt up very rapidly in these open docks?—Not so much in the harbour. The dredging in the river is continual.

5538. You have given some figures about the dredging. I suppose you could not tell us how much of that yearly expense is for the dredging in the docks?—No, that was not given to us by the authorities.

5539. You talk about these canals that run into the interior of the town, and I presume further back?—They run through the territory of the Free State of Hamburg.

5540. Does much traffic run up these canals?—I think the main stream would be congested by barges and river craft, if these canals were not made use of.

5541. Are they freely made use of?—Yes.

5542. What do they take the traffic up to, do they take it to railway wharves, or what?—In the Free Harbour itself, in the district where goods are manipulated and sorted, and redistributed and repacked, there is a very large private company founded called the Lagerhaus Gesellschaft. The Hamburg Government holds a great many shares in that company which has been constructed solely for the convenience of all the ships' cargoes; there is, in addition, a very complete network of railways round all the quay-sheds shown in the ground plans.

5543. Then with regard to the unloading at night, who are the judges of the necessity?—The quay authorities under the direction of the Deputation for Trade and Navigation.

5544. As a matter of fact, is much trade done at night?—Not a great deal; only for the short line vessels, such as the General Steam Navigation and the Grimsby lines; those making short journeys.

5545. Speaking generally, does the Hamburg Deputation for Trade and Navigation deal with the whole of the port, the buoying, lighting, and everything?—They have the whole of the control. They appoint the officials, and they regulate the charges and settle all the general expenses of the harbour.

5546. (Sir John Wolfe-Barry.) With regard to the River Elbe, is the depth given in your answers to the questions confined to one or two shoals, or is it the general depth?—The general depth is 16½ ft.

5547. Irrespective of shoals, is that the general depth of the river, or are there particular bars with that depth on and deeper spaces in between?—The spaces are deeper.

(The witness explained by means of a map, and showed the navigable channel of the river.)

5548. Supposing the shoals were dredged away, would there be a larger depth of water available at Hamburg?—I think it is impossible to dredge those shoals away. They are always silting up again, and new shoals arrive. Suppose a vessel got stranded for 24 hours or 12 hours, it very often makes the sand silt up in another part.

5549. Then the limitation of depth for the Elbe appears to be about 23 ft. at neap high tide?—That is about right.

5550. Then when you get into the harbour itself you have a depth of 25 ft., have you not, alongside the quays?—In many parts.

5551. Then any ship that can come up the river lies afloat in the harbour, does it?—Not at all times. With certain winds the water in the harbour is very low.

5552. There you lose the difference between high and low water, which is something like 6 ft. at spring tides?—And a little more.

5553. Do the ocean ships lie partly aground?—The very largest vessels remain lower down the river. The vessels which belong to the Hamburg-American line are generally kept down the river.

5554. Whereabouts?—At a place called Stade. They are generally kept opposite Brunshausen.

5555. Then the large ocean-going steamers do not come into the harbour?—No, not as a regular thing. The "Deutschland" was up there a few weeks ago, drawing about 27 ft., and she reached Hamburg safely.

5556. Then there must be rather more water than you have mentioned in your answer?—Yes. The west wind fills the harbour, and they take advantage of such an opportunity. It raises the water 6 ft. 3 in.

5557. Are there any proposals for improving the river between Stade and Hamburg—deepening the river?—It has not been necessary yet, not so far down the river.

5558. There has been no necessity for an increase of water up to Hamburg?—Not so far down the river—only in the vicinity of Hamburg.

5559. Has there been any proposal for deepening the river up from Stade?—They are continually dredging it.

5560. Is that to maintain the depth, or to increase it?—I do not think there is any plan for using Government money on a large scale. They have no settled scheme for it.

5561. (Chairman.) Can you tell me what amount of assistance to expenditure is given from Imperial funds to Municipal funds for the maintenance of these works?—Hamburg is a Republic altogether, and the Imperial Government only exercise jurisdiction in military, postal, and criminal law, and Customs jurisdiction.

5562. Can you tell me whether there is any assistance given from Imperial or other funds towards the improvement of this port?—Not at the present time.

5563. Has there ever been?—When Hamburg went into the Zollverein, the Imperial Government voted a certain sum towards the construction of the harbour.

5564. When was that?—That would be about 1882. Hamburg went into the Zollverein actually in 1888, and the money was voted earlier, I suppose.

5565. Can you tell me whether since 1882 any Imperial funds have been used in the improvement of the harbour?—That is since Hamburg actually went into the Zollverein? I do not think any Imperial funds have been voted since then.

(The witness handed in a sectional plan of the harbour at Hamburg, showing the different tidal basins.)

Sir FREDERICK DIXON DIXON-HARTLAND, Bart., M.P., recalled and further examined.

Sir F. D. Dixon-Hartland, Bart.

5566. (Chairman.) Are you prepared, on behalf of the Thames Conservancy, to give us any information as to the financial proposals of the Board to-day?—No, not to-day, but I should like to give a message from my Board.

5567. Very well?—I gave a pledge to this Commission that our engineer should, if possible, prepare a plan which should be handed into you. I passed that through the Board at once, but as you will notice, that report was only signed on the 20th February. It was not handed to our Board till a short time after that. Then we had to send our secretary to obtain information with regard to various ports, and, as a matter

of fact, the information only came to us fully last Wednesday. That was considered by the Finance Committee last Wednesday, but this morning the Board, without any wish to be discourteous at all, thought that they ought to discuss it a little before I was allowed to bring it before the Commission. It is being pushed on as fast as we can push it on. It is a large work, and we have had to do it properly.

Now, my Lord, as I am here, perhaps I may be allowed to correct my evidence on one or two little points. The first is with regard to Question 1387. I left it a little doubtful as to the composition of the Board.

5568. (Chairman.) The question is, "What amount of tonnage would they represent?"—Yes. From my evidence it rather seemed as if we had only the small shipowners on the Conservancy Board. I wish to state that the largest shipowners in London are represented on the Conservancy Board by Mr. T. L. Devitt, a joint manager of the Orient Steam Navigation Company, Limited, one of the Conservators elected by shipowners. That is to say, that we have a representation of the largest as well as the smallest shipowners. Then I wish to correct a statement with regard to taking over the duties of the Port Sanitary Authority. That is at Questions 1422 and 1423. I had not noticed it, but I was wrongly reported in that instance. What I said was, that if the Commissioners recommend the placing of any additional duties upon the Conservators, they would be able to carry out such additional work. I did not say that they desired to take over the duties of the Port Sanitary Authority, which they consider have been admirably performed by the City of London, and would be best left in their hands.

5569. Then do you wish to make any remarks with

reference to the answers given by the pilots who have been called?—Yes. With reference to the answers given by the pilots at Questions 4226 to 4228, 4302 to 4305, 4322 to 4326, and 4379 to 4381, I would point out that the Thames Conservancy has for some years employed a surveying staff, and that the results of the various surveys are sent from time to time to the Admiralty and to the Trinity House, both of which bodies, as well as the shipowners themselves, have representatives on the Conservancy Board, whose duty it would be to bring up any complaints that had been received, and the Board presume that no complaints have been made, as none have ever been brought up. The pilots represented that there was no surveyor and that there were no surveys. The regular surveys have been taken by the regular staff; they have been handed in regularly to the proper authorities, and if those authorities had any reason to complain they have their representatives on the Board, and they could bring up their complaint to us, and it would be immediately looked into. As we got no complaint we did not understand that there was anything to complain of.

Sir F. D.  
Dixon-  
Hartland,  
Bart.

1 April 1901.

Recalled, 7432.

(Adjourned *sine die*.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## SIXTEENTH DAY.

*Monday, 6th May, 1901.*

### PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Docks Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. K. HARPER appeared on behalf of the Wharfingers and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. JOSEPH SHAW appeared on behalf of the North London Railway Company.

(*Chairman.*) We have had some applications made to us with reference to the appearance of Counsel before this Commission, and the Commissioners would like to say that as far as the examination, the cross-examination and addressing the Commission are concerned, they will

only recognise the attendance of one Counsel for each interest. This, however, will not prevent notes being taken by any person whom the parties affected may desire to attend for the purpose.

Mr. THOMAS WILLIAM JACOBS, jun., recalled and further examined.

Mr. T. W.  
Jacobs, jun.  
6 May 1901.

5570. (*Chairman.*) You are Chairman of the Association of Master Lightermen and Bargeowners?—Yes.

5571. You have some documents, I think, which you are desirous of handing in to the Commission?—Yes.

5572. Will you kindly do so, and at the same time tell us the number of the question in the Minutes of Evidence where the matter is referred to?—With reference to towage within the docks, which was dealt with at Questions 3725 to 3734 and 3746-49, I was asked to put in correspondence which I referred to that had taken place between my Company and the Dock Company. I am sorry to say that I have not been able to find that particular correspondence, but I have correspondence with another firm.

5573. This case which you wish to put in is not referred to in the evidence is it?—It is a similar case. I have not been able to put my hand upon the letters that passed between my Company and the Dock Company.

5574. These are not the documents referred to in the previous evidence. It is not that particular case?—No, it is not that particular case.

5575. Then I am afraid we cannot take it. Now have you any other documents?—Yes. With reference to Questions 3723, 3767 to 3771, and 3806 to 3825, on the subject of compulsory pilotage, I was asked to give further particulars of cases where bargeowners had suffered hardship through the law relating to compulsory pilotage.

(*The Witness handed in a Table of Cases where the Law relating to Compulsory Pilotage has proved a hardship. See Appendix, 16th day, No. 1.*)

5576. Have you any remarks to make upon this

table?—No, these are particulars in support of the evidence that has been given by myself and other witnesses. Then as to the Lighter Pass Regulations, the evidence with regard to which is at Questions 3734 to 3739, I now hand in suggestions which were made by my Association for amended pass regulations, and the correspondence which has passed with the Board of Trade on the subject.

(*The Witness handed in a copy of the Correspondence between the Association of Master Lightermen and Bargeowners, the London and India Docks Joint Committee, and the Board of Trade, on the subject of the suggested Regulations in respect of passes for Lighters using the London and St. Katharine Docks. See Appendix, 16th day, No. 2.*)

Then I put in a copy of the judgment in the case of "Waldemar Friedlaender v. Shaw, Savill and Albion Company," which bears on the question of Pass Regulations.

(*The Witness handed in a copy of the Judgment in the Waldemar Friedlaender v. Shaw, Savill and Albion Company, Limited, March 1st, 1897, in an action for the wrongful detention at the Victoria Dock of a lighter containing Plaintiff's goods. See Appendix, 16th day, No. 3.*)

5577. Have you anything further to add?—I have nothing further to add. I have further correspondence which has passed in specific cases if the Commission think it would be of any use. It is rather voluminous, and I think the Commission have all that is necessary.

(*Chairman.*) Thank you. I think we shall be satisfied with what we have.

Mr. WILLIAM VARCO WILLIAMS recalled and further examined.

5578. (Chairman.) You have, I believe, some documents to hand in to the Commission?—Yes. First of all, in connection with Questions 3852 to 3854, we were asked to provide figures as to the magnitude of our dredging operations. We have taken out some careful figures, and we find that our average is as near as possible 1,000 tons a day. Then with regard to Question 3870 and others I hand in a document showing sundry amounts that we have received from steamship owners

in payment of damage caused by excessive rates of speed in 1899 and 1900.

(The Witness handed in a Table showing List of Payments received by Samuel Williams and Sons, Limited, in settlement of various claims for damage caused by excessive speed of steamers while navigating in the lower reaches of the Thames during the years 1899 and 1900. See Appendix, 16th day, No. 4.)

5579. Have you any further remarks to make?—No, I have nothing further to add.

Mr. W. V.  
Williams.  
6 May 1901.

(Chairman.) We propose now to proceed with the examination of Mr. Scott. We intend that the witness shall in the first place be examined by the Commissioners, and after that is finished Counsel representing the witness will have the opportunity of applying to the Commissioners with a view to supplementing the examination by such questions as they may think fit, and after that will follow the cross-examination on such points as the Commissioners may allow.

(Mr. Balfour Browne.) Very well, my Lord. In that case, as you can only stand one Counsel a day, perhaps you will allow my friend, Mr. George Wallace, to suggest the questions, if your Lordship has not asked them beforehand.

(Chairman.) We must have the examination by the Commissioners before any questions are asked by Counsel.

(Mr. Balfour Browne.) So I understood.

Mr. CHARLES JAMES CATER SCOTT recalled and further examined.

5580. (Chairman.) Will you proceed with your evidence?—I wish in the first place to put in certain returns which have been asked for by the Commissioners. When I was before the Royal Commission before, I was asked certain questions, and I promised to give the information later on. The first table is a return showing the market values at the prices on November 22nd, 1900, of the stocks, etc., of the London and St. Katharine Docks Company, the East and West India Dock Company, and the Joint Committee respectively.

(The Witness handed in the Return. See Appendix, 16th day, No. 5.)

That return was asked for in Question 526 of the Minutes of Evidence. I think Sir Robert Giffen, if I remember rightly, asked the question. Then the next is in answer to Questions 535 to 542 of the Minutes of Evidence.

(The Witness handed in a Return showing the Capital Account of the London and St. Katharine Docks Company, the East and West India Dock Company, and the Joint Committee respectively, on 22nd November, 1900. See Appendix, 16th day, No. 6.)

Then the third table shows the dividends paid by the West India Dock to begin with, then the East India Dock, and the East and West India Dock down to the time of their amalgamation in 1858, and subsequently the dividends paid by the East and West India Dock Company down to the end of 1899. This is in answer to Questions 594 to 598.

(The Witness handed in a Return showing the Dividends (including bonuses) paid by the West India Dock Company, the East India Dock Company, and the East and West India Dock Company on ordinary capital stock since the opening of the Docks. See Appendix, 16th day, No. 7.)

Then in answer to Questions 876 and 877, I hand in a table of the cost of dredging. These questions were put to the engineer of the Joint Committee, and I thought if you would allow me to put the return in here it might save time. It is simply the information which we have from our accountant.

(The Witness handed in a Return of the expenses incurred by the London and India Docks Joint Committee on account of dredging inside and outside the gates at each dock for the years 1898-99; also the average expenditure per annum, all expenses except supervision being included in these amounts. See Appendix, 16th day, No. 8.)

Then there were certain other questions, 776 to 778, put to Mr. Baggallay as to the tides in the course of a year.

(The Witness handed in a Statement showing the levels at high water in the river at Galleons entrance, Royal Albert Dock, during the year 1899. See Appendix, 16th day, No. 9.)

Then the next table is in answer to Question 790, and shows how tonnage discharged at Tilbury is dealt with by rail and barge.

(The Witness handed in a Return of the proportion of the Out-turn tonnage at the Tilbury Dock of the London and India Docks Joint Committee that was delivered by rail and water respectively during the half-year January 1st to June 30th, 1900. See Appendix, 16th day, No. 10.)

Then I hand in a return showing the dividends paid by the London Dock Company. We were not asked for this, but I thought as we were putting in the dividends paid by the East and West India Dock Company it would be satisfactory if we gave the same information as to the London and St. Katharine Dock.

(The Witness handed in a Return showing the dividends paid by the London Dock Company, the St. Katharine Dock Company, and the London and St. Katharine's Dock Company on the ordinary capital stock since the opening of the docks to 1865, inclusive, as extracted from the minute books of the Company. See Appendix, 16th day, No. 11.)

Then the next table I hand in shows the amounts charged to revenue, but which really should have been properly charged to capital, prior to 1863, spent by the London and St. Katharine Dock Companies. These figures were up to 1863 the amounts charged to revenue. For the period subsequent to that date we have put in other tables.

(The Witness handed in a Return showing the amounts charged to revenue in respect of new works by the London Dock Company and the St. Katharine's Dock Company respectively, during the years 1845 to 1864, as extracted from the minute books of the Company. See Appendix, 16th day, No. 12.)

The amount here is another £255,000. Since I gave my previous evidence in November last the amalgamation of the two Dock Companies has been completed, and on the 1st January they became one company—the London and India Dock Company, the Joint Committee disappearing. I have, therefore, thought it well that I should put in a statement showing how the capital of the two former companies, the London and St. Katharine Dock Company and the East and West India Dock Company, became merged into the capital of the London and India Dock Company, and I will put in a table showing what the unexhausted capital powers of the London and India Dock Company on the 1st January, 1901, were.

(The Witness handed in a Return showing (1) the estimated amounts of new stocks that will have to be issued by the amalgamated London and India Docks Company on 1st January, 1901, to replace the existing issues of the separate companies and the Joint Committee; and (2) the unexhausted capital powers after providing for such new issues, but before paying off certain liabilities shown in the Return. See Appendix, 16th day, No. 13.)

I should like in passing to remark that although we show there unexhausted borrowing powers of £1,291,000, of that amount £250,000 is only available for working capital. It is not available for any new dock or extension of buildings. It is kept loose, and represents our floating cash in the business in case of need. A further amount of £247,000 is only available, or is rather taken up by the repayment of the London Company's debentures. Those debentures are debentures payable at three, four, and five years, and by the Act of Amalgamation they have to be paid off. We can only pay them off by the issue of debentures or stock of

Mr. C. J. C.  
Scott.

*Mr. C. J. C. Scott.*  
6 May 1901. the company. So that that takes up a further amount of our unexhausted borrowing powers. Then there was a further amount of £78,000, which was a debt to the London and Westminster Bank at the end of last year on account of debentures which had been paid off, but we thought the moment was not a fitting one for the issue of debenture stock to pay that. So that from that amount of £1,291,000 a total of £575,000 must be deducted showing the amount of available capital for extensions as £715,000.

(*Mr. Scrutton.*) My Lord, might I interrupt the witness for a moment? I appear for the Corporation of the City of London. I gather that at the end of this witness's evidence in chief, your Lordship will invite suggestions to see whether Counsel have any relevant cross-examination to offer. The difficulty is this. As I gather from listening to the evidence there may be important matters upon which the witness will have to be cross-examined. The members of the Commission have this evidence before them, and can follow it, but Counsel here have not had it before them at all, and we cannot get any copies from the Dock Company. I have asked. I gather that the figures are relevant, and we should be able to follow them.

(*Chairman.*) Have you not been supplied with copies?

(*Mr. Scrutton.*) No. It is very interesting, but without the book it is quite impossible to follow.

(*Chairman.*) I think it is quite necessary that you should have copies.

(*Mr. George Wallace.*) My Lord, copies shall be supplied, as far as we can do so, if the Commissioners think fit, but I do not think the supply is unlimited.

(*Mr. Joseph Shaw.*) It is very important for the Poplar Dock Company to have a copy, because I see the railway has been mentioned.

5581. (*Chairman.*) I think it is important that everybody should have copies. (*To the witness.*) Now will you proceed?—The next table is a return of the description and tonnage of goods discharged from ocean-going vessels in the Docks of the London and India Docks Joint Committee between the 1st January and the 30th June, 1900, showing the quantity on which quay or warehouse rates were levied, and the quantity which passed through the docks (overside) without any payment to the Joint Committee.

(*The Witness handed in the Return. See Appendix, 16th day, No. 14.*)

We thought it might be of interest to take out the actual figures for six months so that in this table we have the actual figures of the imports, and it is rather satisfactory to us that on the actual figures we find the amount of goods which went away from the docks without paying anything came to 76 per cent. as against our estimate of 72 per cent., showing that we had understated it. We have no means of getting at the actual export figures. This table only refers to the import figures. Then another table deals with the same figures, only it takes in certain small trading lines which are constantly in and out. Some of them run every day, and some two or three times a week, and of that cargo we in some cases have no full return.

(*The Witness handed in a Return of the tonnage of goods discharged from vessels from foreign and colonial ports in the Docks of the London and India Docks Joint Committee during the first six months of the year 1900. See Appendix, 16th day, No. 15.*)

Then the next table is a return showing some of the largest ships that have entered each of the docks under the control of the London and India Docks Joint Committee.

(*The Witness handed in Return. See Appendix, 16th day, No. 16.*)

I think this return should be read in connection with a return which I put in at Question 626, showing the actual tonnage which we had dealt with at different docks in different years, my object being to show that even the smaller docks of the Dock Company have now their proper use, and that they are not out of date and obsolete, as has been suggested in some quarters. And if you further turn to this table which has been put in, and go through it with these particulars of the larger ships, I think my contention is well supported. I might perhaps just instance one thing at the London

Dock, which is one of our oldest docks, and which in 1871 had 373,000 tons, and in 1899 had 447,000 tons. In those 29 years the tonnage has varied from a minimum of 373,000 to a maximum of 473,000, showing I think that the Dock has been fully occupied all that time. Now, my Lord, there is another matter to which I wish to refer. I was asked if I could divide the receipts and expenditure of the Dock Companies. I had certain correspondence with Lord Egerton, in which I told him we were asked to do a thing that we believed was actually impossible. However, he pressed the point, and we have done it to the very best of our ability. I put in now the division so far as we have been able to do it, and the correspondence relating thereto.

(*The Witness handed in a statement of Revenue and Expenses of the London and India Docks Joint Committee, 1899, with correspondence relating thereto. See Appendix, 16th day, No. 17.*)

I would like to draw your attention to one letter signed by Mr. Welton, the accountant. You may perhaps wonder why we selected Mr. Welton. My reason is that Mr. Welton was one of the auditors of the Joint Committee, and is to-day one of the auditors of the London and India Docks Company, and is therefore fully acquainted with all our accounts, and I thought it would be satisfactory to you that you should have his certificate that we have made the division to the very best extent we could. Even this division that we have made is to a certain extent estimated. Before I proceed to the next portion of my evidence may I refer again to the fact that it was prepared when the Joint Committee was in existence. The Joint Committee ceased to exist on the 1st January, when the two dock companies, the London and St. Katharine and the East and West India Docks Companies disappeared. Now the entire docks on the north side of the river, with the exception of Millwall, are in the hands of the London and India Docks Company. The proposal which the London and India Docks Company submit as being the best, the most equitable, and the most effective mode of dealing with the present crisis in the condition of the Port of London, and with the financial affairs of the Dock Company themselves, is briefly thus:—To abolish a clause which is to be found, except as hereinafter mentioned, in every important Act of Parliament affecting the dock companies during the last 101 years, whereby lighters, barges or craft entering into any docks, basins, locks, cuts, or works, to discharge or receive ballast or goods to or from on board of any ship or vessel lying therein are exempted from payment of rates so long as the lighter or craft shall be *bond fide* engaged in so discharging or receiving ballast or goods, and whereby the ballast or goods so discharged or received are exempted from all rates and charges. The survival of this clause into modern times—when the conditions of shipping and commerce combined with the peculiar wharfage and lighterage system which has become inseparable from the trade of the Port of London, have brought it into a prominence which 100 years ago could never have been foreseen, and which is continually on the increase—is, it is submitted, very largely responsible for the difficulties with which this Commission have been appointed to deal. The historical causes which led to the insertion of this clause (except as above stated) in the first of the Dock Acts I have already set out in my previous evidence. (*See Appendix, 2nd day, No. 1.*) They may be briefly recapitulated here. For more than a century before the constitution of the first dock company, the crowding of the river, and the limited extent of the legal quays, the sufferance wharves on which alone dutiable goods, that is to say, practically all goods, could be landed, had made the Port of London the subject of bitter complaints. As early as 1674 we find the London merchants petitioning the Privy Council in vain for redress of their grievances. Yet between the years 1702 and 1770 (when 1,535 ships of a total tonnage of 157,035 were employed in the trade of the Port) the commerce of the Port was nearly doubled, and between 1770 and 1795 (when 3,663 ships of a total tonnage of 620,845 were employed), it was doubled again. Not only were the number and tonnage of ships thus rapidly increasing during the century, but also their draught and bulk. In about 1750 the average foreign trading vessel was 132 tons, and the average coasting vessel 80 tons; in 1794 the averages were 194 tons and 101 tons. At the end of the 18th Century the biggest ships in use were those engaged in the West India trade, which in a few cases reached 500 tons, and in

See 6623.

the East India trade even rather more; ships of 400 tons were, however, hardly known to any other trade, nearly half the British ships were under 200 tons and more than half the coasters under 100 tons. The lighters, hoys and craft in use on the river at this time (including colliers) averaged 32 tons. It is important to bear these figures in mind because they help to picture the conditions which prevailed in the age of sailing vessels when the exemption clause was first introduced and to contrast them with those of modern commerce as carried on in the age of leviathan steamers and barges even running to 200 tons. You will see from that that many of the barges exceed the size of the ships for which the docks were originally built, and as far as we can see there is no reason why this increase of size should not go on. Only last week I had one ship owner who suggested to me the advisability of putting on the river steam barges of 1,000 tons. If you are going to have steam barges of 1,000 tons on the river, and that barge is to have the same right of entry as the smaller barges originally of 30 or 40 tons, I do not know really what the position of the Dock Company will be. A steam barge of 1,000 tons cannot really be called a barge. You have steamers to-day without any masts, having simply a mast to carry a flag, and those steamers it seems to me are just as much barges as one of these barges. The evils of which the merchants complained in 1674 had therefore quadrupled by the end of the 18th Century, for during the whole intervening period not a foot of fresh accommodation was added to the Legal Quays and Sufferance wharves, the extent of which was then, as formerly, 1,464 feet and 3,676 feet respectively. These evils were (1) the difficulty of access to the port and the over-crowded state of the river from ships, timber barges, &c., which drove many ships on to the shallows. (2) The danger of delay or loss to ships from the circuitous course round the Isle of Dogs and from the insufficient depth of the river. (3) Want of arrangement in the mooring and navigation for ships. (4) The neglect and bad practices resulting from the foregoing which included the depredations of the several well recognised classes of river thieves, this state of things being aggravated by the connivance of the Revenue officers. Lastly, the state of the Legal Quays and Sufferance wharves and the insufficiency of the accommodation afforded by them for the delivery and reception of cargoes, leading to the detention of loaded cargoes for weeks at a time for want of space and consequent exposure to pilfering and frauds on the revenue, and to a deficiency of lighters for river service. The confusion was rendered complete by the indiscriminate use of the quays as an import and export market. It will readily be understood that the people interested in the wharfrage monopoly, who included a large number of influential City men, fiercely resisted any proposals threatening their vested interests, even if for the advantage of the port as a whole. That is a condition which we find to-day. At length, however, the evils grew to be so serious and the trade and prosperity of the port were so imperilled, that after a severe struggle, and many abortive attempts, a Bill was passed in 1799 for the construction of a dock for the exclusive accommodation of the West India trade. The recommendations of the Committee appointed to enquire into the matter were to the effect that it would be necessary at all events at first to require all West India ships to use the wet docks at the Isle of Dogs; they also embody suggestions with regard to the important question of warehousing (dealt with by the Act of 1803, presently mentioned), the necessity for further docks and warehouses, and other matters of management and detail. The provisions of the Act of 1799, and of the subsequent Acts, referred to later, which are material to the present subject, will be found more in detail in my previous evidence. (See Appendix, 2nd Day, No. 2.) As these provisions are to a great extent similar in the case of the West India Dock Act, and of the two Acts which followed in 1800 and 1803 for the construction by the London Dock Company of a dock at Wapping for the wine, brandy, tobacco, and rice trades, and of a dock at Blackwall by the East India Dock Company for the East Indies and China trade, it will be sufficient here to state generally the nature of the "bargain" which each of them represents. In each case a monopoly for twenty-one years of the trade for which the dock is designed is granted to the company. The dividend is limited to 10 per cent.; there are compulsory provisions for the protection of goods by the construction

at great expense of a high and solid wall, and in other ways; officials are to be appointed to superintend the management of the dock; the docks are made part of the Port of London; compensation is to be made to landowners, dock owners, and other prejudiced persons; the quays, which in each case are to be built round the docks, are made legal quays; proper warehouses for the accommodation of the goods are to be constructed. I think this rather shows that warehouses were the prime origin of the docks, and the reason was that it was largely to protect the revenue, the docks for shipping being built to ensure the warehousing. Statutory charges of large amounts (in the case of the West India Dock Company 6s. 8d. a ton) are authorised on ships, and on goods landed on the quays or warehoused; and, lastly, the exemption clause above referred to is inserted, exempting lighters from charges under the circumstances mentioned. I should like to say that the 6s. 8d. a ton is not the dues. It does not compare with the 1s. which we charge to-day, but that 6s. 8d. did include a good many other charges at the time. If it is wished, I can put in a statement showing exactly what it did include, but I may say that we would be perfectly willing to accept that 6s. 8d., with its liabilities, instead of the 1s. 6d. which we have to-day. The goods themselves which the lighters carry are not by the exemption clauses in these three earliest Acts exempted from dues. The reason probably was that all goods of the kind for which the respective docks were granted a monopoly practically had to be landed inside the docks, and were, therefore, in any case liable to dues. Whether the goods were actually charged for on entering or not is not known. Anyhow, after the expiry of the monopolies, in all the similar clauses inserted in subsequent Acts, the exemption was extended to the goods as well as the lighters, and applied as well to these original docks as to those built afterwards, except the London Dock Company. It must not, however, be supposed that the exemption clauses granted to the lightermen were the only countervailing privileges granted to the persons prejudiced by the construction of wet docks. As before mentioned, provision was made for the indemnification of those whose lands were required for the docks themselves, while in addition a very large sum, variously stated at £1,000,000, £1,600,000, and even £2,000,000 was paid to the proprietors or occupants of wharves in compensation for their loss of business. With regard to the twenty-one years' monopoly granted to these companies, it has been suggested that the length of the period was taken from the similar period granted in 1709 to Liverpool. The analogy, however, failed in one very important respect, inasmuch as the Corporation of Liverpool continued after the expiry of their monopoly and still continues to levy town and anchorage dues irrespective of their docks, and are therefore independent to a great extent of any such monopoly. In the London Docks no such privilege remained after their monopoly was removed. In 1802 the Western Dock (London) was commenced, and shortly afterwards in the same year the West India Import Dock was opened. In the following year, 1803, the great Warehousing Act (43 George III., chapter 142) was passed to secure certain specified goods in their warehouses without payment of duty. Previously to this time the duties on most imported goods had either to be paid at the moment of importation or a bond with sufficient security for future payment had to be given to the Revenue officers, and the country was on this account to some extent prohibited from being an entrepôt for goods for foreign consumption. Now, however, the quays and wharves of the various docks having been declared legal quays, and adequate warehouses having been constructed, in which tobacco, wine, silk goods, and other commodities, were allowed to be deposited under the custody of the officers of Customs, it had become obvious that facilities might be afforded to both importers and exporters by the introduction of the system of warehousing dutiable goods without first requiring payment of duty. This Act of 1803 therefore provided that certain imported goods could be so deposited in warehouses, to which the Commissioners of Customs allowed the privilege, and further that goods intended for exportation might also be deposited in such warehouses and taken out for exportation free of dues. By this Act the application of the system was limited to the Port of London, and it was not in fact for many years extended by the Commissioners beyond the dock warehouses, but it was afterwards developed and applied by the Legislature to

other ports, and extended all over the Port of London by the Warehousing Act, 1832 (3 and 4 William IV., chapter 57), and the Customs Consolidation Act, 1856 (16 and 17 Victoria, chapter 107). The advantage of the system was that property lying in the dock warehouses became transferable by dock warrants, which soon acquired a high reputation as securities, and thus facilitated mercantile transactions. On January 31st, 1805, the Western Dock (London) of 20 acres was completed at Wapping, and in the same year the West India Export Docks and the City Corporation's Canal across the Isle of Dogs were completed. In August, 1806, the East India Docks were opened, and later on in 1820 the Hermitage Basin of the London Docks. A House of Commons Committee in 1810 testify to the excellence of these docks as "a work of great and general public benefit accomplished without any charge whatever on the public at large." The West India Docks continued during the period of their respective monopolies to enjoy great prosperity and to pay their full 10 per cent. dividend. The India Company paid 6 to 7 per cent. in 1818, 10 per cent. for three or four years, and then 8 per cent. for a time. The London and St. Katharine Dock never paid their full dividend, averaging only 4 or 5 per cent. The first of the monopolies to expire was that of the West India Dock Company in 1823, but in that year a strong attempt was made to obtain a renewal of it, and the facts and arguments adduced in favour of such renewal are contained in the Report of that year of the Committee appointed to report on the foreign trade of the Port. (See *Appendix, 2nd Day, No. 3.*) The evidence before this Committee shows that in 1817 this Company was enabled in accordance with the provisions of its Act to reduce the maximum charge of 6s. 8d. a ton, which that Act allowed, to 5s. a ton in 1817, and to make a further reduction in 1822. It is believed that a further reduction was made in 1823 and 1824. Neither these reductions in rates nor the acknowledged excellence of the docks in respect of their accommodation of the trade for which they were constructed availed to obtain for the company a renewal of its privilege. The principle of free competition was held paramount, and the monopoly expired in due course, as did those of the London and East India Dock Companies in 1826 and 1827 respectively. It is observable that apparently throughout the enquiry of 1823 by the Select Committee the exemption clause was not once mentioned, nor was there any suggestion of compensation to the companies for their compulsory expenditure on walls and other strict precautions for the protection of dutiable goods. This is submitted to be a very significant fact. The obvious inference of course is, that at this time, practically before steamers had been introduced, and when the goods affected by the monopolies had not only to be brought into these particular docks, but also in the case of the West India Company, had by statute to be landed in the dock, and in the cases of the other two companies were to all intents obliged to be landed there, owing to the restriction of privilege observed by the Commissioners of Customs in favour of the warehouses which surrounded the dock waters there was little need for lighters to enter the docks at all. I venture to point out that it is a remarkable thing that in 1823 that exemption clause was never mentioned at all. Practically the result to the dock companies at that time was that the limitation of the right of landing goods in bond to the warehouse if the dock companies preserved their monopoly. Of course that limitation was afterwards removed. One of the witnesses before the Select Committee on Foreign Trade of 1823, stated (page 224, B) that he did not in 1823 own more than one-third in number of the lighters that he formerly possessed, and that since the institution of the docks he had sold for £20 lighters which had cost him £800 and £900 each. The same witness was compensated to the extent of £3,327 for the loss of his business occasioned by the institution of the docks. (Third Report of Select Committee on Foreign Trade, House of Commons Paper, 431 of 1824.)

5582. (*Chairman.*) Can you give us the question and answer?—It is the Report of the Select Committee on the Foreign Trade of the Country: House of Commons Paper, No. 411, of 1823, page 224. "Q.) What number of barges may you have?—(A.) I have now about one-third of what I had. (Q.) Are barges or lighters more used?—(A.) More barges than lighters. I have sold some at £20 that cost me £800 or £900 since the docks have been in operation." It seems a fair inference from this that the reason why

this clause was allowed to stand was its comparative insignificance. It seems to have been simply overlooked, as appears from the fact that the arguments for the renewal (which appear in Vol. B.), based on the liabilities to which the company was subjected by the Act as a counter-balance to the privileges which it was accorded, nowhere include any mention of this clause. The Dock Companies are suffering now for their shortsightedness on that occasion. But they were then prosperous bodies, and the prospect of dangerous rivalry from this unnoticed source appeared to be of the remotest. Moreover free trade had not then commenced to flourish or to enable large classes of goods no longer subject to duty to go direct to unlicensed wharves and warehouses. The customs had not then commenced to extend the Legal Quay and Bonded Warehouse system beyond the limits of the docks, and so enable even dutiable goods to be taken away directly to the riverside wharves and warehouses. For some years, in fact after the expiry of the monopolies, it appears that the dock companies hardly felt their loss. It was free competition between the dock establishments that the Committee of 1823 were advocating. (See Vol. B., pages 3-15 *passim*.) That other rivals from outside should compete with them for their business seems hardly then to have been contemplated, nor does it appear that either the wharfingers or lightermen presented any petition against the company's application to Parliament for a renewal of their monopoly. It is noticeable, however, that the Committee volunteered a recommendation to the Commissioners of Customs to extend the bonded warehouse privilege, which policy was gradually more and more adopted to the serious prejudice of the Dock Companies. I have dealt more fully with the history which now follows down to 1855 in the Appendix to my evidence on the Second Day. (See *Appendix, 2nd Day, No. 4.*) The expiry of the monopolies led to a fierce struggle between the established Dock Companies on the one hand and would-be promoters of rival dock schemes on the other. The St. Katharine Dock Company was, after a chequered history, in which it was first encouraged, and then opposed by the London Dock Company, constituted by the Act of 1825 (6 George IV., chapter 105), and the first free dock in London (the waterway of which was only some 10 acres in extent) was opened at enormous expense in 1828, subject to the usual exemption clause (s. 116). The reason of the enormous expense of the St. Katharine Dock was that for the building of that dock the site had to be bought. It was covered with houses, and I believe there were two or three churches, and in the first place the cost was naturally very great. Then it was surrounded by these enormous walls, and so the whole of the cost of the dock was very large indeed. But there was an object for that. The object was that the warehousing business should be as near to the City as possible; and that is what we find to-day; that for the warehousing business you are bound to keep your warehouses close to the City. So that the St. Katharine Dock at this enormous expense was built simply for the advantage of the warehousing business. But the opposition of the older Dock Companies apparently discouraged other enterprises, for from that year (in which the London Company opened its Eastern and Tobacco Docks) until 1850, there was a lull in dock expansion. Several important Acts, however, passed during this period, and significant events took place. Thus in 1829 the West India Dock Company purchased for £120,000 the canal across the Isle of Dogs (which in 1870 was converted into the present South West India Dock). Now I ask your permission to make a digression here, and to deal with some points raised in the evidence of Mr. Gomme, clerk and late statistician to the London County Council. Have I your permission to go on with that?

5583. If you please?—This sum was offered by the Dock Company for the canal, in response to an appeal by the Treasury for tenders for its purchase. (See Treasury Minute of April 14th, 1829.) How the canal came in this way into the open market is a question of interest, because it bears on the connection between the Corporation of London and the Port in the early part of the century, as to which the evidence of Mr. Gomme may, I think, give rise to misapprehension. The "City Bill" of 1799, to which Mr. Gomme referred, which was passed in consequence of the recommendations of the Committee appointed to consider the question of the improvement of the Port of London, is better known as the West India Dock Act of that year, to which I have before referred. By this Act (39 Geo. III., cap.

See 317.

lix.), as we have seen, a company was constituted to construct wet docks, quays, and warehouses at the Isle of Dogs (secs. 56, 57) in pursuance of the scheme finally approved by the Committee for the amelioration of the Port. By the same Act the Corporation of London, who had proposed a scheme which was rejected by the Committee, were granted £72,000 for the construction of the canal which was afterwards purchased by the West India Dock Company as before stated. It was provided by the Act that the Corporation should in the first instance acquire the land on which the docks were to be constructed, and convey it to trustees for the company at the company's expense, the company paying the purchase money out of its capital (see secs. 21, 74, and 160 of the Act). But it does not appear that beyond lending the support of their name and credit in this way to the promotion of the Bill and the acquisition of the necessary land, and having eight members of their body on the Board of the company, the Corporation had any further or other connection with the docks of London. Further moneys were by successive Acts (*viz.*, 42 Geo. III., cap. xlix., 43 Geo. III., cap. cxxiv., 44 Geo. III., cap. vii., 45 Geo. III., cap. lxi., and 47 Geo. III., cap. xxxi.) granted to the Corporation out of the Consolidated Fund for the completion of the canal and other works for the benefit of the Port, the total advances (with the £72,000 originally granted) amounting to £327,000. It is suggested or implied by Mr. Gomme that these sums were principally devoted to the improvement of the docks. This view does not, however, appear to be quite in accordance with the facts, and is indeed shown on a perusal of the Acts themselves to be erroneous. The docks were paid for by and were the property of the dock company, and are stated—(see Report of the House of Commons Committee, 1810)—to have conferred a great benefit on the port “without any charge whatever on the public at large.” The moneys advanced to the Corporation were for the construction and completion of the canal, the purchase of mooring chains and other port improvements. It should be noticed, too, that the different Acts under which the moneys were advanced charged these advances on the Port dues payable to the Crown under Section 134 of the Act of 1799, and Section 3 of the Act of 1803 above referred to. These dues had no connection with the docks, the dues payable in respect of which were, of course, payable to the dock company (Section 137 of the Act of 1799). That is to say the dues in respect of the docks were paid to the dock company but the dues payable to the Crown were not paid to the dock company. It is thus apparent that the £327,000 advanced to the Corporation by the Government under the above series of Acts was altogether independent of the docks, and was neither charged nor spent upon them. There was, therefore, no occasion for the dock company to repay them to the Government. The £120,000 paid by the dock company for the canal was, however, paid into the Consolidated Fund (see Exchequer Account of the 16th August, 1833, on page 5 of the “account of payments out of the Consolidated Fund, etc.”—printed by order of the House of Commons, 21st August, 1833).

*(The Witness handed in a Return of Payments out of the Consolidated Fund, under the Act 39 George III. c. 69, and of the several Acts passed for the improvement of the Port of London, etc., dated 21st August, 1833. See Appendix, 16th day, No. 18.)*

This went towards repaying to the Government part of the £327,000 advanced by it to the Corporation as above mentioned. It does not appear that this purchase was any great bargain for the dock company, since £100,000 of the £327,000 so advanced was expressly directed by the Act of 1803 to be devoted to new moorings, etc., and the purchase of legal quays, and not to the canal, and the remainder was to be devoted not to the canal only, but to divers other works for the amelioration of the port. It follows, therefore, that of that £327,000 only £227,000 was available for the canal, and a portion of that was also required for the improvement of the port. The £100,000 could not be included in that because it was advanced for other purposes. Therefore, what the dock companies paid £120,000 for was represented by that £227,000, less whatever amount of that was spent on the improvement of the port. When the Treasury asked for tenders, the dock company, I believe, were the only people who made an offer, their tender was the only one received by the Treasury. The Treasury Minute of the 24th March, 1829, is as

1736—16.

follows: “Whitehall, Treasury Chambers, 14th April, 1829. Copy of Treasury Minute, dated 24th March, 1829, on the subject of the sale of the City Canal to the West India Dock Company. Read a letter from the Chairman of the West India Dock Company offering, on the part of the company, to purchase the City Canal at the price of £120,000. My Lords read their Minute of 3rd instant, directing letters to be written to the several parties who had expressed a wish to purchase this property, desiring them respectively to transmit on or before the 20th instant, a final offer, stating the highest sum they are willing to give, and Mr. Stewart states to the Board that no offer has been in consequence received from any of the parties, excepting from the West India Dock Company. My Lords are pleased to accept the offer of the West India Dock Company. Write to Mr. Aeneas Barkly, the Chairman of the West India Dock Company, that My Lords have had under consideration his letter of the 20th instant, offering on the part of the West India Dock Company to purchase the City Canal for the sum of £120,000, and that My Lords accept the offer, and will direct Mr. Maule, their solicitor to put himself in communication with the solicitor of the West India Dock Company, for the purpose of arranging the completion of this purchase. Give directions to Mr. Maule accordingly, and direct that he will prepare a Bill for Parliament to enable their Lordships to sell this property for the sum of £120,000 to the West India Dock Company. Write to the City Remembrancer, requesting he will inform the Lord Mayor and Corporation of the City of London, that in pursuance of the arrangement which my Lords adopted for the sale of the City Canal, which was communicated to them on the 3rd instant, my Lords have agreed to sell that property to the West India Dock Company for the sum of £120,000 and have directed their solicitor to prepare a Bill for Parliament to enable the Lords of the Treasury to carry that measure into effect; and my Lords desire he will move the Lord Mayor and Corporation to permit no measures to be taken hereafter which may in any way affect the value or alter the present circumstances of that property.” The only sum known to have been advanced to the dock companies by the Government is a sum of £30,000 lent to the West India Dock Company under sec. 4 of the above-mentioned Act of 47 Geo. III. cap. xxxi. This was devoted to the erection of a wall round the dock for the protection of the revenue and to guard-houses for the soldiers and Customs officers. The whole of this sum, with interest amounting to upwards of £13,000 was repaid by the Dock Company into the Exchequer on or before March, 1817. So that the only public money which the dock companies received was this £30,000, which was repaid. The “Account of payments out of the consolidated fund, &c.” above referred to is also of interest, as showing that from 1799 to 1833 nearly £1,300,000 in “canal and dock” dues payable to the Crown were paid into the Exchequer (under sec. 154 of the Act of 1799 and sec. 5 of the Act of 1803) to replace the moneys paid out of the consolidated fund under sec. 154 towards the improvements and “compensations” provided for and payable under the Act of 1799. These “compensations” were (by sec. 121 of that Act) made payable to the “owners and occupiers of and other persons interested in or employed upon the Legal Quays and Sufferance wharves, warehouses, docks, &c., rendered less valuable” by the scheme of improvement carried out by the Act. It will thus be seen that these compensations formed part of the Government's considered scheme for the amelioration of the condition of the port as a whole. They were never treated as in any sense advances to the Dock Company, though the docks, like the rest of the port, derived a benefit from them. No doubt the Government considered that the Dock Company was bearing its full share of the burden and responsibility of the scheme in supplying the capital for, and undertaking the construction of the docks, without any guarantee whatever for the success of its enterprise except the privileges granted to it by the Government in respect of which these compensations were payable. Provision was made by the Act for the repayment of the moneys so paid out of the consolidated fund by charging them on the port dues payable to the Crown; and the accounts show that at any rate the greater part of those moneys was in fact so repaid to the Government. In 1828 (9 Geo. IV., c. 95) the East India Dock Company was formally reconstituted. By this Act the docks, &c., of the company though expressed to be part

Scott.  
6 May 1901.

of the Port of London are (by s. 2) absolutely vested in the company. By Section 118 the company is empowered to charge rates on ships up to 10s. a ton, a significant figure compared with the modern maximum of 1s. 6d. (See *Appendix, 2nd Day, No. 5.*) What I said about the 6s. 8d. will equally apply to this. In the same year (9 Geo. IV., c. 116) the London Company was also reconstituted (exemption clause, s. 108). In 1831 (1 and 2 Wm. IV., c. 52) the West India Company was reconstituted with similar provisions (exemption clause, s. 83). In 1836 (6 and 7 Wm. IV., c. 31) the St. Katharine Dock Company was reincorporated and the previous Act of 1825 embodied in the new Act including of course the exemption clause. In 1838 (1 Vic., c. 39) the East and West India Dock Company was incorporated by the absorption of the East India Company in the West India Company.

5584. Can you tell us what the object of the reconstitution referred to was?

(Mr. George Wallace.) May I help your Lordship? I think the West India Dock was not really a corporate body under the first Act; it was created a corporation by the Act of 1831.

(Chairman.) So that really the reconstruction was formal?

(Mr. George Wallace.) Yes.

(Witness.) Then, in 1838, there was the amalgamation of the East India Dock and the West India Dock into one company; gradually the whole thing has been amalgamated. Meanwhile, in 1832, the important Warehousing Act of that year, above referred to, almost wholly swept away the restrictions affecting legal quays, and threw open the door to the freer wharfrage and warehousing rivalry. A steady increase is also observable during this period in the number of goods exempted from duties, and the consequent diminution in the demand for bonded stores. In 1842 the dutiable goods still numbered 1,200, but in 1845, by the 8 and 9 Victoria, Chapter 12, 450 of these were struck off the list. At the present day there are but 15 remaining (to-day there are 16, because we have added sugar), and for these the bonded stores of the docks compete with very many others which have now been set up in or about the Port of London and elsewhere. According to the recent London County Council Report there are now altogether some 120 wharves and quays, besides numerous up-town warehouses of all kinds in competition with the docks; the 120 wharves I take from the London County Council's Report. In 1850 the Victoria Dock Act was passed, and a new dock of 90 acres shortly afterwards erected on the marshy ground north of the Isle of Dogs (at the comparatively small cost, it is believed, of £5,000 an acre) to meet the demands of the growing commerce of the Port, and in particular with a view to attract the collier trade. It is only fair to say that with regard to that very low cost when the Victoria Dock was opened it was much more of a pond than a dock. The south side was certainly not fitted with any quays at all, in fact, it is only within the last few years that we have been putting any quays on the south side. I am not sure that in that estimate of £5,000, quays and jetties such as exist now on the north side of Victoria Dock were included. It was really a floating pond. It was not, however, very successful, and in 1864, by the same Act by which the London and St. Katharine Dock Companies were amalgamated it was purchased by the Amalgamated Company. In 1853 came the Customs Consolidation Act, yet further extending the bonded warehouse system and legalising the appointment of fresh station and sufferance wharves. The history of these years since 1827 when the last of the monopolies expired is, it will be seen, marked by the material growth and legislative encouragement of free trade and free competition, both of which tended more and more to remove the after-effects of the monopoly so long enjoyed by the dock companies. The rivalry of the outside wharfingers and warehousemen, at first compulsorily minimised by law, and then for a time practically crippled by the restriction to the dock warehouses of the bonding privilege, had gradually assumed the proportions of a very serious danger to the future of the docks. It had long been the policy of the dock companies to look to their warehousing for the main source of their revenue. We contend that warehousing was really the prime principal business for which the docks were started. They accordingly attracted goods to the docks by minimising their charges on shipping, for it was pre-

sumably then as now the shipowner and not the consignee who chose his port. And it must be remembered that in those days of large fleets of sailing vessels supplies would come over in huge quantities far in excess of the immediate need and remain for weeks in the dock warehouses. While the special privileges attaching to these warehouses lasted the revenue obtained from the high charges made for their use enabled the Dock Companies to earn a good return on their capital, and it was not in fact then necessary to make the Dock waters pay their own way. The docks were a prosperous institution, and the inroads of free trade were not as yet foreseen or only to a slight extent. I may point out that in those days when practically the whole of the trade was carried on by sail all the trades were much more of a season trade. I might point to two trades; take the sugar trade, for instance, which in those days was a West Indian trade. Practically the whole supply of sugar came into England in the early part of the year. Consequently very large stocks of sugar had to be held in this country. In the same way I may take the tea trade. In those days we were entirely dependent on China for all our teas. Tea used to arrive at the end of June or the beginning of July, and practically the whole of our supplies were marketed in the last six months of the year, so we had to carry a very large stock of tea. Now if you take the position to-day both as regards sugar and tea, you find that owing to the development of beet sugar, it is coming into the port the whole year round: that applies not only to the Port of London, but to every port. As regards India and Ceylon, Ceylon especially, they are sending their tea for, I suppose, nine months at least through the year, and the supplies are coming in throughout the year, so that there is no longer the same necessity to carry the stocks as formerly. These remarks practically apply to nearly all trades. Now, however, by 1855 the Dock Companies had realised the serious fact that their warehousing business was slipping from them. They alone could accommodate the larger vessels, but then as we have seen their shipping dues were not enough to fall back on; on the other hand, others were successfully competing for the warehousing business so long enjoyed by them without a rival. And the reason why up-river wharves and warehouses were able to attract goods as they did was because by virtue of the exemption clause (formerly overlooked) lighters and barges could come into the docks, without restriction as to size or number, and take away goods from ships inside without paying anything either for their own use of Dock waters or for the goods, the dues on which were thus lost to the owners of those waters.

5584a. (Chairman.) Can you tell us whether, in addition to the competition for the warehousing business, the warehousing itself was diminishing at that time?—I could not speak to that time. I do not think at that time the warehousing was diminishing. I should say to-day distinctly it is.

5585. But in 1855?—No, I do not think I could say that.

5586. You only put the point of the competition?—Yes, I could not say whether warehousing was diminishing then; I should rather doubt it. Take the case of China, for instance; China was still supplying all our tea; and also beetroot sugar was practically non-existent. At that time we were still depending to a very great extent on sailing ships, so that the stocks had to be carried on. If your Lordship wishes I will try to get some figures, but it is going back a good many years.

5587. I think we need hardly trouble about it?—The Dock Companies accordingly appealed to Parliament in 1855 for the repeal of these clauses. Their Bill was rejected by 249 votes to 26. The report of the debate in Hansard shows that two facts principally caused the rejection of the Bill almost without hearing—(1) That the vested interests opposed to the companies were too powerful to be easily removed; (2) that the companies were still in a sound financial condition. The result was that the rights of the question at issue were not then threshed out. The Dock Company now submit that if the prosperity of the docks was a good reason for the rejection of the Bill that at least cannot be urged against them. If the changes in the conditions of commerce that had taken place between 1802 and 1855 were not of sufficient importance to make the clause, originally

equitable, then no longer applicable, the Dock Company hope to show that the revolutions that have occurred between 1855 and 1900 at any rate have removed all doubts as to the applicability of the clause to the conditions of commerce at the present day. Lastly if vested interests are strong, equity is stronger; when the first dock was authorised in 1799 vested interests were interfered with of longer standing than those which the dock companies have now to oppose, and what the Dock Company now ask is not to sweep away vested interests, but to be allowed to make a small charge for the use of their own legally vested property, which would enable the dock companies not only to live, but also to bring the docks of the Port of London up to a state of high efficiency. In 1864 (27 and 28 Victoria, Chapter 178) the London and St. Katharine Dock Companies were amalgamated, and the Victoria Dock acquired by them as above stated (exemption Clause Section 126). In 1875, by the London and St. Katharine Docks Act of that year, the amalgamated company was authorised to construct the Royal Albert Dock (which cost £2,300,000), and later Acts of 1878, 1882 and 1884 conferred further powers upon the company, including powers to make an entrance to the Royal Albert Dock (1884), and to maintain a railway to Galleon's Reach (1882). In 1882 the East and West India Dock Company's Extension Act authorised the construction of the Tilbury Dock (exemption Clause Section 26) some miles nearer the estuary of the Thames than the rest of the dock systems. This great dock has been a favourite source of argument for opponents of the dock companies. Its construction marks the commencement of a very keen trade rivalry between the London and India Companies; for the necessity of obtaining an immediate return on the very large capital sum (nearly £3,000,000) expended by the India Company upon their new dock led the company to try and attract the shipping which would not come of its own accord, by cutting down their shipping charges to starvation price. The London Company replied with a similar lowering of prices, and an internecine struggle ensued. In 1888, however, a working union was negotiated, and after a severe struggle sanctioned by Parliament, and the Joint Committee was constituted. The terms upon which this working union was based need not be here specified, since an unopposed Act for the amalgamation of the London and India Dock Companies into a single company as from the 1st January, 1901, has been passed. Since 1888 the Joint Committee have carried out among others the following large works:—(1) The erection of a new Blackwall entrance to the West India Dock (in 1894) at a cost of over £200,000; (2) the erection of a large cold storage dépôt at West Smithfield, and another at the Victoria Docks, at a cost of £76,000 and £116,000 respectively. They also purchased in 1897 for £26,000 the Victoria Graving Dock on the south side of the Victoria Dock. (See Appendix, 2nd Day, No. 6.) In connection with this expenditure I may mention that in the last 20 years the London and St. Katharine Dock, the East and West India Dock Companies, and the Joint Committee have expended altogether on improvements on the port £3,700,000. When I come to consider the return to those companies for this expenditure, I find that during those 20 years the net income of the two companies has increased by £54,000, or barely 1½ per cent. on the capital expended. I mention this because I think it is only right to show that in the past the dock companies have endeavoured to the best of their ability to do everything that was necessary for the docks. It might have been expected that the working union, by putting an end to the warfare of rates, and economising the expenses of management, would have brought about a very material improvement in the financial position of the docks. This, however, has not been markedly the case, as the figures for the first half of 1899 clearly show. It is true that the transport business brought by the war made the record for the year as a whole favourable; but the exceptional causes which account for this make any reliance upon the figures, as an indication of permanent improvement in the present condition of affairs, altogether fallacious. The following statistics show that even by the most economical and careful management no such steady improvement in income as was hoped would result from the working union has been obtained, though the shipping has increased enormously.

4736.

1.	Foreign Trade Ship Tonnage to the Joint Committee's Docks.	Increase on 1890.	Import Goods Tonnage on which the Joint Committee received dues.	Relation to Ship Tonnage.	Gross Income from Import Goods.
2.	3.	4.	5.	6.	
1890	3,009,976	Per cent. —	994,156	Per cent. 33	1,031,413
1891	3,181,485	6	968,605	30	1,019,067
1892	3,464,114	15	1,181,471	33	1,111,609
1893	3,303,270	10	856,593	26	1,006,667
1894	3,520,674	13	840,460	24	1,005,036
1895	3,517,533	13	904,270	26	1,003,911
1896	3,788,848	26	964,439	25	1,024,921
1897	4,102,483	36	1,078,053	26	1,060,180
1898	4,224,312	40	1,097,816	26	997,563
1899	4,281,389	42	1,085,820	25	994,827

I should like to draw the attention of the Commissioners to this table. I venture to think it is very instructive. If you take the year 1890, and the foreign trade coming into the Joint Committee's Docks, you will find that it was 3,009,976 tons. The goods landed in that year on which the Joint Committee received charges were 994,156 tons or 33 per cent. Then take the year 1899. The foreign trade ship tonnage coming to the Joint Committee's Docks in that year was 4,281,389 tons, an increase of 42 per cent.; but the import goods tonnage on which the Joint Committee received dues was only 1,085,820 tons, or a little more than in 1890, and the percentage in relation to ship tonnage had fallen from 33 per cent. to 25 per cent. Now I have gone back another 10 years. We took 1890 for the purpose of this table because although 1889 was the first year of the Joint Committee that was disturbed by the great dock strike, so that we thought it was not right to take in any figures dealing with that year. If I go back to 1880 I find that the foreign trade ship tonnage coming into the Joint Committee's Docks was 2,372,000. Out of that we had charges on 982,000 tons of goods or 41 per cent. of the whole; so that in the last 20 years the percentage on goods delivered from ships in the Joint Committee's premises, on which the Joint Committee received charges, has fallen from 41 per cent. to 25 per cent.

5588. (Sir Robert Giffen.) Can you tell us the gross income from the import goods?—I am just going to give it to the Commissioners. I have not the figures for 1880, but I will give you the figures for 1890. I find in 1890 the gross income earned on those 994,000 tons was £1,031,000, which works out at 20s. 9d. per ton. When I come to 1899 I find that the 1,085,000 tons only gave us £994,000, which works out at 18s. per ton. So that not only during that period of 10 years has the percentage of goods on which we earn charges fallen from 33 per cent. to 25 per cent., but the value of every ton of goods on which we earn charges has fallen from 20s. 9d. to 18s. I might answer your question in another way. If in 1889 the percentage of goods on which we earned charges had been unchanged we should have had 1,427,000 tons instead of 1,085,000 tons. Taking it at the same rate of 18s. per ton—that is, the reduced rate—we should have had £1,284,000 of gross revenue as against £994,000. To illustrate the point that was taken just now about the way the goods remaining in warehouses have fallen off, I may say that in 1880 we landed 982,000 tons of goods for which we received charges. At the end of the year our stock in warehouse was 370,000 tons. Twenty years afterwards, although we had landed 1,085,000 tons of goods on charges—that is to say, the proportion on which we received charges, which is 100,000 more—the stock of goods at the end of the year had fallen to 231,000; so that with 100,000 tons more on which we earned charges the stock had fallen by 140,000 tons. The goods come in and pay us charges, but they do not stay. When you have to work goods across a quay, or when they stay for a short time in a warehouse, all the expenses are incurred. The rent is the profitable thing, and it is the falling off in rent which has to a very great extent reduced that 20s. 9d. to 18s.; it has cut away the most profitable part of the warehouses.

5589. Can you give us the corresponding figure to the 20s. 9d. for 1880?—I have not got it here, but I can

Mr. C. J. C. give it to you. If you will allow me I will put it in next time I come here.

Scott.

6 May 1901.

(Mr. George Wallace.) There may be a difficulty about that return that Sir Robert Giffen has asked for, in consequence of the system which the East and West India Dock Company adopted about that time. I do not think the figure could possibly be got out of the books.

(Witness.) I was forgetting that in those days the two companies were quite separate, and we were working in competition, and the accounts were kept perfectly separate. The immense expense constantly incurred, not only in meeting the increased demands of commerce, but in keeping the dock premises in proper and efficient working order, makes the successful working of this great enterprise impossible unless a reasonable charge be exacted in respect of all vessels and goods which enjoy the use and benefit of those premises. In 1896 the Joint Committee decided on an attempt to improve matters by introducing into London the custom of the Port of Liverpool. The following account of this attempt is taken for the most part verbatim from Mr. Douglas Owen's pamphlet of February last, which is quite accurate:—"The custom of Liverpool, like that of most other ports, is this: that on goods being delivered from the importing vessel on to the quay, the contract of affreightment is fulfilled; the contract is to land the goods at the port of destination, and does not extend to hand them over to the consignees. In Liverpool, and indeed in most other ports except Hull, lighterage is very little resorted to, the river front is practically occupied by the docks, and there are few wharves. London, on the contrary, has always been a port of wharves, and no doubt the fact accounts for the difference between the London usage and that of other ports. The usage of the Port of London is that, if so required, the goods have to be delivered not merely on the quay, but to the consignee's barges; in fact, the shipowners have to follow the consignee's instructions with reference to goods. This makes a great difference, for it is one thing for a cargo of mixed goods to be shot pell-mell on to the quay, and another for it to be sorted, collected together, examined, and put on to lighters. The difference between the two processes varies in cost according to circumstances, but as a convenient figure it may be put at 2s. or 1s. 6d. per ton. Theoretically, to put goods overside into a lighter is a simple process, but with a ship 100, 150, or even 200 yards long, loaded with a mixed cargo, and having perhaps five to six hatchways, to give delivery in this way is so to impede and delay the discharge that the shipowner finds it cheaper to pay his 2s. or 1s. 6d. per ton to get the sorting done on and the delivery made from the quay, than to suffer the inconvenience and money loss caused by the detention of his costly ship through discharging overside." I may say that really it is impracticable for any ship to-day with a mixed cargo to deliver that cargo overside to craft without using the quays. The ship's decks are not sufficiently large to sort the cargo. When you get a certain amount of running cargo it may be different, but taking an ordinary mixed cargo it is absolutely impossible for the ship to deliver those goods to the barges without making use of the quay, without putting up with a loss of time which practically makes it impossible. "In thus using the quay as a stepping-stone between the ship and the lighters, however, the shipowners render the goods liable to be charged quay dues and the lighters shipping dues by the dock companies, inasmuch as the 1799 section applies only to delivery directly overside. That is, that if we like to exercise our statutory powers to-day, if a shipowner puts any goods whatever on to the quay, and then takes these goods from the quay and puts them into a barge, we are entitled to levy our rates on those goods and dues on that barge. It is, therefore, quite within the power of the docks to levy quay dues on all goods landed on the quay, that is to say on the bulk of the import cargoes, and also to charge shipping dues on all lighters taking goods from the quay. But the companies did not wish to levy further dues from shipowners, for any charges attaching to the goods in course of transfer from the ship to the consignee's lighters, fall, by the usage of the port, on the shipowners." The reason for that is that the quay being used by the shipowner, instead of the dock charges falling on the goods, in consequence of being placed on the quay, it would be for the account of the shipowner, of course, unless he protected himself by altering his bill of lading. "The only way, therefore, to place a toll on goods so as to make it bear on the goods-owners, and not on the ship-owners, was to introduce the custom of the Port of Liverpool, under

which custom the shipowners' contract is fulfilled as the goods leave the ship's tackles. In the case of steamers from North American ports, the shipowners themselves have succeeded in incorporating in their bill of lading the Liverpool conditions of delivery, by what is known as "the North American bill of lading clause," or, more shortly, "the American clause." But their case is the exception. The dock companies determined to try to make the American trade conditions general, to take the sorting and delivering into their own hands, and to charge a profit on the transaction." In other words, this was to follow out the Liverpool system of master portorage—a ship doing all the work and delivering on to the quay, and then independent people stepping in and doing work on the quay. "The 1799 section only protects barges going to and from ships, so that if the dock companies chose to charge tonnage dues on barges loading from the quay, as well as quay dues on goods momentarily or temporarily landed on the quay, they would be within their rights. Such a charge formed, however, no part of their 1896 proposal. And the companies saw the less obstacle to making the Liverpool custom general, inasmuch as it would relieve the shipowners of an obligation and an outlay which had long been a grievance urged by them against the Port of London." In passing, I may say that I know that many shipowners were in support of that charge we proposed in 1896. "No sooner, however, was this programme announced than there arose from the wharfingers and lightermen a storm of indignant protest. A meeting at the Cannon Street Hotel was unanimous and enthusiastic in its condemnation of the docks. The Liverpool system, with its double-handling, delays and expense (to consignees) was loudly denounced, while the dock companies' misfortunes were ascribed to over-capitalisation, mismanagement, and improvident competition. London, it was declared, was already being boycotted, and trade driven elsewhere by reason of the dearness of the port, and now the docks were proposing fresh taxation." I may say, so far from that being true, London is to-day the cheapest port in the world for goods. It is the only port in the world, I believe, where any goods can be landed and go away without paying anything to the docks. As I have pointed out, 76 per cent. of the goods brought into the docks pay nothing at all. On the question of the relative dearness of the port, I believe the Commissioners have had some figures showing a comparison between a ship in Liverpool and a ship in London. I have had it all printed, with the various correspondence, if you would like me to put it in. Perhaps you would like to consider that.

5590. (Chairman.) Is it referring to evidence which has already been given?—No; it is referring to the case of a ship. When the Commissioners visited Liverpool, they were given particulars of the cost of discharge of a ship in Liverpool and in London. These figures were put before me, and I was asked to check them. I did check them, and I added to them so as to carry out the comparison, and show it in what we considered a true light.

5591. If you like to put in anything which you know of your own knowledge we shall be glad to receive it, but I think the evidence might come more properly from the shipowner himself?—It has been sent to the Royal Commission.

(Chairman.) We will consider the matter.

5592. (Mr. Peel.) Can you tell us when the American clause was introduced?—In 1888. Ultimately the dock directors gave way, and contented themselves with the concession, for whatever it might be worth, of an increased rent to be paid to them by the shipowners for sorting sheds. That the proposal of the Joint Committee in 1896 was a sound one is shown by the effects of "the American clause" previously mentioned. In 1888 the shipowners had this clause inserted, which practically embodied the Liverpool practice, and made the shipowners' contract completed when the goods were put on the quay. They were thus enabled to collect from the consignee a sum of 1s. 6d. per ton originally—now it is from 1s. to 2s. 6d. per ton according to circumstances (I believe since the beginning of this year it has been increased), for the discharge of the goods, an expense which had previously fallen on the shipowners themselves. It was said at the time that the change would ruin the trade of the port, but it has been far otherwise. In spite of the imposition of this additional tax, the North American trade has shown a steady increase, while other trades have practically stood still, as the following figures show. In 1888 the

0035-38.

total tonnage entering from North American and Canadian ports was 683,000 tons; in 1899 it had increased to 1,497,000 tons, an increase of 813,000 tons, or 119 per cent., while the increase in the same period from all other foreign ports was only 13 per cent., other foreign ports adhering to the old custom.

5593. (Chairman.) Will you tell us whether the American clause is used by all companies who deal with North American ports?—I believe by every company, and not only by every company, but the various tramps which do not come regularly have adopted it.

5594. How many such companies have you coming regularly to your docks?—About half-a-dozen.

5595. And they all use it?—Every one of them. This is, it is urged, a very strong argument in favour of the proposal of the dock companies to try and shift some of the burden of taxation on to those interests which at present pay nothing, and absolutely disproves all the arguments raised at the Cannon Street Hotel meeting against the 1896 plan of putting all goods on the quay, which plan was only another way of saying that all goods brought to the docks should be charged just as the dock companies have power now to charge goods put on the quay. I may say all goods brought should be charged, and not only those which are landed on the quay, for which we have to render service. Only unfortunately for the dock companies the charge imposed on the consignee by the clause goes into the shipowners' pockets, and not those of the dock companies. On the question of the American clause, which I think it would have been better possibly for a shipowner to have answered, but certainly our opinion with respect to the working of the docks is that it would be absolutely impossible for the American lines to get through their business in the way they do. Take the Atlantic Transport Company, which brings the largest steamers. They will bring their steamers in, and in a week they will discharge and load. They do not take very much export cargo, it is true, but they will turn round and go out, and I do not think you can beat that in Liverpool. I have a letter which appeared in the "Times." I do not know whether you would like me to read it. It is from the Atlantic Transport Company, showing what they could do.

5596. We have already had evidence as to what they have done?—The repeal of the exemption clause would bring about the same result, only in another form. All goods which go overside would pay something towards the maintenance of the docks, instead of nothing as at present, but would pay it to the Dock Company instead of the shipowner. The shipowner at the same time would reap the advantage of getting quicker despatch. No further step was taken by the Joint Committee till in the session of 1900 they brought in the Bill to repeal the exemption clauses. That Bill was negatived without a division on the 15th of May of last year, and as a result this Commission was formed. I may mention that this year we did re-introduce that Bill, and in that Bill we incorporated certain clauses which exempt all *bond-fide* transit business—that is, goods in transit to other ports—from charges, and made certain exemptions in favour of goods which were not shipped on a through bill of lading, but which were sold previous to arrival. We did that because we recognised it was our duty to encourage all that business. When we found it was quite impossible to get any report from the Royal Commission in time we withdrew that Bill, because we knew it was hopeless to go on with it without having such a report. The fact that the London Company are now earning some 2½ per cent. on their share capital, and that the shareholders of the India Company have only received 13s. 4d. per £100 on their capital in the last 13 years (see *Appendix, 2nd Day, No. 6, Tables XI. and XII.*), are not the only differentiating circumstances which lead the dock companies to hope for a better result from the present inquiry than the fate which overtook the Bills of 1855 and 1900. The whole of the conditions of commerce have changed not only during the century, but especially during the last 45 years, and the nature of these changes may best be appreciated by the classification of them under the following heads, which will presently be considered more in detail:—(1) The introduction of modern steamers of vast and increasing size and draught. (2) The growing increase in the tonnage of ships and steamers entering the docks. (3) The growing increase in the size and number of barges and lighters entering the docks. (4) The increased tendency for goods to be delivered

direct by the nearest route, without calling at London for transhipment. (5) The increased tendency for goods to be taken into immediate consumption, and consequently to be delivered overside. (6) The expansion of free trade and spread of bonded stores. (7) The reduction in freights payable to shipowners by merchants. (8) The introduction of modern business arrangements outside the scope of the Dock Acts, enabling wharfingers and warehousemen to compete with the docks at an advantage.

(1) The modern steamer has revolutionised commerce. It has been shown that in the early years of the exemption clause the average tonnage of the big sailing ships then in use was less than 200 tons, although in the West India trade exceptional vessels of 400 and even 500 tons were known, and in the East India trade vessels of even greater size. In 1814 there was one steam vessel of 69 tons owned in the United Kingdom; in 1825 there were 153, averaging rather over 100 tons each. So that if you take the "Oceanic" of 17,274 tons, which is not the largest steamer, it would be larger than the entire steamship fleet of those days. In 1830 there were 298 of about the same average tonnage; in 1840 there were 771 of a slightly increased average tonnage, but these steam vessels formed only about one-thirty-second in tonnage of the steam and sailing vessels owned in that year. These figures have been obtained from the Board of Trade, and are useful as showing the size and relative numbers of the ships and steamers in these years, though they relate only to those owned in the United Kingdom at these dates. The following figures relate to ships in the foreign trade, which, of course, affords the best test of general national prosperity:—In 1861 the number entering the Port of London were 8,594 sailing vessels, averaging 273 tons, and 2,373 steam vessels, averaging 343 tons. At this time, therefore, the sailing vessels outnumbered the steam by nearly four to one, and were of about three-quarters the size. In 1899 the numbers were 2,052 sailing vessels, averaging 405 tons, and 9,217 steam vessels, averaging 946 tons. The ratio in numbers is 1 to 4½ instead of 4 to 1, and in tonnage about 2 to 5 instead of 3 to 4, showing the complete turn round there had been in the whole shipping trade. These changes have been wrought during a period commencing six years after the India Docks Bill was thrown out. (See *Appendix, 16th Day, No. 19, for the corresponding figures for earlier years.*) The following comparison of the number of vessels of all kinds in the foreign trade entering and clearing from London in 1798 and 1898 is submitted to be instructive:—

Year.	Foreign Ships.	Tonnage.	British Ships.	Tonnage.
1798	8,771	429,162	2,970	707,459
1898	8,305	5,123,930	11,399	11,472,518

In that table we have dealt with foreign and British ships separately; you must add them together to get the total tonnage coming into the port.

In 1899 the average gross tonnage of steam vessels of over 200 tons was 2,844, and of sailing vessels 1,612. (See *Appendix, 16th Day, No. 23.*) There were in that year 23 German, nine British, four American, and one Dutch, merchant vessels of 10,000 tons and upwards. In the Appendices on ships and shipping, which I shall hand in, will be found statistics showing the gradual increase in the size and tonnage of steamers in recent years, from various points of view, including (see *Appendix 24*) particulars of the tonnage, dimensions, and draught of some of the largest steamers built during the last ten years; the increase in the average size of steamers between 1890 and 1898 (see *Appendix 23*), the increase in the proportion of gross tonnage to net (see *Appendix 25*), and other statistics of various kinds. Not the least important feature of this increase in size, and consequently in value, of the modern steamer, is the increased necessity for dispatch in delivery, owing to the added expense caused by every day's delay. I would remark that the rapidity of dispatch, which is absolutely essential to these enormous steamers, cannot be obtained while the London custom goes on as at present. It is absolutely impossible, with the continuance of the present London custom, that you could ever get the rapidity of dispatch which is required. I would confirm everything that the shipowners have said about the necessity of rapidity of dispatch. It is not only a necessity from the point of view of the shipowners themselves, but it is a necessity from the

Mr. C. J. O.  
Scott.

Mr. C. J. C.  
Scott.  
6 May 1901.

point of view of the dock owners. The average time that ships coming into the docks occupy their berths is about three weeks. Now, if you take the American lines, for instance the Atlantic Transport Company, which work their business so well, their average would be about a week. We get 1s. for that week. I think it is very evident that it is very much better for us to have a ship in and out in a week, with the payment of the shilling dues, than to have a vessel come in and stay an average of three weeks and often more, when we still get only 1s. dues. So that we are entirely with the shipowners. Anything that will facilitate the prompt dispatch and the more rapid handling of steamers is an advantage to the shipowners and an advantage to ourselves. The Dock Companies have always recognised this, and have assisted to get an alteration of the bill of lading in the face of the most strenuous opposition. I have pointed out how under that bill of lading the American trade has advanced, but that change was only carried with the very greatest difficulty. I may take it that everybody outside the dock companies opposed it. There was an idea outside that the change would be a very great benefit to the dock companies, but it has been of very little benefit. We get nothing out of the charges which the shipowner makes at all. That simply goes to the shipowners; we get nothing out of it. We would do everything that would facilitate the alteration of the custom of the port so as to make rapidity of despatch greater. I am quite aware that Sir Thomas Sutherland, I think under a misapprehension, said that if we attempted to follow the Liverpool system in our docks we could not do it. Now, I recognise at once that if the shipowner comes alongside our quays and says: "I am going to try and block you," he will do it, and I do not care whether you have a quay with one-floor sheds or two-floor sheds, or ten-floor sheds, if the shipowner is going to put everything on to that quay as rapidly as he can and we have no powers to compel people to take it away as they have in Liverpool, that quay must be blocked. But in Liverpool they have very great powers of making the consignees take away the goods, and in Liverpool you will see what their powers are and how much more rapidly they can work by figures which our manager, Mr. Hardy, will put in when he gives his evidence, showing that per foot of space they deal with a very much larger quantity of cargo than we can, simply because they have this power of compelling people to take away their goods. Then also I do not think it is quite fair to say that if we alter our system the quays could not do the business. At our quays we are working to-day to carry out a certain business. If you are going to alter that custom and change that business surely it is only fair to give us time to make the necessary alterations and if the shipowners would only alter their bills of lading so as to alter the custom, there would be no difficulty on the part of the dock companies in making every change necessary so as to carry out the alteration. But the introduction of these vast steamers has, not for this reason only, brought very clearly into prominence the natural disadvantages of London as a port. These disadvantages are common with all other ports which are some way up the river. You will find that at Hamburg it is exactly the same. Big steamers cannot get up at all. In 1895 I was in the "Tantallon Castle" at the opening of the Kiel Canal. She is not a ship of enormous size, but we did remain up at Hamburg one night, and most anxious Sir Donald Currie was to get her back, and we went back the first thing in the morning, simply because they had not the water there. The expenses of the dredging, deepening, and widening constantly necessitated by the growing size and draught are very great, and yet greater expenses and deeper docks will shortly be necessary to keep pace with the growing need. But the docks can reap no compensating advantage for their outlay, for, as will presently be seen, the goods which these steamers bring in are to an increasing extent taken out of the docks again without paying a penny, although each year the tonnage of vessels entering and using the docks shows a steady increase. (See Appendices 26 and 27.)

(2) Then with regard to the increase in the total tonnage of ships and steamers using the dock, Appendix 20, which I shall hand in, shows the number and tonnage of vessels in the "foreign" trade that entered the Port of London, including vessels in ballast, in each year from 1861 to 1899, and the percentage of increase. It

gives instructive indications of the yearly decrease since 1861 in the number of sailing vessels and increase in the number of steamers in the foreign trade entering the Port of London, and also of the steady increase of the total tonnage, which in 1899 is over 200 per cent. more than that of 1861, although the actual number of vessels has scarcely varied. The immense capital expenditure on the docks in the past, however adequately remunerated it might be if the goods that entered those docks paid dues as well as the ships, cannot possibly produce an adequate return if the revenue derived from goods continues at the average of the last ten years, whilst the probability is that it will decrease despite the great increase in the amount of goods entering the port. It is the goods and not the shipping that pay. The shipping entails and has entailed vast expenses for maintenance and the like, nor are these expenses capable of diminution, for the goods cannot come without the steamers, and accommodation must be found for the steamers. Moreover, the total tonnage of the ships and steamers entering with cargoes is little more than one half of the estimated total tonnage of the lighters and barges that enter the docks in the course of the year as will be seen.

(3) With regard to the increase in the size and number of barges and lighters that use the docks I shall give in Appendices 33, 34, 35 and 36 some yearly figures, but figures as to barges are not readily obtainable. It has been seen that about the time when the exemption clause was first drafted the average size of the lighters, hoys, and craft in active service in the river was 32 tons; the total number in use was about 3,500. In 1823 the number in use must have been very insignificant for reasons previously given. That is with regard to the evidence given by one of the witnesses before the Select Committee on Foreign Trade. There could not have been a very large number of lighters and barges employed in taking goods from and to the docks, because if the lighterage business had been a very flourishing one in those days that man would not have wanted to sell his barges for an old song. Of course if they were of any value they would not have been sold.

5597: (Sir Robert Giffen.) Is that quite so? I wish to put you upon your guard on that point?—Well, as the value of the exemption clause to the rivals of the docks became more and more apparent, they must have sprung rapidly into prominence again; for in 1855, when the Bill for the repeal of the clause was thrown out, according to the statement of the opponents of the Joint Committee's recent Bill in one of their Memoranda, no less than 40,000 barges entered into "one dock," which, of course, must have meant one dock system, probably the West India. In 1855 the average barge is believed to have been about 25 tons register, the craft known as hoys, which were of a larger tonnage, having then gone out of use. About 140,000 have entered the docks in the last three years, of an estimated total tonnage for each year of some 9,000,000 (taking the average lighter to be only about 60 tons register), or nearly double the total tonnage of the foreign trading vessels entering the docks during the same period. I am speaking from memory, but I think one of the lightermen witnesses put in that the average size of a dumb barge was nearer 80 tons than 60. Mr. Jacobs said that the average was 79 tons, so that of course I have very largely understated these figures. I should like to remark that practically all these barges have to be worked in and out, and proportionately to their tonnage involve the docks in at least as much expense for locking as ships. Ships come into the docks for their ordinary purposes, and then perhaps they have to go out to a dry dock. We make for that a special charge of 3d. for locking and unlocking, and our contention is that if it is a fair charge simply for the services that we have to render, it is not an unfair thing to ask that the barges which put us to at least as much expense should pay the same. If the exemption clause was oppressive in 1855, it follows therefore that the burden has been increased tenfold since then. For nowadays barges of 150 or even over 200 tons register are not uncommon (see Appendix 35), and even larger ones are in contemplation. Some idea of the quantity of goods they carry out of the docks for nothing is given by stating that a single barge equal to carrying 180 tons of goods will hold the contents of an ordinary goods train of 20 to 24 trucks. It is thus apparent that as steamers

See  
6436-67.

See 6466.

have increased in size, so the barges which come into the docks to receive their cargoes have kept pace with them, and these are taking away from the companies in ever-increasing quantities the goods for whose reception they were originally designed. A circular issued on July 21st, 1899, by Messrs. James Cook and Co., is typical of the growth of the lighterage trade, for it states that Messrs. Cook have added to their fleet to meet their customers' demands 15 open 125-ton and 15 open 150-ton craft. The increase in the actual number of lighters in existence, so far as this can be accurately gauged, appears to be shown from the following figures. The reports on the navigation of the River Thames, 1879 (pp. 21 and 447), show that the number of barges registered for use on the River Thames between 1868 and 1877 was about 1,017 per annum, averaging about 47 tons each, and that the number of barges remaining on the books of the Watermen's and Lightermen's Company was, in or about the year 1879, 7,283, which is probably in excess of the number actually owned by barge owners, owing to the system of registration under which, in certain cases, the same barge appears more than once. Even at this time more than 700 barges entered and left the London and India Docks every twenty-four hours. It is 350 in and 350 out. I do not wish it to be thought that it is 700 each way. That is the total. In December, 1895, the actual number of barges on the river was 8,374, and in 1899, 9,000, the average tonnage being of course much greater than in 1877, as the rapid increase in their size would suggest.

(4) Then as to the tendency for goods to go more and more direct to their ultimate destination this is a natural tendency, for only the exigencies of port accommodation would compel the delivery of goods at London, when there may very likely be a port much nearer their destination. Quickness of delivery and saving of expense are the two great objects which the narrow margin of profit now allowed by modern competition must keep constantly before the eyes of the shipowner and merchant. Again it is in the natural course of things that the business of the transhipment of foreign goods, formerly almost monopolised by the Port of London, must continually decrease. I may refer to the statement I gave just now, as showing what the competition for this business is, that the Germans to-day have 23 steamers of 10,000 tons, as against nine English. Those are the figures for 1899. It is notorious that almost each year fresh docks and fresh improvements in the old docks in foreign ports are being made largely with State and Municipal funds. Thus the competition between shipowners must tend to divert the transhipment business to other ports under the system of "through" bills of lading, in consequence of which agents at some English ports quote cheaper rates *via* Continental ports than *via* London, although in London transhipment is as cheap as it can possibly be. I say it is as cheap as it can possibly be because so far as the docks are concerned we levy nothing. The only charge is what the shipowners have to pay for their own services. They are absolutely free so far as the docks are concerned, and under our present proposals will continue to be free. Moreover, the geographical position of some Continental ports, that is, Hamburg, is partly responsible for this diversion. Goods can be more easily shipped from Leith or Dundee to Hamburg, and there transhipped for South America, then sent down to London for transhipment. If you take a map and look at the position of Dundee and Hamburg you can see that it is a simple thing for them to send across and get transhipment. They get cheap freight from there, so naturally they do it. With the expansion of foreign merchant navies, too, it naturally follows that goods are sent more and more direct to their port of destination, and encouragement is given to this system by the higher duties put upon goods brought, for instance, to Havre *via* London, than those put on goods that come direct. In many instances foreign governments give a premium for direct importations by penalising goods that are transhipped.

(5) Then with regard to the increased tendency to take goods into immediate consumption; this is a part of the general expansion and perfecting of the trade of modern times when steamers are timed to the day and prices gauged to a pound. Increased railway facilities have also helped largely to do away with the necessity for warehousing, goods being now supplied according to the demand and not brought over in huge quantities by

fleets. I have endeavoured to explain that when goods are brought over in these huge quantities they have to be stored somewhere. Every day gained in transit is a consideration, and cheapness is everything. This tendency is shown by a comparison of the following figures. In 1880 for every two and a third tons of foreign shipping entering the docks to discharge, one ton of goods was there landed for warehousing. In 1898 for every 4 tons of shipping entering the docks only one ton of goods was there landed upon charges, and 40 per cent. of the goods so landed were for immediate delivery and not upon full warehousing charges. The following are some carefully worked out figures for 1899 showing that over 75 per cent. of the goods that use the docks pay not a penny for such benefits. Here I have a statement giving the figures worked out as we thought as closely as we could for imports and exports:—

## LONDON AND INDIA DOCKS.

Estimated Tonnage of Imports and Exports for the Year 1899.

	Number of Vessels discharging or loading.	Net Registered Tonnage of Ships.	Estimated Tonnage of Goods discharged or loaded.	Tonnage of Goods on which landing or wharfage charge levied.	Tonnage of Goods discharged or shipped overboard on which the Joint Committee got no charge whatever.	The percentage the Goods discharged or shipped overboard bear to the Total Tonnage of Goods shipped or discharged.
Imports	2,800	4,281,889	3,946,527	1,686,830	2,800,707	72
Exports	1,860	3,208,098	2,418,037	453,431	1,959,606	81
Total	4,660	7,489,987	6,364,564	1,539,261	4,820,313	76

I have put in a table which gives actual figures for imports. (See Appendix, 16th day, No. 14.) We have not been able to get actual figures for exports. But while the actual figures show that while the imports were 76 per cent. against my estimate of 72 per cent., I think we may take it that the figure for the exports, 81, is practically correct. And though no doubt the effect of the tendency indicated is to render cheaper the necessaries of life, it is among the hardships of their case that the Docks which have been the real means of bringing about this salutary result should suffer from it. I do not know really that it has been cheaper in Liverpool. They have to pay dues that are not charged in London. I think the things are just as cheap in London.

(6) Then with regard to the expansion of Free Trade and its effects on the business of the docks, these have already been indicated. It is sufficient to repeat that whereas in 1845 there were still 750 kinds of goods liable to duties, at the present day there are 15, the remaining 735 being in consequence practically free to be taken and stored where the consignee pleases.

(7) Then with regard to the reduction of freights Appendix 37 which I shall hand in, shows the fluctuations in freights between 1860 and 1899, and illustrates the fact that the shipowners' profits have been narrowed to a minimum in recent years, and with it the necessity of every possible economy has arisen.

(8) Then going to the question of the business practices of the wharfingers, as the total of goods to be warehoused diminished and the competition for what remained became more keen, the wharfingers and warehousemen naturally availed themselves of various devices for attracting goods to their wharves and warehouses which were not legally open to the Dock Companies. Among these may be mentioned cash advances on goods warehoused or to be warehoused, offers to importers of shares in the wharfage and warehousing businesses, and acceptance of part interest in produce operations with the importers, and such other business negotiations as were most likely to cement the ties of mutual interest. Of course, I do not blame the wharfingers. It was perfectly open to them to do that, but it was not open to us. It will thus be seen that the exemption clause,

Mr. C. J. C.  
Scott.  
8 May 1901.

See 6186-90.

Mr. C. J. C.  
Scott.  
6 May 1901.

by reason of its accidental survival some eighty years ago, has come to be applied to a state of things differing altogether from that for which it was originally intended. The Dock Company submits that the time has now come when an anachronism such as this should be done away with. Looking only to the positive arguments in favour of its abolition, and leaving out of consideration altogether the objections urged against it, they submit that they ought no longer to be called upon to maintain and find interest on the capital expended on private waterways of the most costly nature covering many hundreds of acres of land acquired at great expense without receiving any payment in return from about two-thirds of the tonnage of the vessels that use those waterways. The exemption was granted for a definite purpose, to counterbalance definite privileges, and under conditions in which it worked not inequitably. The purpose for which it was granted has ceased to exist. The privileges which it was designed to counterbalance have long since been removed, not only by the letter of the law, but by the effects of untrammelled enterprise and competition and the different conditions of trade now existing. Some idea of the expense and labour enjoyed by the wharfingers and lightermen, and imposed upon the docks by these exemption clauses may be gained from the following figures. As instances of heavy and increasing expenses to which the Dock Companies are put in respect of the Docks may be taken the annual sum of £21,000 expended on police, and the £92,000 or more on rates and taxes. The latter is a constantly increasing item as the following figures show. In 1889 the sum expended by the Joint Committee on this account was £64,653 0s. 1d., which had increased in 1894 to £85,820 11s. 1d., and in 1899 to £92,385 7s., and in 1900, £101,115. The following table shows the number of police employment by the Joint Committee:—

Dock Police.	
Superintendent	1
Inspectors	9
Sergeants	19
Constables—	
1st Class	124
2nd Class	129
Barge Searchers	10
	292
Foremen Firemen	3
Firemen	11
	306

All this very heavy expenditure is incurred annually by the Dock Companies in respect of property which the wharfingers and lightermen treat as their own without contributing a penny. And other expenses for maintenance and other matters stand of course on the same footing. With respect to labour, the following figures are pertinent. In 1899, 2,800 ships from foreign ports of an aggregate tonnage of 4,281,389 tons entered the Docks of the Joint Committee to discharge. The number of barges entering during the same period was 137,193, as against 142,217 in 1898, of an estimated tonnage of nearly 9,000,000 tons. I do not know whether the number being rather smaller is accounted for partly by the increase in size. This traffic has to go in and out. Sometimes as many as 150 lighters have to be locked either in or out at one entrance in one tide. If these lighters were detained until they could go out on high water, the congestion of traffic would render the access to the docks by the ships themselves impossible, and the safe navigation of the Thames would be imperilled. Consequently, locking out has to be commenced three or four hours before high water. Every time the lock is emptied comparatively clean water is withdrawn from the dock, which has to be replaced by muddy water from the river, and this when stationary deposits the mud which has then to be dredged and removed to Barrow Deepes. We estimate that for every £1 that we spend in pumping water into the docks to make good this waste we have to spend £4 in removing the mud deposit. The sum spent by the Joint Committee under this one head of dredging during the last eleven years amounts to nearly £300,000. Further, the craft using the docks are usually ill found with ropes and gear. They have only one man on board (sometimes, indeed,

only one man to look after two or more craft), and without the assistance of ropes, tugs, and hydraulic power at the pier heads and locks it would be absolutely impossible for the barge traffic to be dealt with at the entrances within the limits of a tide's work, even when extended as above mentioned. Although the barges only have very few men to look after them the Conservancy bye laws require when those barges are in the river that for over 50 tons they shall have two men, and for over 150 tons three men. Moreover, anyone who has ever witnessed the operation of locking and unlocking at a dock entrance can testify to the absolute supineness and disregard of the dockmaster's orders by the bargees, who never stir a finger to assist the work in the least degree. Then, in addition to that, the absence of men or the shortage of men on board the barges makes it quite impossible for us to marshall the barges. If we could marshall the barges it would be possible to let a certain number of barges out, and then when we have to refill that lock so as to let more barges out, we could take a certain number of barges in; but the block of barges coming down to the entrance of the lock makes it absolutely impossible to do that. We have to fill the lock with water again, without making any use of it, and then take out more barges. When the barges on the inside have been exhausted, then we are able to take barges from the outside, but not before. I have here some photographs of the barges taken at different times. (*The witness handed in photographs to the Commission.*) In addition, owing to the public necessity of letting these barges out before high water, at the Victoria and Albert, the London, and the West India Docks, extra pumping due to the necessity of docking and undocking lighters has to be resorted to, to keep up the head of water in the dock and prevent ships from going aground; this being specially the case when the tide is not a high one. If you take the Albert and Victoria Docks, which are practically one dock, the pumping for those two docks is all performed by the same set of machinery, and we find that even with that pumping, and running the pumps, which are very powerful ones, to the fullest extent possible between high water springs and high water neaps there is a loss of water in the dock of about 2ft. That is entirely due to this barge question, and the consequence is that the value of that dock is enormously diminished. Take the Victoria Dock to-day. If we could always ensure having that full extra 2ft. of water we could take in very much larger ships to-day, but the value of a dock is not what it can take in at the best tides; the value of a dock is what you can always accommodate there. We could not agree to take ships in there which we could only take at high spring tides; we must take ships which can get in at the worst tides. Then, the services which the docks have to render to the bargees are enormously in excess of anything they have any legal right to ask. The legal right of the barges is to come in and out; but we have to nurse them; we have to help them in and to help them out, and unless we did that the whole state of the trade would be so congested that we could never get the big steamers out and the whole trade would come to a standstill. The labour and the vast expense thus involved are not obligatory on the companies, but are incurred simply to facilitate the carrying on of the trade of the port. Moreover, the police force maintained by the dock companies is in part, though not exclusively, engaged in protecting the interests of merchants whose goods are being conveyed to and from the docks in lighters to wharves and warehouses on the river, and for transhipment. The tax imposed upon the dock company by these clauses has now reached such a stage in its advance as to threaten its vitality. Without the docks the trade of the Port of London would be impossible. The size and draught of the modern steamer places the possibility of its discharge in the river out of the question. When the docks were built originally that was not so. I know it has been suggested, and probably will be suggested again, that it is all very well to say that the docks are necessary but a system of river quays would answer equally well. I should like to give you a few facts on that point. The quays in our docks extend 21 miles. If you take in the river-side on the north and south from London Bridge down to the Albert Dock you have about some 11 or 12 miles, so that, practically, if you had no docks at all our river quays would extend from London Bridge down to the entrance to the Albert Dock. But, of course, to have any quays like that would be impossible. The cost of having 20 miles of quays like that, with an average width of certainly 100 to 150 yards, would have

been prohibitive altogether. You could not have done it. Then, if, instead of doing that, you had a huge system of river quays below the Albert Dock—take the ten miles again—it would spread down to such a distance that it would be almost impossible to carry on the business. To-day, we find that the Albert Dock is the extreme limit of cartage. There is an enormous quantity of goods to go down by cart. A cart can go down there and back in a day, but once you get beyond that you get beyond the day's work of a horse and cart, and if you are going to extend your river quays beyond Albert Dock it means that you do away with all cartage traffic. I may mention this: Outside the Albert Dock entrance, at Galleons, when that dock was built, we did put up a river quay, hoping to induce steamers to make use of it. For a good many years that river quay was never used; we could not get anybody to use it, and to-day the only use we can get made of it is by certain steamers for discharging coal. To prevent commerce from being driven away to other ports, and to enable even the opposing wharfingers to continue to carry on their business, the Dock Company submit that the best and simplest course is to free the docks from hampering and unfair restrictions, and so enable them to earn a living wage, and be in a position to meet the demands of commerce as they arise. It is submitted that lighters should not, without giving a return, or corresponding benefit of any kind, use freehold property which has cost millions, and enjoy the benefit of the police and labour systems generally of the docks, and that, too, not only without paying rent or due of any kind on their own account, but without paying a penny on the goods which they are occupied in diverting at the dock's expense from the dock quays and warehouses. One course open to the Dock Company, and one that was strongly urged on them by the opponents to their recent Bill, is to raise their shipping rates from 1s. to 1s. 6d. per ton, which is their statutory maximum charge; besides this, they could charge a rent of 2d. per week per ton on ships from their date of entrance, instead of allowing them to be free of rent for four weeks, and could increase the rents of their sheds and berths. (See Appendix, 2nd day, No. 5.) If taking the average time that a ship remains in dock as three weeks, the dues were raised from 1s. to 1s. 6d., and the full rent charged during that period of three weeks, it would mean an increase, instead of 1s., which we charge at present, to 2s., and the money value of that to the docks would be £200,000 per annum, and we should not then have exhausted our full powers. These steps they are loth to take, because they believe that the lower the charges on shipping can be kept the greater will be the advantage to the port, and in addition they have their experience of the North American trade, which, owing to the shifting of some charges on to the shoulders of the consignees, has more than doubled in 11 years, while the other trades in which the shipowner bears all the charges have barely increased at all (13 per cent.) in the same period. Moreover, the lighters are not ancillary to the ships; they are used in the service of the wharfingers and consignees, and an increase in shipping dues would not, therefore, fall at all upon the persons who now receive the benefit of these clauses. As between ships and lighters equity therefore demands that the dock companies should, if possible, fix a charge upon the lighters and goods which pay nothing, instead of raising their charges on ships which already recognise the value of the accommodation and services which they enjoy. In putting forward their present proposal to repeal the exemption clauses, the Dock Company is convinced that it is the most equitable one that can be found, and is the one most calculated to take away from London the reproach of being a slow and, therefore, a dear port, and at the same time to afford the means for providing that new and increased accommodation which is so urgently needed. It is equitable because it widens the area of taxation, and prevents the burden from being borne by only a section of the people benefited by the docks. This, it is submitted, is more just than a system which puts the whole cost on the ship (roughly, one-third only of the interests using the docks), and enables the lighters and goods shipped in them to avoid sharing the burden altogether. The dock company has power, it is true, to charge the goods which are landed on the quay for purposes of delivery from thence into lighters, and the lighters so taking goods; but they do not do so, because the result would be either that those goods would be delivered directly overside as well as the others, and discharge would be slower than ever, or the shipowners to avoid the delay would have to pay the

charges so incurred. In addition to which it may be pointed out that the longer ships take to discharge their cargoes the more is the available dock accommodation for the public contracted. The quicker the ship can complete its discharge the better for the dockowner. On the other hand, it is confidently anticipated that, if the exemptions were removed, the port would become less slow, because there would not be the same reasons for taking delivery overside, and consequently more goods would be landed on the quay, to the great advantage of the shipowner and the public generally. Unloading would be accelerated, sorting to marks and other services would be more quickly and efficiently rendered, and the docks would not be so crowded with craft. Also, the port would be cheaper, as ships would not be detained so long waiting to deliver goods to craft, and discharge would be accelerated generally. The detentions of which shipping so justly complains can never be removed until the custom of the port is changed. Further, by thus obtaining a new source of revenue, the dock company would be enabled to facilitate trade, by providing more cranes and labour-saving appliances, and increasing the accommodation generally, and would also be enabled to raise the additional capital required to construct the new and deeper docks that will inevitably have to be made in the very near future if London is to remain a first-class port, and perhaps also in time to lower the charges on ships. Personally, I think it is a very shortsighted policy on the part of those who are now opposing the docks. It is absolutely necessary for warehouse keepers and wharfingers along the river to do everything they can to get the Port of London cheap and efficient, and the only way in which you can get the Port of London cheap and efficient to my mind is by putting on all those using the docks a charge. It is a monstrous thing, it seems to me, that all the charges should fall on a bare 25 per cent. of those coming into the docks. Now, if I might be allowed to show this, I should like to turn to the accounts of the Mersey Dock and Harbour Board. There is one point to which I wish to draw your attention. It is in the statement of general receipts and general expenditure. Their total receipts are £1,418,000, and our total receipts in London are about £1,700,000. Of that £1,418,000 you will find on the credit side dock rates on goods, £330,000, and town dues on goods, £269,000, making together £599,000. Those amounts represent dues on goods precisely the same as dues on ships. The Mersey Dock and Harbour Board do not services for those; they are not warehousing charges. Their warehousing receipts are shown separately. They are a toll, and a toll only, on all things brought into the Port of Liverpool. That is what we have not in London. For charges corresponding with the £600,000 we have nothing in London. I think that is where the hardship comes in. If you deduct from the receipts of the Mersey Dock and Harbour Board that £600,000 you will find that the amount which they carry to sinking fund, £100,000 must go, and they are £500,000 short of their working expenses. So that, putting Liverpool in the same position that London is, although Liverpool is charging 1s. 4d. dues against the 1s. due that we charge in London, take away those dues on goods which we say we ought to be allowed to charge, and Liverpool financially would be in an infinitely worse position than London. If you take the position of the Clyde Navigation, that is even stronger. The total receipts there are £441,000, and of that £234,000 is made up of these dues on goods. Put the Clyde, again, in the same position as London, eliminating the £234,000, and the trustees of the Clyde Navigation would be in a state of hopeless bankruptcy.

5598. (Mr. Lyttelton.) Do you say that Liverpool would be insolvent also?—Certainly; absolutely. And I say that the whole difference is that the Clyde and Liverpool, which are financially prosperous, have this power of levying charges on goods which we have asked for, and which we never have had.

Then the Dock Company are also able to show that their proposed rates on barges and goods compare very favourably with those which are charged in other ports under similar circumstances. (See Appendix 38.) Moreover, they have no wish or desire to get out of existing contracts, or to press unduly on the lighterage trade or goods in transit, as they have stated again and again in public. They would not necessarily charge the proposed maximum dues on lighters, and would only charge partly laden lighters according to the amount of goods carried, and not on their register tonnage. In the Bill which we have deposited this year, and which

Mr. C. J. C. Scott.

6 May 1901.

we have withdrawn, there are exemptions put in exempting the transit business, and making these alterations.

5599. (Chairman.) Would you like now to give us a summary of your arguments?—I do not think it would advance anything. You have been good enough to listen to the whole thing in *extenso*, and I hardly think it necessary.

5600. I see that the docks of London only produce a dividend of  $1\frac{1}{2}$  per cent. to the shareholder. That dividend is only on nominal value, of course?—Yes.

5601. Not on the market price?—No.

5602. Would it not be suggested by the investing public that, so far as they are concerned, the capital value has already been written off? The return per cent. would not be  $1\frac{1}{2}$  on money invested at the present price?—The investing public might look at it in that way, but I think companies always speak of the return on the nominal capital. Take the London and North-Western Railway Company, for instance; if they pay a dividend of 7 per cent., that is 7 per cent. on the nominal value; it is not on the market value.

5603. But an investment at the present moment would yield a greater dividend?—On the cost price, no doubt. May I put it in this way. I have gone into this question rather largely in the last few days. I find that 56 per cent. of the stockholders of the India Company before the amalgamation had been stockholders for something like twenty years, and their investment represents to them, not to-day's market price at all, but a price of over £100. Some of them paid £130 or £150 or £160 for their stock.

5604. (Mr. Lyttelton.) With respect to your answers and any evidence which you criticise, do you leave that to the speech which is to be made by your counsel?—Yes.

5605. (Chairman.) Now will you hand in the tables to which you have referred, and at the same time make any remarks upon them which you may consider necessary?—Yes.

The Witness handed in the following tables:—

(Table of the number and tonnage of British and foreign sailing and steam vessels engaged in the foreign trade which entered the Port of London from 1820 to 1855. See Appendix, 16th day, No. 19.)

(Table of number and tonnage of vessels in the "foreign" trade that entered the Port of London, including vessels in ballast, in each year from 1861 to 1899, showing the percentage of increase. See Appendix, 16th day, No. 20.)

(Table showing the increase in the size of ships: (a) Vessels registered under the Merchant Shipping Acts in the United Kingdom. (b) Number of steamers of all nationalities of 2,000 tons gross and over afloat at various dates. (c) Steamers under construction in the United Kingdom. (d) Vessels under construction in the United Kingdom at the end of June, 1875, and June, 1899. See Appendix, 16th day, No. 21.)

(Table of the number of steamers classed of over 5,000 tons each, and sailing vessels classed of over 2,500 tons each. See Appendix, 16th day, No. 22.)

(Table showing average size of steamers and sailing vessels, excluding vessels under 200 tons. See Appendix, 16th day, No. 23.)

(Table of the steamers over 7,000 tons gross, built since 1890, and afloat on 30th June, 1900. (a) Built in United Kingdom. (b) Built abroad. See Appendix, 16th day, No. 24.)

(Table of the number and net tonnage of steam vessels (not including warships) built in the United Kingdom from 1888 to 1898, and also showing the excess of gross tonnage over net tonnage. See Appendix, 16th day, No. 25.)

(Table of the vessels with cargoes entering the Port of London and the docks of the London and India Docks Joint Committee between the years 1889 and 1899, both inclusive. See Appendix, 16th day, No. 26.)

(Table of vessels in the foreign trade that entered with cargoes into the Port of London, the Docks of London, and the Docks of the London and India Docks Joint Committee respectively, between the years 1889 and 1899, both inclusive, showing the increase on 1889 in each year. See Appendix, 16th day, No. 27.)

(Table of the number and tonnage of all ships entering the Docks of the London and India Docks Joint Committee between the years 1889 and 1899, both inclusive. See Appendix, 16th day, No. 28.)

(Table of the number and tonnage of vessels in foreign trade, with cargoes and in ballast, entering and clearing from some of the chief ports in the United Kingdom, showing the increase of shipping in 1898 in each port over that of 1890. See Appendix, 16th day, No. 29.)

(Table showing the tonnage of merchant shipping owned by different countries at different dates, showing the rate of increase. See Appendix, 16th day, No. 30.)

(Comparative statement of earnings and expenses, and of shipping, exports, landings, and stocks of the London and India Docks Joint Committee, for the years 1889 to 1899, both inclusive. See Appendix, 16th day, No. 31.)

(Comparative statement of vessels and tonnage entering the Docks of London and the Docks of the London and India Docks Joint Committee respectively, from North American and Canadian ports, and from all other foreign ports, to discharge, between the years 1887 and 1899, both inclusive. See Appendix, 16th day, No. 32.)

(Table showing number of lighters using the various docks of the London and India Docks Joint Committee between the years 1889 and 1899, both inclusive. See Appendix, 16th day, No. 33.)

(Statement showing the number of barges entering the docks controlled by the London and India Docks Joint Committee on the Joint Committee's account during the year 1899. See Appendix, 16th day, No. 34.)

(Table showing particulars of some of the barges having a net tonnage of 90 tons and upwards, which frequent the docks of the London and India Docks Joint Committee. See Appendix, 16th day, No. 35.)

(Table showing the number, description, and tonnage of craft using the Port of London in 1796. See Appendix, 16th day, No. 36.)

(Table of freight fluctuations, 1869 to 1899. See Appendix, 16th day, No. 37.)

(Statement of charges leviable at certain ports to which Parliament has given powers of charging tonnage dues on lighters and craft, and on the goods carried therein. See Appendix, 16th day, No. 38.)

(Table of the existing rates chargeable at outports on goods not landed on the quay. See Appendix, 16th day, No. 39.)

The first remark I should like to make is with reference to Appendix No. 20, which shows the number and tonnage of sailing and steam vessels with cargoes and in ballast in the foreign trade that entered the Port of London from 1861 to 1899, and the percentage of increase in each year over 1861. Since 1861 the tonnage has increased from 3,163,000 to 9,557,000, or an increase of 202 per cent., which I venture to think does not point to a diminishing trade in the Port of London. Appendix No. 21 (A), (B), (C), and (D), and Appendix No. 23, all deal with the great increase in the growth of steamers of late years. With reference to Appendix No. 24, I would like to repeat what I said last year when I was before you, namely, that all these steamers, of which we give the list, can dock at Tilbury, and only 28 cannot dock at the Royal Albert Docks. I also include the "Celtic," the new White Star steamer, the largest steamer afloat, which can dock at Tilbury whether it is spring tide or neap tide, when she is fully loaded. Tilbury is the only dock, with the exception of Southampton, where she can dock fully loaded; and I believe that even in Liverpool, when they have completed their present alterations, she will not be able to dock at neap tides when fully loaded. Appendix No. 25 also shows another hardship that all dock companies suffer from. In 1888 the gross tonnage exceeded the net tonnage by 58.35 per cent. In 1898 (these being the last returns we are able to get) the gross tonnage exceeded the net tonnage by 64.31 per cent, so that while in 1888 the ship paid dues on about 42 per cent. of her gross, to-day she only pays dues on about 36 per cent. Appendix No. 26 shows the growth of the trade in the Port of London and in the docks of the Joint Committee. In 1889 the Joint Committee had of the foreign trade of London 38 per cent. To-day the docks of the London and India Docks Company have 45 per cent. I think this all tends to show that with the increasing size of ships it is more and more necessary for those ships to come into the docks, and not to do their work in the river.

It is a little curious that even the coasting trade, which in the ordinary course might be expected to favour the river, both because it would be cheaper and because they could get away when they liked without waiting for tides, that trade is now coming more and more into the docks. In the London and St. Katharine Docks we could take in more to-day than we have room for. I mentioned this morning that we had at Galleons entrance a river quay which we never could get any vessel to use until we used it for coal business. But we have an even more strong point than that. At Millbury, inside the basin, there is a quay to which there are no locks; a vessel can enter or leave whenever she likes. That quay would give her plenty of depth of water, and it is fully equipped with sheds and everything, and we never have yet been able to get any large vessel to use it. If you cannot get that quay occupied, it being within the basin which is within sheltered water, is it likely that these big steamers would use the river quays exposed to all the traffic? Appendix No. 27 is another form showing the increase in the Port of London and the docks of London and the docks of the Joint Committee. Appendix No. 28 shows the total number and tonnage of all vessels entering the docks of the Joint Committee for the years 1889 to 1899, both inclusive. Appendix No. 29 is a table which I think is of very considerable interest. We have in that table taken certain ports, some municipal, some private, some railway, and some trust. Bristol is a municipal port; Cardiff is a private port; Hull is a railway port; Liverpool is a trust port; London is a private port; Middlesborough is a railway port; Southampton is a railway port; Sunderland is partly trust and partly railway; Swansea is partly trust and partly railway; the Tyne ports are partly railway and partly trust; Glasgow is a trust port; Grangemouth is a railway port; Leith is a trust port; Belfast is a trust port; and Dublin is a trust and railway port. I want to draw attention to these figures, because certain percentages which have been put forward would tend to show that London was not holding her own as a port.

5606. (*Mr. Ellis.*) These figures are being put in by a witness in a particular case. Are they official figures?—They are compiled from figures supplied by the Board of Trade.

5607. We can have your assurance that they are not your figures, but are Board of Trade figures?—Certainly; they are Board of Trade figures. When I compare Bristol, which is a municipal port, with London, which is a private port, I find that in 1890 London was 12,702,000 tons ahead of Bristol. In 1898 London was 15,422,000 tons ahead of Bristol, although Bristol shows by percentage a greater increase. On the actual figures London stands further ahead than Bristol in spite of this percentage. I mention this, because I think it is not quite fair to judge the port by the percentage; you must deal with the figures. Now I should like to take Cardiff. In 1890 London was 4,665,000 tons ahead of Cardiff. In 1898 London was 7,800,000 tons ahead.

5608. (*Mr. Joseph Shaw.*) With reference to that figure, might I interpose. Sir John Wolfe-Barry knows that 1898 was a strike year at Cardiff, and that would make a great difference?—I am perfectly willing to leave out Cardiff. Cardiff is not a port that you can fairly compare with London. Cardiff is a coal port, and very little but a coal port. London is not a coal port. At Liverpool in 1890 we were 2,538,000 tons ahead. In 1898 it was 4,427,000. Then I take the Tyne ports. They are chiefly coal ports; perhaps I had better leave those out also. Then I will take Glasgow. In 1890 we were 10,631,000 tons ahead of Glasgow. In 1898 we were 12,911,000 tons ahead. The increase of percentage is put down by the side. I think it will show how the real test of the position of the port is not the increase of percentage, but is to be found in the actual tonnage. You can imagine a case of a port with one ship of 1,000 tons; the next year it might have two ships of 1,000 tons each; that port would have increased 100 per cent. Appendix No. 30 is another case showing how illusory percentages are. These are also figures taken from the Board of Trade return of 1899. I find that, lumping Hamburg and Bremen together, which represented German trade fairly in 1850, in 1890 the tonnage of the United Kingdom exceeded that of Hamburg and Bremen by 3,426,000 tons. Since that date the tonnage of the United Kingdom has increased by 151 per cent. The tonnage of Hamburg and Bremen taken together has increased by 831 per cent. Yet in 1897 the tonnage of the United Kingdom

is 7,787,000 tons in excess of Hamburg and Bremen. Looking at these figures, I say to-day, if you compare London with any port in the United Kingdom, London stands further ahead of that port than at any previous time of its history. Then Appendix No. 31 gives the figures of expenses and earnings. Appendix No. 32 goes very fully into the question of the development of American trade under the London clause in the American bills of lading. There one sees how that trade has grown and prospered under that, although it was said at the time that that clause would kill the trade. The trade has doubled since. Appendix No. 33 gives certain figures as to the number of lighters using the docks of the Joint Committee during the years 1889 to 1899. Appendix No. 34 is an answer to a statement that a great portion of the barges are for account of the docks. Here we show that the percentage of the total number of barges coming to the docks which are for account of the docks is only 10 per cent.; 90 per cent. have nothing whatever to do with our business. Appendix No. 35 gives the size of some large barges in London. Appendix No. 36 gives particulars of some barges in the years 1796 and 1799. Appendix No. 37 gives the freight fluctuations to which I have referred already. Appendix No. 38 I bring forward with a little diffidence. It is scarcely evidence, but I should like to say that in getting out these particulars of the charges on barges they were compiled by our solicitor from Acts of Parliament governing the docks referred to, information as to the Acts passed in each case having been first obtained from the dock authority, and the extracts as to barges were subsequently submitted to and checked by the various dock authorities. The original correspondence can be produced. Then I come to my last table. I want to compare the rates which we proposed to charge under our lighterage with those which are authorised for other ports, showing how very reasonable our rates were. The Bill which was entered this Session was withdrawn. I will take the chief articles only. This is Appendix No. 39. Cigars in London are 1s. 6d.; in Liverpool 3s. 9d. Coffee in London is 1s. 6d.; in Bristol, 2s. 6d.; in Glasgow, 2s.; in Liverpool, 2s. Drugs in London, 1s. 6d.; in Glasgow, 2s.; in Liverpool, 5s. Fruit in London, 1s. 6d.; in Glasgow, 2s.; at Liverpool there is a charge of 3d. per package, which would work out at a great deal more than 1s. Then hides, skins and leather in London, 1s. 6d.; in Bristol, 4s. 2d.; in Glasgow, 2s.; in Liverpool, 2s. to 5s.; and in Southampton, which is a railway dock, 5s. to 10s. Meat in London, 1s. 6d.; in Glasgow, 2s.; in Liverpool, 1s. per hoghead. Spirits in London, 1s. 6d.; in Bristol, 2s. and 2s. 9d. per puncheon; in Glasgow, 2s.; and in Liverpool, 10d. per hundred gallons, which would work out very considerably more. Then tobacco, which is a very large trade done in London and Liverpool, is in London, 1s. 6d.; in Bristol, 2s. 6d. to 5s.; in Glasgow, 2s.; in Liverpool, 1s. 8d. Wines in London, 1s. 6d.; in Bristol, 2s. 9d.; in the Clyde, 2s.; in Liverpool, 2s. 4d. Wool in London, 1s. 6d.; Glasgow, 2s.; Liverpool, 2s. Flour, which is a very large article in London, 1s.; in Glasgow, 1s. to 1s. 3d. Grain in London, 1s.; in Glasgow, 1s. 3d. to 1s. Metals in London, 1s.; in Bristol, 1s. 6d.; in Glasgow, a varying amount according to the metal; in Liverpool, 1s. to 3s. 4d. Then Southampton, iron from vessel into craft, or *vice versa*, 6s. a ton, the object, of course, there being to prevent it going over-side at all, and to force it over the railway. Sugar in London, 1s.; in Bristol, 2s. 6d.; in Liverpool, 2s. Those are all that I wish to draw the attention of the Commissioners to. Of course, those are all maximum authorised rates; they are not rates actually charged.

Before we adjourned for luncheon I brought forward the question of the correspondence in regard to the "Politician." I do not know whether the committee have settled anything about it. See 5589-91.

5609. (*Chairman.*) We have no copies of it?—I should like very much indeed to put it in.

5610. You wish to put it in on the point of the difference between the charges in London and Liverpool?—I do, certainly.

5611. Are the statements first-hand?—May I explain in this way? The first statement was handed, I think, to Mr. Black for Lord Egerton when the Royal Commission visited Liverpool. It was a statement made by the owners of the "Politician" as to the comparative cost of the steamer "Politician" in London

Mr. O. J. G. Scott.  
6 May 1901.

Mr. C. J. C.  
Scott.  
May 1901.

and in Liverpool. The statement was sent to me, and I was asked to see whether I found it correct. It was correct, so far as it went; but it did not go anything like far enough, because it only dealt with a certain portion of the charges. We then, in London, carried that statement a bit further, so as to put it, as we believed, in the form of a true comparison between London and Liverpool. That was then returned by Mr. Black, and was submitted by him to the authorities in Liverpool. They again agreed with our figures. The correspondence shows all this, and the figures show that whereas if you include in London the charges paid by the ship, which are the only charges, as the consignee pays nothing, and if you dock in Liverpool, and take in the charges falling on the ship and the charges falling on the consignee, that is, if you take all the charges which the goods in some form or other have to pay before they get to the consignee, London is very considerably cheaper than Liverpool. You will find in this the whole statement set out. It shows that the charges in London falling on the ship for dock dues, stevedores, etc., in connection with the delivery and discharge of the cargo amounted to £1,001 9s. 10d., all of which was paid by the shipowner, and nothing by the consignee. In Liverpool, the total charges amounted to £1,347 4s. 8d., or £346 more. Of that, only £552 was paid by the shipowner, £794 being paid by the consignee. There is the whole difference between London and Liverpool—why London is an unpopular port with shipowners, and why Liverpool is a popular one. In Liverpool, although the total cost from the time the ship arrives to the time the goods get to their destination is more than in London, yet the shipowner pays very much less, the consignee having to pay his share. I do not know that I need trouble the Commissioners with the correspondence. That is simply to show that we, in London, confirmed those charges which were applicable to London, and the dock authorities in Liverpool confirmed those charges which were applicable to Liverpool.

5612. (Mr. Ellis.) Is this something that arose out of evidence that has been given before this Commission?—I think so.

5613. You are not referring us to the evidence?—I could refer to Sir Thomas Sutherland, but I do not want to refer to anyone particularly. I refer to the shipowners generally, and Mr. Jones and Mr. Becket Hill in particular, who have said London is very much dearer than other ports.

5614. Is it a broad general statement, not a specific statement, by any witness?—Certainly. I will put the statement in.

*(The Witness handed in a Statement of the London Charges on the SS. "Politician," and correspondence with the London and India Docks Company relating thereto. See Appendix, 16th day, No. 40.)*

5615. (Chairman.) Do you wish to make any further remarks?—I have one or two further remarks I should like to make.

5616. I understand you wish to limit yourself to matters which are within your province as a witness?—Certainly. I propose, in the following observations, to limit myself to that portion of the inquiry before the Royal Commissioners which relates specially to the docks of the port. Although it goes without saying that the dock companies are deeply interested in the proper maintenance and dredging of the river, I feel that the Royal Commissioners have ample evidence on that subject from witnesses specially competent to give it, and that I shall better assist them by limiting myself to matters more within my own province as a witness. I have endeavoured to set before the Royal Commission the various alterations in circumstances which make the conditions originally imposed upon the dock companies antiquated, unfair and impracticable now, and I have also, I believe, succeeded in showing that London has steadily progressed under the efforts made by the dock companies to provide for the growing wants of the port. Those efforts have undoubtedly led to much advantage to the trade of the port, but with no corresponding gain to the shareholders, and I venture to think that the progress made by the trade of London, and the ever increasing proportion of that trade which has come to the docks, is a contradiction of the statements loosely made that London is losing her trade, and that her position

as the foremost port of the world is critical. Compared with other ports, British and foreign, we have more than held our own, and a port which can, and does, accommodate the largest steamers afloat, and provides facilities for trade second to no other port in the world cannot be said to be out of date. I do not claim perfection for the docks. With the growth of the port, I recognise that more dock accommodation is necessary, and for some years past the dock companies have had this in view. The necessity has been put before the shareholders, large sums have been spent in improving and enlarging the entrances to the West India Dock and the South West India Docks. Tilbury Dock was constructed in anticipation of the necessities of shipping, and is by everybody admitted to be a dock second to none in existence, and the action of the London and India Dock Company in promoting a Bill in the present Session of Parliament is also proof that the directors have not been blind to the growing needs of the port. The improvement and development of the docks is chiefly a money question. This I have considered very carefully with my colleagues, and we are of opinion—and our opinion is, I believe, shared by many shipowners—that the necessary income for this purpose can be found without recourse to the rates of the Metropolis, and without inflicting hardship on any trades by authorising a moderate charge to be made on goods and barges entering the docks. I will deal first with charges on goods. If the schedule of dues on goods as proposed in the Lighterage Bill of the London and India Docks Company deposited in Parliament this session is compared with the maximum rates authorised in the case of other home ports, it will be found that (irrespective of the very important exemptions to be found in the Bill) the proposed schedule for London is generally lower, and on this point I refer to Appendix No. 38, and instance particularly Bristol as a municipal port, Liverpool and the Clyde as ports governed by a trust, and Southampton belonging to a railway company. If these ports are not crippled by such dues, why should London be? But the whole idea of a maximum impost of 1s. 6d. per ton (equal to a 1d. on 124 lbs.) crippling the trade is absurd; freights vary 10s., 15s., 20s. per ton or more, and it is not found that trade is crippled. I can quite understand strenuous opposition to the imposition of dues being offered by private traders who have warehouses of their own, and railway companies who take delivery from the ship's side and deliver to consignee's domicile. To this I say that their overside business is a modern development, it did not exist when the exemption clauses were originally passed, and if it is no hardship to them to have to pay such dues in Liverpool, the Clyde and elsewhere, why should it be in London? Further, I say that if in docks owned by railway companies, such as Southampton, it is allowable to charge such dues, there is no reason why docks owned by dock companies, and which are an absolute necessity to the shipping and trade of the port, should not be allowed to make the charge. The question of warehousing cannot be brought in, for if it is contended that the warehousing rates in the docks are higher than in other ports, then I say that the dock companies have no warehousing monopoly of any kind; that there is, therefore, no compulsion on anybody to warehouse goods with them, and that if their rates are inordinately high then there are warehouse keepers who have no connection with the docks to whom application for storage can be made. I now come to the question, who should be the authorities authorised to levy charges if it should be considered proper to levy dues on all goods using the docks. If there were any need to fall back on the rates, I can quite see that there would be justification for control by the local authorities. But if all the required funds can be, and are, raised by the business itself, surely the control of the docks may best be left in the hands of those who have had all the necessary experience and against whom no serious complaint whatever as regards management has been substantiated. Their only offence is poverty, and that is to be attributed to the injustice (which we are now seeking to remedy) of allowing the docks of this port to be used by a very large class of the community without any payment at all. Take as an alternative a body constituted on the lines suggested by the London County Council; would it have the necessary knowledge for the proper conduct of the very difficult, complicated, and intricate business of the docks? I say at once it would not, and could not, and if it is true, as we are told, that the private wharfingers and warehouse keepers do their business better and cheaper than the docks because it is under

the direct supervision of the proprietors themselves, then I say it must be equally true that the docks managed by merchants and shipowners with an intimate knowledge of the business will do their business better and cheaper than if managed by a body of gentlemen collected indiscriminately from various other associations, and bodies without previous acquaintance with dock working and liable to lose their connection with the management of the docks for wholly extraneous reasons. I believe, therefore, that the control and working of the docks of London should be in the hands of business men who know from personal experience what the wants of the port are, and are in touch with the various trades of the metropolis. But is not this what is found at present? Taking the Board of the London and India Docks Company, with which I am best acquainted, you will find all classes of trade fairly represented by men who for years past have made the trade of London and the management of the docks their constant study. I do not hesitate to express a very strong opinion that the present directors of the London and India Docks Company are as competent a body to whose hands to commit the management of the docks as can be found. Here I ask to be allowed to give the names of the directors of the London and India Docks Company with their qualifications. I start with myself as chairman. I was 19 years member of the firm of J. W. Cater, Sons and Co, East and West India merchants, and chairman of the London and St. Katharine Docks Company and London and India Docks Joint Committee for two years; the Honorable Sydney Holland, the deputy chairman, who is a barrister, director of English, Scottish and Australian Bank, large wool importer, and chairman of the East and West India Dock Company for three years; Sydney Eggers Bates, a member of the firm of Edward Bates and Sons, Shipowners and East India merchants, and deputy-chairman of the London and St. Katharine Docks Company for two years; Edward Boyle, K.C., barrister, and deputy chairman of the East and West India Dock Company for three years; Sir George Henry Chambers, was chairman of T. Daniell and Co., Ltd., West India merchants, was chairman of London and St. Katharine Docks Company for fourteen years, also a director of the Regent's Canal and Dock Company. Thomas Du Buisson, a member of the firm of Henckell Du Buisson and Co., general merchants; John Lowther Du Plat Taylor, C.B., was secretary and manager of the East and West India Dock Company from 1870 to 1888, and was appointed a director in 1888; John James Hamilton, a member of the firm of Sinclair, Hamilton and Co., merchants; Rodolph Alexander Hankey, a member of the firm of Thomson, Hankey and Co., West India merchants, and a director of the Colonial Bank, chairman of the East and West India Dock Company for three years; William Egerton Hubbard, a member of the firm of John Hubbard and Co., Russian merchants, and a director of the London and County Bank, was chairman of the London and St. Katharine Docks Company as well as the London and India Docks Joint Committee for eight years; Sir Henry Denis Le Marchant, Baronet, a member of the firm of H. S. Lefevre and Co., merchants, and chairman of the East and West India Dock Company for three years; Sir Nevile Lubbock, K.C.M.G., the chairman of the New Colonial Company, Limited, and chairman of the West India Committee; Colonel Ben Hay Martindale, C.B., who was the general manager of the London and St. Katharine Docks Company from 1874 to 1888; Edward Samuel Norris, who was a member of the firm of S. E. Norris and Co, leather merchants; Fred Pook, a member of the firm of J. B. Barry and Son, East India merchants; Marlborough Robert Prior, a member of the firm of Henry Kendall and Sons, merchants; Robert Bruce Ronald, a director of the Australian Mortgage Land and Finance Company, Ltd., large wool importers; Seth Taylor, grain and flour merchant; John Henry Tod, was East India merchant in the firm of Tod, Durant and Co., a member of the Committee of Lloyd's Register of Shipping, and Chairman of the East and West India Dock Co. for three years, and Edward Wagg, a member of the firm of Helbert, Wagg, and Russell, stockbrokers. What would at once strike anyone reading through that list is that here is an absence of shipowners. I will tell you the reason why that is so. In 1889, when the Joint Committee was formed, and there had been frequent opposition by one of the two dock companies,

the shipowners—I do not blame them for it—had been trying to get the very best terms from the two companies, and were working the two dock companies together. At the time the number of directors was very largely reduced from 45 and 40 to 16 and 12 respectively, and the shipowners who had been trying, as was very natural on their part, to get the best terms they could for themselves, did not stand for re-election. So at the present moment we are short of two or three directors, and we have been keeping those vacancies for the purpose of filling them up with shipowners so soon as we see how the Royal Commission terminates. Then it is said that such powers should not be given to any private corporation. Why not? If powers have been given us to levy dues on shipping entering the docks irrespective of services rendered, why not on goods? It has not been shown that we have abused our powers of charging shipping; on the contrary, we only charge to-day 1s. per ton where we might exact 2s. 2d., made up of 1s. 6d. dues and 8d. for four weeks' rent. Why then should we be unfit to be trusted with the power of levying dues on goods? Again, since our Dock Acts were passed other Acts have been passed giving similar powers on goods to other private companies—Manchester Ship Canal Docks, for instance—and if it is reasonable to give such powers to other new companies, why not to the London dock companies, who are working now under circumstances never contemplated when the original exemption clauses were passed? I now come to the proposed charges on barges. Here again I find that we are only asking for powers similar to those given to other ports in varying amounts, and again I contend if it is reasonable to give such powers to other ports, it cannot be unreasonable and killing to the trade of London to give them to the dock companies.

5617. Can you cite any parallel case of any port which is, as London is, essentially a barge port?—No, I do not think I can.

5618. Surely the case of London is exceptional?—I do think it is an exceptional case in that way.

5619. (Sir John Wolfe Barry.) What about Hull?—Hull is a railway port. Hull is in very much the same position as London.

5620. It is a case in point, is it not?—It is a case in point. For the barge traffic services have to be rendered far in excess of any to which it is entitled by statute. For instance, when once in the lock we need render them no help there, but we frequently tow them in and out, allow them the use of our hydraulic capstans, doing far more of this work for them than they do themselves, and so it is from the time they enter the lock going into dock until they leave the dock again. It may be asked, why do you do this? The answer is a simple one. Unless we rendered these services the whole trade of the port would be brought to a standstill, and rather than permit that we prefer to give gratuitously services to which the barges have no statutory claim; but we consider that this fact does not shut the door to our obtaining relief. The charge which we propose to levy is 3d. per ton, although the maximum limit would be 4d., and we have arrived at this figure as it is the rate which other vessels liable to dues pay for extra docking and undocking when required. I have so far dealt with the suggested creation of a public trust only as it bears relation to the statutory powers which any company are seeking to obtain, but I ask permission to add some observations on the question of a trust from a more general point of view. First, I take it that the principal argument in support of the formation of such a trust or statutory committee as is suggested by the County Council is that, having in some shape or other the security of the rates of the metropolis to fall back upon, the money necessary for the formation of such a trust could be raised more cheaply, to the benefit of the trade of the port. In other words, that the merchants and shipowners of the port shall be enabled to work more cheaply, and consequently make more profit, at the expense, or at least the risk, of the metropolitan community at large, and possibly, though very doubtfully, to the indirect gain of that community. A short time back, when money was cheaper than at present, and the docks were in a weaker position than to-day, we were able to borrow at less than 3 per cent., and the London County Council were at the best only able to raise money at a fraction less, as the following table shows:—

Mr. C. J. C.  
Scott.  
6 May 1901.

Mr. C. J. C. Scott.  
6 May 1901.

COMPARISON OF PRICES of, and return on, Stocks of the London County Council and the London and St. Katharine Docks Company in 1896 and of Stocks of the London County Council and the London and India Docks Company in 1901.

1st AUGUST, 1896.

STOCK.	Rate of Interest.	Price.	Return.	Remarks.
Metropolitan Consolidated Stock.	3½	125½	£ s. d. 2 15 7	1s. 3d. per cent. cheaper than London Company's Debenture Stock.
London and St. Katharine Docks Company's Debenture Stock.	4	141	2 16 10	

22nd MARCH, 1901.

STOCK.	Rate of Interest.	Price.	Return.	Remarks.
Metropolitan Consolidated Stock.	3½	109	£ s. d. 3 4 2	
London and India Docks Company "A" Debenture Stock.	3	94	3 3 10	4d. per cent. cheaper than London County Council Stock.
London and India Docks Company 6½ "A" 3½ Debenture Stock at 94				
72½ "B" 3½ Debenture Stock at 89	4	121½	3 5 9	
i.e. the equivalent of £100 Old London and St. Katharine 4 per cent. Debenture Stock.				

5621. (Mr. Peel.) I see you have given the price of the County Council stock of last year. That, I think, was issued at 97½—3 per cent. ?—I was only dealing with the published Stock Exchange quotations. I think that is rather in favour of my point.

5622. They got a better price for it. You said 94 here—3 per cent. ?—At what time of the year?

5623. It was issued last year ?—Yes.

5624. (Mr. Ellis.) Of course, the figures have fluctuated since ?—Yes; we have a 3 per cent. at par to-day. All I wanted to show is that on certain dates there was not a very great difference in the price of our securities. Well, on the 1st of August, 1896, our London and St. Katharine Dock four per cent. debentures stood at 131, and returned at £2 16s. 10d.; the Metropolitan Consolidated Stock stood at 126½, and returned £2 15s. 7d., so it was only 1s. 3d. difference. Then, when I come to a later figure, I find Metropolitan Consolidated Stock on the 22nd of March returned £3 4s. 2d., and the London and India Docks is a debenture stock returned £3 3s. 10d.

5625. (Chairman.) Of course the figures include redemption ?—No, they are irredeemable.

5626. Both of them ?—I think so. I am not overlooking the fact that in the above comparison the London County Council stock is placed side by side with the best of the dock stocks, but the point I wish to emphasise is that if the docks company can show a reliable income they will be able to borrow the two or three millions necessary for meeting all the dock requirements of the port on very moderate terms, while if a trust be formed to purchase the whole dock undertakings of this port and to construct further dock accommodation as well, the trust will require to raise a sum which I put at a minimum of 30 millions, and which has been put very much higher in a debate of the London County Council. It is, I submit, very doubtful indeed whether that enormous amount could be raised on easy terms by the London County Council. Again, the scope of the trust would of course have to be decided, (1.) There might be a trust as in Liverpool to control the whole port. This would mean absorbing all the dock properties and river frontages, and as I believe that without these water frontages the river wharves would be unable to carry on their business, it seems that the wharves themselves would have to be purchased. Indeed, this must be so, for to a very great extent the warehouses themselves abut on the river; there is no margin of quay. I cannot believe that it would be to the advantage of the port to give a monopoly of docks, warehouses and river frontage to any public body, and besides, the cost of such a scheme would be so enormous that its

realisation seems to be quite beyond the bounds of possibility. (2.) The idea of a trust formed to purchase certain selected parts of the dock company's property, and of leaving the dock company with no docks need not be seriously dealt with, but there might be a trust to take over the dock undertakings as a whole, disposing of the warehouses and retaining only the water area of the docks with the quays and sheds adjoining. But our docks were originally built to serve the warehouses, and in the older docks such a division is impossible on account of their construction, and it would be very difficult even at the Victoria, Albert, and Tilbury Docks. In some docks we use for the purpose of discharging ships, portions of what, strictly speaking, are warehouses, and in other docks we use as warehouses portions of sheds intended for ships discharging, it being in many cases, commercially speaking, impossible to transport cheap and bulky goods from the dock where landed to another dock or different part of the same dock for warehousing. Then, for all goods stored in the docks, as distinct from the up-town warehouses, the water frontage is vital, and the greater part of the business of the dock warehouses would go if the owners were deprived of the access by water. The business could not be worked. Numberless further illustrations can be given to justify me in saying that any such division of the property would be not only economically unsound, but from a working point of view, practically impossible, and I say confidently that if the value of the property as a whole is X the value of it divided would be much less than  $\frac{X}{2} + \frac{X}{2}$ ; in other words the effect of division would be to seriously depreciate the value of both the portion retained by the trust and of that disposed of as being unnecessary to a simple dock undertaking. To this scheme there is also the further objection that it would not be a complete port trust after all; only 6½ million tons out of 15½ millions coming into the port discharge in the various docks of London, and a port trust which would include less than half the tonnage coming into the port, and would have to face competition from riverside owners, would not, I venture to think, offer to seriously minded people a solution of the question of the Port of London. (3.) There is the scheme to take over the entire property of the three dock companies, with their warehousing and other business, and work the business as a whole in the name of a trust. Of course to this the objection to which I have referred above, that it really would not be a port trust at all, equally applies. In addition it must be remembered that though the docks do an enormous warehousing business the collective business of riverside and other warehouse keepers is still larger. With all of these the trust would be competing, and the result would in all probability be that the trust to secure the business would have to take unremunerative charges, the loss being provided out of the rates, to the ruin of the private wharfingers and warehouse-keepers. I have endeavoured, very briefly, to summarise the difficulties which will confront the formation of a trust as they apply to the different schemes which have been set forth in various quarters. But there remains one more, common to all the schemes, namely, that to ascertain the compensation to be paid to the various parties to be expropriated will be a very long and tedious process; so that with the loss of time inevitable before the necessary Parliamentary sanction can be obtained, it would be several years before any trust could assume definite shape, and in the meantime the needs of the port constantly growing must remain unsatisfied. Lastly, I am desirous of submitting to the Royal Commissioners the views of my colleagues and myself as to what is really needed for meeting the altered circumstances and requirements of the port. Briefly I would summarise our suggestions as follows:—The London and India Docks Company to have (1.) Power to charge dues on barges with a maximum rate of 4d. per ton, estimated on the basis of 3d. per ton to produce the sum of £56,250; (2.) power to levy dues on goods estimated to produce the sum of £177,833. In consideration of the above powers the dock company are willing to agree (1.) That the reasonableness of the amount of the charges on goods as between the different classes of goods on which the rate is levied shall be subject to a right of appeal to the Railway Commissioners. (2.) That in place of the maximum tonnage dues of 1s. 6d. with rent from the date of entrance at 2d. per ton per week now chargeable on shipping there shall be substituted maximum dues of 1s. 4d. to include freedom from rent for four weeks. (2.) That the maximum dividend to be

See  
6144-46.See  
6039-56.

Mr. C. J. C.  
Scott.  
6 May 1901.

paid on the capital stocks of the company shall be 4 per cent., and that the surplus shall be applicable only to any of the following purposes:—(a) In making good the deficiency of any previous dividends from the date of obtaining the above-mentioned powers. That is not the back dividends, but only from the date when the powers were given. (b) The redemption of loan capital. (c) The provision of a reserve fund not to exceed 10 per cent. of the total nominal amount of the capital stocks of the company. (d) The reduction of charges on goods and shipping. (4) The dock company to undertake to complete with all despatch the proposed extension to the south of the Royal Albert Dock, if authorised by Parliament. Then I give a statement showing how I make out an estimate of the amount which this would produce, and with that I complete the statement I put before the Commission. This is the estimated additional income to be derived from the rates and charges proposed to be authorised by the Bill promoted by the London and India Docks Company in the session of 1901, but since withdrawn to await the Report of the Royal Commission on the Port of London. Dues on barges:—In the year 1899, 137,193 barges entered the docks. Taking these as of an average of 60 tons, the aggregate tonnage would be 8,231,580 tons.

	Tons.
Ten per cent. of these barges were employed in the London and India Docks Company's work - - - -	823,158
Ten per cent. carried coal (based on a fortnight's experience), estimated at - -	823,158
Ten per cent. were barges which passed from one of the company's docks direct into another, estimated at - - - -	823,158
Barges exclusively employed in conveying transhipments, estimated at - - -	350,000
Total - - - -	2,819,474

It is not proposed to charge dues in any of these cases. The tonnage upon which dues would be leviable would therefore be about 5,400,000, giving at 4d. per ton £20,000. It is not proposed that the tonnage rate shall be charged on any greater tonnage than the weight of the goods carried. It is estimated that this would reduce the tonnage by say 900,000 tons (assuming that one-half of the barges only carry full weight), and the revenue would be reduced by £15,000. The maximum powers sought would therefore give £75,000. But in the carrying out of their powers the London and India Docks Company would, in the absence of necessity for a larger income, charge at the rate of 3d. per ton only—a deduction of £18,750—leaving a net income from barges of £56,250. Dues on Goods:—It is estimated that in the year 1899, 2,860,707 tons of import goods and 1,959,606 tons of export goods passed through the docks on overside conditions without contributing anything to the dock revenue. These are the goods that the dock company seek to tax. The maximum rates proposed are 1s. a ton on certain descriptions of goods, and 1s. 6d. a ton on the remainder. It is impossible to say in what proportions the goods would fall under the several rates, but probably an average rate of 1s. 3d. a ton would be leviable. It is proposed to give special consideration to transhipments. These are of two kinds, viz.—(1) Goods brought to London upon a through or optional bill of lading for a Continental or other foreign port, or for an out-port, and transhipped in London from the import to the export ship without being landed, and without any operations being performed on the goods. The tonnage of these goods is not great in comparison with the total imports; probably 10 per cent. of the overside import tonnage, or, say, 286,000 tons is the extent of it. These goods it is proposed to exempt. (2) Goods consigned originally to London but sold before, or within 24 hours after, arrival for immediate shipment to the Continent or coastwise, and which are not landed in London. The tonnage of these goods is considerable, probably amounting to 20 per cent. of the total imports dealt with on overside conditions—say, 572,000 tons. On these goods half-rates only would be charged. The tonnage upon which ordinary charges would be leviable would therefore be, say, 3,822,000 tons, and half-charges on 572,000 tons. This would produce £266,750. In the actual assessment of the charges as between different classes of goods the

docks company would have to consider the conditions under which the trade is carried on, and the relative values of goods, and, after giving due effect to these considerations, the average yield would probably not exceed 10d. a ton, say £177,833. The total additional revenue anticipated from barges and goods under the powers sought, with modifications, would thus be £234,000, against a proposed maximum charging power of £341,750.

5627. (Chairman.) With reference to the dues on goods you tell us that it is estimated that in the year 1899, 2,860,707 tons of import goods passed through the docks. Will you tell us, if you please, whether those figures include coal?—No, because we exempt coal altogether. Coal and all goods in transit are exempt. One very great reason for exempting all goods in transit is this: take the lines from the East, bringing goods to London and also to Continental ports. They cannot get for their goods to Hamburg, say *via* London, a higher rate than the rate ruling from the China ports, say to Hamburg direct. That rate is practically the same as to London, so that the shipowner who wishes to fill up his ship coming to London has to take the same rate of freight to Hamburg, *via* London, as Hamburg direct. Therefore we thought we ought rather to help the shipowners to get their business, because it is our business to encourage shipowners to come to the port. We have put in a copy of our proposed Dock Extension Bill, which was read the second time last Friday week, and the Lighterage Bill, which was withdrawn, in which we set out all these exemptions of coal.

5628. To which you have referred in your evidence?—Yes. Then another matter to which I should like to refer is a statement of Sir Thomas Sutherland's, in his evidence at Question 2009 of the Minutes of Evidence, and a statement of Mr. Jones in his evidence at Questions No. 4832 to 4837. Sir Thomas Sutherland compares certain charges in Antwerp, and Mr. Jones took certain charges at Avonmouth, Liverpool, Hamburg, Rotterdam, Antwerp, and Bremerhaven, and compared them with those at London. As suggested by Sir Robert Giffen at Questions 2015 to 2017, it seems on examination that the comparison really put forward here is between a ship at Antwerp entering light and to load at a quay, and a ship in London entering loaded end to discharge in a dock. In London, a ship entering light pays 3d. a ton only. If she loads she pays a further 9d. a ton on the quantity of goods loaded, the total of both payments not to exceed 1s. per ton net register. The comparison will, therefore, in many cases, be unfair, and not between like and like. Mr. Jones in Appendices 4 and 5, 14th day, shows the charges on vessels of 2,202 tons and 5,146 tons at London and various ports on the Continent, including Antwerp, to be much the same. Either Sir Thomas Sutherland or Mr. Jones has made a mistake somewhere in comparing the Antwerp charges with those in London, since Sir Thomas Sutherland gives the Antwerp charges on the "Candia," a vessel of 4,000 tons net register as being £54 3s., while Mr. Jones puts the Antwerp charges on his vessel of 2,202 tons register at £55. So that Mr. Jones, with his smaller vessel, puts his charges at £1 higher than Sir Thomas Sutherland with his larger vessel. I am quite sure that Sir Thomas Sutherland is the last man to come forward and state anything that he did not think was correct; but I do not think he has the circumstances quite before him. Perhaps the term "quay dues" used by Sir Thomas Sutherland does not comprehend all the charges which Mr. Jones has more properly included in his figures which he describes as dock and quay charges, and that further charges are incurred if a dock is used. Then Mr. Becket Hill, at Question 2256, said: "Of recent years the Millwall Dock has been subsidised by the amalgamated docks, so that there is really no competition whatever." Then at Question 2257 he was asked: "How do you know about the Millwall Dock being subsidised?" and he says: "That is a matter of common notoriety, but it is a matter upon which you could obtain exact information from the Secretary of either Dock Company." The Secretary of either Dock Company knows nothing at all about any such form of subsidising. My answer to that is that the only foundation for this statement lies in the fact that there was a private working agreement (which has now expired) between the Joint Committee and the Millwall Dock Company, under which ships from certain ports were assigned to each party,

See

Mr. G. J. C.  
Scott.

6 May 1901.

and mutual payments made if ships assigned to one party went to the docks of the other, the shipowner, of course, being free to go to whichever dock he liked. Then Mr. Becket Hill further goes on at Questions 2257 to 2292: "It follows that berths in the Royal Albert Dock are very much sought after, and there is nothing to prevent favouritism in their allotment." This statement is devoid of foundation, except that, other things being equal, the Dock Company prefer a large and regular customer to a small and intermittent one. Then Mr. Becket Hill stated that the directors were turned off the Board. As a matter of fact, the shipowners who were members of the Board at the time of the passing of the Working Union Act resigned, and did not offer themselves for re-election. There were several of them who, if they had come forward, would have been re-elected at once. I may mention that the first chairman of the Joint Committee was a shipowner, Mr. Norwood, so that it is incorrect to say that these shipowners were turned off the Board. Then Mr. Becket Hill says at Question 2258: "I have attended some of the meetings, and pointed out that in some respects the docks seem to be managed in an extravagant way. There are large pension funds, and very large amounts are paid for stationery, which, perhaps, is caused by what some of the witnesses will tell the Commission is the red tape system of the docks." My answer to that is that the pension scheme is founded on the Government scale, and is also similar to that of many railway and other great companies. It was most carefully considered, and there is no question that an assured pension is an attraction which enables the company to pay lower salaries than would otherwise be the case. Moreover, a pension fund was set on foot in the year 1890, and is gradually accumulating in the hands of trustees, the income of which will ultimately pay all pensions. This fund appears in the company's accounts, and already amounted on the 31st December last to £97,732 7s. 2d. Then with regard to stationery, a good many shareholders at times have made that a question, but they must forget that a great deal of our stationery goes in the enormous quantity of papers that we have to use in wrapping round samples, which are delivered to the trade, and the more of that paper that is used the better, because we are paid for it. On the question of pensions it may be mentioned that, at the time the West India Dock Company were in difficulties, Mr. Justice Chitty allowed the payment of these pensions out of moneys coming into the hands of the Receivers. I can put in a report of Mr. Justice Chitty's decision, and also a print of the deed providing for the superannuation allowances if the Commissioners would desire to receive them. Then Mr. Matthews at Question 2343 stated that although the London and St. Katharine Docks are full, it is not done on payable terms. In answer to Question 2344 he said: "They do not levy their 1s. a ton dock rate, and, therefore, they cannot get that profit." And in answer to Question 2343 he said, *inter alia*: "The docks" (that is the London and St. Katharine) "were nearly empty for a long time, and then they took up this system of placing themselves in the position of wharfingers sub-letting to me." My answer to that is that I have put in tables showing, with regard to the London and St. Katharine Dock what their tonnage was for a great many years past, and I am quite certain that if Mr. Matthews would be kind enough to examine those figures he would have to withdraw that statement. The tonnage has scarcely fluctuated at all. It is quite true that, so far as a lot of these coasting steamers are concerned, we do not charge them the full shilling. What we do both in the London Dock and the St. Katharine Dock with regard to these coasting lines is to say: "You pay us a certain amount per annum." That covers the use of the quay and a certain amount of shed space, and it also covers the right to bring in a certain number of steamers each year. It would be quite impossible for these coasting steamers to pay a shilling every time they come in. Here you have vessels trading from the Clyde to the St. Katharine Dock. They come in perhaps every fortnight. If they had to pay a shilling for every time they come into the dock they could not do it; but we get the equivalent. We get a rent for our quay and warehouse space, which we consider is remunerative. Then Mr. Moore at Question 2772 said: "If I had a 50-ton barge with only 20 tons of freight in it, according to the dock companies' proposal you would tax the barges according to the tonnage of the barge, and I should have to pay as if I had 50 tons in the barge." If Mr. Moore had taken the trouble to read the Dock Company's Bill, he

would have seen that when a barge does not carry a full cargo we only charge her on what she does carry. Then Mr. Humphrey makes this statement with regard to transhipment at Question 2906: "If you are going to tax barges, that would throttle the transhipment trade of the Port of London effectually. That is a point which does not appear to have been touched on at all." By this very Bill which we have deposited—and it was all public last year—the transhipment trade is specially exempted; so that all these remarks come to the same thing. If these witnesses had carefully read the Bill, they would have seen it was not so. There were other statements made to the same effect by Mr. Greig at Questions 3532 and 3536, and Mr. T. W. Jacobs, jun., at Questions 3776, 3804, and 3805, and Mr. Deering at Question 3959. Then Mr. Jones at Question 4837 says: "The following figures are interesting as illustrating the ability of the various ports to deal with the big ship of to-day, which will be even larger in future. London: There is accommodation in the Millwall Docks, where we are compelled to take our cargo, for six steamers of 470ft. long, 56ft. beam, and 18,000-40 cubic feet tons, whereas at other ports the whole range of the docks is open to us. Liverpool: 31 steamers (12 in the Langton Dock alone) of this size can be accommodated. Bremerhaven can, or will shortly, be able to accommodate nine steamers; Avonmouth, nine of 400ft.; Hamburg, 48; Rotterdam, 30; and Antwerp, 21." I contend that that is most misleading. In giving these figures Mr. Jones actually treats London and the Millwall Dock as convertible terms. There was, at the time, no vacant accommodation in the London and India Company's system except at Tilbury, which he would not accept. That does not justify him in saying the whole of the range of docks is not open to him, but only shows the need of more accommodation, which the dock company is anxious to provide. As to the accommodation provided in London for ships of the size mentioned, the London and India Docks Company alone could take between 70 and 80, and the figure to be compared with Liverpool's 31 is really much nearer 100 than six. On the question whether Mr. Jones is quite correct in saying that the whole of those 31 berths in Liverpool are available for him, in Liverpool they have exactly the same system of appropriated berths that we have in London, and Mr. Jones could not take a man's appropriated berth.

5629. May I ask you to turn to the evidence of the British Vice-Consul at Hamburg, at Question No. 5512. Have you anything to tell us with reference to the statement that the shipment of sewing machines direct from New York to London was more expensive than *via* Hamburg?—We have no definite figures so far as regards Hamburg. We have checked it so far as London is concerned, and that is correct; but I should like to point out that the Vice-Consul of Hamburg gave us to understand that he gave us that information from his own knowledge. It was all second-hand.

5630. I think I asked him the question?—Yes; it was all second-hand. In fact, I do not mind saying that we asked him to give us the particulars so that we might check them, but he could not, and could not give us the name of the firm that was concerned in it.

5631. (Sir John Wolfe-Barry.) You have mentioned Hull, have you not?—Yes.

5632. Do you happen to know whether any attempt has been made within the last few years to get rid of the lighterage clause there?—Yes.

5633. Did it come before a Private Bill Committee?—I said that they had. I am not quite sure that they did, but I do know that they are under a statutory obligation not to apply for a repeal of that exemption clause.

5634. How did that arise?—The manager tells me that it is an arrangement between the railway companies.

5635. Possibly it was when the railway company took over the dock?—Yes, that was when it was.

5636. What expenditure of capital do you contemplate as necessary for the Port of London, either in improvements of the docks, or new docks or equipment?—For this new Albert Dock extension which we contemplate, the engineers' estimate was £1,500,000. Our shareholders had a meeting, and I told them I thought it would be more advisable for them to go on a basis of £2,000,000. For that we provide berths for twenty ships of 500ft. or seventeen ships of 600ft. each. The lock will be 750ft. long.

5637. We have had a description of it, but I wanted to get from you, as Chairman of the dock company,

See  
5662-3.

what amount of capital you had in view as necessary, within, say, the next ten years, for bringing the Port of London up to what may be called modern requirements?—I think the £2,000,000 will quite cover all we want within the next ten years.

5638. You do not then include any alteration of existing docks?—No, nothing very much. We are, at the present moment, altering the entrance to the South West India Dock, and we have altered the Blackwall entrance to the West India Dock. What we might do is that in the West India Import Dock we might put quays on the south side which might make that more available. That would amount to £100,000. We might have to do that very soon. We are going to dredge the West India Dock to a further depth of 2½ ft., which will give us about 27 ft. there always.

5639. Do you include anything for improved equipment of existing docks?—I do not know really that it is necessary. In London, at the present moment, although it is said that we are so short of cranes, we have over 500 hydraulic cranes, and in Liverpool they have, I think, under fifty. In fact, in Liverpool they do not ask for the facilities, but in London we give them; and we are perfectly willing to do it. But the rates we get for it do not pay. So, although the shipowner will insist upon having the cranes there, he only pays for them if he wants them.

5640. You propose an additional charge on the barge traffic of something like £235,000 a year?—Yes.

5641. What I wanted you to lay before the Commission was how much of that money, supposing it was available, would go in interest on new works or improved docks, and how much in other directions?—First of all, you have the £2,000,000 for the new docks, and then you will, from time to time, have a considerable amount of other capital expenditure. We are just authorised, and are going, to carry out the beginning of a very complete system of silos for grain on the American principle. In the case of a great many of these works, we are paying for them out of revenue. The silos for grain we spread over twenty years, although it is capital expenditure. And a great many of these improvements we charge to revenue. We have a regular scale by which we charge them to revenue.

5642. I am not challenging what you are doing. All I want to know is what programme you wish to lay before the Commission as likely to be carried out, supposing you were in funds?—First of all, there must be undoubtedly this big extension of the Albert Dock. Then before very long—ten years very soon goes in modern business—you would certainly have to extend it, or you could not get on.

5643. Are we to take it that about £2,000,000 is going to be spent in new works, supposing these powers are granted?—Certainly. That is what we undertake to do at once.

5644. I wanted to ask you another question. You said there was no monopoly of warehousing in London under the present conditions, but under those conditions the wharfingers pay nothing for the use of the dock. If you add these charges of £235,000 a year, the terms of competition would be greatly altered, would they not?—That will not come out of the wharfingers. A great deal of that is on goods which go away by barge to consumers at once. Some of it is done by the railway companies. The railway companies send their barges in, and take it away by railway direct to the consignee, and certainly a great deal goes away to the consumer at once.

5645. Whatever impost is put on will modify the present competition between the private wharfingers and the dock companies' warehouses?—Probably it would have that effect.

5646. Therefore would it not have the effect of sending a larger percentage of the goods into the company's warehouses?—I do not know that it would send a very much larger quantity. It would rather have that tendency. Our rates are now higher than the wharfingers. We have an agreement with the wharfingers. They claim from their present position that they ought to charge less than we do, and they do charge less than we do. Their justification for that is that their rates of fire insurance are less than ours. We admit that, and they do charge rather less than we do.

5647. The dock would get then not merely the £235,000, but the increased traffic of the warehouses for the traffic deflected to their warehouses. That you have not included in your estimate?—I could not estimate it.

5648. In the comparison of raising money you have only compared the debentures of the dock company with the public funds?—Yes.

5649. You could only raise, I suppose, one-third, or something of that sort, of any capital you wanted to expend, by debentures?—I have already said I am not overlooking the fact that in the comparison I gave the London County Council stock is placed side by side with the best of the dock stocks. What I wanted to point out was that the comparatively small amount that we should want to borrow—two millions to three millions—we could raise on fairly reasonable terms; but if you have to make the whole thing into a trust, and raise not only these two or three millions, but also the amount necessary to buy up the existing docks—at least thirty millions—would you be able to raise that thirty millions as cheaply as we could raise our two millions or three millions without having the support of the rates?

5650. But taking the raising of the necessary money for your purposes, you could not raise it at anything like 4 per cent. over the whole capital, because a great part of it must be share capital, and the rest debentures?—We should raise some of it as preference capital. These powers are to put us into a better financial position, so as to facilitate our object.

5651. You mean if you get the increased power of charging?—Yes. You must remember that without the increased powers given us by Parliament we have already our unexhausted powers of charging. If we put up our dues 6d. there is £100,000 at once.

5652. There is one other point which I did not quite understand, though I dare say it is quite clear in your mind. You spoke about the North American trade, and you said approximately a million and a half tons is dealt with under those particular conditions of landing?—In 1883 the total tonnage entering from North American and Canadian ports was 683,000 tons; in 1899 it had increased to 1,497,000 tons.

5653. All that is landed on the quay, is it not?—Entirely, with the exception of grain, which is delivered overside to craft.

5654. Then, legally speaking, you could charge for the use of those quays?—Certainly, we could.

5655. And you could also charge the barges that come and take that cargo away?—That is so.

5656. Then what stops your so charging?—Simply because it would upset the whole trade. As I have said, if you did that the ship would probably try to deliver more and more overside, and that would make the work of the ship slower, and make London a still more undesirable port. The rapidity of the despatch which the Atlantic Transport Company have, arises from the fact that they do put everything on the quay.

5657. Under the conditions of the North American trade the shipowner has done his work when he puts the cargo on the quay?—Yes, but the shipowner, under the North American bill of lading, by his bill of lading, is entitled to make a charge for doing that, and there is a considerable amount of profit hanging on to that, so that the shipowner is anxious to put it on the quay.

5658. Then being on the quay you can charge for it?—But by his bill of lading he has to deliver it so that any charge we made would be against the shipowner, not against the goods.

5659. Your charge then would be against the shipowner?—Yes.

5660. And that is what you say would upset the trade?—Yes, certainly it would. It would be against the shipowner, not against the goods.

(Mr. Rowland Whitehead.) My Lord, might I make an application? This witness has put before the Commission a large number of figures which are in appendices. Many of us have not had an opportunity of seeing them, and have not read the figures. They were not read out to the Commission fully, and if there is to be any effective cross-examination it is essential that we should see those figures first.

(Chairman.) I think you will have an opportunity. You will have them detailed. They will be in the notes to-morrow.

(Mr. Rowland Whitehead.) I am told we shall not be able to get the notes to-morrow.

(Mr. Cranston.) It is suggested that the cross-

Scott.

6 May 1901.

Mr. C. J. C.  
Scott.  
6 May 1901.

examination of this witness might be deferred if you thought it was necessary, until this day week. All this is fresh matter to us, and certainly so far as the lightermen are concerned a great many suggestions have been made which want to be looked into. If I am to be allowed to cross-examine, and am to cross-examine shortly, I should like to have two or three days in which to get it up.

(*Chairman.*) I think you will find that the matter will take care of itself, because the Commissioners have still to ask the witness a good many questions, and then there will be the examination by the learned counsel representing the dock company. I do not think the cross-examination will take place before this day week.

(*Mr. Cranstoun.*) I am told by my friend Mr. Wallace that his examination will be very short.

(*Mr. George Wallace.*) I was going to suggest to your Lordship that probably it would be more convenient if I examined in chief as shortly as possible. There will be three other witnesses from the dock company. What I was going to say is this: it is most important that whoever is here for the dock company should have full time for the re-examination after we have heard what has been put in cross-examination. That is very important from my point of view.

(*Chairman.*) Would it be more convenient to you if we were to take another dock company's witness before the cross-examination of Mr. Scott takes place?

(*Mr. Cranstoun.*) It would be very much better, my Lord. Then the cross-examination will stand over until this day week?

(*Chairman.*) Till at least this day week.

(*Mr. George Wallace.*) There will be the evidence of Mr. Hardy, the manager, Mr. Baggallay, the engineer, and Mr. Broodbank.

(*Chairman.*) As far as the evidence of Mr. Broodbank is concerned I do not think we shall feel ourselves in a position to take any evidence as to foreign ports which may be second-hand.

(*Mr. George Wallace.*) I think your Lordship will find when the time comes that it is not really second-hand at all. He has been and made personal inquiries throughout.

(*Witness.*) Might I mention that even in our poverty it has always been our practice to charge a very considerable amount of our expenditure on new works to revenue, and with an improved income we shall undoubtedly continue the same policy.

5661. (*Sir John Wolfe-Barry.*) That all appears on the tables, does it not?—Yes.

Recalled 5662

(Adjourned to Wednesday next, May 8, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## SEVENTEENTH DAY.

Wednesday, 8th May, 1901.

### PRESENT :

The Right Hon. Lord REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Rear-Admiral Sir JOHN HEXT, K.C.I.B.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Docks Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. K. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. CHARLES JAMES CATER SCOTT recalled and further examined.

Mr. C. J. C.  
Scott.

See  
5636-43.

5662. (*Chairman*.) Do you wish to add anything to what you said on the last occasion?—At the close of my evidence on Monday, Sir John Wolfe-Barry asked me a question as to what my company proposed to do in the way of improving the docks and their equipment for the purpose of giving extra facilities to the trade of the port, if we receive increased income coming from charges levied on barges and goods. I am afraid that at the moment I did not quite appreciate the bearing of Sir John Wolfe-Barry's question, and also coming after four hours of examination, I was perhaps a little tired, and I mixed up to a certain extent the works which we are contemplating now, and in respect to which we have applied for Parliamentary powers, and those works which under our present powers we are able to carry out without making application to Parliament. There have been a great many things which we have discussed very fully, and at times we have done more than discuss them, which we consider necessary for the advantage of the port. If you will give me your permission I propose to supplement what I then said by stating what some of these extra works are. I would like to say, however, that I could not pledge myself to-day to say that we are going to deal with all these various items, some of which may be varied of course as time goes on. But with your permission I would like to mention some few of them. They are all important works, and although each separate item may not be of very large amount, the total would come to something very considerable. With your permission I will take them dock by dock. First of all I refer to the London Dock. At the present moment all the business of the London Dock is worked through the Shadwell Basin. Vessels can get

into the Shadwell Basin, but are then stopped by a cut from getting up into the main dock. We have had in contemplation the formation of a new entrance where the Hermitage entrance is now, but of course that is a matter involving considerable expense, and at present as our finances go, it is quite out of the question. Then when I go further down the river I come to the West India Dock. There we have two docks, the export dock and the import dock. The import dock by the erection of a quay along the north side, we have made available for ships of very considerable size, but to make that dock still more valuable, it requires further dredging, and that we are now discussing and will carry out. Then I come to the export dock. By the expenditure of a certain amount of money we can make that dock a very much more valuable property than it is at present. We have gone so far as to instruct our engineer some four or five years ago, or even more, to get out plans showing how this should be done, and also to prepare estimates. The estimates came to something like £100,000, but I think probably before the work will be complete it will be nearer £150,000. That work has not been carried out because in our present financial condition we do not see our way to do it. Then I come to the Victoria Dock. Underneath the passage between the Victoria Dock and the Albert Dock, is a railway tunnel. The normal depth of water at the dock over the tunnel, is only some 24 ft., and of course it is impossible to increase that, but when you get across that tunnel, you could increase the depth of the dock very materially, and we have discussed from time to time the advisability of making a new entrance to the Victoria Dock, so that vessels coming in at the western end

8 May 1901.

Mr. C. J. C. Scott.

8 May 1901.

would be able to get into deep water. Then in the Victoria dock we are to-day erecting grain silos with the most modern machinery. The amount we are spending over that, to begin with, is some £22,000, but if that is successful (and we are advised by the people who are thoroughly acquainted with the trade that it will be successful), then the expenditure on those grain silos will certainly not be limited to an amount of £22,000, but I think £100,000 may very easily be spent. Then also in the Victoria Dock, which is the centre of our refrigerated meat business, we are seriously considering the question of putting up more accommodation for frozen meat. In the docks to-day our accommodation amounts to something like 500,000 carcasses, and by the way that trade is developing, we believe that is not sufficient. But here again we are practically stopped by the question of ways and means. Then I come to the Albert Dock. I might mention perhaps here that in the new dock we propose a system of barge ponds. I believe in dock construction that will be something quite novel, and it will give to barges all the facilities for which shipowners, bargeowners, and wharfingers are asking. If we find that meets the demands of the trade, we have drawn our plans so that on the south side of the Albert Dock we can also carry that out. That would be a very large expenditure; it is impossible for me at the moment to say how much, but it would certainly be a large expenditure, and it is possible that for that we might have to go to Parliament for further borrowing powers. Then in the East India Dock we would wish to make a new connection between the basin and import dock. If that were done the import dock would become of very great value, far more value than it is at present to the Port of London. I think I am right in saying that as far back as ten years ago we got out estimates for this expenditure, which roughly speaking came to £100,000, but we felt at the moment that was not within our powers to carry out, again undoubtedly owing to financial means. Then at Tilbury Dock, last year I was down there with the President of the Atlantic Transport Company which Company brings more tonnage into the Port of London than any other line, and I gave him a plan of the side of one of the docks which is now occupied by his business. That plan showed berths for four ships which they use now, and at my request he sent out that plan to New York so that their engineer in New York might draw on that plan his suggestions of working it with the most improved labour-saving machinery. I saw Mr. Baker, the President of the Atlantic Transport Company, one day last week, and he told me that he hoped very soon to let me have those plans. When we receive those plans we will go into this question of dealing with this trade in the most economical way but there again the financial question will crop up of course. There are other matters too, generally, in the docks which require attention. For instance, with the great increase in the size of ships, the old-fashioned tugs are no longer what we want. Sir Thomas Sutherland, I think, described them as little better than Noah's Arks, though I do not think that is quite correct. We have in the course of the present year ordered two new tugs, but if we could see our way clearly in respect of the financial means, we would certainly at once order more. Then there is undoubtedly from time to time, to meet the very varying and growing demands of the trade, a necessity for more equipment. I do not say more cranes, because our cranes even now are not anything like fully occupied, and we can show that all the very large number of cranes that we have in the docks, taking them all round, are not occupied for half of the time. The shipowners require them to be there, and if we wished to move them they would object to it, because they may want them, but at the same time they are not occupied for six months out of the twelve in the year. But we have to keep them there. Of course we are only paid for the time they are really worked by the shipowners. Then there is another matter in connection with barges. If we get this charge for barges we undoubtedly would then be in the position that the facilities which we give now voluntarily, because we consider they are necessary for the trade of the Port, would devolve upon us as a duty, and I think the haulage that we give the barges now by our hydraulic appliances and by our men we should then certainly have to give as a matter of right. With that would also come the necessity for increased dredging. At the present moment we spend on an average something like £34,000 a year on dredging, but with this increased business more dredging would be necessary, and it will certainly in the future be necessary to keep our docks dredged down to their maximum

depth. That at once means more expenditure, because it is very clear that if you are able to allow the water when it gets in to deposit its mud, and that mud becomes firmly solid before you lift it, it is much more economical to dredge mud that is fairly solid than mud which is simply to a great extent slush. In the one case you are dredging almost all solid matter, and in the other case you are dredging a good deal of water.

5663. Can you give us any estimate of the additional sum which would have to be spent in dredging?—I do not know whether Mr. Baggallay could give it to you. See 6744. I should not like to speak off-hand, but it might be certainly a very considerable amount.

(Mr. George Wallace.) I might inform the Commissioners that the engineer will be better able perhaps to give those figures.

(Chairman.) We shall have the opportunity of hearing him.

(Witness.) These are matters which would come before us if we were in a proper financial position, and would be carried out by us as necessity arose. But looming before us in the distance we see a very much bigger matter, for which we should require Parliamentary sanction. It is impossible for me or for anyone else to say when that will come, but that is another dock extension at Tilbury. Some years ago people laughed at Tilbury, and said Tilbury was a white elephant, and that it would never be any good. To-day we find that Tilbury is practically full, and if the trade of London goes on developing in the coming ten years, as it has done in the past, I am perfectly certain that it will be necessary to take into consideration an extension of Tilbury Dock as large as that of the Albert Dock, which we now contemplate. We have gone into this matter very carefully; we have drawn out plans and we have had estimates for it, but of course that matter must stand over for the future until we find it is absolutely necessary. In our present position an extension of the Albert Dock is quite the outside of what we can see our way to do. That is all I wish to say by way of supplementing my answer to Sir John Wolfe-Barry on Monday last; but I wish to point out that these questions are matters which are constantly arising before us, and that we deal with them as we can. During the first four months of this year I may mention that we have authorised expenditure on new works necessary for the Port to the extent of £60,000. All that expenditure, I believe I am correct in saying, we charge to revenue, because our policy is whenever we can not to burden the capital, but to charge to revenue. We do it by spreading it over a certain number of years, according as we think the works are of a more or less permanent character, and also consider to a certain extent whether they are likely to be very remunerative. Mr. Hardy reminds me that there is yet another question we have had before us for, I think, some seven or eight years, and that is the question of sorting sheds for this frozen meat trade, which is assuming gigantic proportions. At the present moment the ships carrying frozen meat discharge their cargo either alongside our frozen meat sheds or else at the berths appropriated to their particular business. The shipowners for a long time have been very desirous, and some of the large meat importers have also been desirous, that we should provide refrigerating sheds; that is to say, not sheds where we should keep the temperature down as low as in our meat storing sheds, but sheds that would be cool and where the meat on being discharged from the ship would go directly into a cool atmosphere, and not suffer from being exposed to the weather and sun upon the quay. This would involve a very large expenditure, because you will at once see it will not answer the needs of the trade to put such a shed in one dock only; you would probably have to have such a shed at Tilbury, at the West India Dock, and at the Albert and Victoria Docks. That is entirely hung up on the money question. That is all I wish to say in supplement to what I said on the last occasion.

5664. You mentioned just now that one-half of your hydraulic cranes were very often unoccupied?—Yes.

5665. Let me refer you to question 4848 in the evidence of Mr. Alfred Jones, who told us that he considered London was at a disadvantage compared with other ports in the matter of hydraulic machinery. Do you agree with that?—Most distinctly not. My reason for saying that I do not think so is this. I take a return of the Mersey Docks and Harbour Board, where

they show they have 95 hydraulic cranes of all sorts. We in London have 576. But where the question comes in is this; in Liverpool, steamship owners practically use their own winches and cranes for doing their own discharging; they very rarely ask the Mersey Docks and Harbour Board to give them cranes. In London we have always given them cranes. That has arisen in this way; in the old days, when the London and St. Katharine Dock Company and the East and West India Dock Company were in great competition, our dock authority tried to see what facilities they could give to the shipowners. But there the fact remains that in Liverpool to-day of hydraulic cranes of all kinds—they have under 100 and we have nearly 600—comparing those cranes, crane for crane, London has nothing to be ashamed of. I might remind your Lordship that Mr. Jones said he had only had experience of the Millwall Dock. I am only speaking now for the London and India Docks.

5666. At Question 4843 he complained of the continued breaking down of the hydraulic cranes, which put them to considerable loss?—That must have been at Millwall. Of course, I admit at once that where you have a great amount of machinery like this, sometimes machinery will get out of order, but we are always watching it, and we have very few complaints. I do not say that we have no complaints; sometimes a crane will break down at an unfortunate time, but taking them all round our cranes work very well indeed; and they do not pay us; at the rates we charge they are not remunerative.

See  
423-6.

5667. Will you tell us your opinion with regard to the requisite depth of channel in the river?—That is perhaps rather a question for a shipowner, but I should say that coming up to the Albert Dock a depth of 30ft. would certainly be sufficient for all requirements; I am not quite sure that that might not be in excess. What I think you do want for vessels coming up is some sort of places where they can lay-to, so that if a vessel coming up the river gets to the dock at a time when she cannot dock, she should be able to lie somewhere in safety until the next tide, and not have to go down the river and lie at Gravesend. Of course, you must consider in all these questions your limits. Take the Eastern trade, for instance; you are limited by the depth of the Suez Canal. The effectual depth of the Suez Canal is certainly not in excess of 26ft. Then when you hear of all these big vessels coming and how they load in some ports, there are really very few ports where they can load to anything like these great depths. Take the Argentine ports, where a very large business is done to-day, vessels cannot load down to anything like that there, and I think it is almost practically impossible for them ever to do so. Mr. Baggallay, our engineer, has had very considerable experience out there, and he could give you from his own positive knowledge what he believes is the greatest depth that vessels could load down to there. Even taking New York, a vessel coming across from New York, I suppose, will lighten on the voyage by burning her coal certainly 18 inches, possibly 2 feet. I do not think vessels coming from New York can load to more than 32 feet there, which would mean that when they got here their maximum draught would be only some 30 feet. So if you take practically all the ports of the world, with very few exceptions, it is not possible for these vessels to load down to these gigantic draughts. There are some exceptions, but there are very few.

5668. Your remark, I suppose, would refer less to the trade, which you have told us yourself has most increased, which is the North Atlantic trade?—Certainly.

5669. That is the trade which shows the greatest increase?—That is the trade which shows the greatest increase, and that is the trade which we hope gradually to accommodate.

5670. And it would be less affected than others by limitations of depth?—Certainly.

5671. Looking at your book on rates of shipping we notice that vessels laden with phosphate of guano, nitrate of soda, bones, or bone ash, are charged rent from date of entry instead of four weeks from date of entry as in other cases. Can you tell us how that is?—They do not load out at all, so that there is no necessity to give them the extra time. As a matter of fact, we do not get any of them; they do not come to us.

5672. It is purely theoretical then?—It is purely theoretical, we do not have them.

5673. Will you tell us whether an agreement has been entered into between the London and India Docks Company and the North Atlantic Steamship Company making it obligatory under their bills of lading for shippers forwarding goods by the North Atlantic line to load all the goods on the quay of the dock?—No, there is no such agreement and there never has been.

Mr. C. J. C.  
Scott.  
8 May 1901.

5674. Do the companies forfeit the right of free delivery over-side?—Distinctly not, except so far as they arrange by their bill of lading. They arrange by their bill of lading that everything shall be put on the quay, and they usually do it. But that is a matter arranged between the companies and the shipper.

5675. Have you entered into any agreement with any wharfingers to the effect that neither the company nor the wharfingers shall charge less than certain specified prices for certain things?—Yes, we have certain agreements in that way. I will tell you what they are. There is a wine and spirit agreement of the 19th November, 1899; there are general produce agreements of the 27th December, 1889, and the 31st October, 1893, and a memorandum of the 5th July, 1899. There are granary keepers' agreements of the 13th May and 20th November, 1890; there is a tea clearing house agreement as revised 2nd October, 1899; there are frozen meat and produce agreements of 25th January, 1899, and 22nd May, 1900. Most of these agreements were entered into after the great dock strike, when we thought it was necessary, in order to recoup advance in wages, to raise our charges. Up to that time there had been all sorts of discounts, and we found that the only way by which it would be possible for us to establish anything like uniformity of rates would be to bring the principal warehouses into line with ourselves. This was done. There is no secret about it; it is generally known.

5676. Do these agreements prevent free competition in the port?—Oh, no, because there are a great many people outside the agreements. In tea practically it would prevent competition, but then the buyers of tea are parties to this, because, to meet the wishes of buyers and to facilitate their business, we established a tea clearing house, and that was of such convenience to the buyers that the buyers said: "If you will do this we will undertake not to buy tea in any warehouses that are not members of the Clearing House." In the old days the buyers had to send round clerks to all the different tea warehouses. When the Tea Clearing House was established it was a centre through which all their work was done.

5677. Have you agreements with any steamship companies whereby the companies are afforded certain positions and wharf space in the docks?—Yes.

5678. And are accorded the right to do their own labour?—Yes, there are generally two sets of agreements; we have agreements for appropriated berths similar to what they have in Liverpool; they are all terminable at three months' notice. Steamers take certain specified spaces; within that space they do their own work and they use the quay there as a portion of the ship's deck, the ship's deck being now absolutely impossible for sorting cargo. Then we have another agreement for a ship that wants temporary accommodation. Take the case of a tramp steamer which comes to London perhaps one voyage, and goes to Liverpool or Antwerp or some other port another voyage. When the owner of that ship comes to London, or through his agents, he can arrange to have an appropriated berth for a shorter period, the period that he requires. Then further we have certain agreements with lines which I have already mentioned to you. Take the Clyde line from Glasgow, where we let them a certain portion of the St. Katharine Dock. That gives them the right to use the quay and a portion of the warehouse, and we also commute the dues payable on their ships, so that by paying a lump sum per annum they have the right to bring in a certain amount of tonnage, and to do their work there. We have a similar arrangement with the Argo, which is a German line. Then at Tilbury we have arrangements with another German line and an Ostend line, which comes in every other day, and there are a good many small lines which all have their agreements in that way, but I think all those agreements are all very largely to the advantage of the trade. A good many of these lines used to come into the river, but they prefer to come into our docks and pay these charges rather than discharge in the river. Mr. Hardy reminds me that Mr. Cattarns, who was at one time Manager of the General

*Mr. C. J. C. Scott.* Steam Navigation Company, said that these agreements were distinctly an advantage to the trade.

8 May 1901.

5679. Have you any agreement with large importers of goods to allow them any special discount beyond the rates published in the Rate Book?—I should like to say a little on that. Our warehouse business amounts to £957,000 in the course of a year. We do make special allowances to certain firms to the extent of £2,000 a year. Those are allowances and discounts which are not published in our books. In reference to that I should like to say, that £1,000 of that £2,000 is in one particular trade where all the firms in that particular trade get a further discount. That accounts for £1,000, and of the remaining £1,000 something like £400 goes to another firm who require their business worked in a particular way. It is, of course, a discount, but there are different circumstances in connection with their business.

5680. Are those discounts allowed on the export or import trade?—I am speaking of the import trade now exclusively.

See 6646-49

5681. Are there any allowed for the export trade?—Yes. Out of our export business of £176,000 there are special discounts allowed of £1,700. Those special discounts are practically not allowed to the merchants, but they are allowed to the agents who take charge of the business for the merchants, and it is really not so much in the form of a discount as a sort of rebate to those agents for bringing their business to us.

5682. May we take it that those two sums are the only discounts you do allow?—Yes.

5683. On both the export and the import?—I have not included at all the railway companies, because we give all the railway companies the same terms, and they have special rates, and it is to the interest of the port that it should be so, because you will see that supposing a railway company is serving a town—I take Birmingham as an instance—suppose a railway company is serving Birmingham to Liverpool and Birmingham to London; if we were to exact our full export rates on the trade coming from Birmingham, it might mean that the trade would be diverted to Liverpool. We are in competition with Liverpool and we have to do it. All the railway companies get a reduction in the export rate.

5684. (*Mr. Ellis.*) Are you debarred from giving any railway company any preferential treatment by any statute?—One railway company as against another, do you mean?

5685. Yes.—Certainly we are. We are under a very strong clause, we cannot give any preferential treatment, and all the discounts that I have named to you both for the import trade and the export trade and the railway companies are all well within what we are authorised to do by our Acts of Parliament; we are not transgressing any of our clauses.

5686. Since your Acts of Parliament, Acts of Parliament have been passed giving certain railway companies access to the docks?—Yes.

5687. Does the same condition apply in those cases?—They all have the same discount. The clause in our Act compels us to give the same terms to everybody under the same conditions. Of course, with varying conditions you can have varying terms.

5688. (*Chairman.*) Have you any other agreements of a similar character to those to which I have referred?—In discount?

5689. Not specially in discount, but any?—Of course, our whole business to a certain extent is worked on the agreements.

5690. I would like to ask you whether you have any agreements which afford one set of persons an advantage in preference to another set of persons?—No, except so far as it allows by our Acts of Parliament where the different conditions warrant a difference of treatment.

5691. May we ask you to put in copies of the agreements you have referred to in your evidence?—Personally I have no objection whatever to do it. But a good many of these agreements concern other people as well. Take, for instance, the wharfingers' agreements; they are all parties to these, and it would be to a certain extent disclosing our business to the public.

5692. You can give us the dates?—Yes, I can give you the dates, and I shall be perfectly willing to assist as far as I can. Some of those agreements certainly I could put in, if you would not mind, without disclosing the actual names.

5693. Rather than do that, I think if you mentioned the dates and particulars it would be better?—I have given you the dates of the wharfingers' agreements. I could not give you the dates of the shipowners' agreements, but I can just say that it is a regular printed form for the letting of berths. I can put in a copy of that at once.

5694. The Commission will be satisfied if you will assure us those are all the agreements that you have?—Yes.

5695. You have mentioned them all?—Yes, I have certainly mentioned them so far as I know, and since you were kind enough to instruct us that this question would be gone into I have got all the information I can. I have seen different people about it and we have threshed it out, so as to get everything.

5696. (*Mr. Lyttelton.*) With regard to those works that you mentioned this morning as being in contemplation, are those works which you are prepared to come under obligation to construct provided you get the relief you seek?—Some of these most distinctly. There are others where there might be difficulties. Take the new entrance to the London Docks, for instance. I am not quite sure, in my own mind, whether the expense would warrant that. My manager does not quite go with me, but I have a little hesitation about it. But when you come to the other works, such as a connection between the East India Dock basin and the Import Dock of the East India Dock and the West India Dock and the refrigerating sheds and such like, we certainly are prepared to do it; in fact, we should have done it a long time ago if we had seen our way to the means.

5697. It would be well that you should define specifically what you are prepared to come under obligation to do provided you receive the relief that you ask for? Of course, you would have to have time?—If you would kindly leave it over until next week I would put in a statement showing exactly what we will undertake to do.

See 6603-12

5698. I see that in your evidence the other day you communicated an opinion that the size of the barges might be indefinitely increased, and they might benefit by the free water clause?—Yes.

See 5581.

5699. I think you said some barges of 1,000 tons might avail themselves of it without your being able to prevent them?—Certainly.

5700. I see the definition clause is extremely wide—it says "Lighters, barges or craft." Have you ever had occasion to test the question legally as to what craft are embraced by that term?—Yes, I think we may say that we have. I think there was a case which the Chamber of Commerce mentioned and they took credit to themselves for having taken up the case. There the question was raised, but was not argued because it was said it was useless for us to argue it; the scope of the clause was so wide that it covered everything.

See 6358-66.

5701. It was not a decided case, but you gave way on advice?—We had to. It was decided against us. We did not argue it; we were told it was useless.

(*Mr. George Wallace.*) Might I assist Mr. Lyttelton in regard to this? I was Counsel in the case and you will find a report of it in Appendix No. 9 of the 4th day. It was a sailing barge that came from outside the Port of London as at present constituted. The question was raised, in fact, on the pleadings whether a sailing barge was a craft within the meaning of the section? With regard to the advice that was given to Mr. Scott, if you will forgive my saying so, it was not only my advice, but there was other advice.

(*Mr. Ellis.*) I think we have had it mentioned in the evidence.

(*Mr. George Wallace.*) Yes.

(*Witness.*) Independently of that, we have been advised that size has nothing to do with it. As to-day you have big ocean steamers of five thousand and more tons without any mast, and simply propelled by steam, I do not see very much difference between them and barges of 1,000 tons.

5702. (*Mr. Lyttelton.*) I was not challenging it at all; I only wanted to know whether you had actually had a decision on the point. I understood from your historical evidence that the free water clause was a provision by which the barge owners were compensated?—To a certain extent, certainly.

5703. There is a reference in your evidence to a

Mr. C. J. C.  
Scott.  
8 May 1901.

See  
5581-2.

witness who spoke to a sale of lighters for £20 which had cost him £800 or £900. This same witness was compensated to the extent of £3,327 for the loss of his business occasioned by the institution of docks?—Yes.

5704. Is that a simple case of compensation accorded to barge-owners and lightermen in addition to the privilege which they obtained by the exemption clause, or is it an exceptional case?—They were all compensated. That was included in the amount given variously as £1,000,000 and £1,600,000.

5705. It occurs to me that this gentleman might have been a wharfinger as well as a lighterman?—That is quite possible.

5706. And that the compensation was in respect of his wharfinger business, and not in respect of his lighter business?—Possibly.

(Sir Robert Giffen.) I may say that I have the evidence of Mr. Drinkald before me. He states that to within the last two and a half years he had been a lighterman, but that he was a wharfinger as well.

(Mr. Lyttelton.) Then so far as that goes it is ambiguous. It might be one way or the other.

5707. But have you anything you can point to definitively showing that the barge-owners obtained compensation in cash as well as the privileges of the exemption clause. If you have it would be a part of the case, that I should like to hear?—What I understand you want to know is whether lightermen, *qua* lightermen, received actual money compensation.

See (570).

5708. Yes. I infer from this paragraph that as a lighterman he received a large compensation, and, of course, as a lighterman he would receive the benefit of the free water clause. However, it may be looked into?—I will try to find it.

(Mr. George Wallace.) If your Lordship has a copy of the Report you will see that Mr. John Drinkald, who is mentioned, described himself as a shipowner and lighterman. He does not say that in fact he is a wharfinger at all.

(Sir Robert Giffen.) If you read the whole of his answer to the second question it shows.

(Mr. George Wallace.) "Till within the last two and a half years I have been a wharfinger"; but he was speaking as a lighterman.

(Sir Robert Giffen.) That means he was a wharfinger between the Act of 1800 and 1823, which is the time he was speaking of. He had been a wharfinger in that time. Of course the compensation to him as wharfinger or lighterman was at the date of the Dock Company's Act, which was in 1800 or 1803.

(Mr. Ellis.) That may or may not have been. It does not appear when the compensation was actually assessed. And it would not have been assessed at the beginning, because, of course, the docks were not opened at first.

5709. (Mr. Lyttelton.) However, Mr. Scott, if you can get anything more specific you will do so?—If I can I will.

5710. You will see at once the inference to be drawn from this paragraph is not satisfactory?—I agree with you at once. From that paragraph I drew the inference that that amount was compensation for his business as barge-owner. I admit that at once.

5711. He being a wharfinger it may have been for that?—Yes. I am informed that this information came from the Treasury. The question was, what compensation was paid to lightermen, and this came from the Treasury in answer.

5712. That quite absolves you, but it does not get quite final proof of the matter. I do not want to amplify it; we understand the case that you make as regards the large expenditure of capital and so forth that you made in consequence of your Acts. Now, in consequence of the free water clause, did warehousemen also embark a large capital in the erection of large wharves and warehouses as distinct from the docks in this hundred years—as a matter of history?—Certainly.

5713. I think the point of Sir John Wolfe-Barry's question the other day was this. If you get a relief from the burden of the free water clause because you have spent large sums of money which have been rendered unproductive, would you not by having that

done, be enabled to institute a much sharper competition with warehousemen?—Undoubtedly we should have the benefit of a certain toll which would be levied on all goods coming into the docks. Unless the wharfingers put up their rates, I will take it that will have to come out of their pockets. They could not put up their rates without us. If we put up our rates they could put up their rates, but not without. At the present moment it works like this. We provide the wharf accommodation, and for our warehousing business we make a charge. That includes collection from the ship's side and lightering from the ship's side to the warehouse, which is what wharfingers do. But whilst our rate has to cover the cost to us of that water accommodation, the wharfinger, who charges the same rate in many cases and sometimes the same rate less a discount, has nothing whatever to pay for it. So that today he is charging practically the same sum for services nominally the same as we render, but really he does not render the same service because he does not provide any water accommodation.

5714. You render gratuitously the services to the barges, and the barges supply the wharfinger, but you only charge one rate for those services, which exclude all the services that you render for the barges?—Precisely.

5715. But if on the basis of the free water clause a large sum of money has been spent by the wharfingers and by the warehousemen, this abolition would render that expenditure fruitless?—It could not do that. We do practically, I suppose, one-third of the warehousing business, and we could not take the whole of the warehousing business at all; it would be impossible for us, so that there must always be a very large amount of warehousing business going outside. Then, I think, you must remember there is a very important thing that since the free water privilege a different class of business has grown up altogether. Take along the river. An enormous number of people have their own private warehouses, where they do not warehouse for the public at all; it is simply their own trade, and they have all that benefit. The railway companies send their barges into the docks. They take the trade away from us; they pay nothing for it; in fact, I think it is a very unfair competition. It is a matter we are trying to settle now before the Railway Commissioners that the railway companies can send in their barges and charge lower rates and pay nothing for our water.

5716. You see in connection with that question, that is to say the result of the proposed change, to enable you to compete with other persons more sharply, it at once becomes relevant to see what you will propose to do or what obligations you will propose to come under in consideration of that change?—I will give you an instance. We are prepared in this new dock, as I said just now, to institute a system of barge ponds, which would enable the goods to be taken from the ship and delivered straight to the barge very much more rapidly. We have the plans drawn up, and we contemplate applying that to the Albert Dock.

5717. You need not trouble to go into details with regard to that, because you have promised that you will give us a statement of what you propose to do in the event of the relief being granted?—Certainly, but do not think for a moment that I do not see all the difficulties of the question.

5718. I have no doubt you do?—Nobody realises more than I do the difficulties which surround the question on every side.

5719. Speaking for myself, I only wanted your assistance in trying to meet some of them. You have spoken of the great congestion of traffic owing to the barges in the docks. I suppose you have power to regulate the traffic under your Acts?—We have the power, but it is a power that it is almost impossible to exercise.

5720. Why?—Because all we can do to regulate traffic like that is to put a man on board a barge and to navigate it, and to charge the owner with the expense. When you have some hundreds of barges there, and you have to put a man on each barge, it is almost impossible to do it. We should have to keep an enormous staff to do it, and we could never get back the cost.

5721. Does your power to regulate traffic extend to regulating the admittance of barges into the dock?—We claim so most distinctly, but supposing we said: "We are going to regulate the admittance of barges now, and we will only let you come in in such-and-such an order, and go out in such-and-such an order," a great many barges could not go in and out, and we should

See 6368-84.

Mr. C. J. C.

Scott.

8 May 1901.

bring the trade of the port to a stand-still, or we should have such a congestion of barges at the entrances of our docks that we should never get the ships in and out.

5722. Your case is not that you will not use those powers, but that you cannot use them?—Without interfering very seriously with the trade. I will give you an instance. Barges have no business whatever at the present moment to moor inside our privileged water, and they not only do moor there but they moor right in the mouth of our entrance. A little time ago matters were becoming so serious that we thought we would take steps to see what our rights were, and it was shown at once that we had the right to do that. But at once there was a great uproar amongst the barges, and whilst the Commission was sitting we said: "Well, the thing has gone on so long, do not do anything to disturb the custom; we do not want to upset the trade"; we have a right undoubtedly to say to a barge: "You shall not moor within our privileged water." If we enforced that I think it would be very difficult for a barge to get into a dock or to get out of it.

5723. The fact of an uproar among the lightermen does not seem to me to be very conclusive upon the matter. If it is for the regulation of the docks, if it is for the proper carrying on of the business that you are bound to carry on, I do not see that such an uproar should have any effect upon you?—May I read a bye-law that we made for the control of barges. It is this: "If any vessel, barge, lighter, craft, or other vessel, or any float of timber shall be adrift or be not properly and securely moored, and made fast within the docks, otherwise than by the proved negligence or wilful act or default of those employed by the Joint Committee, the master or other person in charge thereof, or the owner or owners thereof shall be liable to a penalty of £5." During the lightermen's strike we had a case where a great many of these lighters were cast adrift. We believe it was done intentionally by some of the people who were out on strike. The result of these lighters being adrift was that one of the P. and O. steamers got blocked and so could not get out, and so lost the tide. The P. and O. Company naturally felt very much aggrieved—I felt for them very much—and they threatened us with all sorts of penalties for this. We thought it was getting so serious that we then gave the barge owners notice, I think it was a fortnight's notice, and after that we said we should enforce this bye-law rigorously against them. They still went on, and the thing was just as bad. We then tried to enforce the bye-law, but although this bye-law was approved by a judge, I believe, and also by the Board of Trade, when we got before the magistrate the magistrate declined to convict. Mr. Wallace was our Counsel in the case, and he will correct me if I am wrong. The magistrate said that we must prove that these things were insecurely moored, or that they were cast adrift by somebody, and that the bye-law also was unreasonable.

(Mr. Lyttelton.) That, of course, you could have tested.

(Mr. George Wallace.) Might I assist the Commission upon the last point as Mr. Scott has referred to me? He has stated perfectly correctly as far as he has gone, but I think one of the reasons was (the learned Counsel who was against me before the magistrate can correct me if I am wrong) that the bye-law really went further than the Act of Parliament of 1882 under which Tilbury Dock was made, and the effect of that was that the bye-law transgressed the Act of Parliament, in the magistrate's opinion, and he thought it was bad. The power given by the Act of Parliament was not so extensive as the power claimed by the bye-law, in the magistrate's opinion. I ought also to add that we have got a case stated by the magistrate, and I suppose it is down for hearing in the ordinary course of justice.

5724. (Mr. Lyttelton.) The point I really wish to be clear upon is whether you refrained from using the power which you undoubtedly had because you did not think you were strong enough to use it, or because it was in point of fact nugatory in its results?—I should think a little of both. It would be almost impossible for us with the enormous number of barges—I suppose taking the year through there are perhaps 2,000 barges in our docks at one time. The greater part of these are practically left unattended.

5725. We have heard of course of the Liverpool Bill of Lading?—Yes.

5726. We have heard of the North American Line successfully adopting that Bill of Lading. What was

the power which enabled them to secure this advantage for themselves as contra-distinguished from the other shipowners of the port?—Combination. They combined and the reason why the other lines have not been able to do it is that they did not combine.

5727. Do you think that a little pressure from your side might induce other shipowners to obtain a similar advantage for themselves. I will define what I mean by "pressure." We understand that if the ship unloads the cargo upon the quay only temporarily and then the barge takes it away, you have power to make a charge?—Certainly, both on the goods and on the barge.

5728. You do not make either one or the other?—No.

5729. The reason being because you fear that charge would fall upon the shipowner as it would do at present according to the custom of the port?—Yes.

5730. The custom of the port can of course be abrogated by special agreement?—Yes.

5731. And has been so in the case of the North American Line?—Yes.

5732. Supposing that you charged that sum which would fall in the first instance upon the shipowner, do you not think that that might be a pressure which would induce him to at any rate agitate for the Liverpool Bill of Lading?—In 1896 when we tried to carry through this scheme, and when the scheme was drawn out with the approval of some of the largest shipowners, we did everything we could in the way of putting pressure on the shipowners to get them to carry it out.

5733. But you gave in upon the threat of a new dock. It seems to me that the docks?—Want a little backbone.

5734. Exactly, in failing to use the powers which they undoubtedly had. Before you get fresh powers, it is always a good thing to see what you can do with your existing ones?—Some of my co-directors shared your view, and thought we ought to have stood fast. But we came to another opinion, and thought if we did this the burden would undoubtedly fall on the shipowner, and the shipowner would say: "I cannot afford to pay this charge, and I shall deliver everything I can oversee." That would have meant great delay to the shipowner and great expense to the port.

5735. I think you pointed out in your admirably lucid statement how the discharge of big ships overseas is a practical impossibility?—Yes.

5736. Therefore they have to come to the quay. You can then charge; it does occur to me that there is a screw there by which you might squeeze this payment that you want out of the people who ought to pay—the consignees—assuming that they ought to pay. However, you deliberated, and you thought you could not do it?—We did. I have a memorandum showing that the P. & O. Company now discharge direct overseas 80 per cent.; that includes everything. What you say, remember, would not affect export goods at all. Eighty per cent. of the export goods now come into dock by craft and are delivered straight from the craft into the ship.

5737. I want instruction and information; I should like to have any reason you have for apparently having given way in a contest in which you had a good many cards in your hand?—Well, we went into the question very carefully indeed, and we considered, looking at the question all round, that it was not to our advantage to press the question. We knew all along when we raised that question that the Dock Companies were not strong enough to carry it. We believed, if we got the active support of the shipowners, we could carry it, because we should then have only to face the riverside opposition and the opposition of a great many merchants, because a great many merchants are largely interested in wharves, and they naturally would fight us on this. Well, we thought, if we can carry the shipowners with us, we can manage the rest of the opposition, but if we are going to stand up by ourselves against riverside interests, shipowners, merchants, the Chamber of Commerce, and everybody, I do not see exactly where we should be.

5738. Even though you were so far masters of the situation that you could legally impose the charge?—Undoubtedly we could legally.

5739. And although the experiment made by the North American Line largely increased the trade and greatly expedited the dispatch of the ship?—Certainly.

5740. Therefore the trade increased and the ship-owners benefited by a more rapid dispatch?—How it expedites the ship I could point out to you. I have a statement here. There was a White Star steamer, the "Afric," which came here from Australia with a large cargo consisting of a general cargo and frozen meat. She had to discharge 2,000 tons of general cargo, and about 1,300 tons of frozen meat in London. This frozen meat comes forward in innumerable small quantities, which all have to be sorted. The owners of the "Afric" said they could not afford to do this, and she went into Tilbury, and they arranged with us that they should deliver from the ship as fast as they could do it, only, we said, that as we had to work this out and sort it, we must put some limitation on the number of carcasses per day. In the ordinary cases with such a cargo as that, I think I am quite safe in saying she would have been at least ten days in discharging, possibly a fortnight, or longer. As a matter of fact, although it was a mixed cargo (they had to take out a certain amount of Liverpool cargo so as to get at the London cargo, and re-stow it), she was not five days. She began on the first day at 8 a.m. and finished on the fifth day at 3 p.m., and the White Star Line expressed their complete satisfaction at the way in which the work was done, although they admitted it was not a fair test. This is right away from the American trade. That shows that when a ship will break away from the custom of the port, she can get much greater rapidity of discharge, and she saves an enormous amount of money. I went into this question very closely at the time, and, roughly, I estimated the "Afric," by the saving of time, saved something like £900 to £1,000.

5741. That seems rather to enforce the point I was endeavouring to make?—Quite.

See App.  
16th Day,  
No. 13.

5742. (Mr. Ellis.) You have given us a return showing the estimated amounts of new stocks that will have to be issued by the amalgamated London and India Docks Company on the 1st January, 1901, to replace the existing issues of the separate companies and the Joint Committee. Has that financial operation been carried out?—Yes, that was carried out on the 1st January. This is how we stand to-day. The old companies, the London and St. Katharine Dock Company and the East and West India Dock Company have disappeared. The first column in that table, marked "Existing Issue," has gone.

5743. You do not state against the first line—the Debentures, £247,325—the interest. Can you give me that?—They were varying amounts, generally something, I should think, from 3 to 3½; possibly a very few at 3¼.

5744. It is not a very large amount?—No. All that amount of £247,325 runs off within certainly the next four years, and by the Act of Parliament has to be paid off, and to find that money, we have either to use our Debenture Stock or our Preference.

5745. Perhaps you can give me in a word the total amount of interest that the concern at this moment has to bear for Debentures. If you cannot do that at the moment perhaps you will give it afterwards?—In round numbers, about £240,000 per annum.

5746. For Debentures and Debenture charges?—Yes.

5747. Can you give me the same sum for Preference?—In round numbers about £112,000.

5748. Then those two charges have to be met by your concern at the present moment, before you come to any dividend on stock?—Yes.

5749. You explained to us so clearly that I will not take you over the same ground, but I wish to ask you one question:—Is there any sum in the indebtedness or share capital of your concern now that arises in any way from a contribution from public funds?—No.

5750. Everything has been discharged and paid off with interest?—Everything. Of course one must speak from what one can find out; but we have carefully searched everywhere, and we cannot find a record of a single sixpence of public money in the concern.

See 5583.

5751. You have given us the detailed story in your evidence?—Yes. In my evidence on Monday I put in a minute, in which the Treasury stated that everything advanced to the Dock Companies, with interest, had been repaid.

5752. The Treasury is one thing and Mr. Scott is another; I wanted to get it from you. You are the chairman of the company; that is why I want to get it

on the note. Now I turn to the Parliamentary aspect of the matter for a moment. Did you have a Bill before Parliament in 1855?—Yes. *Mr. C. J. C. Scott.*

5753. Did the Bill come on for second reading on February 19th, 1855?—Yes. *8 May 1901.*

5754. Was there a discussion in the House on it?—Yes.

5755. Did Mr. Bouverie, the then Chairman of Committees, interpose, and suggest it should go to a Select Committee in the ordinary way?—Yes.

5756. Then did Mr. Cardwell, the then President of the Board of Trade, interpose?—Yes.

5757. Did he say that although it was not generally the practice for Government to take part in discussions on the second reading of Private Bills, there were some circumstances that rendered it necessary that he should make a statement in this particular case?—Yes, he said that.

5758. We need not go through his speech; but really the vital part of his speech, I think, is in these words—I ask you whether he used this language—"There was at the same time an express enactment that no charge should be made for lighters or barges. There was, in fact, what was known in law as a complete dedication to the public of the newly-created water space in as far as lighters were concerned. Now I conceive that before a bargain of that kind is altered by the House, a very strong case should be made out by the parties seeking the alteration." Did he use those words?—Yes.

5759. Then the discussion was continued by various persons, with the result that the Bill was rejected by a vote of 249 against, and 26 for. Was not that so?—Yes.

5760. You suggested to us the other day, I think, that the Bill was not considered on its merits?—Yes.

5761. May I put it that that interposition of the then President of the Board of Trade, on behalf of the Government, was on the grounds of what we may describe as a Parliamentary bargain?—I do not quite follow.

5762. I cannot put it better than in the words that Mr. Cardwell used: "He interposed because the Government did not consider it a mere matter of private interest, of an ordinary public Bill, but a matter of high public policy." I am not wishing to put any words into your mouth. I do not wish to suggest any reasons; I am only asking you questions?—Do you not think that what you have been reading out and saying rather supports my contention, that the Bill was never discussed on its merits? The Government intervened, and said: "This is a matter of high public policy, and it cannot be altered unless strong cause is shown in favour of an alteration."

5763. I take your answer; I only want to get it?—I take it that the only place where you could have shown strong cause was in Committee, and the Bill never got to Committee at all; it was thrown out on Mr. Cardwell's intervening.

5764. By merits, you mean "details"?—Yes, you could only show the merits when you went into details.

5765. You mean really that the whole reasons for your concern coming within that clause of the Bill were not gone into?—No; they were not even disclosed.

5766. (Mr. Lyttelton.) May I interrupt my hon. friend for a moment? I was asking a question with regard to Mr. Cardwell's speech, because it is not an accurate statement of the law. At that time there was not a complete dedication to the public of the newly-created water space. It is only a limited dedication?—I was going to take that point. I am not a lawyer, but I have it before me, and I was going to take that point presently.

5767. (Mr. Ellis.) I take it that that sums up your view of the debate of that day?—Yes.

5768. At all events, Parliament did reject that attempt by an enormous majority?—Yes.

5769. You have made no further Parliamentary application till when?—Last year, 1900.

5770. Then, again, the President of the Board of Trade intervened, and that is why we are here to-day?—That is why the Commission have got this very knotty question to deal with.

5771. I do not think you gave us the summary of the arguments advanced by the Joint Committee in support of their case for the repeal of the exemption

*Mr. G. J. C. Scott.* clause. I think it will be well if you give us that?—  
Certainly.

8 May 1901.

See 11793.

(1) The whole history of the docks which shows them to be and to have been from the first a public benefit and necessity, and an incalculable saving to the revenue.

(2) The history of the wharfingers and warehousemen's businesses, which shows that when they first received the privilege of exemption it was in return for the compulsory diversion of business from their premises, that when the dock monopolies expired, the unimportance of these claims left them unnoticed either by the Dock Companies or the Government, but that when the expiry of the monopolies was followed by the extension of the legal quay and bonded warehouse system those clauses largely assisted to enable the wharfingers and warehousemen to compete with the docks on advantageous terms, and had therefore become both inapplicable and inequitable.

(3) The wholesale revolution that has taken place in the conditions of modern shipping by the introduction of steamers.

(4) The growing size and draught of steamers, and their growing numbers.

(5) The growing size of lighters themselves and their growing numbers.

(6) The growing tendency for steamers to bring goods into the docks for shipment overside into lighters with a view to delivery elsewhere, or to be taken into immediate consumption.

(7) The loss of business resulting to the docks through the development of free trade, and consequent diminution in the number of dutiable goods, and of bonded warehouses necessary for the accommodation of those that are left.

(8) The lowering of freight payable to the shipowners for the carriage of goods renders it inequitable to raise the shipping charges which would fall upon the shipowners, while the wharfingers, warehousemen, and consignees get the use of the docks for nothing. At the same time the low price of goods enables a small charge to be imposed, which, even if it should eventually fall on the consumer would not be felt.

(9) The vast outlay of capital on the docks on which interest has to be found. This, the shipping dues alone are insufficient to supply in their proper proportion, because at present so large a proportion of vessels in the shape of lighters pay no dues.

(10) The fact that the docks are by statute legally vested in the Dock Companies, and that to use their premises without payment or return of any kind constitutes in effect a trespass which, though originally sanctioned by Parliament, is no longer justified by any countervailing rights or privileges.

(11) The fact that the river is freely used by all, and that wharfingers and warehousemen have therefore spent no capital on their waterways, nor have they any dock repairs or maintenance to pay for, or growing requirements to keep pace with, or interest on dock expenditure to find.

(12) The fact that such wharfingers as have jetties or small private docks have a perfect right to charge for the use of them.

(13) The fact that the lighters that use the docks are ill found in equipment, and are not even supplied with sufficient men to work them, thus throwing on the docks a large amount of voluntary labour, which the necessities of business alone render practically compulsory.

(14) That the tonnage of lighters using the docks is nearly double the total tonnage of foreign trading and coasting vessels which enter them with cargoes—compare this with relative tonnage proportions of ships and lighters in earlier times.

(15) That the docks being the only place in which it is possible for modern steamers to discharge owing to their bulk and depth, and to the necessity for despatch, if those docks were to lose their business for want of funds to meet the requirements of the port, the wharfingers and warehousemen's business would also cease. Before the docks were opened every ship could discharge in the river.

(16) That the utmost care and economy have been unable to make the London docks a financial success in face of wharfrage and warehousing competition carried on against them with all the advantage on the side of their opponents.

(17) That the docks of the greatest port in England ought not to be so crippled as to be able to produce no greater dividend per annum than 1 1-5th per cent., which represents to the shareholders of the London company an average dividend of two per cent., or thereabouts, and to those of the India Company an average dividend of practically nothing at all.

(18) That all the conditions of commerce which were responsible for the exemption clauses in the first instance have long since ceased to exist, and that the main argument which led to the rejection of the Bill of 1855, can now no longer be argued against the companies.

(19) That a crisis has now come, and that if the Dock Companies are to exact increased duties of some kind or other, the people who obviously ought to bear the burden are not those who already pay for what they get, but those who enjoy the use of the property and gratuitous services of the docks for nothing, and complain that the latter are inadequately rendered.

(20) The fact that Parliament has at frequent intervals during the present century recognised the justice of the charges which the docks now ask to be allowed to make by granting to numerous other docks and harbours the privilege of making them under the same or similar circumstances.

5772. I wish to draw your attention to Paragraph 18 of that summary. You say that the main argument which led to the rejection of the Bill in 1855 can now no longer be urged against the company?—Yes, I do say that most distinctly. In those days the companies were to a certain extent prosperous; that was one of the main arguments against them. To-day I do not think anyone would say that they are very prosperous.

5773. You say that Parliament has at frequent intervals during the present century recognised the justice of the charges which the docks now ask to be allowed to make, by granting the numerous other docks and harbours the privilege of making them under the same or similar circumstances?—Quite recently it has granted the Manchester Ship Canal Company a charter.

5774. Have the circumstances been in all respects the same?—I do not know of any difference. They are a Dock Company doing a large business; we are a Dock Company doing a large business; I do not see where any difference comes in.

5775. There was no reason why?—So far as I know, none.

5776. There was nothing in the circumstances which made it desirable or right that these people should have free water in the Port of London that did not exist there, that existed on the Mersey, in the case of the Manchester Ship Canal?—I do not know of any different circumstances, except of course that you are dealing in London with what has been going on for a great many years, and I suppose in Manchester they were not.

5777. In your evidence at Question 5597 you dealt with the Mersey Docks and Harbour Board and the Clyde Navigation?—Yes.

5778. You suggested that there was a sum of £600,000 received by the Mersey Docks and Harbour Board?—Certainly, in round numbers; £599,000 was the exact amount.

5779. Are you quite correct in suggesting that they derived the whole of that £600,000 from being free from exemption clauses?—I think so. Certainly it is absolutely true for a certain amount, and I think for the whole. They have the power of levying on everything that comes into their dock whether it is put on the dock or not. These goods are put on the quay; they do no services for it. What we ask under our scheme is, that in regard to anything that comes into the dock we should be in exactly the same position as they are.

5780. With regard to the Clyde you state there is a sum of £234,000 in similar circumstances?—I think so.

5781. You think you are right in regard to that?—Yes.

5782. They are very large sums?—They are very large sums I admit at once.

5783. At what do you put the cash loss to you in London from the exemption clause?—I could only put it at what I have estimated it. I have not worked this out on the Liverpool figures, but I have given a statement showing how this is arrived at. I say: "The

tonnage upon which the ordinary charges would be leviable would therefore be, say, 3,822,000 tons, and half charges on 572,000 tons. This would produce £266,750. In the actual assessment of the charges as between different classes of goods the Docks Company would have to consider the conditions under which the trade is carried on and the relative values of goods, and after giving due effect to these considerations the average yield would probably not exceed 10d. a ton, say, £177,833. So that I say, taking 10d. a ton on that amount of 3,822,000 tons, and half on the 572,000 tons, the amount we estimate to get is £177,833. If you were to take the Liverpool schedule rate on the whole—in Liverpool they make no exemption in favour of transit goods, it is leviable on everything—I say if you could measure our loss by what Liverpool would be entitled to charge under the circumstances, it would be immensely in excess of that £177,833 which we ask for.

5784. I see you estimate the dues on barges on the basis of 3d. per ton to produce the sum of £56,250?—Yes.

5785. That is to make a sum equal to £234,083?—Yes.

5786. That is what you would like to get?—We should like to get it very much.

5787. And that really summarises your suggestion so far as finance is concerned?—Yes.

5788. You have, or rather perhaps had, a Bill before Parliament this year; I do not know which expression I should quite use?—We had. It was withdrawn. We gave public notice that we should withdraw it.

5789. You introduced the Bill?—We introduced the Bill in the hope that we might be able to get something done.

5790. That Bill was a considerable modification of last year's Bill?—Certainly, but that Bill only expressed what we had always intended to do under the old Bill, and what we had publicly stated. In the early part of last year I had some correspondence with one of the Orient Company's directors, who asked me what we really meant by that Bill. There was correspondence at the time by which we then showed that we intended to make these exemptions precisely as we put them into the clause of the Bill this year. When we re-deposited the Bill we thought it better to put those clauses in the Bill, but it only carried out what has always been our intention.

5791. In fact, the Bill brings the Parliamentary position up to your public utterances?—Precisely.

5792. Do I gather that the obligations which in answer to my Honourable friend, Mr. Lyttelton, you expressed yourself ready to enter into are a further move on?—Certainly. These are obligations the necessity for which we have had before us for a long time.

5793. Supposing another Bill was introduced?—A great many of these special works which Mr. Lyttelton asked me about just now we can carry out without going to Parliament at all. They are covered by our statutory powers, and there is no necessity to make any application to Parliament.

5794. In answer to the question whether you were prepared to come under further obligation with regard to improvements, you only meant you were prepared to carry out certain works which were within your powers?—I meant certain works which are within our powers now, and with regard to which it is optional whether we carry them out or not. We are willing to give an assurance that we will carry them out.

5795. No further Parliamentary powers?—No. It would be an undertaking on the part of the Dock Company that we should carry out these works. As I say, we are willing to carry out this extension of the dock, and we would also be willing to carry out those further works which I will specify in the course of a very few days.

5796. In your answers you have confined yourself, for reasons which you have given, specially to the docks. Do I understand from you that you do not desire to say anything with regard to the Thames Conservancy?—I do not think it is quite my role to do it.

5797. (Rear Admiral Hext.) With reference to the question Mr. Lyttelton was asking just now about barges, if you insisted on the barges lying outside your limit of free water, outside your entrances, would not

they be lying in a more dangerous position than they would near the entrances?—Yes, but that is not my concern. It would be so undoubtedly. I do not know how they could lie there unless there were special moorings provided for them. *Mr. C. J. C. Scott.*  
8 May 1901.

5798. The fact of lying there would more or less congest the river traffic?—It certainly would not improve the river traffic.

5799. If you kept them outside the free space of water that you are allowed, would it not be almost impossible to get the number in and out that you do at present?—I think it would.

5800. And if the size of the barges much increased, do you think it would be practicable to work the present entrances for ships as well as barges?—It would undoubtedly increase the congestion, and make it still more difficult. It is difficult enough now; whether it would be absolutely impossible I cannot say. It would be more difficult, and certainly would involve us in more expense, because we should have to begin our locking and unlocking even a longer time before high water than we do at present. That would bring us back to the old question of more pumping and more dredging.

5801. You have told us about the pier or wharf below the entrance to Tilbury, I think?—There are two. There is a quay at the entrance of the Albert Docks, and then inside the basin at Tilbury, which is connected with a free entrance to the river—there are no gates—we have another quay but that is protected from the river because it lies within our own basin, which is our own private water.

5802. With reference to the pier or wharf outside below the Albert Docks, what was it built for?—It was built for shipping.

5803. And never has been used?—And never has been used, only we now use it as a coal wharf.

5804. With regard to the berth inside the basin at Tilbury Docks, has that wharf ever been used?—Never. *See 7934.*

5805. Is it long enough for a big ship?—Yes, quite long enough, and it is in a better position really than the quay at Galleons, because it is provided with sheds and everything. It is a properly fitted discharging berth. The other was not a properly fitted discharging berth, because until the need arose we did not put up all the necessary equipment.

5806. For that berth in the basin at Tilbury would the charges be less than going into the dock, or the same?—Possibly the same. We have never really gone into it.

5807. It seems to me if you reduced the charges perhaps you might have got somebody to use the outside berth?—Even now, when we find so much difficulty in finding berths for people, they will not come to it.

5808. That all goes to tell you wharves for big ships in the open tideway or in a position like that basin at Tilbury are not suited to the requirements of big steamers?—That is distinctly so.

5809. (Sir Robert Giffen.) You said just now that you have repaid all the money that was received from the Treasury in the early part of the undertaking; but I suppose you would admit that you still retain privileges of different kinds which were given to you originally, and which make you occupy a privileged position?—I am not quite aware of any privilege that we have at present that anybody else has not.

5810. Have you not certain powers of detaining vessels until the dock dues are paid, and privileges of that kind?—Yes, undoubtedly.

5811. Which are of some value, as well as the power of making bye-laws?—Yes, we have the power of making bye-laws, which we find it very difficult to enforce.

5812. These are privileges of collecting money which give you some advantage. I do not suppose they are special to the London and India Docks Company, but they are of advantage to a dock company or any other public body for recovering its money?—Undoubtedly.

5813. So that you can hardly say that you occupy no privileged position, although you have repaid the money which was advanced to you in the beginning of the undertaking?—It is a privileged position that, as you say, every other dock company has. Naturally in our business we have to give shipowners a certain amount of credit; we do not stop the ships unless we

*Mr. C. J. C. Scott.* believe a man is insolvent. Take all the big lines; we work their business on a regular current account, they keep paying us so much, we do not stop their ships.

8 May 1901.

5814. Originally you had some privileges in connection with the construction of the docks. I have not had time to examine all the Acts of Parliament thoroughly, but it seems to me that the whole work of construction in the early days was treated as one of great public interest, and you were obliged to present accounts to Parliament as to the progress which was made with the work?—Yes.

5815. If my recollection serves me rightly you were entitled not merely to water from the river to help you in the construction, but to sand and gravel?—From the river?

5816. Well, sand and gravel that were not your own—I believe from the river?—Yes, I am told that is so.

5817. So that in various ways you have had advantages although you have not had the advantage of receiving any public money which you have still got. You have repaid the public money, but you have other public advantages?—We have only the same privileges that other Dock Companies have, and so far as regards having a right to the water from the river we have only the same right to the water that every wharfinger or owner of a quay alongside the river has. We have no other right.

5818. I am speaking of the use of the water in the actual construction of the docks?—That we took water from the river—I have no doubt it was so. But in the same way I have no doubt that all the wharves built along the riverside took the water for their building in precisely the same way.

5819. Of course, you admit that you have had all the advantages of compulsory powers for taking land and things of that kind which other bodies have?—Certainly.

5820. I should like you to turn to Question 5588. You stated this: "In 1890 the gross income upon all those 994,000 tons was £1,031,000, which works out at 20s. 9d. per ton. When I come to 1899 I find that the 1,085,000 tons only gave us £994,000 which works out at 18s. per ton." The suggestion of your answer is that you are not getting any more goods to deal with in consequence of this over-side delivery, and you are not getting so much for the actual handling of the goods. I should like to ask you if there is not something else in the question besides this over-side delivery?—Undoubtedly. I think, as I have shewn in my evidence, what I pointed out is that the warehousing business is very much less remunerative now than it used to be. In the old days, going back even only so far as 1890, goods used to remain very much longer in warehouses, and, I think, I specified that the rent was the most profitable part of the business, and that as the rent fell off, so the earnings per ton of goods diminished. I showed that in the years 1890 and 1899 it had fallen off from 20s. 9d. per ton to 18s. per ton. I do not say that that is due to the free delivery of goods. I say that is due to the alteration in the circumstances.

5821. Is there not a corresponding alteration in circumstances of this kind: that while your income from goods is diminished, your expenses have also diminished?—No.

5822. I wish you to look now at Appendix No 31, of the 16th day. I think you will find that in 1890 your expenditure, for wages and salaries, was £968,000, and in 1899 the corresponding expenditure was £688,000?—Yes.

5823. Which shows that amongst the altered circumstances you have to reckon diminution of your outlay in earning the money, as far as wages and salaries are concerned, at £280,000, which was a good set off against the diminished income from the goods?—Pardon me, there is a very satisfactory answer to that. Up to the year 1890, we did all our discharging in the docks, and we claimed it as our right. We worked the cargo out of every ship that came into the dock, and we did the entire work for the ship. In the year 1890 we were doing that. Then we came to an arrangement with the steamship owners, under which we gave up all that work. We immediately threw over an enormous amount of labour, which we no longer paid, and we received from the shipowners a rent for our quay space instead. So that the whole of that diminution in labour arises from the altered circumstances, from our not doing the work of the shipowners which we used to do. You do not see the full force of it at once, because at first it was

not possible to make all the alterations. We limited, at first, the right of discharge to shipowners, I think, to the Albert and Victoria Docks. Subsequently, we gave the shipowners the right to discharge their own ships in the West India Dock, and, I think, in the South West India Dock, and gradually, at Tilbury, we have been giving up all the labour and making the shipowners do it themselves. So that to-day, down at Tilbury, the only line which we are discharging is the Orient, and in another month or two we shall have ceased to do that.

5824. But is not that a good reason amongst others why you should have received 20s. 9d. per ton on goods in 1890 and 18s. per ton in 1899?—No. These figures, I may explain, have nothing whatever to do with this.

5825. You have just been explaining, have you not, that you were doing more work in connection with discharging in 1890 than you are now doing?—Yes. But our warehousing earnings do not include those that we get from discharging. That came out of the ship. Will you look at Appendix No. 31 of the 16th day. Take the income. Tonnage dues and rent on ships in 1890—that includes also discharge and extra rates on ships—you will find that we received from shipping £481,000, and we did in that year three million tons of shipping in the docks. Now, in the following year we began to make an alteration. If you will turn to Appendix No. 27 of the 16th day, you will find that the tonnage has gone up to 3,181,000 tons, whereas the receipts from shipping have gone down to £445,000, because we were no longer doing this service for the ship-owner. If you come to the last year, 1899, you will find that instead of our having three million tons of shipping we had 4,281,000 tons. That is an increase of 33 per cent. roughly, and our earnings from ships have fallen from £481,000 to £478,000, the reason being that in 1890 we were doing work for which we charge the steamers. To-day we are not doing that work and consequently there is no charge.

5826. Your statement is that the import rates have nothing whatever to do with this discharge?—Nothing whatever; on the contrary, I could amplify what I have said already. During the last five or six years we have seen a very great alteration in the trade, namely goods landed going away for immediate delivery instead of being warehoused as formerly; we have kept a record, and we find that about 40 per cent. of the goods on which we get charges go away immediately. I may put it, I think, in this way; that whilst to-day we get somewhere about 18s. to £1 per ton for goods that are warehoused with us, on an average out of that we have only to pay a certain amount of labour, and there is a considerable amount of profit. Where the goods go away for immediate delivery, we probably do not get more than 5s. or 6s. or 7s. a ton, and there is all the work to do, so that the margin of profit on what we call the nimble ninepenny goods, the things that come in and go away immediately, is very small.

5827. You call them dues on shipping?—No. These are included in the import rates, that is why you find that although we are doing an enormously increased amount of work according to our tonnage, our earnings on import rates are less than they were ten years ago.

5828. I thought one of the points in the table to which I have referred was that you were not turning over any more goods?—Yes, we say we have an increase. We have a larger tonnage of goods, but we have a reduced amount really for warehousing. The rest of the goods were for immediate delivery.

5829. There is no great increase in the amount of goods from 994,000 tons to 1,085,000?—There is no great increase; there is a small increase.

5830. In what form did you make the charge to the shipping in connection with the discharge of the goods?—So much per ton; it was all worked on a regular scale.

5831. Part of the tonnage dues on the ship?—No; quite exclusive of the tonnage dues on the ship.

5832. Then it was a charge on the goods?—It was a charge we made to the ship owners for landing their goods.

5833. I wish to know whether that charge was included under the heading of import rates in your account, or under the heading of tonnage dues and rent

on ships?—It was included under the heading of tonnage dues and rent on ships, discharging and extra rates on ships. It was a discharging rate.

5834. Then how does it happen that your expenditure for salaries and wages as between 1890 and 1899 was so much diminished; because it is diminished much more than apparently these extra dues would account for?—The difference arises in this way. First of all you have all the shipping business. That went. That would represent a very large part of it. Then although on the goods for immediate delivery the proportion of labour to the total charge is very much higher than the proportion on the goods for warehousing, still the actual charge for labour does not come to so much. You can understand that if you are making 20s. a ton on goods for warehousing you have to work that; there are many labour things which may run up.

5835. It is quite fair that we should ask whether there was a corresponding diminution of the net income from the goods. You see that in 1899 or thereabouts, you got 20s. 9d. for handling goods. This was the gross sum which you obtained?—Yes.

5836. What I am asking now is, was there this corresponding diminution in the net sum?—Certainly; most distinctly. There must be that, because the warehousing business is so much less profitable. The item of rent has disappeared to such an enormous extent. When you earn rent it is simply good money; there is no charge against it. You have your capital account, and your rates and taxes going on just the same, whether you are earning rent or not.

5837. Still, take the whole income. In 1890 you had an income of £1,715,000, out of which you paid £852,000 for wages—I am keeping the wages alone now?—Yes.

5838. In 1899 you had a gross income of £1,687,000, but instead of paying £852,000 in wages you paid £566,000?—Yes.

5839. So that you have a saving of no less than £300,000 of wages to set against practically the same income?—Yes. You must remember that 1890 is not quite a fair year to take. We had the great dock strike in 1890, which only came to an end in September, and throughout 1890 labour was extremely disorganised. It would make a very considerable difference.

5840. Take 1892. You have an income of £1,776,000, and you have an expenditure for wages of £713,000, which is still a very large sum, much larger than the expenditure in 1899 of £566,000?—Yes, but you must remember that with regard to shipowners so much of our income from them is now net. Before, we used to get an amount which covered our labour. Now it is in the shape of rent for the quay space which they take. We are getting a reduced amount, it is true, from the shipowner.

5841. That comes into you net now?—Yes. It comes into us net; there is no deduction whatever. Whereas we used to take on one side receipts from the shipowner, and on the other side put labour, now it comes into us net. The result is that with this very large increase in tonnage we are to-day receiving net £478,000 against what was the gross figure in 1890 or 1892—there is only £12,000 difference between them. That was a gross figure then, subject to any deductions for labour.

5842. What would be the net figure, do you think, in 1892?—I really could not tell you at all; it would be quite impossible to say. I quite admit that what you say at first sight does look very astonishing, but the whole system has been completely altered since then, and whereas we used to discharge every ship that came into the dock, and claim as our absolute right that we should do so, to-day we only discharge a portion of them.

5843. I wish now to refer to the table you have put in, separating to some extent the warehouse income from your other business. I do not propose to ask you to repeat any of the figures which you have given in the statement, but I should like to ask you whether in your opinion it is the warehousing business which pays you best of all the departments of your undertaking. Would that be a fair conclusion that you would like to put before us—apart from the figures?—In other words, whether the warehousing business is more remunerative than the shipping business? I do not think I could possibly answer that. I do not think anyone could, because to do that you must first

of all calculate how much of your property is used for warehousing business. Not very long ago we went very seriously into the question of one trade—I do not mind mentioning it—the tobacco trade, because it is a trade of which we had an absolute monopoly. The trade believed that we had a very paying business, and we found that, taking into consideration the amount of space which was occupied, it was not a very paying business. I think, if you take the warehousing space generally on the river, it is not such a remunerative business.

5844. I put the question because these figures which you gave us, and upon which you throw—very properly, I should say—some doubt because you cannot separate some of the items, appear to show that almost all your net income came from the warehousing business. I do not wish to repeat the figures, because they may be misleading?—I cannot agree with you there. I think I should say the greater part of the gross income, because the difficulty comes when you come to separate what are the fair charges against them.

5845. That is what I wish to have your opinion about, apart from the figures. I wish to know what the opinion of the company is as to their business?—We have every desire to give you every information, and we took an enormous deal of trouble to try to get out these figures to give you information. I really do not think I could answer the question, and if I did answer it I do not think my own opinion would be of very much value. The whole thing is so much mixed up.

5846. I should like to ask whether it is a true statement that most of your shipping business belongs to the docks down the river—the Victoria and Albert Docks and the Tilbury Docks—and most of your warehousing business is done at the docks up the river?—That is undoubtedly the fact, because we have put in tables where we show that the bulk of the shipping is done at the lower docks, where only the big ships come, and the warehousing is put down in the upper docks because it is practically impossible to get the trade to go down to the lower docks.

5847. Would it be possible to separate the up-river business from the lower river business?—I do not think so. See 6659-61.

5848. Suppose you were asked to make a sale of the one business or the other, could you make such a division as to enable it to be done?—I do not think it is possible—honestly I do not. I have gone into it very carefully, and I do not think it is possible. The whole thing is so mixed up together, and there are so many ramifications that it is almost impossible to say. You find that you are giving facilities perhaps to shipping to get goods; goods get the benefit of that. I believe it is impossible for anybody without altering our whole system of book-keeping, as it has been for years and years, to bring out any nearer statement as to the relative values of our warehousing and shipping business, than we have given in this statement, and even in this statement a great many of the figures which we have put before you are estimates; they are as near as we could get them, but personally I should be very sorry indeed to take these figures even as correct.

5849. I think, in answer to Mr. Ellis, you rather hesitated to express an opinion as to how money was to be found for improving the river and harbour generally, apart from the docks?—I have my own ideas, but I do hesitate rather to express them.

5850. I should like to press it a little, for this reason—that you are one of the experts in the matter, and this is one of the general subjects with which we have to deal, and whatever body is constituted to deal with the river, might have to deal with the Dock Company?—Roughly, I think it is not a difficult question at all. At present the Thames Conservancy do collect certain rates, and I would give the Thames Conservancy, or whoever is the river authority, the power to continue to collect those rates. I think shipping should pay perhaps a trifle more, but I think that all goods coming into the river should also contribute. I think that body should have the power of levying a small toll not only on goods coming into the docks, but on all goods brought into the port or exported from the port. To simplify matters, if the dock companies continue separate, I think that it should be put on the dock companies that, so far as the goods coming into the docks are concerned, they should levy and collect for the river authority that portion of the dues. See 6421-2

5851. That would be an addition to the burdens upon

Mr. C. J. C.  
Scott.

8 May 1901.

See App.,  
16th day,  
No. 17.

Mr. C. J. C. the trade of the port more than you propose for yourselves?—Yes, but it would be something so infinitesimal that I do not think it would really matter. The charge that we ask comes to one penny on 124lbs.; that is the maximum charge. The river authority would not want as much.

Scott.  
8 May 1901.

5852. But it would be necessary for your purpose, in making these big improvements which you contemplate, to have the river improvements going on side by side with them?—Certainly. It would be folly for us to build a dock such as we contemplate putting on the south side of the Albert Dock, a dock which, so far as we can see, will accommodate anything that can ever come up the Thames, unless the river were improved to such an extent as to allow these big ships to come up. Our object was, and our instructions to Mr. Baggallay were, to design a dock that, so far as we could see, would take in anything ever likely to come so far up the river.

5853. I should like to ask you one or two minor questions now. One of them is with reference to that date of 1823, in regard to which you quoted from a witness, Mr. Drinkald, a statement which seemed to imply that the lighterage business of the river had at that time diminished. It is with reference to the inference you draw from that statement that, "I have sold some at £20 that cost me £800 or £900 since the docks have been in operation." I think your suggestion was that the business of the lightermen altogether had diminished from the formation of the docks?—That was my inference from the question. It seems to me not altogether an unreasonable inference, because if a man is willing to sell for £20 or £30 barges which have cost him £800 or £900, it rather points, I think, to his having very little need of them.

5854. I think you suggested that very soon after the lighterage business must have increased. This was in 1823?—Certainly. Since 1855 it has been increasing. Whether it increased much between that and 1855 I cannot say.

5855. My question to you is whether it is the case that any part of the business of the river could have diminished between 1800 and 1823, because we have it in evidence that a large increase of coasting and other shipping did in fact take place?—Yes, I admit that. Of course I simply drew my inference from the fact that a man was willing to sell for £20 something which cost him so very much more. I think the ordinary inference is that if he was willing to sell them, as he found he had no employment for them, their occupation was gone.

5856. I think you will observe that what was said was in answer to a question: "Are barges or lighters most used?" He said: "More barges than lighters." But is not a barge in this sense practically much the same thing as a lighter. Is not there some technical point in the distinction?—I should be very sorry to try to define the difference between a barge and a lighter.

5857. But if a man says that he uses more barges than lighters, it does not follow that the whole of the business has been diminishing, but there has been a certain technical change in the business?—I suppose that at that time there was some distinction between a barge and a lighter, but to-day I think in practical use the two terms are interchangeable.

5858. I have been trying to find out whether there was any distinction; I am sorry to say I could not find out, but evidently there was a distinction at that time?—Evidently there was at that time.

5859. Then he was asked to state what the circumstances were which prevented or inconvenienced the passage of a vessel from the West India Dock to the London Docks, and in reply to that question he said, "In the first place the want of sufficient water to navigate; in the next place, the bad state of the Pool almost constantly, which I think is now worse than it was when the whole of the West India trade passed through it." Then he was asked, "Do you mean that it is more crowded?" and he replied, "Yes, from the increase of colliers and coasting vessels since that period, and the bad arrangements for the mooring of the vessels by the harbour masters." That all points to a continuous increase of the trade of the Port from 1800 to 1823?—Yes.

5860. I suppose you are aware that in 1836, which is 13 years after 1823, there was a committee upon the state of the river at that time. I do not know if your attention has been drawn to that?—I do not think so, it has escaped my memory if it has been.

5861. You may take it from me there was a very elaborate inquiry into the state of the river at that time, because the business of the river had been continually increasing. What I suggest is that it is quite impossible to believe that the business of barging and lighterage (putting the two together) could have been diminishing all that time?—Perhaps I ought to say I am rather sorry now I spoke on the question of the barges.

5862. It is merely rectifying a small point in the history?—Yes.

5863. That brings me to a point I was going to ask you a question about, namely, in reference to what Mr. Ellis asked you with regard to the debate on the Bill of 1855. Is it not the case that all through the century Parliament has been careful to insert in every Bill creating docks this exemption clause?—Docks in London, yes.

5864. In that very debate in 1855—I think you have it before you that in 1853 at the time of the passage of the Victoria Dock Bill a question had been raised and the exemption clause was put into the Victoria Dock Bill?—Yes.

5865. Then I think about 1863 some attempts were made to get rid of the exemption clause, and they were refused. So that it has been a continuous policy on the part of the Government to insist upon that exemption clause?—Yes.

5866. I do not suggest for a moment that Parliament in 1855 were well advised in refusing to hear the Dock Company's case, because I think when an important company comes and makes a case of that kind it is better to hear it than to refuse to hear it. I merely wish to get out now that you admit that all through the century Parliament has continuously and steadily insisted upon the insertion of this exemption clause?—Of course, I must admit it, and I must admit that in all Dock Acts passed since 1855 there is practically no option. People had to accept this clause. Parliament had refused in 1855 to reconsider the matter at all, and insisted on the exemption clause, and so in all the following Acts of Parliament it necessarily had to be inserted.

5867. But the thing was not done as a matter of course. There were debates and questions at different times?—Mr. Turner, the solicitor, tells me that in nearly all cases the clause was put in by ourselves when the bill was deposited. The reason, of course, why we put it in was that having failed in 1855 to get the exemption clause repealed we found ourselves bound to go on with it. In our bill for this dock extension last year in the first place we put it in without the exemption clause, but when we found there was no chance of the Commission reporting before that bill had been dealt with, we stated at once that we should put in that exemption clause, and the exemption clause will go in.

5868. In 1863—I will not say what company's bill, but I have it on my notes—a clause exempting lighters was omitted from one of the bills, but it was inserted in the House of Lords in 1864, and there were debates?—Yes.

5869. So that it has not been done merely as a matter of course, one Bill following another, but there have been debates at different times?—I am not sure whether one would be right in saying that the matter has been debated.

5870. I am merely putting the question to you to raise the point, that it has been done, not merely as a matter of course, but that the House of Commons and the House of Lords have steadily insisted upon this exemption clause?—I think they had to until the whole question was settled. No doubt they did insist. Having failed in 1855, it would be very difficult I take it, in another bill for a new dock to get that exemption clause repealed and not repeal the clauses in the old Acts.

5871. I wish to ask you a question with reference to your statement as to vesting and as to the claim about freehold. I think at one part of your evidence you said that docks are freehold property. My question is whether you maintain that docks are freehold property in the sense that the dock companies could give up the business and sell the property or whether it is a complete property of that kind?—Whether it is an absolutely private property without any restrictions attaching to it? No, I do not think so, for this reason. If we wanted to sell one dock I do not think it would be possible to sell it without getting Parliamentary sanction.

See  
6690-5

5872. You could not refuse while the docks exist to accept any vessels that come to enter them?—Exactly. The obligation is upon us, and we have to do it. It even goes so far as this, that to-day if there is room in a dock we cannot say to a vessel, "You cannot go into that dock; you must go into another dock." If there is room in any particular dock the vessel can say, "I will go in there," whether we like it or not.

5873. So that not much turns upon this claim that they are freehold property?—Yes, I think a good deal turns on it.

5874. I should like to know, then, what it is you mean by that claim. You do not refuse to submit to the control and regulation of Parliament?—No.

5875. And you admit you have certain public duties to discharge?—Yes.

5876. Then what is the advantage of claiming freehold property, as you call it?—What we mean by that is that it is not open to anybody to go in there and do anything they like. We can stop a man going in there and doing any particular work. We can make regulations for carrying on a trade.

(*Mr. Lyttelton.*) It is the same as a railway company's right to a station, I suppose?

5877. (*Sir Robert Giffen.*) That would follow naturally from the ownership of property under the Act of Parliament without claiming that it is freehold. You seem to attach great value to the vesting, and to the fact that it is freehold property?—We bought it and we paid for it, and a good many people think they have a certain right in it besides ourselves. We say, "No; you have certain rights which we give to you by statute. You can come in and exercise those rights, but you are not entitled to anything more."

5878. There is no claim to anything more, is there?—Pardon me, I think there is a great deal. At the present moment we are being asked to give all sorts of facilities to barges which they are not entitled to. We have correspondence going on now. Even the facilities that we are giving now to barges are undoubtedly far in excess of what they are entitled to. They are not satisfied; they want more.

5879. That will hardly be a public right?—The public have no right to do this without payment of anything. Even in the present instance, as *Mr. Lyttelton* has pointed out, the barges to-day in taking goods from their quays are going right away from any powers that they have.

5880. But that does not affect your general admission that you have special privileges, and you admit that you have public duties in the matter of the use of the property?—We have special privileges for serving the public at our own cost.

5881. (*Mr. Ellis.*) You are a statutory body, in fact, with all that that means?—Yes.

5882. (*Sir Robert Giffen.*) In the bills that you have laid before Parliament you do not ask for any extra powers to regulate the lighters?—No.

5883. You see no advantage or public advantage in doing that?—I will tell you frankly, in this bill in which we have applied to Parliament for the extension of a dock we wanted to make it as little controversial as possible. We saw the great necessity of completing that dock as soon as possible, and we felt that if we put into that bill anything at all that was going to bring us into conflict with wharfingers, lightermen, or anybody else, we should run the risk of that bill being hung up, and in the interest of the port we wanted to get it through quickly.

5884. You attached the greatest value to your own income?—Which bill are you speaking about?

5885. The bill in this session?—There were two bills in this session. I was referring to the bill which is now going on for extending the dock, and not to the Lighterage Bill, which is dead.

5886. In the Lighterage Bill you simply proposed to increase your charges?—Yes.

5887. You think that is a more important matter to be dealt with in comparison with lighterage business?—Certainly, because we recognise that if the lightermen pay us a certain sum for the service we render, naturally a certain obligation must fall on us which to-day does not exist, to do things for them, which to-day we are not bound to do.

(*Chairman.*) With reference to what was said yesterday, we gather that it would be more convenient to the learned counsel who are representing various bodies in this inquiry, that the cross-examination of this witness should not take place to-day. Do I understand that is so?

(*Mr. Harper.*) That is so, my lord.

(*Mr. Whitehead.*) I have not seen the shorthand notes of the last day's proceedings yet.

(*Chairman.*) Does that apply to the re-examination of *Mr. Scott*?

(*Mr. George Wallace.*) I should very much prefer, if it is convenient to your lordship, to reserve *Mr. Scott's* examination once and for all till after the cross-examination.

(*Chairman.*) You do not want to examine him before the cross-examination?

(*Mr. George Wallace.*) I do not want to, it would only waste your lordship's time.

(*Mr. Scrutton.*) May I say that I am in the hands of the Commission. I am quite ready to go on now if the Commission think fit; or to postpone it. I understand that the Counsel who appears for the wharfingers is not in a position to cross-examine at present.

(*Chairman.*) As far as we are concerned it would be more convenient to us to entirely dispose of one witness before we take another.

(*Mr. Scrutton.*) What occurred to me was that I may not finish to-day, and perhaps it might be convenient that I should commence after your adjournment.

(*Chairman.*) We have only practically an hour at our disposal to-day. *Mr. Wallace*, you do not want to submit anything now?

(*Mr. George Wallace.*) No, my lord, I think not.

(*Mr. Whitehead.*) Might I make an application? *Mr. Scott*, in his evidence, has referred to certain agreements which practically divide themselves into two classes, one which has according to his evidence very seriously affected the usage of the port, and the other being agreements of a secret character, giving preferential rights either to individuals or to particular groups of traders. I will not comment upon the evidence, but what I ask is that those agreements should be put in and be accessible to the parties represented here, for the convenience of the tribunal. If it is incumbent upon us to obtain the details and the nature of these agreements by question and answer in cross-examination, it will take up a great deal of the Commission's time, and I think it would not be for the general convenience. What I ask is that those agreements should be put in and placed upon the notes, and be generally accessible at the earliest possible moment. *Mr. Scott* said that some of the agreements were in the nature of trading agreements which they did not wish to disclose, but if I may say so, speaking on behalf of the traders, the secrecy of those agreements is one of their vitiating features, and we ought to know them, and I submit they are very relative to the inquiry which the Commission are making.

(*Chairman.*) We shall consider that.

(*Mr. Harper.*) Might I draw your attention to Section 58 of the London and St. Katharine's and East and West India Docks Act, 1888, which provides specifically that after the passing of that Act they shall not make any agreement or renew any agreement existing at that time by which preference should be given.

(*Mr. Lyttelton.*) *Mr. Scott's* point was that they did not give preference.

(*Mr. Harper.*) I mention merely one case—the Orient Company; we should like to have some information about that.

(*Witness.*) That is an agreement before that date which was specially provided for by Act of Parliament.

(*Mr. George Wallace.*) That section carefully excludes all prior agreements that there were.

(*Chairman.*) I think it is hardly the moment now to enter into any argument on the subject.

{Adjourned for a short time.}

(*Chairman.*) With reference to the question which was raised this morning by the learned counsel representing the London Chamber of Commerce, the Commissioners wish to say that they are not prepared to

*Mr. C. J. C. Scott.*  
8 May 1901

**Mr. C. J. C. Scott.**  
8 May 1901.  
make any general order for the production or disclosure of agreements. If any document be required to be produced by any interest represented before the Commission, application must be made for it in writing, with particulars thereof, and the reasons alleged for its production.

(*Mr. Lewis Coward.*) And you will decide then, I suppose, when occasion arises, upon the admissibility of it?

(*Chairman.*) Yes. With reference to the cross-examination of witnesses by counsel, the Commissioners desire to say that they are not prepared to admit questions involving matters of opinion; the cross-examination must be limited to matters of fact. They will also be obliged if the learned counsel engaged in cross-examining will first indicate the topics upon which it is proposed to cross-examine.

(*Mr. Scrutton.*) I appear for the Corporation of the City of London. I desire in the first instance to get more in detail from Mr. Scott the great change of system which has been referred to by the questions of Sir Robert Giffen and I think referred to for the first time, which has taken place in the last 12 years, because I think it will appear that that has a great deal to do with the present position of the docks. I do not know whether that is the sort of intimation that meets the wishes of the Commission.

(*Chairman.*) Certainly.

(*Mr. Scrutton.*) That will take some little time. When I have got to the end of that, I shall be prepared to make a similar intimation with regard to the next point.

(*Chairman.*) That meets our view entirely.

5888. (*Mr. Scrutton.*) It is the fact, is it not, as the figures that Sir Robert Giffen asked about show, that within the last eleven years almost a revolution has taken place in the docks in the way of dealing with goods coming in?—Yes.

5889. I want to get a little more in detail from you exactly what is the change that has taken place in those 11 or 12 years, and how it has come to take place. I do not want to go further back than the Tilbury Dock data. I want to ask you to see whether I correctly understand what was the system which prevailed say from 1882 to 1887 at the time when the Tilbury Dock was being built. You were charging a tonnage due on ships. Can you state shortly to the Commission what you were giving the ship simply for the tonnage due—that is the 1s. per ton?—It was the right to go into the dock and remain there for four weeks.

5890. Was there any right to use the quay?—No.

5891. Simply the right to lie in the water of the dock for four weeks?—To come alongside the quay.

5892. I suppose they might moor to the quay for the shilling?—Yes.

5893. And people landing from them might walk on the quay?—Yes.

5894. But nothing further?—Nothing.

5895. That was the first due you were charging? You were charging on goods landed on the quay and brought to your warehouses a landing rate or consolidated rate?—Not charging the ship.

5896. But charging the goods?—Yes.

5897. In addition you were claiming the right at that time to do all the discharging work yourself unless it was done by the crew of the ship?—Yes.

5898. You were charging that in the case of discharging, but in the case of loading you were allowing the shipowner to do the work, and indeed requiring him to do the work by his own men, the stevedores?—Yes.

5899. For the work you were doing for the shipowner and compelling him to let you do, you were charging him a discharging rate?—Yes.

5900. That would be the third rate; a tonnage rate on the ship paid by the shipowner, a discharging rate for the labour of discharging paid by the shipowner, a rate on the goods landed for warehousing paid by the goods?—Yes.

5901. And under those circumstances, at that time were all the large shipowners adopting the practice of turning out all their goods on the quay which were wanted in barges, and then delivering them to the barge?—We were doing the discharging.

5902. That was the system that was being used?—I think that was the system practically. It was practically so; but in many cases we did deliver goods overside to barges.

5903. But in a large number of cases and with a large number of ships between 1880 and 1890, you were putting the goods out on the quay, and where the consignee required his goods overside you were delivering into a barge?—Yes.

5904. But in other cases you were charging the shipper a rate—a shipper's accommodation rate, or overboard-to-craft rate?—Yes.

5905. So that as things were at that time there were the four rates?—Yes.

5906. If the consignee asked to have his goods overside direct from the ship, as it was very often not convenient to give it, the dock company would put the goods out on the quay and deliver from the quay to the craft. They would not charge the goods anything; they would not charge the barge anything, but they would charge the ship a rate over quay to craft?—Certainly. We were acting for the ship.

5907. At that time you were claiming an absolute right to do all the discharging, and to exclude the shipowner?—Certainly.

5908. That was the position, I may take it, up to 1889?—And I think practically up to 1891.

5909. I will give you the exact dates presently. I am coming to that in a moment. But between 1880 and 1890, certainly, that was the position?—Yes.

5910. Also before 1882 there were the two separate big dock companies, the East and West India, and the London and St. Katharine?—Yes.

5911. At that time, before the Tilbury Dock proposal was made, they were living in peace and unity?—Yes.

5912. Charging the same rates?—Yes.

5913. In 1882 the Tilbury Dock Act was obtained?—Yes.

5914. Was the immediate result of that a competition on the most vigorous scale between the two dock companies?—In 1882?

5915. Not, of course, in 1882, because the Tilbury Dock was not ready, but we will say about 1887 or 1888?—Yes, about 1887 or 1888.

5916. Each company was bidding for the big lines?—Yes.

5917. I think from the evidence it appears—it is so, is it not—that both dock companies were very much hampered for the next seven or eight years, or longer, perhaps, by the agreements which they had made with shipowners in that time of competition?—No; the East and West India Dock was hampered for a considerably longer period, but the London and St. Katharine Dock Company was not hampered.

5918. The East and West India Dock Company was very much hampered?—Yes.

5919. This is an instance. The Orient Company came down to the Tilbury Dock on an agreement, I think, which gave them a rebate of 50 per cent. on the rates for 10 years?—Yes.

5920. Which expired in 1896?—Yes.

5921. The P. and O. Company stayed in St. Katharine's Dock?—Yes.

5922. Under an agreement?—Under an agreement, but their agreement, if I remember rightly, ran out in 1892.

5923. In looking at any of the figures from 1886 to 1892, 1893, 1894, and 1895, the Commission must bear in mind that as to the big lines, there were agreements which had been made when the two companies were in competition with each other?—And you would infer from that, that the earnings were reduced accordingly; but that was not so.

5924. So that 100 per cent. would have been paid to somebody had it not been for the inducement to go to Tilbury with 50 per cent. rebate?—But the India Dock Company had to bear that.

5925. I am not going now into what was the condition after 1889?—But it does not affect that, because the figures which I have put in are the figures of the Joint Committee, which are not affected by this.

5926. You mean it is only the division of the two

companies? The India Dock suffered in 1889 for the agreements that were made. The St. Katharine Docks suffered for the P. and O. agreement up to 1892?—I forget what the exact date was.

5927. The exact date does not matter, but there was an agreement in which the P. and O. stayed in the other dock instead of going into the Tilbury Dock?—Yes.

5928. In 1889 the companies made up their quarrel?—Yes.

5929. And amalgamated?—No.

5930. Put themselves under the Joint Committee?—Yes.

5931. The amalgamation was in 1900?—Yes.

5932. Competition then was removed?—Yes.

5933. There were docks outside—I will not call it the amalgamation, because you object to that—but outside the combination?—Yes. There were the Millwall and Surrey Docks.

5934. Did the Joint Committee make agreements with the Millwall and Surrey Docks to avoid competition between the docks?—Yes. The Surrey Commercial was doing a business in soft wood which the docks had never done, and we were doing a business in hard wood which the Surrey Commercial had never done.

5935. What was the date of the agreement?—I think it was after the dock strike, but I think it was about 1890.

5936. The dock strike was 1889?—Yes.

5937. Is that agreement still continuing with the Surrey Commercial?—No.

5938. When did it expire?—Speaking from memory, I should think about three or four years ago.

5939. Is there any agreement now between you and the Surrey Commercial as to rates?—None whatever.

5940. That was an agreement by which you kept clear of certain classes of goods and the Surrey Commercial kept clear of certain classes of goods?—Yes, and the Millwall Dock Company was brought into it.

5941. As you have mentioned the Millwall, let us have the Millwall. What was the agreement with the Millwall Dock Company?—Practically the same. They were made parties to it.

5942. It was not timber with them?—Yes, they do timber. It was for everything—that they should follow our rates.

5943. Was there not some agreement as to the American ships. What is the date of the agreement with the Millwall?—The same date as with the Surrey Commercial. It was somewhere about 1890.

5944. Was there not some agreement designed to keep the American grain trade, I think it was, for the Millwall?—No, not the American grain trade.

5945. What was it?—They did a very large grain trade, for which they had certain facilities. We had not those facilities, and we were willing that they should keep that.

5946. So that, although, on the face of it, to the public, you were competing docks, there were, as a matter of fact, agreements between you which destroyed competition?—Precisely as there are amongst shipowners.

5947. You mean rings?—You would call them rings; I call them combinations.

5948. "Rings" is a shorter word. Do I understand that those agreements have now stopped? Are there any agreements now between you and the Millwall, or between you and the Surrey?—None.

5949. But there were between 1889 and 1896?—Somewhere about that.

5950. Have you any objection to produce those agreements to the Commission, now they have expired?—It also deals with the Surrey Commercial and the Millwall Docks Company.

5951. I am only asking you to speak for yourself. Have you, for the Joint Committee, any objection to produce them?—No.

(Mr. Scrutton.) I see counsel for the Surrey Commercial present.

(Mr. George Wallace.) I think one ought to consider what the agreements are. Personally, I am not in a position to decide about it. All I know is that the agreement expired about five years ago.

(Chairman.) I do not know whether you will insist on that, Mr. Scrutton. It is ancient history, and, in one sense, it is remote. Mr. C. J. C. Scott.

(Mr. Scrutton.) I am quite willing that your Lordship should decide presently, when you have heard the rest of the cross-examination; but I cannot help thinking that the whole of the last 15 years will be material for the Commission in deciding whether this company shall have any further powers. 8 May 1901.

(Chairman.) Then will you bring up the question again?

(Mr. Scrutton.) Yes; I will not press it at present, if your Lordship will bear it in mind. I have asked this gentleman, the chairman of the Dock Company, and he says he is willing to produce the agreements.

(Witness.) Yes, I was speaking purely my own personal opinion. I have no objection to produce them. I have no wish to keep anything back.

5952. In 1888 is the Act which constitutes the Joint Committee?—Yes.

5953. In 1889, was the dock strike?—Yes.

5954. That was a strike of the dock labourers employed in discharging, against the Dock Company, their employers?—It was not only dock labourers employed in discharging.

5955. But it began with the labourers wanting their 6d., and then there was a sympathetic strike?—It began with a certain portion of the dock labourers.

5956. And then extended to all of them?—Yes.

5957. One of the results of that strike no doubt was a suggestion whether the shipowners might not do the work of discharging. Up to that time, as the Commission may remember, you had claimed the sole right of discharging. You had claimed it as a right?—Yes.

5958. Did you discover, in 1889, that you had been mistaken in your view that you had such a right?—No.

5959. You think still you had such a right?—Yes, it was never disputed. The shipowners had never tried it.

5960. You think still you had such a right?—Yes.

5961. Can you suggest to the Commission under what Statute you had such a right?—No, I could not say that.

5962. You claimed it?—We claimed it, and it had never been disputed.

5963. In December, 1890—perhaps you could give me the exact date—did you give everybody notice that after the 1st January, 1891, you would do none of the discharging?—We certainly did not give what you would infer was a four weeks' notice. We gave a proper notice; but we certainly did not do as you suggest: give notice in December that on the 1st January we should alter it.

5964. When was the notice given?—It can be ascertained. And, prior to that notice, I may say there had been a considerable amount of communication between ourselves and the shipowners.

5965. I will read from the statement in the "Law Reports." The case is reported in "Law Reports," 3, Chancery Division, 1892, on page 242, under the name of the London Association of Shipowners and Brokers v. the London and India Docks Joint Committee. I will read the statement of facts there, and ask you whether it is accurate:—"To carry out the alteration the defendants, the Joint Committee, in December, 1890, issued a printed code of regulations dated '1st of January, 1891.'" Do you say that those dates are inaccurate?—No, I do not say that those are inaccurate. You are asking me now to speak from memory of a great many things that happened, and, although we may have issued that notice on the 1st January—

5966. The notice was issued at the beginning of December, to take effect on the 1st January?—What I would wish to say is that although that particular book of rates may have been dated the 1st January, and would come into force on the 1st January, it does not at all follow from that that the shipowners had not had notice prior to that.

5967. I agree it does not follow; but I am asking whether it is not the fact that it was not put out till the beginning of December?—I have not got it before me.

5968. I have?—That is dated 1st January, and you say it was put out at the beginning of December.

*Mr. C. J. C. Scott.* 5969. Yes?—If so, I think it is extremely probable.  
 8 May 1901. (*Chairman.*) The question, whether shipowners had or had not proper notice in December, 1890, is not, perhaps, matter for inquiry before us. We must keep as closely as possible to the terms of the reference.

(*Mr. Scrutton.*) Of course, my Lord, I do not want to try any cases over again.

(*Witness.*) May I mention, in passing, that there was an enormous amount of correspondence prior to that with the shipowners. I had the pleasure of seeing Mr. Scrutton's father on several occasions to discuss these matters. It may be true that the printed book dated the 1st January, 1891, was issued in December, 1890. There had been correspondence with the shipowners for months and months before that, and it was simply at the last moment, when everything was settled, that we gave notice what the rates would be on a certain date. There was no question, and I do not think Mr. Scrutton would say that we sprang a change in December, of which the shipowners had heard nothing, and which was to come into force on the 1st January.

(*Mr. Ellis.*) It is a very minute point.

5970. (*Mr. Scrutton.*) The book that you put out, professed, on the face of it, to require every shipowner to comply with it, did it not? It began: "Shipowners will be required to comply with the following regulations"?—Yes.

5971. Did the Court of Appeal say that they regarded it as an imposition on the public? I am reading from Lord Justice Lindley's judgment. "For I regard the new code as an imposition on the public"?—If it is reported so I suppose it is so. I cannot remember it.

5972. And did Lord Justice Kay say: "I am clearly of opinion that it is not a proper proceeding on the part of the Joint Committee to publish in this manner, as binding regulations, a set of rules which they know are not binding"?—If it is stated so, I suppose he did.

5973. But did they hold that you had this right? This is the change of system that I want to bring to the attention of the Commission. Did they hold that you had the right to say to every shipowner who wanted to come to the same berth every time he came to the dock, "We will not let you do it unless you agree to certain terms"?—They gave us judgment and costs. That is more to the point.

5974. "With this declaration the appeal must be dismissed without costs." You must be careful, Mr. Scott, in making these assertions?—The original costs. That is the appeal.

5975. And was the appeal dismissed without costs because they said it had been an imposition on the public?—You have everything there fresh before you, and you are quoting from things before you, and asking me to answer questions. I have nothing before me.

5976. This point about costs is only brought up because you would not answer the question I asked you, and you tried to say that the appeal was dismissed with costs. The question I asked was this:—Did the Court of Appeal say that when a shipowner wanted the same berth every time he came to the dock you had a right to charge him terms for the use of the same berth?—If a shipowner wished to have an appropriated berth we had a right to charge him, but it need not necessarily be the same berth every time he came into the dock. In the case of a tramp steamer she would not have the same berth.

5977. It was for the appropriated berth that you began now to require shipowners who wanted the same berth to take an agreement?—Yes, and that we were held to be within our right in doing.

5978. Your system beginning then has now extended, so that in the lower part of the river the whole of the docks is let in appropriated berths?—Not entirely.

5979. Not entirely, but very nearly. So that whereas before 1890 there was nothing of this sort in the docks, nearly every berth in the lower docks is let to shipowners on a form of agreement?—With this reservation, that if that shipowner is not using that berth for his own particular business we have a right to use it.

5980. Will you hand a copy of the form of agreement to the Commissioners in order that they may see the terms on which the dock is now let?—Yes.

5981. You are still charging the tonnage due on ships?—Yes.

5982. You are still charging the rates on goods that go to your own warehouse?—Yes.

5983. You are not charging the shipowner a discharge rate, but you are charging him a rent for quay space?—Yes.

5984. And for that you are letting him do the work of putting the class of goods that go to lighters over the quay?—Yes.

5985. He does the discharging; he puts the goods on to the quay, and instead of the three rates he was paying before, he has to pay the tonnage due on the ship and the rent for the quay space?—Yes.

5986. And he has been, not only in the American trade, but in every other trade, putting all the goods out on the quay?—Not all. So far as it suited his convenience.

5987. If he finds it more convenient he can put it overside, but he does not thereby avoid paying any rate to you, so that he has substituted the two rates for the three rates previously?—Yes.

5988. You have told the Commission that it was the American clause that has made the difference?—I do not think I said that.

5989. What I am thinking of is this: "The only way, therefore, to place a toll on goods so as to make it bear on the goods-owners and not on the shipowners was to introduce the custom of the Port of Liverpool, under which custom the shipowner's contract is fulfilled as the goods leave the ship's tackles. In the case of steamers from North American ports, the shipowners themselves have succeeded in incorporating in their bill of lading the Liverpool conditions of delivery by what is known as 'the North American bill of lading clause,' or more shortly 'the American clause.'" Has not nearly every ship that comes into your docks a power to do what it is doing—namely, a power to put goods on the quay at once and deliver thence to the barges?—Yes, under its bill of lading.

5990. It is not merely the American clause?—Yes, pardon me.

5991. For instance, here is a P. and O. bill of lading. Look at the two clauses I have marked. (*Handing a copy of the bill of lading to the Witness.*) Let us see whether this is peculiar to the American trade. Do you see what the P. and O. have power to do?—"The company shall have the option of making delivery of goods either over the ship's side or from lighters or a store ship or hulk or Custom House or warehouse or wharf or dock or quay at merchant's risk. In all cases their liability is to cease as soon as the goods are free from the ship's tackles."

5992. As I understand, you suggest that that is not the sort of clause you are referring to in your statement with regard to the custom of Liverpool. Is that the custom of Liverpool?—No.

5993. The liability is to cease when the goods are free from the ship's tackles?—This is never used here.

(*Chairman.*) I think there is a dispute on this point. Mr. Scott told us in his evidence that the ships of the North Atlantic did use the American bill of lading, and the reason why the others did not was the custom of the port. He himself deprecated it.

(*Witness.*) I should like you to ask the P. and O. whether they act on that clause. I say they do not.

5994. (*Mr. Scrutton.*) Let us see what the P. and O. do. The goods that they do not put overside they turn out on the quay?—Yes.

5995. From the quay they deliver to you if they are goods going to you, or deliver to the lighter if they are goods going to the lighter?—Yes. May I ask how do you reconcile that statement that they are free from liability so soon as the goods leave the ship's tackles? If they are free from responsibility so soon as the goods leave the ship's tackles, how does it come to pass that they truck these over the quay and then deliver to the craft from the quay? That is a great deal more than the ship's tackles, and that is why I say that this clause, so far as the P. and O. are concerned, is entirely inoperative.

5996. Then, in your view, is there something that is acted upon in the American trade that is not acted upon in other trades?—I say they act on their own bill of lading.

5997. Now I want to go to another thing. We see now what happened after 1890. You changed your pre-

See 5589.

vious system to the system you have just described?—Yes.

5998. Did you then try to extend that system to ships which did not always want the same berth, but which came in as casual ships?—Certainly. At that time it was ruling in Liverpool, and that is the reason why we adopted it in London.

5999. In two cases were actions brought against you to restrain you from enforcing the clause on ships? There was the case of the "Clam," of Messrs. Samuels in 1894, and the case of Messrs. Bruce in March, 1895?—I remember the case of Messrs. Samuels. I should like to refresh my memory with regard to the details.

6000. In each of those cases, did you refuse to allow the ship to go alongside the quay unless they signed the form of agreement?

(Chairman.) What form of agreement are you referring to?

(Mr. Scrutton.) The form of agreement that they imposed on ships that always wanted the same berth in 1890.

(Chairman.) What was the effect of it?

(Mr. Scrutton.) You may come alongside the quay if you pay us so much a yard for quay space. I understand the witness is going to put in a form of agreement.

(Mr. George Wallace.) There are two. We will hand in a copy of the monthly agreement and one of the weekly agreements, both of which are in common use. There is also a three months' agreement. They are exactly the same.

(Mr. Scrutton.) I think the only difference is the period.

(Mr. George Wallace.) Yes.

*(The Witness handed in a copy of the monthly agreement between the London and India Docks Company and Shipowners as to appropriated berths. See Appendix, 17th Day, No. 1. Also a copy of the weekly agreement between the London and India Docks Company and Shipowners as to appropriated berths. See Appendix, 17th Day, No. 2.)*

6001. (Mr. Scrutton.) In the two cases I have referred to, was the dock company trying to require a casual ship to sign one of those agreements before it came alongside the quay?—Speaking from memory, I think you are not stating it quite accurately.

6002. What is your view?—My view is that Sir Marcus Samuel claimed the right to go along to the particular berth.

6003. Which was vacant at the time?—Yes.

6004. Without signing that agreement?—Yes.

6005. And Messrs. Bruce's case was the same?—I really forget.

6006. Did the dock company submit to an injunction restraining them from endeavouring to impose that agreement on casual ships that came in?—Yes.

6007. Let us take the Victoria Dock. Can you tell us how many berths there are in the Victoria Dock unlet under this system at present?—Eight or ten.

6008. Suitable for large ships?—Such as there are in the Victoria Dock.

6009. How many berths are there unlet in the Albert Dock?—As many. Ten, I am told.

6010. How many berths are there unlet at Tilbury? Are there three or four times as many?—No; nothing like three or four times. I should think twice as many.

6011. For instance, this last year, have you had to remove a line from the Victoria Dock and send them down to Tilbury, because you have no longer any room to let them?—No.

6012. The City Line?—We have not sent them down to Tilbury because we have no room to let them. We have not sent them. They have not gone.

6013. When are they to go? You have given them notice to go, have you not?—What we have done is what is quite within our rights. We have given them notice to terminate the agreement for the berth which they held for three months, subject to notice to terminate.

6014. For how long have they held that berth from you?—A good many years, but I am not aware that because you hold a berth for a good many years, that gives you any vested interest.

6015. Where have you offered them a berth?—We have offered them a berth at Tilbury, if they like to take it.

6016. And is it because of the pressure of ships in the up-river docks that you have been obliged to say, "Having been ten years in this dock, you must go to Tilbury"?—Partly, and partly that with the space we have at our command we wish to make the best use of it. The City Line do not load in London; they simply come to discharge their cargoes here, and we hold that they can do their business equally well down at Tilbury, where the Clan Line, and the Harrison Line, and one or two other lines which are doing a similar business are working.

6017. Is it the condition this year that there is great pressure on all the three docks, the Albert, the Victoria, and Tilbury?—Yes.

6018. It is one of the reasons why you are putting forward a bill in Parliament for extending the Albert?—Yes; and not only for appropriated berths, but accommodation generally.

6019. Is the present condition of the docks correctly described in this language, "The dock companies of London are in a very serious financial position. It is unquestionably unsatisfactory to have the docks of the Port of London managed by companies which cannot develop it as it should be, and which cannot meet the demands for capital expenditure commensurate with the size and importance of the Port." Do you recognise the language?—Yes.

6020. It is the language of my friend, Mr. Sidney Holland, is it not, your Vice-Chairman?—Yes.

6021. And that accurately states the present position?—Yes. That is why we want to get relief from that position.

6022. Unless you have some legislative powers which enable you to raise more funds, is this the position that you will be in, that the dock companies cannot develop their docks?—The dock company cannot develop their docks to the extent they would wish.

6023. Let us see what powers you have got. You could legally put up the 1s. tonnage rate to 1s. 6d.?—And more.

6024. More, because you say you can charge rent?—Yes.

6025. And you do not use that?—No.

6026. Why?—For a very good reason, but it is a little long. As you have explained, up to 1889 the dock companies were fighting. It was not a question, then, of either dock company increasing their rates; it was rather a question of a dock company reducing its rates so as to get the business. In 1889, under the Working Union Act, the dock companies came together, but as you have also explained, the East and West India Dock Company particularly was crippled by certain agreements which ran on for several years up to 1895 or 1896. The result of those agreements was that, if we had then raised the dues from 1s. to 1s. 6d., half—I am speaking approximately—of the lines coming to the docks having agreements would not have paid any more than they were doing; the other half would have paid more, and we held that it would have been a very unfair thing by any action on our part to practically make some lines, say, the P. and O. pay 1s. 6d. for their ships when their competitor was coming into Tilbury at 6d. Then, so soon as those agreements ran out and we were free to make a change, we attempted in 1896 to carry through this change to which you have been referring in my evidence, and which the shipowners supported.

6027. That is the American clause?—Yes. When the shipowners deserted us, and we found we were not strong enough by ourselves to carry that through, we accepted a small extra payment from the shipowners. Some of us were very much against accepting it. From then we have been constantly looking into this question, and the result of it was that last year we went for this Lighterage Bill, and one of the reasons why between 1896 and last year we could not do anything with it was the position of the two companies; we were not amalgamated. So soon as we were amalgamated and were one concern, we went for this Lighterage Bill, but we have been all along perfectly certain that we could do this with a stroke of the pen.

6028. Does this statement of Mr. Holland correctly express the facts?—Moreover, the cost to the ship-

Mr. C. J. C. owners of discharging and loading their cargoes in  
 Scott. London is already, owing to dearer labour and the  
 8 May 1901. peculiar arrangements of the port, probably greater  
 than any other port in England."—Yes.

6029. Then Mr. Holland also says: "The dock companies hesitate therefore to place any further burden on the shipping trade, though they may be driven to do so, failing the present remedy." That is one legal power which you do not use?—Which we can.

6030. Which you can legally use, but which you do not propose to use as a matter of business?—I do not propose anything at present, and I do not say I do not propose to do it.

6031. You suggest that you have the power to charge the goods intended for overside, which are put on your quay, delivered to barges, and the barges which come to fetch them the full goods rate?—I do not know that anybody has ever denied it.

6032. You have never tried it?—No, because the circumstances have not arisen.

6033. You think you have that power?—Certainly.

6034. You do not propose to use either of those powers?—Pardon me. I do not say whether I propose to use them or not. If you read my evidence you will find that we do propose if we get further relief that we should have a reduction in our powers of charging dues, and undoubtedly it would follow if we got this right to charge goods put on the quays, we should not then claim the right to make another charge, which we also really have.

See 5592.

6035. Now, I want to ask you a little more about this American clause. You gave the figures for 1888 of the total tonnage entering from North American and Canadian ports as 683,000 tons, and for 1899 a million and a half, roughly?—Yes.

6036. Do you suggest that that increase is due to the introduction of the American clause?—I only quote that because it was stated before that clause was introduced that that clause was going to ruin the American trade; and if it is good for one party to say that that clause will ruin that trade, it is good for me to say, "This is what has resulted." I do not say in consequence of that change, but in spite of it.

6037. What is the cause of this increase? Is it that the Atlantic Transport Line began running after 1888?—If the Atlantic Transport Line had not begun running, and there had been business doing, there were other lines coming to London before. This trade has grown. It does not depend on one line of steamers.

6038. You do not suggest that it is because of the American clause that this great increase has taken place?—I say the steamers of the Atlantic Transport Company could not discharge and do their work, as they had to do, without this clause.

See 5626

6039. Now, I want to ask some questions about your proposals. The increased revenue asked is £234,000, is it?—Yes.

6040. I see one of the things you are willing to agree to is that the maximum dividend shall be 4 per cent. ?—Yes.

6041. Would you mind telling the Commission what amount per year is necessary to raise your dividend to 4 per cent. ?—On last year's figures?

6042. The last figures I have got here are 1899?—About £160,000.

See 5626

6043. Then, if that 4 per cent. clause is to be acted upon, and you propose to pay 4 per cent., it will absorb £160,000 of the £234,000 which you are asking. Then you said: "The provision of a reserve fund not to exceed 10 per cent. of the total nominal amount of the capital stocks of the company." If you acted on that to the full amount you would require to provide £1,700,000?—That is on the capital stock plus the debentures. It would be less than that.

6044. You told Mr. Lyttelton, and I think you told the Chairman, that you would by next Monday produce what you were willing to bind yourself to spend?—No, pardon me. I did not say what I was willing to bind myself to spend, because I have not got the estimates out, and it is absolutely impossible between now and Monday to get out the estimates. What I told Mr. Lyttelton—and I am sorry if I misled him—was that I would state definitely what works I would bind myself to carry out.

6045. I do not know what you are going to tell Mr. Lyttelton on Monday, but when you made this proposal what did you propose to spend £234,000 on. This is to give you £234,000 a year?—Yes.

6046. When you made this proposal what did you propose to spend that amount on?—When we made this proposal what we had in view was the new dock. Then we had in view considerable works which we had to carry out. As I mentioned this morning, our engineer has drawn up a system by which we should remodel the whole of the Albert Dock. We are only waiting to see how this new scheme of the Albert Dock Extension works. There are many other things which from time to time will have to be done, as I have stated before the Commission. Our shareholders have in the last 20 years provided £3,700,000 for the advantage of the port. The advantage to the shareholders has been that that money has cost them to raise, I suppose, something like 3 to 4 per cent., and it has earned 1½ per cent., and the whole of the difference has had to come out of the shareholders' pockets.

6047. I understand the general statement, but had you any definite figures before you when you asked for this amount of £234,000? Was it allocated to docks, was it allocated to works, or was it allocated to increase of dividend?—No, certainly not.

6048. You had not gone into that at all when you asked for it?—Not definite figures allocated. What we had to do is what we claim we ought to try to do; that is to put the company into such a financial position that it can carry out these new works, and carry on work on reasonable forms.

6049. Did you propose to spend any part of it on increase of dividend?—Certainly.

6050. How much?—It is stated here that the dividend is limited to 4 per cent.

6051. Then you propose to spend £160,000?—No, I do not say that at all. One can only deal with the dividend when the time comes for declaring it, and it is quite impossible for me to say to-day what amount of dividend we are going to declare in two or three years. It might have happened that our warehousing business had fallen off, and instead of our having a gain of £234,000, we might have nothing like it.

6052. Surely when you asked for a definite figure you had some definite ideas as to how you were going to spend it?—Yes.

6053. What were they?—I have been trying to explain perfectly frankly to you. We wish to put this company into a position in which it can borrow the money reasonably. So long as our deferred ordinary stock is only paying a little over 13s. 4d., the company is not in such a financial position, and we have spent so much of our money in improving the property that we think we have the right to put it into that position. The Port has had the benefit of Tilbury. The Dock Company would have been infinitely better off if Tilbury had never been built.

6054. Then I understand that you are unable to produce any definite figures as to how you propose to expend the extra revenue you are asking for?—Yes, if you like to put it in that way, but I think you are going too far when you do so.

6055. Can you supply me with definite figures?—I should like to ask you—

6056. I am afraid you must not?—Not that question at all. It would be like, if you were looking forward to a certain increase in income in two or three years, asking how you would spend it. I cannot tell you.

6057. Now let me ask you something else. This proposal only deals with a part of the Port?—Certainly.

6058. Am I right in saying that about four-ninths of the ships coming into the Port in 1899 used your docks?—I have given you the figures.

6059. Just see whether these figures are right. 9½ million tons came into port in 1899, and 4,200,000 came into your docks?—About that.

6060. That is about four-ninths of the ships and of the goods 14½ millions came into the Port, and nearly five millions to your docks?—Where do you get those figures from?

6061. I get the figures by adding "from foreign ports" and "coastwise"?—That has nothing to do with the goods.

6062. Is it the tonnage of the ships?—Yes.

6063. Where shall I find the goods?—I do not know.

(*Mr. Ellis.*) That is just an illustration. Is counsel to occupy the time of the Commission in this way? It is not for counsel to state to the witness; it is for counsel to extract from the witness his information.

(*Mr. Scrutton.*) I asked Mr. Scott if he could tell me.

(*Mr. Ellis.*) That is the wrong way to do it.

(*Sir Robert Giffen.*) Perhaps I can help you. There are no returns as to the tonnage of goods coastwise. All the figures as to goods which have been given us are goods in the foreign trade.

6064. (*Mr. Scrutton.*) What I want is this. Are you making any suggestions to the Commission for dealing with the rest of the tonnage and the rest of the ships which do not use your docks?—No.

6065. Is the proposal limited to the part of the tonnage and the part of the ships that use your docks?—Yes.

6066. You make no proposal for dredging the river? *Mr. C. J. A. Scott.*  
—I have no authority over the river.

6067. Or for any of the other docks?—No, certainly not. *8 May 1901.*

(*Mr. Scrutton.*) That, my lord, is all I have to ask as to facts, and I understand that as to policy you do not desire any questions?

(*Chairman.*) That is so.

(*Mr. Loehnis.*) My lord, I appear for the Surrey Commercial Dock Co. Will you require Mr. Malcolm, our chairman, here on Monday? I gather from Mr. Wallace that the London and India Docks Company will not finish their case on that day.

(*Chairman.*) I should hardly think so.

(*Mr. Loehnis.*) Will you say you will not call Mr. Malcolm on Monday?

(*Chairman.*) I think we can say more than that. I will say we will give due notice when his presence is required, and we will do that in the case of all witnesses.

(*Mr. Loehnis.*) I am obliged to your lordship.

Recalled, 6068.

(Adjourned to Monday next, May 13, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## EIGHTEENTH DAY.

*Monday, 13th May, 1901.*

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.  
Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*

Mr. Balfour Browne, K.C., and Mr. George Wallace appeared on behalf of the London and India Docks Company.

Mr. Lewis Coward, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. Loehnis appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. Scrutton, K.C., and Mr. J. B. Porter appeared on behalf of the Corporation of the City of London.

Mr. F. F. Daldy appeared on behalf of the London County Council.

Mr. Claude Baggallay, K.C., appeared on behalf of the Thames Conservancy.

Mr. K. Harper appeared on behalf of the Wharfingers and Warehousekeepers' Association.

Mr. James Cranstoun appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. Rowland Whitehead appeared on behalf of the London Chamber of Commerce.

Mr. C. J. C.  
Scott.

Mr. CHARLES JAMES CATER SCOTT re-called and further examined.

May 1901. 6068. (*Chairman*.) Will you be kind enough to refer to Question No. 608 in the minutes. You promised to give us the items constituting the sum of £109,000 charged for maintenance. Have we had those particulars?

(*Mr. George Wallace*.) I do not think you have had them, because Mr. Scott said he would have them by the next meeting, and he was not called after that day.

(*Chairman*.) We understood he would be good enough to put them in.

(*Mr. George Wallace*.) The matter has been overlooked if the figures have not been put in.

6069. (*Chairman*.) In any case, Mr. Scott, I hope you will be good enough to put them in?—Yes. Now may I make a short statement in answer to a question that Sir Robert Giffen put to me the other day?

6070. Will you give us the reference to it?—It begins at Question 5708: "Yes. I infer from this paragraph that as a lighterman he received a large compensation, and, of course, as a lighterman he would receive the benefit of the free water clause." I have now before me the appendix to the third report of the Select Committee on Foreign Trade, 1824, which I propose to put in. There it states the amount of compensations paid away to different people in connection with this matter, and I find on page 78 that the compensations are divided into five classes.

"First, of freeholders, leaseholders, wharfingers and warehouse keepers. Second, of the Corporation of London and their appointees, city companies, tackle house-porters, and ticket-porters. Third, of carmen, carroons, and merchants, etc., for additional expenses. Fourth, of lightermen, foremen to lightermen, lumpers, watchmen, and gangmen. Fifth, of coopers, clerks to wharfingers, victualers and miscellaneous." So that all the compensations claimed were distributed under one or the other of those five headings. Then further on in the list I find that

John Drinkald, the elder, and another claimed as lightermen. He did not claim as wharfinger, but he claimed distinctly as a lighterman. The amount of compensation which he claimed was £28,955 18s., and the amount of compensation which he received was £3,327 19s. as a lighterman. I put that table in with your Lordship's permission.

(*The Witness handed in Accounts relating to Port of London compensations. See Appendix 18th day, No. 1.*)

You may remember that at the moment there was a question whether he had received that compensation *qua* lighterman or *qua* warehouseman.

*Cross-examined by Mr. Daldy.*

Will your Lordship allow me to cross-examine next on behalf of the London County Council? Of course, we are out of the conflict of trade interests, and it may be convenient for the Commissioners if I cross-examine first.

(*Chairman*.) Will you be kind enough to indicate to the Commissioners the points upon which you wish to cross-examine?

6701. I will as I go on. First of all I wish to ask one question about these compensations. Will you turn to Question 5581. You will find it refers there to a very large sum, variously stated at £1,000,000, £1,600,000, and £2,000,000, as paid to the proprietors or occupants of wharves, and so on. I want to get this clear. Was it compensation paid in respect of the specific docks as they were constructed?—I do not quite follow the question.

6702. I will try to make it a little clearer. Was it paid as compensation in respect of the injury caused by the specific docks, or as compensation for the change of system in the port. Does that make it clear to you?—Yes. I should say as compensation for the change of system in the port.

6073. I want also to understand this. You said in answer to Question 5583, "Provision was made by the Act for the repayment of the moneys so paid out of the Consolidated Fund by charging them on the port dues payable to the Crown; and the accounts show that at any rate the greater part of those moneys was in fact so repaid to the Government." If the port dues or Crown dues, I will call them, were given in respect of anything else, such as canal works or anything of that kind, you could not strictly speak of these as a repayment to the Government, could you?—But were the Crown dues given in respect of canal works?

6074. Let me put it in this way. Are you assuming in that answer when you talk about repayment to the Government that the Crown dues were expressly created for the purpose of paying off these compensations?—I do not think the Crown dues were expressly created for the purpose of paying off those amounts advanced.

6075. The point I want to get clear is this. If those were dues which would have come to the Government anyhow under the arrangement this repayment to the Consolidated Fund would have been a mere piece of Government book-keeping?—Yes.

6076. I thought if you would clear it up and tell us which of those two it was, it would be convenient?—I am afraid I cannot, really. The point I wanted to emphasise was that so far as this money was advanced it was not advanced to the dock companies at all. It was quite independent of the dock companies?

6077. Quite so. But it was a buying up of existing business *pro tanto*?—It was compensation for disturbance.

6078. It was equivalent to a buying up of existing businesses. The Government also bought up the legal quays at that time, did they not?—Yes.

6079. And paid for them quite independently of these compensations?—I could not tell you.

6080. I am going to suggest to you that commercially the Government did so far find capital for the dock undertaking?—No, I cannot see that. I have put in a Treasury account, which shows exactly what the Government did pay for.

6081. I only want to put the point to you to see what you say about it. Now would you mind turning to Question No. 5587. Speaking of the state of things in the year 1855, you say that the companies were still in a sound financial condition?—Yes.

6082. I want to ask you to give us as nearly as you can the year when the companies ceased to be in a sound financial position?—You will find if you turn to Appendix, 16th day, No. 7, that up to 1877 the India Dock Company paid 6 per cent., 7 per cent., 5½ per cent., and 6 per cent. In the year 1878 they paid 5½ per cent. and from that time forward the dividend gradually diminished until nil was reached in 1887, so that I should say that dating from the year 1880 or thereabouts the companies came into an unsatisfactory financial position.

6083. In the year 1855, when this proposal was brought forward, there was a book or pamphlet published in which the grounds upon which the dock companies sought a repeal of the free water clause were set out on the one side, and the answers of the objectors on the other?—I think I have seen it.

6084. If you have a copy it may be that the Commission might desire to see it. May I take it that the book itself sets out authoritatively, or, if not, fairly, the contentions of the dock company at that time in support of the repeal of the free-water clause?—I should rather like to look at it before I answer that question.

6085. If you have not considered it I will not press you further?—I should think it would fairly represent the contentions of the dock company.

6086. Now I want to ask a few questions as to the position with regard to the administration of the Board of Directors acting in the interests of the shareholders, and not as a public body acting in the general interests of the Port. Of course, you would concede that in some matters there must be a conflict of interests between the dock shareholders and the general interests of the Port?—I do not see it except in this way, that the conflict of interests has been that the dock shareholders in the last twenty years have found £3,700,000 of money for the administration of the Port, on which they have received a return of 1½ per cent., so that the conflict of interest has been entirely in favour of the Port.

6087. But in deciding upon any given charge to be made upon the goods, any given expenditure of money, or anything of that kind, there may be a conflict between the interest of the dock stockholders and the general interest of the Port?—I do not think so. I think their interests go together. It is the interests of the dock shareholders and stockholders to develop the Port. Anything which they do which would be against the Port is against the interests of the dock stockholders and shareholders.

6088. I am going to suggest to you one or two matters in which that conflict might arise. I will get this first. Of course, with your Board, in any case, if that conflict arose the interest of the stockholders would be paramount?—I do not admit it at all.

6089. Of course, with directors of public companies the interests of the stockholders would be paramount?—Of course, we are bound to study the interests of our stockholders as well.

6090. I quite agree. I should like to get it clearly. If you have not considered it, I will not press you, but I ask you whether, as a matter of fact, and as a matter of conduct of an undertaking like this, in case of a conflict between the interests of the stockholders and the general interests of the Port the interests of the stockholders would not necessarily be paramount?—In such a case as you put before me, I do not admit that such a case has ever arisen—undoubtedly the duty of the directors would be to see that their stockholders did not suffer.

6091. For instance, both in your past charges on goods, and in deciding the charges between the different kinds of goods like hides, petroleum, hemp, and one thing and another, and also in any charge which you propose to make, might there not be a conflict between the interests of the company or interests of the general public, and the interests of the dock shareholders?—I do not think so.

6092. I have looked at the tables that you have given us, showing the net earnings of the two companies, that is Table 12 of Appendix No. 6 on the second day. I will not ask you to go through the figures now. Just look at Tables 11 and 12. What I want to direct your attention to is this. I find that taking round figures in the case of the London and St. Katharine Dock Company, to which Table 11 relates, and before the eleven years up to 1899, the net earnings only exceed the sum paid in dividends and interest by about £5,000 on the whole. I will not ask you to total up all the figures now?—Are you taking Table 11 separately, or Tables 11 and 12 together?

6093. I am taking the London and St. Katharine first. As far as I can see, in the last eleven years up to 1899, the net earnings were all paid away in interest and dividends with the exception of about £5,000?—I cannot total up the figures, but if you have done so, and say it is £5,000, I will accept it.

6094. In the case of the East and West India Dock Company, which is dealt with in Table 12, I think you will find that the moneys paid in interest and dividends for those exceed the net earnings by something like £158,000?—Yes; I daresay it is so.

6095. Would you have expended the net earnings in that way if you had been carrying on the undertaking in the general interest of the port?—I think, in dealing with these figures, you are now dealing with the eleven years 1889 to 1899. Those were precisely the eleven years when the Joint Committee was in existence. The Joint Committee administered the entire property of both dock companies, and all new works were carried out by the Joint Committee. The two separate companies simply existed for the purpose of distributing the net earnings, which they received from the Joint Committee, amongst their proprietors. The two separate companies in that way were not responsible for the working. It was a very curious sort of arrangement, an arrangement which we have since seen carried out with a couple of railway companies. And you must remember that, so far as the East and West India Dock Company were concerned, they were not paying dividends, but they were paying interest, which was a debt. They paid no dividends during that time.

6096. Not on preference shares or stocks?—No. I think it was entirely interest—not dividends.

6097. Either you had no preference stock, or you

Mr. C. J. C.  
Scott.  
13 May 1901.

*Mr. C. J. C. Scott.*  
13 May 1901. were not paying dividends upon it?—Until 1898 they paid no dividend on their preference stock. The London Company in the meantime were receiving a certain amount from the Joint Committee, and that amount was for distribution amongst their stockholders, after paying interest on their debenture debt.

6098. You also referred in Question 5587 to a number of works which the Joint Committee have carried out since 1888 out of capital?—Yes.

6099. Will you first tell me whether, in order to find out what works in the way of improvements and new works were actually done, I ought to add anything to that for expenditure for improvement and new works out of revenue, or does that statement that you have given represent the whole expenditure on improvements and new works in those eleven years?—The Joint Committee could not spend any of the revenue on new works. They were entirely an administrative body, and before they could spend any capital at all they had to get the consent of both companies. When the Joint Committee was first started, they endeavoured to carry out the plan of the two old companies to a great extent, spreading money for new works over a certain number of years, and charging it to revenue. After two or three years they were advised they had no power to do that at all, and consequently everything they spent on new works had to be charged to capital.

6100. Then I may take it that that does represent the whole of the money actually expended on improvements and new works during that period?—Are you speaking now of Question 5588?

(*Mr. Ellis.*) You refer to the £3,700,000?

(*Mr. Daldy.*) Yes, that is it. I want to find out how much the company have been spending.

(*Witness.*) By far the greater part of that amount was spent before the 11 years. It was in 20 years. That included the expenditure on Tilbury. It included the expenditure on a new entrance to the Albert Dock, which took place before the 11 years with which you are dealing. You find that in that question I stated that in 20 years that was the expenditure. So that those figures that you are reading there do not come into line with the 11 years from Tables 11 and 12 to which you just now referred?

6101. I think the best way of clearing it up will be to ask you to look at Table 9 in Appendix 6 of the second day. There is a table of capital expenditure of the Joint Committee totalling up to £627,000?—Certainly.

6102. That was really what I wanted to ask you about. May I take it that that table shows all the money that was expended in new works and improvements during the 11 years?—No, I should not say all, because we had a system. Supposing we were carrying out works for £50,000, and that necessitated the destruction of existing works to the tune of £20,000, we would only debit to capital the £30,000. The £20,000 we charge to revenue.

6103. I want to take out a few of those items which seem to refer clearly to the warehousing part of your business, so as to see what was spent on the docks themselves. The first item of the frozen meat store is warehousing, is it not?—Certainly.

6104. The Victoria Graving Dock is perhaps dock?—That is most distinctly not warehouse. You do not warehouse in a graving dock.

6105. The works erected by the London Grain Elevator Company. That is only £10,000, and that is warehousing, is it not?—No; it is as much in connection with shipping. It was a facility for shipping.

6106. I will take it both. Those improvements on Blackwall entrance, that is dock?—Yes.

6107. Refrigerating chambers?—That would be warehousing.

6108. Then there is a new cut—that is, dock?—Yes.

6109. Improvements on the South West India Dock; and then there are sundry other new works?—Yes.

6110. Those amount to a considerable sum, over £200,000. The Victoria Dock item is cold storage accommodation, and that is in the nature of warehousing?—No, not entirely cold storage.

6111. Chiefly?—There was a considerable amount of that for new sheds, which would be dock work.

6112. Could you tell us, if necessary, how much of the items included in this bracket are attributable to the dock undertaking as opposed to the warehousing?—Yes, I could get it out almost exactly. I should say the greater part of it was dock—speaking from memory.

6113. But I should think that if you divide the total figure that you have by eleven it gives an expenditure of some £57,000 a year for the average for both purposes?—Yes.

6114. If you take out the dock purposes only, it would probably not come to much over £30,000 a year?—Will you pardon my saying I do not think you are quite fair in putting it in that way. You must remember that immediately before these eleven years we had spent an amount getting on to three millions on the Tilbury Dock, and the fairer plan would be to take that expenditure, because, having built the Tilbury Dock, we had done all that was necessary to bring the trade up to the level required then. For several years, in fact, I might say almost until the last two or three years, we had a large margin of unoccupied space in the Tilbury Dock. Now that has gone. I do not think it is quite fair to take a year which very likely excludes an enormous expenditure for dock matters pure and simple, and then in the subsequent years to say you have only spent so much.

6115. With your answer I hope it will become a fair question and answer when you take them together. Those sums which I have named to you are a mere fraction compared with what was spent in the Mersey or the Clyde on new works and improvements—the average expenditure for those purposes during those years?—Again I do not think it is quite fair to exclude all expenditure.

(*Chairman.*) Mr. Scott is not concerned with the Mersey or the Clyde. I think you must confine your questions to his own docks, and not his opinion as to the Mersey and the Clyde.

(*Mr. Daldy.* If your Lordship pleases.

6116. There is a Table shown in Question 5587. You may be able to help us with an explanation about one item in that. If you pass from the year 1892 to 1893 you will see that there is a diminution in your foreign trade tonnage of, roughly, 150,000 tons. Then, if you turn on to the next column but one the corresponding diminution in the import goods on which you received dues is not only 150,000 tons, but something like 130,000 as well as 150,000 in those 280,000. That almost appears to want some explanation?—I think the year 1892 does require some explanation; 1892 was the year of the Russian famine, and practically no grain was shipped from Russia. In that year there was an enormous amount of grain shipped from America, and we get far more of the American grain than we do of the Russian; practically I think I may say we get no Russian grain. In consequence of the Russian famine and the short supply coming from Russia, our receipts were enormously increased on American grain. That accounts for the entire difference in that year.

6117. I am not quite sure whether I understand you about that. What I am calling your attention to is not that year. Receipts increased from 1892 to 1893, but they diminished so enormously more than the diminution in the total trade. Assuming that you lost the whole of the trade that did not come in at all, that would reduce the amount from £1,131,000 to something under £1,000,000, but it actually goes down to £856,893, and it makes me think that there must be something in the way of agreements expiring, or something of that kind, which will want explanation?—If you are on the question of agreements expiring, I have told you there were none.

6118. I do not want to go into that if I can possibly help it. I only want to see what the value of this table is?—These figures are absolutely correct. They were not taken out for the purpose of the Commission in any way.

6119. Do not for a moment think I am suggesting that?—What I want to tell you about 1892 is precisely what I have said. Our figures were abnormal by the enormous receipts in American grain at that time caused by the falling off of the exports from Russia. Speaking from memory, I think for a certain portion of the time there was an actual prohibition of export of grain from Russia.

6120. I am not sure that I follow your answer, but I will not press you on the point. I do not want to go into it?—There is another point I should like to speak of. Grain is a business that has to be worked very cheaply indeed. Practically there is very little profit on grain until it stays on rent. We were doing then for the benefit of the public an enormous amount of grain business practically for little more than the cost of working. We do to-day.

6121. Even now I do not see that that explains the fall in that particular year of 1892 to 1893. Still I will not press it further?—In 1893 Russia was resuming her shipments, and those from America which come into our docks consequently fell off.

6122. Now will you turn to Question 5597? You said: "The size and draught of the modern steamer places the possibility of its discharge in the river out of the question." Then you spoke of your river quay which you put up outside the Albert Dock?—Yes, and further on I speak of a river quay which is inside the basin at Tilbury.

6123. Supposing a public or private authority were to establish deep water jetties in the river, would they in fact seriously compete with the docks or not?—It depends what they charged for them.

6124. Then it comes to this: that such jetties with a lower charge than yours would seriously compete with you?—Certainly; I think they would.

6125. I thought your evidence in those passages I have called your attention to rather went to show that a pier of this kind was a white elephant which nobody would make use of?—I have no doubt that if you put up jetties like that, and told a shipper they would have them for practically nothing they would go to them. But short of that, on anything like reasonable terms they would immensely prefer the sheltered water in the docks.

6126. May I take it that you would go so far as to say that such deep water jetties could not compete with the docks unless they made a charge which was very much smaller than the corresponding dock charge?—That is my opinion, and I am strengthened in that opinion from the fact that we find to-day a great many coasters which might do their work in the river without paying anything to the docks, prefer to come into the docks and pay us charges.

6127. Now, will you turn to Question 5620? That is where you spoke of borrowing?—Yes.

6128. You said: "A short time back, when money was cheaper than at present, and the docks were in a weaker position than to-day, we were able to borrow at less than 3 per cent., and the London County Council were at the best only able to raise money at a fraction less." When you say you were able to borrow money at less than 3 per cent., do not those words go rather further than you mean? Do you mean you actually effected a loan at that rate?—Certainly; we put out a great deal of what was then our 4 per cent. debenture stock at 138, 139, and 140.

6129. You put a substantial amount of debenture stock upon the market at that rate?—Yes; a very substantial portion. During that time we were changing our debentures for debenture stock.

6130. You have admitted in the frankest possible way that you have selected the best dock debenture stock for comparison here?—Undoubtedly.

6131. That is, the London and St. Katharine debenture stock was backed, was it not, by a dividend of  $4\frac{1}{2}$  per cent. on 1,620,000 preference shares and a dividend of  $2\frac{1}{2}$  per cent. on  $5\frac{1}{2}$  millions of ordinary shares?—Yes.

6132. At that time, in 1896, did 4 per cent. debenture stock of the East and West India Dock stand at 115, or thereabouts?—I do not think they had any 4 per cent. in 1896.

6133. And of that, I think, there were something like £4,000,000 out?—Of course, the two dock companies were working together then, but I was not a director of the East and West India Dock Company, so perhaps I am not as fully acquainted with their figures as I ought to be.

6134. At the same time you put a table like this in your evidence, so I am obliged to ask you?—I am not objecting to your question, only I am apologising for not being able to answer you as easily as I ought to.

6135. Would that be about right—£4,000,000?—£3,000,000 at 4 per cent., I understand. *Mr. C. J. O. Scott.*

6136. I am told at that price that would return 13 May 1901. £3 9s 6d. per cent.?—Yes.

6137. Was this debenture stock that you issued in 1896 London and St. Katharine debenture stock?—Yes.

6138. Not East and West India at all?—No. When I spoke of the prices I was speaking of my own company, the London and St. Katharine Dock Company.

6139. The time you have selected, 1896, was, as a matter of fact, the time at which the London and St. Katharine was the top price of the year?—So was the London County Council. I did it intentionally, but I also gave you the prices, lower down, when both had fallen very considerably.

6140. With regard to that  $3\frac{1}{2}$  Metropolitan stock with which you have compared it in the year 1896, was that a stock on which any money had been borrowed since the year 1880?—I cannot tell you at all.

6141. Then you cannot tell me whether it was redeemable in 1929?

(*Chairman.*) We had it, I think, in the answer that they were both irredeemable.

(*Witness.*) They are both irredeemable.

(*Mr. Daldy.*) I am afraid I must challenge that, but it may be that the witness did not know.

(*Witness.*) The London and St. Katharine debenture stock was certainly irredeemable, and I am told that the other was, too.

6142. I am told that it was redeemable in 1929. If you provide for the redemption you have to take off 10s. 3d. from the income?—Not altogether. If you had taken the price of Consols when they were very high you would have found there was very little allowance made in the price for the time that the interest would fall from  $2\frac{3}{4}$  to  $2\frac{1}{4}$ .

6143. Can you tell me one way or the other whether in the year 1896 the London County Council was raising money at a net interest of £2 6s. 1d.?—I cannot tell you. We know what they are raising it at to-day.

(*Chairman.*) I think that has hardly to do with us.

6144. (*Mr. Daldy.*) Now in Question 5626 you said (giving a reason for it) that it would be several years before any Trust could assume definite shape, and in the meantime the needs of the port, constantly growing, must remain unsatisfied. Do you say that this compensation must be assessed and paid before the Trust should be established at all? Or what is your reason for that statement?—I think if the Dock Companies are going to be bought out the question must be settled before they are bought out, how they are going to be bought out and what they are going to receive.

6145. And that is the meaning of your statement?—Certainly.

6146. That the transfer could not take place or the Trust be constituted until all the compensation had been assessed?—Yes.

6147. In Question 5626 you have given some figures, about the yield from your proposed new rate. Do you anticipate that the imposition of these charges will relieve the congestion of the barges in the docks?—Undoubtedly.

6148. To a substantial extent?—It will tend that way, undoubtedly.

6149. In estimating your figure of £56,250 as the yield from barges, have you not assumed that the number of barge entries would remain the same as before?—Undoubtedly.

6150. So there would be some reduction from that figure?—I think there probably would be.

(*Mr. Daldy.*) If your Lordship will allow me, it is possible this question may go rather on policy, but I would like, with your Lordship's permission, to ask the witness one or two further questions.

6151. Would not the dock undertaking be substantially benefited by the deepening of the river to 30ft. up to the Albert Dock entrance?—The dock undertaking would be benefited in this respect: that it would benefit the trade of the port; but the dock undertaking would not be benefited unless we went to a very considerable expenditure.

6152. May I put it in this way? Assuming that

*Mr. C. J. C. Scott.*  
 12 May 1901. the public authority became bound to-morrow to deepen the river up to the entrance of the Albert Dock, would it improve the value of the dock undertaking forthwith or not?—I am not sure that it would, and I will tell you why. If you had the river deepened to that extent, so that ships could come up at any time, we should practically have to make our dock so that we could lock in at any time. Locking in at any time when the tide was very low would mean extra pumping, and, consequently, extra dredging. It would be a great advantage to the trade of the port, but whether it would be a great advantage to the docks, I question.

6153. I think you have already said that this proposed extension of the Albert Dock is dependent upon the deepening of the river. It would not be a commercially practical thing unless the river is deepened too?—We propose to carry that out, believing that whoever has charge of the river will deepen the river.

6154. I think you are answering my question in the affirmative. If you knew for certain that the river would not be deepened, would you carry out that proposed Albert Dock extension?—We should carry it out. We might not carry it out to its full extent. Possibly we might not make the entrance quite as deep, because it would be useless to make an entrance so deep if we knew that the vessels could not come up there. Of course to-day, when you have high water, the vessels would come into that new entrance. What you propose is that the vessels shall be able to come up at any time by the deepening of the river. But at high water now (if that dock was in existence to-day) we could use that new entrance.

6155. I think your answer is, if I may put it shortly, that, assuming no deepening of the river, you would still go on with that to a certain extent?—Certainly.

*Cross-examined by Mr. Shaw.*

If your Lordship pleases, I would like to ask a few questions on behalf of the North London Railway Company. The first point I would like to put would be rather historical. It will be about the connection between the North London Railway and the Dock Company. I do not think your Lordship has had it yet.

6156. You have been giving past history. I want to ask you a few questions with regard to the history of the Poplar Docks. I think about 1846 there was a suggestion made that railway connection should be made with the docks in London?—I should think so.

6157. Then I think a company was promoted which was the predecessor in title of the North London Railway Company to make that access?—I think very likely, but I was not a director of the East and West India Dock Company, who made the arrangements with the North London Railway Company, and I cannot speak of those things from my own knowledge.

6158. You have been giving the history of this; I thought it was only fair to put the question to you, because my witness, Mr. Newton —

(*Chairman.*) He was so ill, I think we did not have the advantage of his evidence.

(*Mr. Shaw.*) It is only fair to Mr. Scott that he should have an opportunity of answering what Mr. Newton has to say about those things.

(*Chairman.*) Do you not think it would be better to have Mr. Newton first?

6159. (*Mr. Shaw.*) I will leave the history to a certain extent alone if you do not know it; but I must the agreement which was come to between the Dock Company and the North London Railway Company, or the predecessors in title, certain moneys were paid over to the Dock Companies?—Yes.

6160. In Appendix No. 31, of the 16th day, I see you put down that the figure received from the North London Railway Company was £4,580 in 1899?—Yes.

6161. That is not the total sum that the North London paid, was it?—I believe so.

6162. Is it not the fact that in 1899 they paid you something like £36,000?—For compensation?

6163. No, not compensation. I must go back again, so as to give you an opportunity of understanding. Under the agreement by which the North London Railway Company turned the timber pond that was there into a dock at their own expense, they were to pay you wharfage rates, rent, and warehouse charge. Did not the total of that come in 1899 to £36,000 odd?—Certainly not.

6164. Has it not been for the last 10 years over £30,000 per annum?—No, certainly not.

6165. Perhaps in that £4,580 you have not included what the London and North-Western Railway Company, and the Great Western Railway Company, and the Great Northern Railway Company, who were tenants of part of the Poplar Docks, have paid you?—Certainly not. This is the amount paid by the North London Railway Company. It is not the amount paid by any other railway.

6166. I am dealing with the total amount, because we are liable to you for it. That £36,000 is the total amount you have got out of Poplar Dock?—I think you are wrong. You are not liable for it at all. We get that from other railway companies.

6167. We are tenants of yours under a lease of 999 years. We are liable to pay you for everything that goes into that dock what the railway companies, who are sub-tenants, pay. Of course, if they do not pay, we should be liable?—I do not think so.

6168. That is a legal question. But will you accept it from me that the total amount that was paid to you in 1899 out of what went into Poplar Dock was £36,000? Or could you get it for me? That is what we have got that was paid, and for the last ten years it has been a good deal over £30,000?—The North London Railway Company do not pay it at all.

6169. I put it that out of traffic that goes into Poplar Dock you get the benefit to the tune of between £30,000 and £36,000 in a year?—In other words, you would say that the amount we received from traffic going into the Poplar Dock is very considerably in excess of that amount of £4,580. See 1178

6170. Certainly?—Yes.

6171. And is it not the case that it was in 1899 £36,000?—I question it, but I will try to get out the figures.

6172. And that is a return which you get, the North London Railway having done all the capital expenditure, and you having done nothing?—No.

6173. Have you spent a halfpenny on Poplar Dock? Was it not entirely built and paid for out of the North London capital?—May I ask, do not we allow you 7 per cent. on certain amounts of money spent by you?

6174. Those are entirely out of the takings of the dock before we hand you over the balance?—Exactly; and it is all part of an agreement with you.

6175. I quite agree?—Under which we lock your barges in and out. They have the use of our water, and occasionally we find that you break away from that agreement, as we had occasion a little time ago to draw Mr. Newton's attention to, and Mr. Newton had to admit it, and say they were doing what they had no business to do.

(*Mr. Shaw.*) I did not want to go into the breaking away from the agreement.

(*Mr. George Wallace.*) I am told that the agreement between the dock company and the North London Railway Company is a very long and elaborate lease, and I believe it would be very hard to say what every right of every party in it was.

(*Chairman.*) I do not think we want to go into this, Mr. Shaw. If you ask him as to the figure, I think that will be perfectly fair.

(*Mr. Shaw.*) I wanted to get the figures before your Lordship.

(*Witness.*) My lord, if you will kindly allow me, I will try to get out a statement showing what income we receive from the Poplar Dock, and how it is charged and how it is received.

6176. (*Mr. Shaw.*) That figure I have been putting to you, I think, includes a sum of £500 a year which we pay to you towards the cost of pumping?—Received in recent years in consideration of your being allowed to do certain things.

6177. I only want to get the fact?—I think it has been paid for about three or four years.

6178. Now I just want to ask you a few questions about the barges. It is almost essential, is it not, to the trade carried on in the Poplar Dock, that barges should come in?—Yes, I should say distinctly so. See 1178

6179. I think the question about the barges has been raised two or three times between the North London Railway Company and the dock company?—Yes.

6180. I think in 1855 you introduced an Act of Parliament which was thrown out on the second reading, which has been referred to. You gave an undertaking to the North London Railway Company that even if you got your bill you would not charge the barges going to Poplar Dock?—I do not know of it. It may be so, but it is very ancient history, and I certainly could not tell you.

6181. Since then is it not the fact that over and over again you have tried to get relief from this obligation, and have failed both before the courts and before Parliament. I am putting it generally?—No, I cannot admit that at all.

6182. Have you not tried to charge on certain barges and the North London Railway Company have had to pay? I can give you cases?—I know of a case quite lately, within the last few years.

6183. That was only the last one, but I say generally was that not the case?—I know of that one case. It was the Burham case.

6184. But that was not the only one, was it?—Will you name another?

6185. In 1878 you tried to charge 6d. on the registered tonnage of barges laden with goods. Will you tell me if this is not true. At the close of the year 1878 the dock company, without giving any reason, sought to impose a charge of 6d. a ton on the registered tonnage?—Yes.

6186. The railway company commenced Chancery proceedings?—Yes.

(Mr. George Wallace.) My Lord, the witness may be in a slight difficulty because of course this relates to the India Dock Company, of which Mr. Scott was not a director at that time, in 1878. He never was a director of that company.

(Mr. Shaw.) I have nobody else to ask these questions of. The docks have all amalgamated now, and Mr. Scott, if I may say so, is the very capable Chairman of the London and India Docks Company.

(Witness.) Unfortunately I have no knowledge of what happened so many years ago.

(Mr. Shaw.) I will try to cut it very short.

(Chairman.) We would suggest that questions such as you are asking now should be put in examination-in-chief of the Poplar Dock witnesses.

(Mr. Shaw.) I expect they will be able to tell us. I will let it go at that. Of course I know a Royal Commission like this has a different way of dealing with witnesses. Mr. Newton will be called, no doubt, and he will go into this.

(Chairman.) It was only through Mr. Newton's illness that we did not hear him. Of course we shall hear him.

(Mr. Shaw.) I think this puts very fairly what the contention is. It is at Question 5597: "It will thus be seen that the exemption clause by reason of its accidental survival some 80 years ago." The word "accidental" is what I was going to ask about. Is it not the fact that the question of the barges was put before the Committee that you have referred to—the question of the barges was put before that Committee—the question of loading and unloading vessels from the side of the ship?—In what year?

6187. The Committee of 1823?—What I was referring to then I think I have stated in my evidence before, was that when the company sought an extension of their monopoly and it was refused, this question of the exemption on barges was never raised in any form.

6188. But had not that Committee evidence before them that barges were then in the docks loading and unloading vessels?—I could not answer the question.

6189. Very well, I will put it in when I come to it?—May I ask for a further reference?

6190. I will get the reference for you. There are one or two places. I have not had time to read that document. You will see it at page 81 in the report of the Committee on the Foreign Trade of the Country, 1823. The question I was putting to you is that this matter of loading and unloading into barges in the docks was at all events before that Committee that dealt with foreign trade. I see a question was asked Mr. Longlands how many ships had at one time been in the export dock. He says that there had been at one time

185 ships in that dock, but that only 130 could load. The question was before the Committee. I only want to draw your attention to that, because you have used the word "accidental"?—I think there the facts only are stated. What I say is that the question of exemption was never brought up at all.

6191. Now I leave that, and will ask you a question about finance. In Appendix No. 6 of the 2nd day there is Table No. 12, giving items of expenditure on new works charged to revenue account and the amount used in diminution of cost of works. For the West India Dock Company you say from 1804 to 1882 there was charged for maintenance and new works, £862,000. Allow for revenue account, say, £6,000 a year?—Yes.

6191A. As I understand it that figure is a figure that you propose to put back to capital account?—Not at all. We do not deal with that. That is simply a statement showing items of expenditure. In our accounts we do not propose to do that.

6192. Then I will deal with it on that basis. How do you arrive at that amount?—It is taken from the accounts as far as it could be, and where we could not get the correct figures it is estimated.

6193. Is it not the fact that while this dock had that monopoly you were under a statutory obligation? You were allowed big rates and a monopoly, and limited to 10 per cent.; everything over 10 per cent. that you got had to go in the improvement of your docks. Under the Act of Parliament 39 George III., cap. 69, you were under an obligation to expend all the money that you got over the 10 per cent. upon the improvement of your dock?—What you would really say is that this ought to be charged to capital.

6194. No, it ought to be charged to revenue in the ordinary way; it ought to have gone out of the common funds as it was treated up to that time?—But if you charge that to revenue you will put off the time when you can pay your full percentage and reduce your charges.

6195. You are making a hardship that you had to spend all this money out of capital account. It was part of your bargain with Parliament that you were to spend it?—No, I do not say that.

(Chairman.) I must ask you to keep, please, to questions which affect the Poplar Dock.

(Mr. Shaw.) This is a question which affects the Poplar Dock. If they levy a tax on barges that will affect the income of the Poplar Dock.

(Sir John Wolfe Barry.) It is very remote to go back to 1824 to deal with the present position of your Poplar Dock.

(Mr. Shaw.) I will not go any further. The only point was the figure that was put in. Now I am only going to ask one more question. £6,000 a year was put down. How do you get at that? In the old days during that period your cost of repairs was £15,000 a year?

(Chairman.) But that is hardly a question for us.

(Mr. Shaw.) Then I will not ask it. We can put it in chief. Mr. Newton is coming, and I think he will be able to deal with the other questions.

Cross-examined by Mr. Harper.

6196. I understand that his proposal is practically to lessen the competition, is it not, between you and the wharfingers?—No.

6197. You do not think that your proposal will hurt them?—It may hurt them to this extent—that at present they are charging our rate for services which we do for them, while we have to do these services ourselves.

6198. An adverse pecuniary effect would be produced upon the wharfingers?—They would be asked to pay for the services which they receive to-day for nothing.

6199. Let us just see historically how this matter arises. Originally goods that came into the river could only be landed at legal quays?—That is so.

6200. Which I think were established by Acts as far back as Queen Elizabeth's time originally, and were followed by Acts in Charles's time?—I believe so.

6201. Then in 1799 the first Dock Act was passed. That was an invasion of the existing monopoly of those legal quays?—For which they were compensated.

6202. I am merely asking you the facts. Parliament in granting the monopoly to the first of those docks for a period of 21 years made provisions, as you told us, for compensation. I do not think this has been quite

Mr. C. J. Scott.

13 May 1902.

*C. J. C. Scott* clearly got. The docks did not pay that compensation?—No.

18 May 1901. 6203. It came, I think, by a tonnage rate on dues having been in the first instance provided from the Consolidated Fund of the country?—I believe so.

6204. Under that system matters progressed until the Foreign Trade Committee, of which we have heard in 1823, and that was at the time when the 21 years' monopoly was just about to expire?—About then.

6205. And was the precursor of the passing of the St. Katharine Dock Act, 1825?—It was before that certainly.

6206. And I suppose we may take it it was passed on the basis of the information acquired by the Committee, and that Act contains the exemption for lighters and overside delivery. I am not quite clear whether we have had it at present before the Commission. Originally the exemption was lighters only?—Yes.

6207. That is in the Act of 1799, the reason being, I take it, that you were given a monopoly then of landing particular classes of goods?—I do not know what the reason was. I can only say it was a fact.

6208. In 1825 it was apparently foreseen I suggest to you that the exemption of lighters would not be adequate protection for you, and the exemption was, therefore, extended to free goods?—I believe that was the date when it was extended, but what was foreseen I cannot say.

6209. To cut the rest short it has continued since?—Yes.

6210. May I remind you that in 1856 you were in Parliament?—Yes.

6211. I think the debate has already been referred to where Mr. Cardwell, the President of the Board of Trade, as he then was, opposed that on behalf of the Government?

(*Mr. Ellis.*) We have this clearly on the notes.

(*Chairman.*) Have you any question to ask in connection with that Act.

(*Mr. Harper.*) Yes, my Lord, I think I have.

(*Chairman.*) Then will you kindly put it?

(*Mr. Harper.*) I was trying to do so as rapidly as possible. I thought it better to lead up to it. I thought it was more advantageous than to put an isolated case.

6212. Mr. Cardwell pointed out their position as owners of water space and as large wharfingers, and said that "by granting the sought-for privilege you would undoubtedly place them in an unfair position to compete with their rivals"?—That is what he said.

6213. How do you suggest that circumstances have changed since then?—I do not admit that. That was the suggestion of one man. The Bill never went into Committee where those suggestions would have been threshed out.

6214. You are now proposing to levy, as I understand, two rates—one on the barge, and the other on the goods, and you have instanced other ports. You gave an illustration, for instance, of Manchester. But there was no wharfing business at Manchester until the docks were created there. The whole thing came into being at the same time, did it not?—I should think so.

6215. Therefore you would hardly say that was precisely an analogous case to London, which had a system of wharves which had been established for centuries?—I think the point is that when the docks were started the wharves were compensated.

6216. Do you suggest that the wharves were compensated for anything beyond the period for which Parliament granted the statutory monopoly?—I say they were compensated for the loss of this business.

6217. But that was in the Act of 1799 alone. Was there any compensation provided in the Act of 1825, or by any one of the succeeding Acts since fresh docks have been established?—No; but you started afresh in 1799. The wharves were compensated for the loss then, and you started afresh.

6218. That is your reading of the Act?—Yes.

6219. You estimate that the effect of what you want to do would be to produce a revenue of £234,000, but you told my friend, Mr. Daldy, this morning, that you

estimate a reduction in the tonnage of barges?—I think it is very possible that there may be a reduction.

6220. That would mean the crippling of the wharves?—Not necessarily.

6221. It would mean less goods going to the wharves?—A great many goods go now to the up-town warehouses.

6222. I am speaking of wharves more particularly?—It might to a certain extent cripple them.

6223. Do you think it would be fair, in respect to any diversion caused by that abolition of the existing rate, that they should be compensated?—The question of compensation is not one for me to settle.

6224. You have not considered it?—Certainly not.

6225. You would produce about £234,000. 4 per cent. of your total debentures, I think, produces about £160,000?—No; you have not the figures at all correctly. That is the difference between the present amount which we pay on ordinary stock and the amount required to pay 4 per cent.

6226. To bring it up to 4 per cent. dividend?—Yes.

6227. And you would be left then with £74,000—the difference between that and £234,000, which you estimate. That would be whatever was coming to you from the lighterage dues and from the quayside tonnage due?—The total amount is, as I have put it, the amount we expect to realise from the dues on barges and the dues on goods.

6228. But, in addition to it it would have a tendency to divert this into your warehouses, and you would have the profit on that warehousing in addition?—Then the amount of this would be reduced accordingly. We could not charge it twice over.

6229. How would it be reduced?—Take the barges. If fewer barges come because the goods go, not necessarily into our warehouses—but go away for land delivery, or go into our warehouses, and we do not get these dues on the barges, of course, we should get an increased charge, either for the handling on the quay or for the warehouses.

6230. You would get quay rates and you would also get warehouse rates?—Not necessarily. You do not quite understand; we do not get quay rates and warehouse rates, too.

6231. You may, may you not?—No.

6232. Why not?—If we charge the warehouse rates we do not charge quay rates.

6233. As a matter of practice, you mean?—As a matter of practice.

6234. There is nothing to prevent you in law, is there?—No, except that there is always the outside competition. If we were to attempt to charge both quay rates and warehouse rates, we should not get any business.

6235. You have told us that you had no agreements with anybody for preferential rates. I understood you that all the railway companies were treated alike, and that they had a rate which was a cheap one?—It was a lower rate.

6236. That is putting them directly in competition, is it not, with the old water-borne traffic?—No; this was for export business entirely.

6237. Do they get nothing on import?—No; nothing at all. The only exception is in the case of wool, where a very low quay rate is made, which would not affect the barge traffic at all. I think I am right in saying that all the wool warehouses are town warehouses, and have no river frontage excepting ours.

6238. Speaking of wool, you are very congested there, are you not, now?—Yes, very.

6239. You had to refuse some 2,000 tons the other day, did you not?—I quite admit there has been a tremendous amount of wool coming in lately on account of the way the prices have fallen, and not only have we been so congested, but we have had to keep wool down there on account of the other wool warehouses which have not been able to take it.

6240. Might I ask you, while I am on that point, what the present state of your warehousing accommodation is? It is pretty full?—Yes, at the present moment.

6241. You could not warehouse much more goods?—Oh, yes.

6242. What class?—Various classes.

6243. Tell me in what warehouse you have much available space?—Sugar, for instance.

6244. There is a special reason, is there not, why that may fall off at present?—I think you do not perhaps realise one of the difficulties of a warehousing business. We may have a great deal of space that is not occupied, for the reason that you cannot mix up different trades. You have a warehouse, say, allocated for indigo, and that warehouse may be occupied for a certain time. To-day we have a very small stock of indigo, but we cannot put other goods into the warehouse.

6245. Not to mix them?—No; and very often you could not put them at all, because the dust from the indigo gets into the warehouse to such an extent that it would damage other goods that came in. You cannot mix up goods indiscriminately.

6246. To an extent, I suppose, that is what a wharfinger does, is it not?—I do not think any wharfinger does the same mixed business as we do. Then you must also remember there is the question of fire insurance. The fire insurance companies will not let you mix up goods indiscriminately. According as they are first, second, or third class risks, you have to keep them separate.

6247. I think you told me that one of the reasons why wharfmasters were able to charge lower rates than you did was that their fire insurance risks were lower than your own?—No, higher.

6248. Is the warehousing part of your business at the present time paying a remunerative rate of interest?—I cannot answer the question at all. I have tried to get out the information for the Commission, but the whole company is so worked to-day that it is absolutely impossible to separate one part from the other.

6249. I am reminded that at Question 5646 you are reported to have said: "Their justification for that is that their rates of fire insurance are less than ours." It would seem almost natural, as they charge less rates?—No. I am very sorry if I have made a mistake; I should like to correct it. It should be "more than ours."

6250. Quite so?—The wharfmasters' premises, as a rule, are rated by fire insurance companies higher than the Dock Companies. The wharfinger does not pay the fire rate; the importer who gives him his business has to pay a higher rate for fire insurance. Consequently, if the importer has to pay more for fire insurance, he will say to the wharfinger: "I cannot give you these goods at the same rates that I pay the Dock Companies. If I have to pay a higher rate of fire insurance, it would then mean that my cost for warehousing with you would be higher than with the Dock Company." Therefore a discount was given off the rates of the wharfinger so that he might be able to compensate the merchant for the higher rate of fire insurance paid by the merchant.

6251. Speaking of that reminds me of this. There have been some insurance cases, have there not, testing this question about goods on the quay side of the wharf? Will you look at Question 5589? "When you get a certain amount of running cargo it may be different, but taking our ordinary mixed cargo, it is absolutely impossible for the ship to deliver those goods to the barges without making use of the quay, without putting up with a loss of time which practically makes it impossible. 'In thus using the quay as a stepping-stone between the ship and the lighters, however, the shipowners render the goods liable to be charged quay dues and the lighters shipping dues by the Dock Companies, inasmuch as the 1799 section applies only to delivery directly overside. That is, that if we like to exercise our statutory powers to-day, if a shipowner puts any goods whatever on to the quay, and then takes these goods from the quay and puts them into a barge, we are entitled to levy our rates on those goods and dues on that barge.'" Do you put that forward as being a charge which would fall upon the goods, the lightermen, the wharfinger, or the shipowner?—If the shipowner puts the goods on the quay, and then delivers to craft from the quay instead of delivering overside, in accordance with his instructions, the shipowner would be liable for that.

6252. That would be under the Merchant Shipping Act, sec. 493. Now let me turn to the North Atlantic

bill of lading. Under that bill of lading I understood you to say that the shipowner makes a good deal of profit?—He has saved a great deal of loss. That is how it works in.

6253. Therefore he makes a profit?—Certainly.

6254. Will you look at Question 5657? "[Q] Under the conditions of the North American trade the shipowner has done his work when he puts the cargo on the quay?—[A] Yes; but the shipowner, under the North American bill of lading, by his bill of lading is entitled to make a charge for doing that, and there is a considerable amount of profit hanging on to that, so that the shipowner is anxious to put it on the quay?"—Yes, I believe so.

6255. That is a profit which he has made?—Yes.

6256. Under that bill of lading you then make what you call considerably reduced charges to lighters going to take it away, do you not?—But we make no charge to the lighters at all.

6257. Is not this the North American bill of lading? The Wilson Line use it, I believe?—Yes.

6258. It says that consignees desirous of conveying their goods elsewhere shall, on making application to the dock companies within 72 hours after the steamers arrive, be entitled to deliver into lighters at the following rates. Then it refers, to grain, rice, flour, coffee, oilcake, sugar in bags, cotton, and so on?—But that is an arrangement with the shipowner.

6259. But the lighterman has to pay to get the goods away?—He does not pay us. He pays the shipowner.

6260. The shipowner has already saved something by putting it on the quay, so he is getting it double. As I understand you, the people using the North American bill of lading get a preferential rate, do they not?—In what way?

6261. You give them special terms, do you not?—No, not at all.

6262. What terms do they come in on?—The same terms as anybody else.

6263. Do you charge them for the use of the quay?—Certainly. I should be very much surprised to hear that we do not.

6264. Does it come out of the rent, or how does it come?—I mean the charge for the quay?—It is a rent. They pay a rent.

6265. It is all lumped together?—They pay a regular rent for all their appropriated berths just like any other line.

6266. Do they get them at a lower rent than the others?—No, it is higher if anything.

(*Sir John Wolfe Barry.*) Do you suggest the wharfinger or the lighterman now pays those rates for traffic taken from the quays under the American bill of lading?

(*Mr. Harper.*) It ultimately falls in that way.

(*Sir John Wolfe Barry.*) Do you suggest they pay it now to anybody?

(*Mr. Harper.*) It is the goods that bear the charge.

(*Sir John Wolfe Barry.*) But the wharfinger does not pay?

(*Mr. Harper.*) No, I do not think he does pay. It comes to this, that the goods have to bear them. If he cannot get them out of the merchant he has to stand to it as a reduction of his charges if he wants the business. That is the effect of it.

(*Witness.*) It simply corresponds to the Liverpool Master Porterage Rate, where either the ship itself or the ship through an agent does the work on the quay and charges for it. Everybody taking their goods has to pay. All the goods that we take from the American lines in the same way we have to pay these charges for. The riverside wharfmasters would have to pay, and the people who own private wharves where they do no public business, but only their private business, have to pay. It is a labour charge. It is not a charge for dock accommodation at all.

6267. Do you make an allowance back to the merchants for goods that have been landed under these North American bills of lading?—It is smothered up in our warehousing charges.

6268. A reduction?—No.

6269. Do you make an allowance to him on your own

Mr. C. J. C.  
Scott.  
—  
13 May 1901.

*Mr. C. J. C. Scott.* counts?—We do make an allowance in that way, because our charge includes the labour at the docks.

*13 May 1901.* 6270. But do not you make an allowance back to the merchant?—On certain goods—coffee, for instance. Where the merchant has paid that amount to the ship and we have the warehousing we credit the merchant with the amount.

6271. In point of fact if you get 1s. you credit him back with 2d., or whatever it is that he has paid, so as to get the warehousing in competition?—Precisely like any other wharf.

6272. Then if he does not land under that bill of lading he does not get that advantage?—No, because we get nothing.

6273. I was not asking you why. I was only asking you the fact?—It is not our custom to give something for nothing.

6274. You have considerable advantages in other contracts, in the first instance over wharves, have you not? Take the East Coast of Africa. Take a ship coming from, say, Zanzibar, does she frequently outstrip her bill of lading?—I do not know; it used to be more than it is to-day. I should not think very frequently.

6275. Is it not the practice very often that the bill of lading has to go from Zanzibar to Bombay and come from there to London?—It may be.

6276. Then when it is more than 24 hours late the shipowner can land on the quay?—He can.

6277. And then you get all the advantages of the dock rates and lighterage rates?—We get the advantage of unclaimed goods undoubtedly, and it is for the advantage of the ship.

6278. Then there is another thing. A merchant cannot always discharge his freight within the bill of lading period. Then in that case you get the pull over the goods?—They are unclaimed goods, and the shipowner prefers to leave the goods with us for security, naturally. I believe it is not at all an unusual thing for wharfingers to pay freights so as to get the goods.

6279. Do you pay bonuses to ship's agents for ships?—How do you mean?

6280. Take the green fruit trade. Take a ship directed to the orders of a broker in London. Have you paid a broker for directing a ship to the docks?—We will make allowances to the ship to get the ship into the docks.

6281. To the broker?—Yes, we have given it to the broker.

6282. And to pilots?—No.

6283. Never?—I do not know. I do not think so. I do not see why we should, because I do not see that the pilot could influence it.

6284. I am speaking of getting a particular dock to go to?—No; I might say that it pays us sometimes. Say a ship wants to come to a lower dock, we might say to them that if they would go to the upper docks we should save certain expenses, and we would pay them a certain return to meet those expenses so as to get the goods up in close proximity to where they are to be placed.

6285. You work some ships?—Yes, about 18 per cent. of the total quantity coming into the dock.

6286. Where you are in competition with the wharf is it your practice to work them out at a reduced rate?—For goods?

6287. Yes?—Not that I know of.

6288. You know of no instance?—I know of no instance.

6289. There is one of your trades, I think—the frozen meat trade—which is worked in a particular way. You have to make rapid delivery, of course?—A great deal of the frozen meat trade has to be delivered at night.

6290. Into lighters?—Not from us. We do not discharge any frozen meat; and the meat that goes into our warehouses—

6291. I am not speaking of that; I am talking of the discharge of a ship in the docks?—That we do not do.

6292. Have you provided dummies that enable that work to be carried out?—For the convenience of the ship I have no doubt we have at times.

6293. A dummy is briefly a landing stage, is it not, between the ship and the quay wall?—Yes.

6294. With a water space between what I have called the dummy and the quay wall, in order that barges may get in between?—Yes.

6295. So that you can unload overside direct into the barge on the outside of the ship and over the dummy on the other side, and so work it from both sides, as it used to be done in the old days of the river?—Yes.

6296. Does not that conduce a great deal to the dispatch of business?—It may, in certain instances, but you have just taken the very instance where, I suppose, the discharge of vessels is the very slowest in the port. It is on the question of the discharge of vessels that we have been approached, I think, by the New Zealand Government, with the object of putting up sorting sheds, because the frozen meat, being discharged in the way you have instanced, is exposed to the weather, and damaged.

6297. It is discharged straight into covered barges, is it not?—No; you cannot cover those barges until you have a certain amount of meat in them, and it must be exposed to the weather.

6298. How long do you say it takes to discharge into a barge?—A very long time. Sometimes a portion has to be discharged into one barge, and then you have to go to another barge.

6299. You have never attempted that system of discharge by dummies with regard to anything else, have you?—Every day.

6300. Where?—Constantly we do it. You can go along the Albert Dock, and you will find it there. A great many vessels have dummies.

6301. Discharging what?—All sorts of cargoes. It is not exceptional to the meat trade, at all.

6302. What is it you are proposing in the shape of what you called a barge pond? Tell me in general terms merely, because your engineer will tell us hereafter, no doubt.

(*Witness.*) My Lord, this question is in connection with our Bill which is now before Parliament, and will get before the Committee. If the Commission wish it, I am perfectly willing to say what we propose to do, but I do not know how far I am right in producing plans here which will have to go before the Committee of the House next week.

6303. (*Mr. Ellis.*) Is this the New Works Bill?—Yes.

(*Chairman.*) Certainly we ought not to go into that. Perhaps, Mr. Harper, you will ask the question of the engineer when he comes.

(*Mr. Harper.*) If your Lordship pleases.

6304. You made a strong point about the cost of dredging the docks. You have given us figures of the number of barges that use the docks?—Yes.

6305. And the proportion which you consider belonged to this?—You say, "which we consider"; it is which are taken from actual returns.

6306. Quite so. I do not dispute that. This is given at Question 5626. You have roughly 823,000 tons, which is 10 per cent. of the barges employed in the London and India Dock Company's work?—Yes.

6307. You have, then, 10 per cent. carried coal, which was an estimate?—Yes.

6308. Then 10 per cent. of the barges passing from one company's docks direct into another?—Yes.

6309. That is practically dock company's work, is it not?—No.

6310. Who gets the benefit of that work?—It is a great deal transhipment goods; it would not be ours at all.

6311. Your next item is barges exclusively employed in conveying transhipments?—Yes.

6312. That brings you to a total of nearly 3,000,000 tons?—Yes.

6313. What is the total tonnage of ships in the same way? It would be larger than that?—It would be larger than this amount.

6314. You have attributed no portion of the cost of dredging to ships using the docks, have you?—There is no necessity for it.

6315. You propose to saddle the lightermen and indirectly, I suggest, the wharfingers, with a tax upon barges taking goods away which may be in competition with you, and which will go to pay for dredging par-

tially occasioned by ships, partially by your own barges, partially by coal barges, and partially by transhipment barges?—Put in that way, it is to a certain extent correct, but so far as ships are concerned, the amount of dredging on account of ships is comparatively small. The ships practically enter at high water, when the loss of water is reduced to a minimum. It is in consequence of having to look the barges one, two, three, and even more hours before high water that the great loss of water is occasioned.

6316. Loss of water, you are speaking of now?—It is the loss of water and making good that loss of water which necessitates the dredging.

6317. It is also, is it not, having a dock sill that is high?—No; I do not think so at all.

6318. There have been suggestions made about lowering the dock sills?—That is done to keep the mud out.

6319. Not to let it in?—Certainly not.

6320. When goods are warehoused in the dock, do you make an allowance to the shipowner?—No; I have never heard of any.

6321. 1s. 3d.?—That is a very different thing. That is where the shipowner does the work on the quay; the shipowner delivers goods into the shed from his ship, and by our arrangement with him in order to prevent having duplicate staffs on the quay, we say, "That in respect of these goods from the ship, which you have to deliver to us for warehousing; we will pay the necessary expenses on the quay." That is purely for labour which the shipowner does for our account.

6322. Would the quays of the docks without the warehouses be of any use to you?—Yes, undoubtedly.

6323. You would make a profit on the water part of your undertaking as distinguished from the warehousing?—I could not separate it.

6324. You have not charged your full rates as authorised by Parliament yet?—I know we have not.

6325. As I think you told us, 6d. a ton would produce £100,000. Why should you not charge that before you seek to vary the whole system of this port?—Because we consider that the best thing we can do is to encourage shipping to come to the port, in the interests of wharfingers and the docks.

6326. But you would be bringing something which would operate prejudicially, and I put it to you, would it not practically amount to creating on your premises bounty-fed warehouses?—In what way?

6327. You are going to levy a tax upon everybody else, which you do not levy upon goods going into your own warehouse?—At the present moment it is not to levy a bounty; it is to put the wharfinger in the same position that we are in to-day. To-day, out of our warehousing charge we have to pay for the accommodation which the goods which are warehoused with us get in the docks. We ask that the wharfinger should be put in exactly the same position.

6328. But you have built your warehouses with the knowledge, as we have heard, and as you have admitted frankly, that you have this exemption to face?—We built our warehouses to a great extent with the knowledge that we had a monopoly.

6329. How many of them were built under the Act of 1799?—Most of them.

6330. Will you tell us which? Was Cutler Street?—Cutler Street was built by the old East India Company, and bought by us.

6331. At what time?—It was built somewhere towards the end of the 18th century.

6332. And used by whom?—The old East India Company.

6333. Before the India Docks were established?—Yes.

6334. Can you name any others which have been built since you acquired the powers in 1799, and before the exemptions?—All the London Dock warehouses; all the warehouses in the West India Dock and the East India Dock.

6335. Were they built before 1828?—Certainly, they would be built under the original Acts which gave them a monopoly.

6336. For the monopoly?—Yes.

6337. There were none at St. Katharine's, were there?

—Because the St. Katharine's Dock was not built with any guarantee.

6338. Till 1825?—It was built afterwards; but when St. Katharine's Dock was built all the warehouses in possession of the Dock Company had practically a monopoly, because it was in the warehouses of the Dock Company that bonded goods could be stored.

6339. There has been a considerable extension in the number of bonded warehouses. You are not quite right in that, are you? Except for the 21 years the legal quays could always take dutiable goods, could they not?—But the owners of the goods either had to deposit bonds or they had to pay the duty. With us it was not so, the mere fact that the goods were deposited within our warehouses was sufficient. It practically gave us the monopoly for a great many years afterwards.

6340. I just want to get from you as to whether you think the warehousing business can be conducted separately from the water business?—Most distinctly not.

6341. Why not? I have suggested to you a number of points in which you have mixed the two up. Why should not those be separated, and if a public authority were to have charge of the waterway of the river, the waterways of the docks considered as part of it, and of the quay space adjacent to it, why should not you as warehouse-keepers be able to conduct the most profitable part of your business, as both yourself and Mr. Holland have said, to the satisfaction of your shareholders and everybody else?—Have I said it was the most profitable part of the business? It may bring in a greater amount of revenue; but you should allocate capital to the warehouses in proportion to the docks.

6342. It is not the amount of capital that they would sell for, but what they originally cost?—When you state it is the most profitable part of the business, you must take in the amount of accommodation given for that business.

6343. Supposing you were left alone with your warehousing business, and you saw that you had good sites, as I suppose you thought you had, in the case of the Billiter Street and the Fenchurch Street indigo warehouses, and that they would sell for a sum of money that would realise a larger interest than you could earn by using them as warehouses, would you sell them?—I do not know that we can without Parliamentary sanction.

6344. The whole of this matter will somehow be considered in Parliament. What do you think of that?—Of selling our warehouses?

6345. If the land is as valuable as you suggest?—Have I said the land was valuable?

6346. I understood you to say that the land must be taken at its present value?—Certainly it must. In arriving at the present value of a particular trade, it is not sufficient for you to say that after paying our charges there is such a margin of profit. You must look at the amount of capital represented by those premises necessary for carrying on that trade.

6347. If you are relieved of that, which I understand is the less remunerative part of your undertaking —

(Mr. George Wallace.) My Lord, I must protest against this being put to the witness. The suggestion has been made by my learned friend to the witness twice, or three or four times, that the witness has expressed an opinion that one part of the business is more profitable than another. I am in your Lordship's recollection as to whether or not that is so.

(Chairman.) I did not understand Mr. Scott to express such an opinion.

(Mr. George Wallace.) No; he has not. My learned friend assumes that Mr. Scott has expressed such an opinion.

6348. (Mr. Harper.) Do you agree with what your manager has said in another inquiry: "It is the warehousing business that pays, and it is this which has suffered"?—Yes, I do agree with that.

6349. Then I think perhaps it was a little waste of time to raise the objection. The figures show that this declining prosperity has gone on in the face of a continuous and very large increase of tonnage of ships, and therefore to the receipts of the dock companies from dues on these larger ships. The truth is that the profit on the dues paid by ships yield quite an insignificant return on the capital expended?—Yes.

Mr. C. J. A.  
Scott.  
13 May 1900.

Mr. C. J. C.  
Scott.

13 May 1901.

6350. For a living all dock companies, wherever situated, must look to something else than dues on ships, and get those wherever they are successful?—You did not go on with the question with which you started, as to the division of the goods of the warehousing business and the shipping business. You asked me, in my opinion, whether it was possible to separate them or not, and I will tell you why it is not possible. At the present moment we work the two businesses together. Down in the Albert Docks we store in the sheds at times a considerable amount of goods. Up in the London, the St. Katharine, and in the West India Docks, portions of the warehouses are situated alongside the water, and they are used for discharging. It would be quite impossible to separate, certainly in those docks, the warehousing from the water business, and it is precisely in those docks where you have the bulk of the warehousing business.

6351. I do not know whether I have put it clearly to you. What I am suggesting to you is, if they were taken over and provided for by a tax on goods coming into the port, collected, not by you, but by a public authority, and expended by a public authority for the benefit of the port, what would you say then?—Your idea, then, is that a public authority should practically take over the water area of the port and collect.

6352. What would be the difficulty?—For working warehouses in the St. Katharine, London and West India Docks access to the water is absolutely necessary. You propose to take the water from those warehouses. Do you propose to take water from the riverside warehouses?

6353. They will not lose the advantage of their situation in any sense?—Pardon me, they would and they must; because they have no ships discharging to speak of, alongside there. In these docks of ours you have ships discharging. How are you going to work it then.

6354. As soon as a ship wishes to discharge there you will get the warehousing of it by reason of your proximity?—Not necessarily, at all. You remember, a great many of these goods are delivered from there.

(Chairman.) This is rather an argument with counsel, Mr. Scott.

*Cross-examined by Mr. Cranstoun.*

6355. Will you refer to Questions 5587 and also 5760, with reference to the bill of 1885. I want to follow up what you said to Mr. Ellis, and I think also Mr. Lyttelton. You said there, this exemption clause was not discussed on its merits. Your attention has, of course, been drawn to the report in Hansard. Is it not the fact that two years before this, namely, in 1853, this matter was fully discussed?—Where and how?

6356. Will you look again at Mr. Cardwell's speech? "This subject has been before the House of Commons not a great while ago. Only two years ago the Victoria Dock Act was introduced into this House. Two years ago that Bill was finally introduced by the promoters without this clause; but the Committee who had that Bill before them, and who heard the whole subject fully discussed, thought it only equitable to insert the clause." Do you say after that that this clause has never been discussed on its merits?—I have not got the particulars to which you have referred before me, but I am most distinctly of opinion that it was not discussed.

(Mr. Ellis.) It was examined in Committee, but it was hardly discussed in the House. The examination was relative to a discussion in the House. May I put it to you having looked up the proceedings, that it was examined very carefully in Committee, but it was not discussed in the House at large.

6357. (Mr. Cranstoun.) If you please, Sir, I will not put it any more. There is only one point on this. Mr. Muntz decidedly said he voted against this because it was a question of the interests of the country, not merely a matter of Parliamentary bargain; he considered that this question of exempting the barges was a public question, a question not of the trade of London only, but a question of the whole trade of the United Kingdom? Is that so?—He says so, but I am not prepared to take his opinion.

6358. There is another point to which I wish to draw your attention. In was in answer to Mr. Lyttelton at Question 5700. After speaking of the great and growing sizes of the barges you brought in a case by which I suppose it was meant that the question of

craft was the question that was discussed. Mr. Lyttelton put to you the question "Have you ever had occasion to test the question legally as to what craft are embraced by that term," and you answered, "I think we may say that we have. I think there was a case which the Chamber of Commerce mentioned and they took credit to themselves for having taken up the case. There the question was raised, but was not argued because it was said it was useless for us to argue it; the scope of the clause was so wide that it covered everything." Do you know that the case was reported in the "Shipping Gazette" of August 4th, 1899?—Yes.

6359. It is the case of the Burham Brick, Lime and Cement Company, Ltd. v. the London and India Docks Joint Committee?—Yes.

6360. In that case it was one of the Burham Brick Company's sailing barges that had come into the dock and on which you had claimed certain dues. They had been paid under protest, had they not?—Yes.

6361. The action was brought to recover these dues, with a declaration as to whether they were bound to pay them or not. There were no fewer than five or six counsel in it. Do you say the matter was not argued at all?—Let me tell you how that case arose.

6362. We do not want to enter into that?—Pardon me. I think it is most material to that case. The case arose because the Treasury altered the limits of the port, and we contended that although the term which you have here "barges, lighters or craft" might apply and cover a great deal if they were trading inside the limits of the port, once they came from outside the limits of the port we hold that they were no longer entitled to come in under that exemption clause.

6363. Then the whole question was as to whether you were entitled to charge for this when it came from outside the port?—Yes, that was the main question.

6364. But it seems to me to be the only question. It was tried before Mr. Justice Mathew.

(Chairman.) It is pointed out to me that this case has already been put in. It appears in the Appendix of the 4th day, No. 9.

(Mr. Cranstoun.) I do not think the attention of the Commission has been called to the exact point. Mr. Lyttelton, I know, was anxious to know of it, and I merely want to read this to the Commission.

(Mr. Ellis.) This is all on the notes of evidence.

6365. (Mr. Cranstoun.) May I just have this one point put on the notes? I will stop if the Commissioners say I am not to go on with it, but it is somewhat important. The judge, after referring to the history of these rates, which I will not take up time by reading said this, referring to Section 138 of the Act of George III.: "It is perfectly plain and perfectly clear language. What exempts the lighter or craft is the fact that she is engaged for the purpose of loading or unloading the ship. The limitation is the engagement of the barge for either of those purposes." That is the point that I wish to impress; it goes to the gist of the whole matter. Then the learned judge goes on: "That is the earlier Statute, and that same scheme of legislation is carried through a large number of Statutes, some of which have been referred to until we come to the Act of 1882, which appears to be the last on the subject." Then he refers to Section 26, which I need not read, and he goes on to say this: "That would apply to any craft or lighter coming from the dock for the purpose of discharging its cargo or for the purpose of transshipment, in the case which has been put, where she had made an independent voyage and came to the dock and discharged her cargo there. Then comes the proviso 'Provided always that any lighter, barge, or other like craft, entering the new dock, lock, or tidal basin, to discharge or receive ballast or goods to or from on board of any vessel lying therein, shall be exempt from the payment of any rate, rent, or sum so long as such lighter, barge, or other like craft shall be bona fide engaged in discharging or receiving such ballast or goods as aforesaid.' Is it necessary to say a further word? There is the old scheme of legislation preserved, and the clearest indication of what the ground of exemption should be, namely, the employment of the barge or lighter in the loading or discharge of the ship. As I understand, the whole of these charges have been made upon barges which have been employed in discharging or loading the ship. It would appear, therefore, that all these charges have been wrongfully demanded by the defendants, and

therefore they must be repaid!" Was not that the question that was discussed?—Yes, undoubtedly; but never the size of craft or what really constituted a lighter, or barge, or craft.

6366. No; but you brought that as an illustration when you were discussing the question about the growing size of the barges, and that you could not get a remedy, or you were told by the High Court that "craft" included any kind of barge?—Yes.

6367. Now a question as to the management of the docks and the barges inside. A good deal has been said about negligence of the lightermen and that you are unable to carry out bye-laws. Do you admit that you have ample powers both by Acts of Parliament and by bye-laws to completely control the traffic in your docks?—No, most distinctly.

6368. Has your dockmaster?—This was a point put by Rear-Admiral Hext at Question 5721, when you were asked, "Does your power to regulate traffic extend to regulating the admittance of barges into the dock?" (A) We claim so most distinctly, but supposing we said: "We are going to regulate the admittance of barges now, and we will only let you come in in such and such an order, and go out in such and such an order," a great many barges could not go in and out, and we should bring the trade of the port to a standstill, or we should have such a congestion of barges at the entrances of our docks that we should never get the ships in and out." Then in the next question you are asked: "Your case is not that you will not use those powers, but that you cannot use them?"—Yes.

6369. Then you go on to say: "Well, the thing has gone on so long, do not do anything to disturb the custom; we do not want to upset the trade; we have a right, undoubtedly to say to a barge: 'You shall not moor within our privileged water.'" Has not your dock-master complete control over barges within that privileged water, namely, 200 yards from the dock entrances?—Yes.

6370. Has not he that power in all your Acts of Parliament?—Yes.

6371. And also in your byelaws?—Yes.

6372. Have you not recently taken proceedings with regard to the very thing?—To ascertain our powers.

6373. But you actually got a conviction?—Yes.

6374. I am referring now to two summonses, dated May, 1899, in which the charge was that the person proceeded against "unlawfully placed, or permitted or suffered to remain, in the River Thames within 200 yards of the said old entrance, and refused, and did not immediately remove such barge on being required by the dock-master to do so, and did remain there." That matter came before the magistrate at the Thames Police-court?—Yes.

6375. Had you, before that, given the ordinary form of notice. Is this a form of notice that your dock-master gave to barges in that position?—I admit it; it is the notice.

6376. This is another notice: "You are required to unmoor and remove your vessel from the pier head and from within the distance of 200 yards from the entrance."—That is quite true.

6377. This was your answer to Rear-Admiral Hext at question 5797. The question was put to you: "With reference to the question Mr. Lytleton was asking just now, about barges, if you insisted on the barges lying outside your limit of free water, outside your entrances, would not they be lying in a more dangerous position than they would near the entrances?" (A.) Yes, but that is not my concern. It would be so undoubtedly. I do not know how they could lie there, unless there were special moorings provided for them." Then the next question is: "The fact of lying there would more or less congest the river traffic?" (A.) It certainly would not improve the river traffic. (Q.) If you kept them outside the free space of water that you are allowed, would it not be almost impossible to get the number in and out that you do at present." Does not that imply (perhaps unintentionally) that you did not for these reasons compel barges to remain outside your 200 yards limit?—Not at all. I should like to go a little further. When this question was raised, for a great many years we had practically, in order to facilitate the barge traffic, been allowing them to take advantage of many privileges, such as that of lying inside our privileged water, to which they were

not legally entitled. The question came up; it was getting more of a nuisance every year, and we took that case to which you have referred, the object being to ascertain whether we really could get a conviction under those circumstances. Sometimes, I daresay you are aware, we have not been able to get convictions.

6378. I am not aware of it. It exactly follows your bye-laws?—Sometimes we have not been able to get a conviction under our bye-laws.

6379. But this point was actually submitted to a Divisional Court, and a decision was given by Mr. Justice Darling and Mr. Justice Channell, in which they had no doubt whatever that you had the power, and they sent it back to the magistrate who had dismissed the summons?—I think, if you will ask some of the lightermen or wharfingers, you will find that after we got the conviction, we told them we should not press on with the matter, as the whole question would probably come before the Committee.

6380. That is a question I cannot deal with. May I take it shortly that by the decision of *Duckham v. Gibbs*, of December 7th, 1899, it is clear beyond all doubt that you have the power to regulate the entrance?—Yes.

6381. And so far as these barges are concerned, or lying within the prohibited waters, you can turn them all out?—Yes.

6382. Otherwise they are punishable at a Police Court?—Yes. If you followed that up, it would practically mean the lighterman's business could not be carried on.

6383. That is a debatable point?—I do not think so.

6384. The point is as to whether you have the powers, and you may exercise them?—Yes.

6385. The next point is this. You said on the last occasion that you had bye-laws which you could not enforce, and you instanced a case which is now for hearing in the Divisional Court. That is the case of *Duckham v. Perkins*?—Yes.

6386. That refers to barges being adrift?—Yes.

6387. One of the complaints that the dock company made was that the barges were unattended by anyone inside the dock. Now, was not this particular case the case of the barge lying alongside a quay?—I believe it was.

6388. Not drifting in any way?—Pardon me—no. drifting most distinctly.

6389. Very well. I have not the case here; but you dispute that?—I say it was a case of the barge drifting and being unattended.

(Mr. Peel.) Has this case been decided?

(Mr. Cranston.) No; it is 19 out of to-day's list. It was decided by the magistrates.

(Sir John Wolfe Barry.) Is it profitable to discuss this before the hearing?

(Mr. Cranston.) Then I will stop, but it was a matter that was brought out on the last occasion, and the point was that the dock company could not enforce their right.

(Sir John Wolfe Barry.) We cannot go into it if it is *sub judice*.

(Mr. Cranston.) One part of it has been disposed of by the magistrate, and I only want to show the Commission that this allegation that their bye-laws cannot be enforced is untenable.

(Chairman.) Will you ask the question of the witness, please, and get his answer; then we shall be content with that?

(Mr. Cranston.) It is a special case, in which all the facts have been found. My friend Mr. Wallace is against me in that case.

(Mr. George Wallace.) I am opposed to my friend. The case will be heard in the course of the week, and if my learned friend puts before the judges in the Divisional Court the statements that he is making now, he might succeed in enforcing the bye-law. But he is there for the purpose of saying that bye-law is bad.

(Sir John Wolfe Barry.) If this case is going to be decided, we can hear the decision when it is decided.

6390. (Mr. Cranston.) By the East and West India Dock Act, 1874, section 23, you have this power, have you not, "In case of any defaulting vessel, as defined by this Act, being left adrift, or not properly secured in the docks, the dockmaster, or other person having

Mr. C. J. C.  
Scott.  
13 May 1901.

Mr. C. J. C.  
Scott.  
18 May 1901.

the command thereof, or the owner, or owners thereof shall, for every such offence, provide and pay any sum not exceeding £5, and the company's dockmaster, or assistant, may place a servant, or servants, of the company on board the defaulting vessel, and may pay such servant, or servants, such reasonable wages as to the said dockmaster or dockmasters may seem fit, and the amount of such wages may be recovered by the Company in the manner provided for the recovery of rates and charges by clause 77 of the principal Act." Now, is not that ample power for you, if you like to exercise it?—It does not apply to the Albert and Victoria Dock, or the London and St. Katharine Docks, where the bulk of the barge traffic is.

6391. You say it is only limited to one or two docks. At all events, in these docks, you have power?—The barge traffic is a minimum. But I will take your point. Supposing you had that power, what does it amount to? We have, I suppose, on an average, something like 1,500 to 2,000 barges in the dock at the time; perhaps I am putting it rather high, but still, it is a very large number; if you go down you can see. The great majority of those barges are unattended. How is it possible for any dockmasters to put a man into all those barges? It is an impossibility.

6392. You spend, according to your account, £21,000 on police?—Yes.

6393. What do those police do? They are certainly not there to assist the lightermen?—The police are there for watching.

6394. Can you suggest any instance in which the police assist the lightermen?—I can suggest instances where the lightermen and the barges do not assist the police, because we have found stolen property in them.

6395. That is not my point. There are good lightermen, I suppose, and bad lightermen?—Undoubtedly.

6396. But you have all that police; what do they do?—They watch generally; they watch the whole place; we have an enormous area to watch.

6397. Merely watching the goods on the quays?—And generally patrolling and doing the work incidental to policemen.

6398. That is your proposition: that you cannot, with that number of police, regulate these barges?—How can you?

6399. Yes, or no?—Pardon me, it is not a question of yes or no. I say it is impossible, with the powers that the dockmaster has, that he should put men on board all the barges in the dock.

6400. I know that?—But that is what it would mean to regulate it.

6401. But you do not suggest that all the 2,000 barges are adrift?—No; but they have to be moved at times.

6402. It is only an exceptional matter, is it not?—No, there are a great many adrift. We have taken them on several occasions, and we have summoned them, with that result.

(Adjourned for a short time.)

6403. (Mr. Cranston.) Will you please turn to Question 5581, and also Question 5597, you stated that "the amount of goods which went away from the docks without paying anything came to 76 per cent, as against our estimate of 72 per cent., showing that we had understated it." In Question 5597 you said 75 per cent. The difference is very small?—My first question dealt only with the imports. We estimated the imports at 72 per cent. When we took out for the six months the actual figures they worked out at 76 per cent. We have no means of checking the export figures. What I wanted to say was that when I take the total of 76 per cent. I say I am understating it, because having the actual figures we found that the imports were more than I gave there.

6404. Do I understand, then, that 76 per cent. of these import goods pay nothing? Is that your case?—Yes.

6405. Does that 76 per cent. represent goods delivered to barges only?—Yes.

6406. Does it not include what was delivered direct to rail?—No, not at all.

6407. Does it include those goods that are sent by the American bill of lading and placed in barges?—Certainly, we get no charges at all.

6408. You do not get any charges in the sense of tonnage dues, but you get rent?—But that is not a charge on the goods; that is a charge on the ship.

6409. But it goes to the dock company, not directly, but indirectly by the rent?—Oh, no, not at all. You might just as well say the dues on shipping come on the goods.

6410. But I understand in 1890, after the great dock strike, when you used to discharge the goods yourself, you afterwards handed it over to the ships themselves to discharge, and you commuted these charges that you had then for a fixed rent charge?—We commuted the payment made by the shipowner for doing certain services for the shipowner into a rent under which the shipowner was allowed to do that work himself. It is a charge against the ship in each case, not against the goods.

6411. (Chairman.) The American bill of lading has been referred to several times. Might we ask you to put in a copy?—Certainly.

(The Witness handed in a copy of the North American Bill of Lading as employed by the Atlantic Transport Company. See Appendix, 18th day, No. 2.)

6412. (Mr. Cranston.) What I mean to say is this, if I am wrong please correct me; these charges up to 1900 that you used to get you have now commuted for those that you got for rent. Is it right to say you get nothing?—We never got anything from the goods before.

6413. But had not you a statutory right to charge for the purposes of these goods?—Which we did not exercise.

6414. But you had the statutory rights?—So we have to-day.

6415. Why not exercise them?—I think if we did we should have the whole port in an uproar. When we tried with the shipowners to make such an arrangement in 1896 the wharfingers were the chief people who objected even to a moderate charge.

6416. Surely when so much as 76 per cent. of the goods leave your dock free of any charges at all you might charge for them?—Yes.

6417. And you have the power to charge for them?

(Mr. Ellis.) Do you suggest they should charge for them?

(Mr. Cranston.) Our case is that they should make no difference between one set of goods and another.

(Witness.) You will remember if we did that we should be levying a very much higher charge under our existing Acts of Parliament than we propose to make to-day. If you take the schedule of our Act of Parliament under which we were entitled to levy charges it would practically be incomparably higher than the rate which we propose to levy to-day. But these goods, which were delivered *bond fide* overside to the craft, would escape, so that a certain portion of the trade would pay very much more and another portion of the trade would pay nothing at all.

6418. But you would not be bound to charge the maximum rate. You could charge what was fair and reasonable under the circumstances?—I think the difficulty would be this. If you are going to levy a certain rate on everything, you could afford to make the rate a low rate; but if you are going to get your charges on a comparatively small portion, you would still have to make it very much higher.

6419. You know the contention of the lightermen is that it should be on everything?—Then I understand that it is on goods with the dock companies, and goods in the river.

6420. Yes. We say, on the whole of the goods that come into the port no distinction should be drawn?—I do not know that we should make any difficulty about doing that. I think it would be very much the worse for the port.

6421. At Question 5850 you yourself say this, "Roughly, I think it is not a difficult question at all. At present the Thames Conservancy do collect certain rates, and I would give the Thames Conservancy or whoever is the river authority the power to continue to collect those rates. I think shipping should pay perhaps a trifle more, but I think that all goods coming into the river should also contribute. I think that body should have the power of levying a small toll, not only on goods coming into the docks, but on all goods brought into the port or exported from the port." That is your own language?—Yes; I was dealing with a charge to be levied for the benefit of the dock companies, but Sir Robert

Giffen pressed me to give my view as to a charge to be levied by whatever body was constituted as the managing body of the river. That was not a charge which I proposed should be levied by the docks at all.

6422. But you are going to allocate it between the dock company and the Thames Conservancy?—No; pardon me, not at all. This was something quite in addition to our proposal.

(Mr. Ellis.) If you will refer to Question 5849, you will see in respect of what the witness was speaking.

(Mr. Cranstoun.) "I think in answer to Mr. Ellis you rather hesitated to express an opinion as to how money was to be found for improving the river and harbour generally, apart from the docks?—I have my own ideas, but I hesitate rather to express them."

(Mr. Ellis.) As to how money was to be found for improving the river and harbour generally, apart from the docks. That is your point; that covers the reply.

(Mr. Cranstoun.) Yes, that is the question.

(Witness.) Sir Robert Giffen asked me whether I had any ideas as to how the funds necessary for the improvement of the river should be raised. I then stated that I thought a small increase on the rate payable by shipping would be fair, and that also all goods coming into the port (and "coming into the port" would include all goods coming into the dock) also should be raised, and I offered on the part of the dock company, if it was thought fair, that we should collect that, but it was quite distinct from the suggestion that I put forward as to leaving goods coming into the dock.

6423. At Question 5666 you represent that cranes do not pay, do you not?—Certainly I do.

6424. They represent a very large proportion of the work that is done, that is to say, the greater part of the work there must be done by means of cranes?—They are necessary for the shipowner. They are used there. The cranes that I was speaking of are those which are let to the shipowner for the discharge of his vessel. He pays a certain rate to us for the hire of the cranes. They are necessary for the shipowner in London, but not in Liverpool, and not in a great many other ports.

6425. Then the lighters and barges are not the only things that do not pay at the dock. That is the whole point of this question?—But these do.

6426. I thought you said they did not?—They pay something. What I say is if you take their full expense they do not give a remunerative payment. But they do pay. There is a regular scale by which the ships pay for the hire of these cranes. I do not think, if you come to that, that 3d. on the barges would be a sufficiently remunerative rate against the expenses.

6427. There is another point about the monopoly that you had. It expired in 1827, but most of those docks have been built, have they not, long after that?—Yes. The Albert and Victoria Docks, certainly.

6428. Up to that time there were only some three or four docks, were there not?—There were the London, the West India, and the East India Docks.

6429. Most of the docks that have been built since are without warehousing accommodation, are they not?—No. In the Victoria Dock we do all the tobacco warehousing trade of London; we do a great foreign meat trade; we do a very considerable amount of grain business; and in the Albert Dock we do a certain amount of warehousing business, and even at Tilbury we do a certain amount of warehousing business.

6430. At all events, you do not do it in the same proportion as you did in the old docks before 1827. The proportion of your warehousing work to your other work is not now as great as it was in 1827?—In proportion to our shipping business, no. That is exactly our point.

6431. In Question 5581 there is something about anchorage dues. You said: "The Corporation of Liverpool continued after the expiry of their monopoly, and still continues to levy town and anchorage dues."—Pardon me, I never said that. The Corporation of Liverpool have nothing to do with the docks.

6432. There is this: "The analogy, however, failed in one very important respect, inasmuch as the Corporation of Liverpool continued after the expiry of their monopoly and still continues to levy town and anchorage dues, irrespective of their docks, and

are, therefore, independent to a great extent of any Mr. C. J. C. such monopoly."—I am sorry, it is a mistake. There is the Mersey Docks and Harbour Board which is perfectly distinct in every way from the Corporation of 13 May 1901. Liverpool.

6433. It is a mistake, is it?—Certainly.

6434. At all events, that is an equivalent to the Thames Conservancy's charge now, is it not? The Thames Conservancy have their charges similar to those anchorage dues?—I believe so.

6435. They are charged in the Port of London?—I believe the Thames Conservancy charge them.

6436. I now come to a question about comparison of barges and ships, as regards tonnage. That is referred to at Question No. 5581. It is also dealt with at Question 5597, in answer to Sir Robert Giffen: "In 1855 the average barge is believed to have been about 25 tons register, the craft known as hoys, which were of a larger tonnage, having then gone out of use. About 140,000 have entered the docks in the last three years, of an estimated total tonnage for each year of some 9,000,000 (taking the average lighter to be only about 60 tons register), or nearly double the total tonnage of the foreign trading vessels entering the docks during the same period." Do you calculate the tonnage of the ships on the net register?—Yes.

6437. How do you calculate the tonnage of the barges?—I should say there is no difference between gross and net in the barges. Ships are subject to certain deductions.

6438. Is it not a fact that the difference between gross and net, so far as barges are concerned, is as much as 5 to 3? A ship is registered at half her gross tonnage?—Yes.

6439. And she carries about double?—Yes, or more.

6440. Do you say that there is no difference in barges?—I admit between the gross and the net there is a difference in a barge, but nothing like the difference in a ship.

6441. I say it is as 5 to 3; some people say it is half?—That the net of a barge is half?

6442. Yes. The gross to the net is as 5 to 3.

6443. (Chairman.) But are they measured in the same way?—I do not see how they can be measured in the same way.

6444. They are not, as a fact?—No. Take a steamer, with the enormous amount which is deducted for one thing and another. I do not see how you can deduct that in the case of a barge.

6445. (Sir Robert Giffen.) Steamers are measured under the Merchant Shipping Act by the Board of Trade, but barges are measured in a different way, and we do not know that the deductions are of the same kind?—No.

6446. (Mr. Cranstoun.) Is it a difference with the barges between registered tonnage and burden tonnage?—From my own knowledge I cannot say, but on this question I might say that I have taken the average tonnage of a barge at 60 tons, whereas a lighterman laid down that the average tonnage of barges now was 79 tons. So that if you take that correction I think you will find that even allowing something for your difference between gross and net my figures are not overstated.

6447. A ship only pays a half of what she actually carries?—She pays on her net register.

6448. That is half of what she actually carries?—No. Very large passenger ships may not carry very much more than their net register. It does not follow at all; there is no rule.

6449. I put it to you that they carry double. If barges are calculated in the same way these 9,000,000 tons that you speak of would be about half, or 4,500,000?—But you must correct my figures first by making the tonnage instead of 9,000,000 tons about 30 per cent. more. I have taken the average barge at 60 tons, and the lightermen have stated the average barge is about 79 tons.

6450. Suppose you take 30 per cent. of your 4,500,000?—No, I take 30 per cent. of my 9,000,000.

6451. Supposing you do, and halved that?—I do not think that would be fair to the barges, because they carry a great deal more in proportion to their tonnage than a ship.

Mr. C. J. C.  
Scott.

13 May 1901.

6452. That is the very point that is denied, so that even if you take your 30 per cent. that would only come to about six millions on your figures?—Take your point then. Then really what we are doing is we are not charging enough on the barges, because if the barges are going to pay for so much less than they ought to we ought to charge more.

6453. But you are suggesting in your Act that it would be a tonnage on the burden of the barges?—Yes.

6454. This is the bill of 1901—your modified bill. "The expression 'tonnage' means the burden tonnage as ascertained by the rules in the 3rd schedule to the Thames Watermen and Lightermen's Act, 1893."

6455. (Mr. Ellis.) This is the bill that has been withdrawn?—Yes.

(Mr. Cranstoun.) It is the modified bill of last year.

(Mr. Ellis.) But it is not before Parliament now.

(Mr. Cranstoun.) No.

(Witness.) As you have referred to the bill, may I draw your attention to page 3, clause 2: "Provided that the tonnage of any craft which shall not be fully laden either on entering or departing from the dock shall for that time be deemed to be the aggregate of the number of tons weight of goods on board such craft?"

6456. I quite agree. Am I right in saying that as compared with the ship it is double?—But a ship pays 1s., as against 3d.

6457. But the principle is different from what you are charging a ship?—If you are going to make the charge on both sides the same I do not mind meeting you on the question of principle.

6458. And in the Bill of 1900, the one before that, you actually drew a distinction between the two: "For the purposes of this section the registered tonnage of large lighters, barges, or craft as aforesaid, shall be deemed first of all in the case of vessels registered under the Merchant Shipping Act, 1894, and under any other Act, the registered tonnage of the vessels. In the case of the tonnage of vessels registered under the Thames Lighterage and Watermen's Act, and under no other Act, the burden tonnage of the vessel?"—The difficulty was that some sailing barges are registered under both Acts, and the difficulty would be to know under which they should come.

6459. So that under your present Bill dumb barges (that is to say, those propelled by oars) are at a disadvantage as compared with sailing barges?—I think the difference between gross and net of a dumb barge would be very much less than the difference between gross and net of a sailing barge. I am told they are now.

6460. However, you do not know?—I could not say.

6461. You say that barges are double. May I take it that you calculate on the double basis?—I think you said the barges were double.

6462. You said it was double the tonnage of the ships coming into the docks?—The tonnage of the barges coming in, yes.

6463. So that in your calculation on the same basis they would be alike in tonnage?—I must correct that by saying that since I have got out these figures I have found that the tonnage of the barges is very considerably more than double. On the figures which the lightermen supplied to the Commission, instead of it being 60 tons it was 79 tons for the average barge. So that instead of my figures being nine millions they should be twelve millions.

6464. But even assuming that, there is not much difference between the two, is there?—I think there is.

6465. Your nine millions is very much reduced even on your own figures; it would be reduced to about six millions?—If you put it that way; but, on the other hand, I should say if you are going to charge the barges in the same light as ships it is a different thing altogether.

6466. In the same Question—that is, 5597—you said: "I am speaking from memory, but I think one of the lightermen witnesses put in that the average size of a dumb barge was nearer 80 tons than 60. Mr. Jacobs said that the average was 79 tons." You know that he

was referring to the burthen tonnage, do you not?—I do not know.

6467. At all events, I put it to you that he was referring to the burthen tonnage, and the registered tonnage would be only 46. Do you agree with that?—I do not know.

6468. Now I come to the question of the modification in your Bill about the transit goods. The Bill of 1901 has been somewhat modified from the Bill of 1900?—Yes.

6469. You propose to exclude from that the cargo that is in course of transit between one ship and another?—Yes.

6470. That would not touch the part of a lighter-man's business that lighters goods from a ship, say, to Nine Elms, or one of the railway termini?—Certainly not. Nine Elms is not a ship.

6471. But there is no exemption as regards that?—Certainly not.

6472. So that with regard to goods that are lightered from a ship in the dock to another place such as Nine Elms, there is no exemption at all?—No, undoubtedly there would not be. If you make that exemption, why should not you make the exemption of any river side premises?

6473. But these are in transit all the same, are they not?—No, not necessarily.

6474. They are not necessarily for consumption in London. You know they are taken a long distance from London?—That may be; but I do not see any reason why they should be exempted.

6475. At all events, the fact is they are not exempted?—The reason of exemption of transshipment and transit business generally is to encourage the ships. Those ships in bringing goods to the port have to take for a through rate to Hamburg at no more than the rate for goods going direct to Hamburg. So we say we will waive this to encourage the business.

6476. So that goods taken to Hull, for instance, on a through bill of lading are exempt?—Yes.

6477. But if they pass to the same place by rail, they would not be?—Certainly not. In all probability going by rail really they are not now exempt, because they would probably go over our quays and pay a certain rate there.

6478. Now will you look at ?—You asked me a question on the net register of the ships. I now have some figures which may interest you. The net register of foreign ships coming into the docks is 4,281,389 tons on which they pay dues. The tonnage discharged from those ships is 3,946,627 tons; so that the ships pay dues on a larger amount than the amount of cargo which they bring.

6479. Where do you get that from?—Those are actual figures taken out from returns made by the Dock Company, in regard to which the shipowners have given us considerable assistance. I have already put them in.

6480. (Chairman.) Will you give us the reference?—It is Question 5597; it is the same question that was referred to just now.

6481. (Mr. Cranstoun.) The table?—Yes, showing tonnage discharged is considerably less than the net register.

(Mr. Whitehead.) My Lord, I appear for the London Chamber of Commerce. Of course I represent a great many different interests in trade, and I am afraid that some of my questions may jump from one point to another, but I will endeavour to keep them in logical sequence as far as possible, and indicate what I am going to deal with. I was proposing to ask a few questions about the agreements first of all.

Cross-examined by Mr. Whitehead.

6482. I understand that, speaking for the last ten years, since the year 1890 the effect of your evidence is that there has been a steady increase in the general trade of the Port of London?—I say so distinctly.

6483. And that in that increase the dock companies have more than participated in the increased proceeding you say "trade," do you mean of the shipping, or the warehousing?

6484. I am dealing first of all with trade coming into your docks; making use of your docks. I understood you gave the figures—that it was 38 per cent. in the year 1890 of the total tonnage dealt with in

the port. and in the year 1899 or 1900, I am not sure which, it was 42 per cent.—That is the shipping tonnage.

6485. And that as regards shipping, therefore, you have more than participated in the increased prosperity of the port?—Certainly.

6486. Yet, as I understand, that period of ten years is a period, so to speak, of financial disaster, so far as the dock companies are concerned. Perhaps I am putting it too high, if you do not want to accept those words, I will put it there has not been a period of financial prosperity in spite of the increased tonnage dealt with at the docks?—Certainly.

6487. That period, I understand, is coincident in point of time with what I will call the period of agreements?—Yes.

6488. You began the period of agreements about the year 1889?—You say the period of agreements was from 1889, are you talking now as to goods or shipping? It is a little difficult to follow.

6489. Take the year 1889. In that year there was the great dock strike, and you were face to face with a condition of organised labour. Down to that time labour at the docks had been unorganised. Down to that time you had yourselves been doing the discharging of vessels. If I may put it so, at that time you were carrying on three businesses; you were dock owners, you were the owners of warehouses, and you were also carrying on the business of discharging vessels. In 1889 there was the dock strike and you were face to face with this labour problem, and you then made arrangements with the shipowners, the effect of which was to alter the form of the bill of lading?—No, it did not alter the bill of lading at all.

6490. When first did you make an agreement, the effect of which was to take out of your own hands the discharging of vessels in the port?—There was no agreement, but I think it was about 1891. We then told the shipowners that in future we did not intend to exercise what we had always claimed as our absolute right namely, the discharge of ships, but we proposed to follow out a wish expressed by them that they should do the discharging, and that we should follow the Liverpool system of letting them the quays on which to do their work.

6491. There was no agreement?—Except that there is the agreement which I have put in here between the docks and each separate shipowner for renting certain quay space, all such agreements being terminable at three months' notice.

6492. Since that time, the tendency has been to gradually increase the amount of discharging by the shipowner in your docks?—Yes.

6493. Until it is entirely done by them to-day?—We only do 18 per cent. of it to-day, and we should not do that if we could separate the water from the quay space sufficiently.

6494. That was a very important change in the administration of the port, and was carefully considered by your Committee?—Yes.

6495. At the time when that change took place, what profit was the Joint Committee making upon the work of discharging vessels?—I could not give you the figures at all; it is quite impossible, the whole thing was so mixed up.

6496. Do you mean to say the Dock Committee made that momentous change without having any data?—We had certain approximate data, but I should say that the result of the change to us was more profitable than the old system.

6497. But let us have some figures. You were satisfied at that time, from something that was before you, that this change was going to be for your financial benefit?—Yes.

6498. What were those figures; surely it is most important?—I do not quite see the point. Do you wish me to give the figures of discharging? I could not do that now at all; it would be quite impossible. All I can tell you is in support of what we believed, that the shipowners were not very ready to take up, on our terms, the right of discharge for which they had clamoured, and we know some of them said it cost them more afterwards than it did before. Even to-day we have a case of the Orient Company, who do not want to do it, because they say it will cost them more.

6499. The point of my question is this; one of the considerations which will come before this Commission is whether the management by the Joint Committee or Board of Directors has been in the interests of the Port of London?—Yes. *Mr. C. J. C. Scott.* 13 May 1901.

6500. As I understand, within the last ten or eleven years a very great and important change has been brought about in the administration of the port by something which you did or which you were parties to. As I understand, you assisted the shipowners to bring about the change; I think you used that word yourself?—I do not think so.

6501. It does not matter about the particular phrase. Now, if this Commission is to judge of the wisdom of the step, they ought to have before them the particulars which guided you when you made the change?—But it was not only the question of finance which guided us. We were face to face with an entirely different state of labour, and we believed in the interests of the port it would be better that we should have as little to do with the labour as possible, and that each individual shipowner would be able to look after the question of his labour for himself better than we could do it for him. That entered very largely into the consideration.

6502. Being face to face with the new problem, you have not got a grip of the new situation, if I may put it in that way, and you were unable to deal with it yourself, but you thought it would be better dealt with by the shipowners?—I cannot say we have not got a grip of it.

6503. Perhaps that is a matter of comment. I do not want to press it upon you. Since you began this course in the year 1891 or 1892, have you ever considered the possibility of making a profit for yourselves on the work of discharging vessels?—No, of course not, because we surrendered the right to do it—a right that we always claimed.

6504. And from that do I understand you have never gone into the question to consider whether you could make a profit upon the work?—Of course not.

6505. Let me just put an illustration to you. I do not know whether you can check me as regards figures. Take for example the unloading of grain. As regards the present charge at the docks for the discharging of grain from a vessel to a barge, is it not 1s. 9d. a ton?—That is the amount which the merchants agree to pay.

6506. Take the port of Hull. Do you know what the charge is there for similar services?—No.

6507. Are you familiar with the charges at Liverpool?—For discharging, no, I could not say.

6508. Do I understand that the dock directors did not go into this question as to the profit that can be made upon such a transaction?—Oh, yes, very largely.

6509. Would it not be an important consideration for you what is being done in Liverpool?—But the Mersey Docks and Harbour Board in Liverpool do not do discharging.

6510. That may be. But take for example the charge. You are not familiar with it?—No.

(Chairman.) I think you should not ask the question with reference to Liverpool.

(Mr. Whitehead.) Very well. I only wanted to give the witness a chance of dealing with it.

6511. Is the charge that is payable by the shipowner under his agreement for rent of quay, a charge of so much per ton?—No.

6512. Is it a gross sum?—It is calculated on the superficial area.

6513. Therefore if the traffic increases, he gets the benefit of that?—Yes.

6514. Are all the agreements with the shipowners in the same form?—Yes.

6515. The form which you have put in?—Yes.

6516. I am not sure whether I follow a statement in Appendix No. 15 of the 16th day. It is a table showing the tonnage of goods discharged from vessels from foreign and colonial ports in the docks of the London and India Docks Company during the first six months of 1900. The first four lines of that table deal with different traffic, and then there are four further lines.

Mr. C. J. C.  
Scott.

13 May 1901.

in the last column of which there is this note. "These lines use the docks at fixed and agreed rentals, including dues and wharfage charges on goods, and the Dock Company's revenue is not affected by the proportion of goods delivered overside." That seems to differentiate the last four lines of traffic from the first four?—It is so. I think I explained to the Commission before that we have two forms of agreement for what is really the bulk of our trade—the foreign trade. Under one of those agreements we let companies berths for a period of three months. Under the other agreement we let a man who comes in with a tramp and wants a berth for a fortnight or three weeks, we let him that berth at a rent. It is a higher rent, and in addition to that we have an arrangement with some lines coming in frequently, some at St. Katharine, some London, some Tilbury, which are short journeys. They come in frequently. They could not afford to pay 1s. on their net tonnage every time they come in, and so we make a consolidated rent which allows a certain accommodation and certain limited number of tonnage.

6517-8. And they do not pay the 1s.?—That is so.

6519. And that is the distinction between the first four lines and the last four lines in this table?—Yes.

6520. I notice the Perlbach and Cockerill lines have agreements which are not in themselves profitable to the dock company?—No, I do not say that they are not profitable to the dock company, but they come to very little in the whole.

6521. These agreements relate to other traffic than the North American traffic?—Yes.

6522. You have agreements with other shipowners than the North American shipowners?—Yes, but the lines on which the agreements are drawn are the same.

6523. Has the trade dealt with by those other shipowners increased at your docks?—To a certain extent it has, but whilst the increase of the North American trade has been very large, the increase in the other lines has been only 13 per cent.

6524. As I understand you, you attribute the increase in the North American trade to the existence of these agreements and the bill of lading?—No, I could not go so far as that, but I say that those who said the alteration in the American bill of lading was going to ruin the trade and kill it have been absolutely wrong. With that alteration in the bill of lading the trade has more than doubled, whereas the other trade which has not made the alteration has only increased 13 per cent.

6525. You do not attribute the increase in the North American trade to the agreements?—Yes, I think so.

6526. Then why has there not been a considerable increase in the other?—You are making a difference between an agreement for letting ship's space for doing its own work—that is on one side. There was no agreement between us and the North American people, but they arranged among themselves that they would alter their bill of lading. We had nothing to do with that. The other lines have not altered their bill of lading. What is the cause I do not know, but in the lines which have altered the bill of lading their traffic has gone ahead a great deal faster than the lines which have not altered the bill of lading.

See 6651-58.

6527. Can you tell me what the correct amount of the rents received by you for the use of appropriated quays has been. Take the year 1899 or 1900?—Somewhere about £40,000.

6528. Can you give me the tonnage of goods dealt with at those dates?—No, we have no means.

(Mr. Ellis.) Are you still on agreements, Mr. Whitehead?

(Mr. Whitehead.) It was really testing the advantage of this agreement.

(Mr. Ellis.) You are still on that point?

(Mr. Whitehead.) Yes, I am still on that point.

6529. Cannot you give the Commission the tonnage of these appropriated wharves?—No, we have no means of checking the tonnage of a ship except for the last six months, where we have it.

6530. Can you give us the figures?—For six months 1,978,000 tons.

6531. That is the total tonnage of goods discharged at the appropriated wharves?—No, everywhere.

6532. I wanted you to distinguish?—I cannot do that. We have no figures at all for them. These figures are only given to us by the kindness of the shipowners. We have no means of checking their figures now that they do their own work.

6533. The tonnage of the North American goods for 1899 was 1,497,000 tons?—That was the ships.

6534. You are quite sure that was the ships?—Yes. I can give you the figures for the six months for the North Atlantic. There were 174 ships, with a gross tonnage of 786,000 tons.

6535. I do not want to follow up the point if it does not deal with goods. The effect of the change in the bill of lading was practically to deprive the consignee of the benefit of the Merchant Shipping Act, 1894, Section 493?—No, I do not think it deprives them of the benefit of it. It enables the shipowner to collect the charge for carrying it out.

6536. Under the Merchant Shipping Act the consignee is entitled to free delivery by the fact that the shipowner does not impose a charge?—Under the Merchant Shipping Act I think Mr. Scrutton brought forward a P. and O. bill of lading to show the shipowner had the power to say his responsibility ceased when the goods left the ship, and then he could put them on the quay, and the consignee would have to pay the charges.

6537. I do not want to deal with the legal aspect, but I understand the effect of the change in the bill of lading is that the consignee has to pay a new charge for delivery?—Yes; which he pays in Liverpool and other ports.

6538. Is it not the fact that the method of trading has very much changed in recent times, and that the old-fashioned merchant, who chartered a whole vessel, has gradually disappeared?—Yes, I should say he is defunct.

6539. And you have in the case of any single ship's cargo a large number of consignees?—Certainly.

6540. And they have no more power of settling the form of the bill of lading than a passenger has who goes to take a ticket at a railway station. They have to take practically a bill of lading that is fixed by the shipowner?—I do not know that I say the question of the terms of the bill of lading is purely a question of contract between the shipper at the port of shipment and the shipowner.

6541. So it is if you are taking a railway ticket. It is a contract that you are to be carried on certain terms. But is there any more real freedom of contract between the consignees and the shipowner? Does not he have to accept the bill of lading as it is put before him?—I should think practically it works out to that.

6542. Now, passing to the agreements with wharfingers. The wharfingers in respect of a certain part of their trade are the competitors of the docks?—Yes.

6543. As regards warehousing and so forth?—Yes; very friendly competitors, taking them all round.

6544. I am afraid too friendly, from the point of view of the trader. I understand you have made a series of agreements with them. Speaking broadly, the effect of those agreements is this is it not; that there are to be certain fixed rates for landing, warehousing and other services?—It comprises warehousing. It has nothing to do with landing, because the ship does that.

6545. Those rates are fixed as for the docks on the one side and as for the wharves on the other?—Yes.

6546. And, speaking broadly, those charges are in all cases higher at the docks than for the wharves?—For the reason I have explained, owing to the fire insurance.

6547. I will deal with the reasons presently. Let us take a concrete case. Take the case of paper. If that is landed at the docks for land conveyance the charge is 5s.?—This would be American paper, I suppose.

6548. I am afraid I do not know what kind of paper it is?—We have some thirty different rate-books, so it is a little difficult.

6549. I only want you to have an instance in your mind, so that we may test the reasons.

(Mr. George Wallace.) I think there is a little difficulty, because this is too much in the abstract. What particular class of paper is pointed to?

6550. (Mr. Whitehead.) I will give another illustration. Take Australian leather. There the dock charge

is, I understand, 9s. 9d. ?—Not for Australian leather. If you make it American leather, I agree with you.

6551. And the wharfage charge 5s. 6d. ?—I do not know what the wharfage charge is, but I will take it from you.

See 2-4. 6552. You say that there is a difference in the rate of insurance as between the wharf and the dock ?—Yes.

6553. Do you mean to say that that item of insurance would account for a difference between 9s. 9d. and 5s. 6d. ?—No, certainly not; but the 9s. 9d. rate includes delivery in Tooley Street, for which we pay 5s. cartage.

6554. Those two rates are not comparable, then ?—No.

6555. Then will you give me the comparable rate for the 9s. 9d. rate ?—There is none, because there is no such similar service.

6556. You have a General Produce agreement of the 27th December, 1889 ?—Yes.

6557. Are you willing to produce that ?—No.

6558. A Granary Keeper's agreement of 13th May, 1890 ?

(Witness.) My Lord, I think these matters were before you, and you said you did not call upon me to produce them.

(Chairman.) I think we told Mr. Whitehead last time the course to be taken.

(Mr. Lewis Coward.) That it should be made the subject of a substantive application, and then your Lordship would decide upon the merits of the application.

(Mr. Whitehead.) I understand application has been made in writing.

(Chairman.) I have not heard of it.

(Mr. Whitehead.) I understand it has been made in the form which your Lordship stated was the proper form.

(Chairman.) Until you have an answer to it, perhaps it would be well to leave it.

(Mr. Lewis Coward.) If there is to be a separate application in respect of these documents in writing, might I respectfully ask that that form of application should be communicated to the docks, because the grounds upon which the discovery of the document was ordered, in accordance with your Lordship's ruling, ought to be stated ?

(Chairman.) We asked for the reasons for the application.

(Mr. Lewis Coward.) At least I think the reasons ought to be communicated to the Dock Companies.

(Chairman.) I think there will be no difficulty in that.

(Mr. Whitehead.) I think I can save time. I was under a misapprehension. My client has not yet sent the letter. I thought the application had been made. I will pass from that.

6559. Have you made an agreement which is called the tea pooling agreement ?—No, there is no tea pooling in existence. We are negotiating one, but it has not yet been carried through. And that has nothing to do with rates.

6560. Have the London Dock Company given up their Crutched Friars tea warehouse ?—We do not warehouse tea there now.

6561. And the Fenchurch Street warehouse ?—That was sold before the working union. But in place of that the Commercial Road warehouses were substituted by the East and West India Dock Company.

6562. Under these agreements with the wharfingers, do you agree to charge an all-round inclusive rate, which comprises a large number of services ?

(Mr. Lewis Coward.) If that is the subject of one of these agreements I must intervene at once.

(Chairman.) I think any particulars as to these agreements should come later, in the event of your being allowed to see them.

(Mr. Whitehead.) Very well, my Lord.

6563. I will take it for the present purposes at your own dock. Do you charge an all-round inclusive rate, called sometimes a management rate, and sometimes a consolidated rate, which comprises a large number of services ?—Certainly.

6564. I will take the concrete case of rice. There you have a consolidated rate of 4s. 2d. ?—Yes. Mr. C. J. C. Scott.

6565. And that includes these services—landing, sorting, classing for sea-damage, sampling, weighing, marking the weight on bags, one month's warehousing, and delivery.

(Chairman.) This is not an inquiry into rates. This is not within our terms of reference.

(Mr. Whitehead.) I am not going to deal with the amount of rate at all, but only the system on which the charges are made.

(Chairman.) If you look at our terms of reference you will see it is the system that we have to consider.

(Mr. Whitehead.) I will deal strictly with the system on which the charge is based.

(Chairman.) If we go into every detail of each charge we shall never finish.

(Mr. Whitehead.) I am not going to take up any time unnecessarily if I can help it. It is the system. As I understand there is a consolidated rate, and I want to attack the system of making charges in that way.

(Mr. Lewis Coward.) That is just one of the things which is not within the terms of the reference.

(Chairman.) We wish to point out to you, and to read you for your information, this paragraph from the terms of reference of the Commission: "The system of charge for such accommodation, and the arrangements for warehousing dutiable goods." We do not wish to go any further than that.

(Mr. Whitehead.) I am not going beyond the system of charging.

(Chairman.) "The adequacy of the accommodation provided for vessels, the loading and unloading thereof, the system of charge for such accommodation, and the arrangements for warehousing dutiable goods."

(Mr. Whitehead.) I asked Mr. Scott whether this charge, this consolidated rate, does not include a charge for landing; that is, loading or unloading ?

(Witness.) Let me answer that at once, to save time. I can say to you that landing does not include the charge for loading. "Landing" means taking it on the quay, it has nothing to do with the ship's work.

(Mr. Whitehead.) From the point of view of the administration of the Board it is a serious question, and I do submit it comes within the terms of reference. I will just explain what the point is from the point of view of the trader. His case is this:—He is charged, it may be 4s. 2d., or it may be 9s. 9d., or some other rate which is a consolidated rate, for a large number of different services. He may, or may not, require all those services to be performed, but if once he gets within the clutches of the Dock Company they can put the whole of that charge upon him; even if he has only one small portion of those services rendered to him. It is the system of making charges upon that principle that my clients do wish to call in question.

(Mr. Lewis Coward.) I submit that it is not within the terms of reference, my Lord.

(Chairman.) I think we must ask you in cross-examination to limit yourself to questions of fact.

(Mr. Whitehead.) Yes, my Lord; I thought that did come, and I submit it does come, within the terms of reference; but if your Lordship rules that I must not ask a question on that point, of course, I shall not do so.

(Chairman.) I do not think anybody can claim that the terms of reference are not sufficiently wide; but I do not think your particular point comes within them. See 7009.

(Mr. Whitehead.) Very well, my Lord, I am very sorry, but it is a most important matter for the trader.

(Witness.) If I may say so, rice is an unfortunate instance; 98½ per cent. of the rice coming into the docks pays us nothing.

(Chairman.) I think we had better keep away from individual cases.

6566. (Mr. Whitehead.) Passing away from the question of the consolidated rate, this is a question of warehousing. Do you find at the present time that the warehousing business is diminishing ?—Yes.

6567. Relatively to the trade done ?—Certainly.

6568. And the traders are more and more building their own warehouses and acquiring waterside premises to deal with their own traffic ?—Because they are able to take it from the docks without paying anything at all.

6569. Now passing to the question of barges. I understand your allegation to be that the barges come into the docks and hamper the traffic there ?—Yes.

Mr. C. J. C.  
Scott.

13 May 1901.

6570. Would it be possible to deal with the business of the docks if the barges were not there?—You could deal with the business of the docks with a very reduced number of barges.

(Mr. Whitehead.) Again, my Lord, I must appeal to you as to whether this question goes outside the terms of reference. If it does, I will not ask it, but I think it comes within the scope of this Inquiry.

6571. Would it not be to the advantage of the Board to have a low quay rate so as to encourage traffic to go over the quay direct to the cart instead of to barges?—We have a low quay rate now where the traffic can go over the quay direct to a cart, and a certain amount does go. We even do some business for wharfingers who want to store goods at the warehouses.

6572. You do it in certain instances, and you find it advantageous?—Yes.

6573. And you get a quay rate?—We get what we call an immediate delivery rate.

6574. Why should not the principle be extended to all goods?—We have no objection to extend it at all.

6575. If it became a general practice, that would remove a good deal of this congestion from the barges?—Undoubtedly.

6576. But you do not put it into force with regard to traffic?—We cannot compel a man to take his goods over the quay.

6577. But cannot you encourage him to do so by fixing a low quay rate?—Not so long as a certain number are able to take their goods away without paying anything at all. If a man can take his goods away without paying anything at all, why should he pay 1s. 6d. or 2s. to take it over the quay.

6578. Has not your policy been to discourage him taking them over the quay, and therefore compel him to do it by waterside?—No. Let me give you these figures. In 1897 the goods landed with us for warehousing were 1,078,000 tons. The amount we had passing over the quay for immediate delivery was 347,000 tons. In 1898 the goods landed with us on charges for warehousing had increased to 1,097,000 tons, only 20,000 tons more, but the goods for immediate delivery had gone up from 347,000 tons to 436,000 tons. I think that shows conclusively that no policy on our part had been taken to hamper this. On the contrary, these figures went on increasing.

6579. Then it really is the tendency of the time that trade should go in that direction?—More and more, and that is one of the troubles of the time, that instead of these goods going for warehousing, they go more and more for immediate delivery.

6580. Would it not be to your interest as a Dock Board to encourage that by a low quay rate for all classes of goods?—We do that whenever we can.

6581. For all classes of goods: take rice?—What is the use of talking about rice, when 98½ per cent. of the rice that comes into the docks goes overside and pays us nothing at all?

6582. That is the point, why do you not encourage it by a low quay rate?—If a man can take his rice overside and pay nothing at all, why should he pay us 2d. even for putting it on the quay. There is no object why he should.

6583. Very well, I will take it from you in that form. Now, as regards the practice. If a barge is not at the docks within 24 hours of the ship reporting the barge has to pay dues?—No, I think not—if no application is made it is so.

6584. In the North American trade it is 72 hours?—Yes.

6585. But in either case if the barge is not there at the docks or does not make the application within the proper time the goods become chargeable to your consolidated rate?—No.

6586. Or to your landing rate—one or the other?—Yes.

6587. In the case where the rate is only a consolidated rate it becomes liable to that?—I cannot conceive such a case where there is only a consolidated

rate. For all these things we have a special landing rate.

6588. If I am instructed that you have consolidated rates solely in some cases that is wrong?—That is wrong.

6589. Is not the effect of that provision to encourage the barges to come at the earliest possible moment into your docks to collect the merchandise which they have to take delivery of?—No, because we should certainly object very much indeed to a barge coming in long before its time. We should do all we could to stop that, but we cannot stop it.

6590. Do you give notice as to when the goods are likely to be ready for delivery?—We cannot. We have nothing to do with the discharge of a ship.

6591. Under your regulations as to 24 or 72 hours the barge is naturally attracted to your docks so as to be ready to take delivery?—That is the arrangement with the shipowner on the bills of lading.

6592. But if it were possible to give a reasonable notice to the barge-owner it might be possible to keep down the congestion of traffic in the docks?—But that is impossible. Where they are working out a ship with an immense cargo the cargo is so much split up into numerous small parcels that it is quite impossible to tell a barge when it will be required.

6593. You referred to the importance of quickness of delivery looking at such a matter from the point of view of the shipowner. You referred to the quickness of delivery and saving of expense. Is that a great object, looking at these matters from the point of view of the shipowner?—Certainly.

6594. I suppose it is equally true that quickness of delivery and saving of expense are important to the consignee?—Certainly.

6595. Is it not the present practice at the docks that the shipowner discharges on to the quay, and gets his cargo on to the quay as quickly as possible?—He cannot do the whole of it that way. It is quite impossible. The reason of the delay in London is that he has to work it as he goes along.

6596. Very often, as I understand, as soon as one vessel has left the quay another vessel comes up to the same quay and discharges its cargo on to the same quay where the first cargo is still lying?—No.

6597. Do you mean to say it never takes place?—It is very rare. I will not say in a case of a line having fixed berths, that where they are working their own cargo like that they may not say: "We want to bring in this steamer," but where we have control, no. Where we want to get control of a fixed berth for a special steamer we cannot do so until all the goods are out.

6598. Where there is appropriated quay practically you have lost control?—Yes.

6599. It might happen there that in consequence of your losing control one cargo is put on the top of another?—I will not say that. That is a matter for the ship-owner.

6600. I have evidence to show that this is done. I want to give you an opportunity of dealing with it. That would involve delay to those persons who are interested in the first cargo?—Which delay would not take place if we had the power to compel those goods to be taken away immediately, as they have in Liverpool.

6601. But you have deprived yourself of the control?—No, we do not deprive ourselves. We have not got that power.

6601A. May I say you have not got that power in consequence of your agreements?—Certainly.

(Mr. Whitehead.) May I refer to a question I mentioned a week ago, and that is as to the Appendices to the 16th day's proceedings. I have not yet seen those. Of course one would like an opportunity of asking Mr. Scott a few questions upon them. I understand there has been some delay in their being printed.

(Chairman.) I understand that there will be no further delay now so far as the shorthand notes are concerned, and that the Appendices to which you refer have been published this morning, and are now available.

Re-called 6602

(Adjourned to Wednesday morning next, May 15, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## NINETEENTH DAY.

*Wednesday, 15th May, 1901.*

PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Real-Admiral Sir JOHN HEXT, K.C.I.E.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. K. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOWN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. CHARLES JAMES CATER SCOTT recalled and further examined.

6602. (*Chairman*.) Do you wish to make a further statement, Mr. Scott?—Yes, my Lord, I wish to make a reference to something that passed last Wednesday. I am glad Sir John Wolfe-Barry is here. It is with reference to Question 5696. Your Lordship may remember that on the 17th day, following up the questions of Sir John Wolfe-Barry on the 16th day, I made a statement showing the works which under our present statutory powers we could carry out for the improvement of the port and works which had at times occupied us very much in discussion. On the 17th day I made a statement as to those works. The question Mr. Lyttelton asked me at Question 5696 is this: "With regard to those works which you mentioned this morning as being in contemplation, are those works which you are prepared to come under obligation to construct provided you get the relief you seek?" Of course, I could not at the moment give an undertaking without consulting the court of the London and India Dock Company. The matter has since been before the court, and I am now authorised on behalf of the dock company to submit a supplemental memorandum which divides the works which we have considered from time to time into three classes. The first class consists of works which the company are prepared to be put under obligation to carry out within a period of ten years if Parliament give the relief which the company ask in the matter of charges on lighters and goods. Taking first the West India Dock, a deepening of the import dock so as to admit of vessels of deeper draught entering and leaving at all tides. A deepening of the export dock to the like extent, and a quaying of the sides of the dock, with all necessary quay sheds and appliances for the accommodation of shipping.

6603. (*Sir John Wolfe-Barry*.) When you say "a deepening," do you give any figure of deepening?—I

can tell you what really since the Commission has begun, and quite independent of the Commission, we have done. We have authorised a deepening of the West India Import Dock so as to give 27ft. of water there at all times, and that is what we have in contemplation for the export dock too. That means a deepening at present of about 3ft.

6604. In the dock itself?—Yes, in the dock itself. Then going to the East India Dock an enlarged cut between the basin and the import dock, so that any vessels able to enter the basin may have access to the import dock, improved shed accommodation and appliances. Then at the Albert Dock we propose further increased shed accommodation. That is to replace some of the existing one-storey sheds by two-storey sheds. Then at the Albert and Victoria Docks silo accommodation for storage of grain, as and when required, and at Tilbury Dock further shed accommodation as and when required. That is to meet the demands that I mentioned the other day of the Atlantic Transport Company to put up double-storey sheds, and not only their demands, but to extend that to the other berths of that dock. Those are matters which we are willing to come under obligation to carry out within this period of ten years. Then the second class relates to works to which the company will give their serious attention with the view of executing such of them, and in such order as upon consideration may be found to be necessary or desirable in the interests of the trade of the Port. Then at the London Dock a new entrance from the Hermitage or at Wapping into the London Dock, so that such ships as may be able to come so far up the river, and as could use the Shadwell Basin may be accommodated in the London (Western) Dock. Sir John Wolfe-Barry was not here when I stated that at present there is a difficulty in getting vessels that can use the Shad-

Mr. C. J. C.  
Scott.  
15 May 1901.

Mr. C. J. C. well Basin into the Western Dock. The works at Shad-  
 well Basin will accommodate much larger ships, but we  
 cannot get them into the Western Dock. It is to  
 15 May 1901. obviate that difficulty that we propose to do this.

6605. This is a new entrance from the river?—Yes. Then we propose to give improved shed accommodation and appliances. Then in the South West India Dock improved berthage and shed accommodation. At the Victoria Dock an improved entrance, so that access may be given to vessels which cannot enter this dock through the Albert Dock, owing to the insufficient depth of water over the railway tunnel at Connaught Road. We have only some 24 feet to 24 feet 6 inches of water over the railway tunnel, and of course it is impossible to deepen that. This, of course, would obviate that difficulty. Then at the Albert Dock, if the plan of the proposed new dock is found to be satisfactory, and to facilitate the delivery of goods into craft, a re-modelling of the quay and the provision of barge ponds on the south side of the dock. Those are works which we recognise may be very necessary, but I do not think it will be possible or wise for us or anybody else to give an undertaking to carry out those works. At present it is not quite clear whether they are absolutely necessary, but so soon as we found they were absolutely necessary, we would most certainly seriously consider them. Then the third class of works is facilities and accommodation which the company will provide as and when required, according to the needs of trade from time to time; dredging and deepening of the docks; tugs; sorting sheds for frozen produce; further storage accommodation for frozen produce; further accommodation for storage of tobacco. All these items in the three classes which I have put before you have been from time to time very fully discussed by us. With regard to some of them we have even gone so far as to get out estimates, but we have been put into the difficulty that we did not see our way of carrying out these works on account of our financial position.

6606. (Chairman.) Can you give us any estimate for the proposed expenditure under Class I.?—Yes, I can. Would you like the separate items?

6607. I think we should like the classes separate?—I have not got estimates for Classes II. and III., but for Class I. I have the estimates.

6608. We should like to have them?—Under the head "West India Dock" the amount is £150,000; East India Dock, £200,000; Albert Dock, £120,000. I think that would probably be exceeded. I think it would come to more than that.

6609. (Sir John Wolfe-Barry.) Does that mean two-storey sheds?—Yes. That is not for the entire dock. That would be only for certain two-storey sheds on the south side. For export work practically you do not want two-storey sheds. Then at the Albert and Victoria Docks, that is the silo accommodation for storage of grain, £50,000. That would complete the plan which we have already begun. Then Tilbury Dock, £200,000, making a total of £720,000.

6610. Do you wish to give us any estimate as to Classes II. and III.?—We have not got so far as that. We have discussed all these matters from time to time.

6611. Can you give us, without going into details, any approximate total of the sum you propose to expend?—Not on Class II. The only one I could give you would be that under the heading "Albert Dock." I think that would be about £100,000. In Class III. the dredging and deepening of the docks would come practically under the yearly expenditure. Of course that would be done. I think possibly if, when you examine Mr. Baggallay, you ask him upon some of the points, he might be able to answer you.

6612. But we might take it, I suppose, that the principal expenditure on capital account would come under Class I.?—Yes. If we made this new entrance into the Victoria Dock, I think that would be certainly £200,000, and the new entrance to the London Dock I should think would not be less than £100,000. Now, my Lord, may I go back to a further question that I was asked by Mr. Whitehead? It is Questions 6601 and 6601a. The two go together. If you read those two questions and the two answers, they absolutely contradict each other. Question 6601 says: "But you have deprived yourself of the control?—[A.] No, we do not deprive ourselves. We have not got that power." Then Question 6601a is: "May I say you have not got that power in consequence of your agree-

ments?—[A.] Certainly." What I want to say really is this. By the mere fact of those agreements that we entered into with the shipping owners we do not deprive ourselves of the power. We still have the power such as we had before. That power is of a legal character which I could not possibly find it in my power to describe, but any power which we had before those agreements were made has not passed out of our hands, and all those agreements are determinable at three months' notice, so that practically if anything did slip out of our hands we could always withdraw it.

Further cross-examined by Mr. Whitehead.

6613. Following up your observations on Question 6601, I understand what you now say to be really this, that as a matter of law you still have control over the quays?—Yes.

6614. That is to say, you could by giving three months' notice, or whatever the notice might be, again acquire the actual use of the quays as before?—Yes.

6615. We are agreed as to this. So long as those agreements are in force under the present actual circumstances, you do not in fact have the control?—Yes, we do in many ways. If you will turn to the agreement you will find that there are many stipulations in the agreement which do keep the control in our hands.

6616. Then we will refer to the agreement itself. Now, taking the matters which you have put in this morning, are these improvements which you contemplate additional to those which are provided for in the Bill?—Certainly. I prefaced my statement by saying that these are all improvements which we could carry out with our present statutory powers. The Bill gives us new statutory powers.

6617. These are additional to those already provided for?—Yes.

6618. And out of what fund do you propose the money should come?—The funds of the company.

6619. Out of revenue?—No; capital.

6620. Do you propose to raise the money by means of that unexhausted borrowing power?—Certainly. If we found, as we went on with these works, that our capital powers were not sufficient, it might possibly be necessary to go to Parliament to get further borrowing powers.

6621. I understand that you have at the present time a net borrowing power of about three-quarters of a million?—Something of that kind. It is not a borrowing power; it is a power of raising money.

6622. And these improvements which are set out in your memorandum would cost about £720,000?—Yes. Of course, you will understand that these estimates are to a certain extent rough. We have had closer estimates made, but since then there has been a considerable advance in the cost of material, and we have had to make allowance for that. If prices went back, we might not have to find so much.

6623. Now, when we left off at the last sitting, I was asking you some question about barges. You gave some figures with regard to the average size of barges at the end of the eighteenth century. You said that the average tonnage then was about 32 tons?—Yes. See 5581.

6624. Has there been any appreciable change in the average tonnage of barges, say, within the last ten years?—I should say most distinctly that the average size in the last ten years has increased.

6625. Can you give any indication of what percentage of increase there has been?—I quoted from a barge owner.

6626. I did not understand you to give any figure with regard to the last ten or twelve years. You said, if I remember rightly, that there were barges now of the size of 200 tons; but I am dealing with the average size of barges to-day. We cannot deal with the thing in detail. I want to take it broadly?—But I think in such a case, where there are practically no figures published, you must deal with it in detail; and if I can show that one particular bargeowner puts it that he has added to his fleet these barges of large size, I think that goes some way to prove that the size of the barges is increasing.

6627. I quite accept that proposition. If you cannot give us any figures, I must pass from it?—I say this in Question 5597: "A circular issued on July

21st, 1899, by Messrs. James Cook and Co., is typical of the growth of the lighterage trade, for it states that Messrs. Cook have added to their fleet to meet their customers' demands, 15 open 125-ton and 15 open 150-ton craft." I think Mr. Jacobs, in his evidence, also alluded to the growing size of barges.

6628. If you cannot give me the figures I will not press it. He deals with the period down to the year 1877, and he gives the average down to 1877 as 47 tons each?—Then there must have been a very considerable increase in the average size, because later on he speaks of an average of 79 tons.

6629. I did not know whether you could give me a figure for the last ten years?—No, I cannot. We have tried to get it, but we have failed.

6630. I will get it from somewhere else, if necessary. Then you expressed a fear that barges should go up in size until they reached 1,000 tons?—I did, because I have been lately approached to know about it.

6631. At the present time, if I understand the exemption clause aright, a barge only has a right of free entry to docks when it is going to receive goods from, or deliver goods to, one vessel?—That is rather a nice legal point, which I am not prepared to answer. That may be your view.

6632. But if that is so, do you think it likely that a barge of 1,000 tons would be able to go full to any one vessel, having regard to the existing conditions of trade?—I think in certain trades—take the grain trade, for instance—it might be worked.

6633. How many riverside premises do you think there are that a barge of 1,000 tons could go to taking grain from the dock?—I could not answer that question at all.

6634. Can you name any riverside premises to which a barge of that size could go?—There must be plenty along the river. The railway docks, for instance; they could go there.

6635. Would it not be true to say that substantially the greater number of the waterside premises could not take such a barge alongside?—That, I think, is probably true with regard to a great many of them; but a great many could. And, mind you, the suggestion that there would be 1,000-ton barges did not come from me; the suggestion came from a shipowner himself.

6636. I want to get your opinion, not the shipowner's, as to whether it is a likely change?—I do not see anything to stop it.

6637. (Chairman.) You might turn to the Appendices to the 16th day, No. 35, in which you give a table showing particulars of some of the barges?—I am afraid that will not answer Mr. Whitehead's question.

6638. There is no average?—No; and Mr. Whitehead wants the average. This all tends to show that the size of the individual barges has been growing; and I hold from that, that the average must have been growing at the same time. Now, may I also refer Mr. Whitehead to Question 1231, where Mr. Rogers was making certain statements. Mr. Rogers is connected with the Chamber of Commerce. He says: "Apparently it would be advantageous to supplement this system or supersede it by the employment of steam barges calling at a number of places, to collect and deliver goods in the same way that land carriers do." If Mr. Rogers thinks that would be advantageous to the port it means the employment of very large barges, because it would not pay anybody to put steam into barges unless they had very large carrying capacity.

6639. Then you think it would be an economical way of working the traffic, do you?—I do not say that at all. That is Mr. Rogers's opinion.

6640. I wanted to get the fact from you about the average size. Now I will go on. As I understand, your proposed charge would apply not only to imports, but to exports?—Yes.

6641. And it would be a charge varying from 1s. to 1s. 6d. a ton?—As a maximum.

6642. And it would apply at the present time to a tonnage of 1,959,000 tons?—You are quoting my figures. It is at Question 5626. "It is estimated that this would reduce the tonnage by, say, 900,000 tons (assuming that one half of the barges only carry full weight), and the revenue would be reduced by £15,000. The maximum powers sought

would therefore give £75,000. But in the carrying out of their powers the London and India Docks Company would, in the absence of necessity for a larger income, charge at the rate of 3d. per ton only—a deduction of £18,750—leaving a net income from barges of £56,250. Dues on Goods.—It is estimated that in the year 1899, 2,860,707 tons of import goods and 1,959,606 tons of export goods passed through the docks on overside conditions without contributing anything to the dock revenue."

6643. That is what I had in my mind. We have heard a great deal about the charge of 1s. a ton on a certain export trade. Can you tell the Commission what articles this proposed impost would affect. What articles are exported from the docks?—Their name is legion. It would be quite impossible for me to go through everything. You have cheap goods and dear goods.

6644. Are they articles of which the nation have a monopoly?—I think nowadays we have a monopoly of very few things.

6645. My clients are looking at this thing from the point of view of the trade of the country, and I want to find out from you what articles would be affected by the impost of 1s. to 1s. 6d. per ton?—Everything.

(Chairman.) Mr. Whitehead, we must ask you, if you please, to give us a little more definite idea of the points upon which you wish to cross-examine. We must ask you not to roam generally over the evidence which has been taken, with a view to asking questions because it occurs to us that a good many of the questions you are asking are already on the notes and others refer to matters and to people who are represented by independent counsel.

6646. (Mr. Whitehead.) If your Lordship pleases. Now, with regard to the discount. At Question 5681 you said there is a discount given in respect of exported goods. You stated that there was a trade in which all the firms who are engaged get a further discount in addition to those that were published?—Yes.

6647. What trade is that?—My Lord, I think this is one of the questions as to which you stated that you were satisfied with my answers, if I gave you my assurance that those were all the discounts.

6648. (Chairman.) Will you give us the reference?—It is at Question 5694 when the matter of putting in these different agreements was before you. You said: "The Commission will be satisfied if you will assure us those are all the agreements that you have," and I answered: "Yes."

(Chairman.) That is subject to the subsequent statement that we would be prepared to receive written applications for agreements.

(Mr. Whitehead.) I understood it applied to discounts; it is not a question of agreements. Certain discounts are public, and I understood the Witness to say certain discounts are secret.

(Chairman.) If so they are agreements.

(Mr. Lewis Coward.) My Lord, this is only another form of trying to get round your ruling, and to get at the contents of those agreements. I submit my friend must accept the ruling your Lordship gave the other day that there must be a substantive application if these agreements are wanted.

(Chairman.) I understand the Chamber of Commerce have already made an application.

(Mr. Whitehead.) I do not want to go outside your Lordship's ruling, but I thought if these discounts were relevant to your Lordship's inquiry, it is important that the matter should be investigated by my clients to see whether a statement on that point was worthy of credence.

(Chairman.) Do you challenge Mr. Scott's statement at Question 5693 and 5694.

(Mr. Whitehead.) His statement is so vague, if I may say so. He says there is a trade. I simply ask him what trade. When he tells me what trade it is I can have it investigated.

6649. (Chairman.) Have you any objection to answer the question, Mr. Scott?—I think if I answer that question I must answer all the questions as to these discounts. I do not see why it is quite fair to pick out one and leave the others unanswered.

Mr. C. J. C. Scott.  
—  
15 May 1901.

*Mr. C. J. C. Scott.* (Mr. Whitehead.) May I point out to your Lordship that it is an extraordinary state of things that there should be a trade in which there are not only published rates of discount, but also secret rates of discount which go to every member of the trade. In itself it is hardly intelligible.

15 May 1901.

(Mr. George Wallace.) May I with deference say that your Lordship has already drawn attention to the terms of Reference of this inquiry, and it is with regard to the system of charge only. I understand my friend now suggests that because there is a discount allowed to the whole trade, therefore other trades ought to inquire into it, for some reason or other. It does not seem to be within the terms of Reference of this Commission. Your Lordship sees it is: "The adequacy of the accommodation provided for vessels, and the loading and unloading thereof, and the system of charge for such accommodation." That is accommodation provided for vessels.

See 7009. (Chairman.) I think that is so; I do not think it is within the scope of this inquiry to go into the charges which are made by the docks.

(Mr. Whitehead.) I am in this difficulty. This matter was gone into fully in the evidence in chief, and if it was relevant then, I cannot help submitting respectfully to your Lordship that any cross-examination upon the point is relevant now. If it was irrelevant when Mr. Scott made the statements, and those statements are struck out of the notes as being outside the scope of your Lordship's inquiry, I am content.

(Mr. George Wallace.) I confess it is the first time I have ever heard one of my learned friends challenge as irrelevant the questions which the Tribunal thought fit to put. No reference was made by Mr. Scott in his own statement. Your Lordship put the question and asked whether there were certain agreements, and what the Witness said was in answer to that question. It was not any part of the case which we put forward at all.

See 7009. (Chairman.) We should like to say that we do not think the question of the charges of the docks, apart from the accommodation of vessels, does come within the scope of the inquiry, and we trust you will be satisfied with asking for the agreements which you wish to have.

(Mr. Whitehead.) Of course I do not want to press the point against the ruling of your Lordship.

6650. Now I will ask you to look at Appendix 31 on the 16th day, under the heading "Income." You see the seventh item in the column: "Rent of premises?"—Yes.

6651. At Question 6527, I asked you as to the aggregate amount of the rent received by you for the use of your quays?—Yes.

6652. You told me then you thought it was about £40,000?—Yes.

6653. Is this figure of £39,863 under that year 1899 the figure you had in your mind?—No.

6654. Where would that £40,000 come in these accounts?—If you will look at the third line, "Tonnage dues and rents on ships discharging and extra rates on ships," it is included there. It is a charge on shipping. When you come to "Rent on premises," that is not a charge made on shipping.

6655. That is quite distinct?—Quite distinct.

6656. (Sir John Wolfe-Barry.) Is the rent of premises the rent of warehouses?—We have certain premises which are let. In the St. Katharine Dock we let large warehouses to the Apollinaris Company. It is conveniently close to the water. We also have a lot of people who distil scent who want accommodation, and we let to them.

6657. Mainly the rent of premises represents matters of that kind?—Yes.

6658. And they are largely outside the docks?—We have a lot of property not included within the dock walls. Those are rents pure and simple.

6659. (Mr. Whitehead.) With regard to your answer to Question No. 5847, you were asked would it be possible to separate an up-river from a lower-river business? Your answer was: "I do not think so." Would you just define what you mean by up-river business and lower-river business?—Do you not think, as you asked the question, that you should define it?

(Mr. Whitehead.) I did not ask the question.

(Sir Robert Giffen.) I put the question.

6660. (Mr. Whitehead.) I want to know what your answer means?—My answer is what it says. Put it in this way. In the lower docks we do a great deal of shipping business, and comparatively a small amount of warehouse business. In the upper docks the position is reversed.

6661. That clears up the point. By "lower river" you mean lower docks?

(Sir Robert Giffen.) That is all quite explained in the questions themselves. I rather object to going over the same ground. If you look at question No. 5846, you will see that that is all explained. The thing is quite clear.

(Mr. Whitehead.) I only want to get the point quite distinctly. Certain questions have been raised as to the control of what I may call the upper river above the upper docks. I was not quite sure whether Mr. Scott had in his mind merely the lower docks and the upper docks, or whether he drew a distinction, say, between the river below London Bridge and the river above London Bridge.

(Witness.) We have nothing to do with the river. We have no control over the river, and, as Sir Robert Giffen says, the previous question shows distinctly it did refer to the business generally in the lower docks.

(Mr. Whitehead.) So I thought, but I wanted to get it clear on the notes.

(Mr. Harper.) May I ask one question upon the evidence that Mr. Scott has given this morning?

(Chairman.) Certainly.

6662. (Mr. Harper.) In all these questions of improved shed accommodation which you have described, and on which you propose to spend altogether a very large sum of money, that is the same class of shedding as that which already exists?—No.

6663. It is increased shedding accommodation, is it not?—If you say a two-storey shed is the same as a one-storey shed.

(Chairman.) The witness has already been asked that question; Sir John Wolfe-Barry asked him.

6664. (Mr. Harper.) There was one thing more I wanted to ask, and I was just leading up to it. They would, in fact, be, for all practical purposes, warehouses in which goods only required to remain for a space of two or three days before being taken into consumption and going away?—Certainly.

6665. And *pro tanto* they would be in competition with the other warehousing interest on the river?—You must remember that at the present moment we need not ask for power at all to put up two-storey sheds. Then you must remember that those goods which are going to be stored for two or three days would never come to a riverside wharf.

6666. I am merely asking you whether it would have that effect?—No, it would not, for the simple reason that goods that remain for two or three days can discharge on a low rate; our reason for keeping them there is that we cannot afford to pay the expenditure necessary for removing them, and if we cannot our competitors cannot either.

(Chairman.) Does anyone wish to put any further questions?

(Mr. George Wallace.) My Lord, I do not know whether the witness has got the items of expenditure of £109,000 which your Lordship asked for. I rather think they are not ready yet. See 7008 and 7916.

(Witness.) I have not got them yet.

(Mr. George Wallace.) They are not on the notes. Your Lordship asked a question again at Question 6068 which was the first question on the 18th day. I said then that it had been overlooked, if it had not been put in. I do not know how far that is so now. I do not know whether your Lordship wants these figures.

(Chairman.) We should like to have them. I understand we have not had them.

(Mr. George Wallace.) I understand there were two half years put together, that is all it is—from the printed accounts.

(Witness.) I think, Sir Robert Giffen, you could not quite understand the accounts, because we publish our

Mr. C. J. C.  
Scott.

15 May 1901.

accounts half-yearly, and we made reference to the amounts of maintenance for the two half years. That £109,000 was made up by putting two half years together. The details of that would be innumerable. It is our general maintenance all over the docks which includes painting and repairs, and every sort of thing from a few shillings up to a good many pounds.

See 7008. 6667. (Sir Robert Giffen.) I think you give a return showing the maintenance of each dock, or something of that kind?—No, we do not keep them separately.

6668. (Chairman.) Then I think we need not go further into the matter. We are satisfied with the explanation?—It is simply general maintenance.

(Mr. George Wallace.) I only wished to mention that as your Lordship mentioned it. I do not propose to ask Mr. Scott a single question.

6669. (Sir John Wolfe-Barry.) I want to ask one question as I was unable to be present last Wednesday. I notice that you discussed the question of division of the warehouse and dock property. The question was discussed by you as to whether it is economical and sound, but you said from a working point of view it is practically impossible. I should like to have that a little further explained. Why is it practically impossible to treat the warehouse property separately to the quay and dock property? I can quite understand it is an entire alteration of your business, but why is it practically impossible?—Where you have, as in the principal docks, warehouses built right up to the level of your water, the lower floor of this warehouse is used for shipping discharge. That, I think, at once makes it impossible. How are we going to work these warehouses above if we have no control over the lower floor, which is necessary for the working of ships?

6670. You mean that the quay being below the warehouse would interfere with the working of the warehouse?—Precisely.

6671. Are all the goods that are stored in these particular warehouses landed at that particular quay?—Yes.

6672. Out of barges or ships?—We bring them up out of barges.

6673. Not out of ships?—Some out of ships. Originally the idea was that the ships should discharge there, but with the growth of ships they cannot come up there. The bulk of our goods for warehousing are discharged in the lower docks, and they are barged up to these docks, or if they are for a town warehouse, such as Cutler Street, they are taken up by road.

6674. The warehouses in the town, apart from the water, do not, I suppose, enter into this difficulty. It is the warehouses near to the water?—We bring a certain quantity of goods for Cutler Street up by barge, and then cart from the St. Katharine's Dock.

6675. You use the quay, then, as a means of approaching the Cutler Street warehouse from the barges?—Yes.

6676. But all the traffic comes from barges into these warehouses?—Yes.

6677. And the ships that bring the goods unload at some of the other docks?—Yes.

6678. So that those particular warehouses are approached on the one side by barges and on the other side by carts?—Yes.

6679. You say, however, that it is practically impossible to treat these warehouses as separate from the docks?—I think so; quite impossible.

6680. I want to know why, if we consider the docks as a barge access to the warehouses?—Because the whole business is so mixed up. Take goods landed, say, in the Albert Docks. There are certain duties which have to be performed there in connection with those goods, but we do not make a charge for those docks; we only in our own accounts to a certain extent credit the Albert Dock with a small part of the warehousing charge which we earn in the uptown warehouse or in the warehouses of the other docks. When we have goods discharged on to the quay, say, at Tilbury, we have to do certain operations for the goods there before they come into our warehouses, but on those goods which are warehoused with us we make one charge for warehousing to the merchant, and that one charge to the merchant covers all the

services rendered down at Tilbury, the cost of transport from Tilbury up to the up-town warehouses, and then the services rendered there.

6681. Then the difficulty arises in charging?—Certainly.

6682. Not in practical working?—Yes; I think it would be in practical working too. Take the case of the Tilbury Docks, again. We do a very large cheese business there, and for the shipowner we have to bring that cheese up and deliver it to domicile. In connection with that trade it is absolutely necessary to have warehouse accommodation, and a great deal of that cheese which is on the bill of lading to domicile comes up to the Commercial Road by rail, and is stored there if the owner, the consignee, does not want immediate delivery.

6683. It comes up by road?—No; it comes up by the London, Tilbury and Southend Railway from Tilbury. It comes straight up into the warehouse, and is stored there. I think when some of the Commissioners went round they saw an enormous quantity of cheese.

6684. But would you follow the other line—barging? Suppose a ship unloads any cargo you like, cheese, for example, which then goes into a barge to go to its destination?—Yes.

6685. That destination may be either a private wharf or the wharf of the company—we will say in the St. Katharine's Docks?—Yes.

6686. What difference is there in the physical mode of working the traffic if it goes to a private wharf, or if it goes to one of the warehouses in the St. Katharine's Dock?—None whatever, but if the warehouses in the St. Katharine's Dock are deprived of their water frontage, they will be placed at an enormous disadvantage compared with the warehouses on the river which will retain their frontage.

6687. I quite follow that point, that for the warehouses belonging to the company water access is all important?—Yes.

6688. Just as water access is all-important to the private ones?—Yes.

6689. To that extent they are on all fours?—Yes. I may tell you we have gone into the thing very, very closely, and we have come to the conclusion that it is absolutely impossible.

6690. You mean absolutely impossible to separate the water access from the warehouses which possess that water access?—Yes. I have just been asked to make a statement on a matter that I had not remembered with reference to Question 5871. It is really on the question as to whether the docks were our freehold or not. The question put by Sir Robert Giffen was this: "I wish to ask a question with reference to your statement as to vesting, and as to the claim about freehold. I think at one part of your evidence you said that docks are freehold property. My question is whether you maintain that docks are freehold property in the sense that the dock companies could give up the business and sell the property or whether it is a complete property of that kind?" My answer was: "No, I do not think so, for this reason, if we wanted to sell one dock, I do not think it would be possible to sell it without getting Parliamentary sanction." I may remind the Commission that in the year 1889, when we had the great dock strike, and when we wanted to get the protection of the Metropolitan Police, we could not get it. They held that the docks were our private property, and we could not have their protection unless we could show there was going to be rioting.

6691. (Chairman.) Have you any specific instance that you can put in?—We can put in all the correspondence with the authorities at that time.

6692. I think we cannot receive the statement without it?—I will have that put in then.

6693. (Sir John Wolfe-Barry.) Bearing on that subject, I do not know whether you are aware that the Liverpool Docks Harbour Trust have recently sold one of their docks. I believe I am right in saying that they had to obtain Parliamentary powers to do it?—Yes, and I think the same would hold good with us. I think that practically with regard to any of our docks or any of our warehouses we should have to get Parliamentary powers to do that.

Mr. C. J. C. 6694. Granting that Parliamentary powers were  
 Scott. given, the compensation all went to the dock trust?—  
 Yes.  
 15 May 1901. 6695. Those who bought the dock had to pay the

money as if it were a freehold? I think all that you  
 want is an enabling power from Parliament to sell?—  
 Yes, and then the money would go into our own  
 pockets. Recalled, 7608.

Mr. HENRY CHARLES BAGGALLAY recalled and further examined.

Mr. H. C. 6696. (Chairman.) You have already appeared before  
 Baggallay. us in order to give evidence with regard to the docks  
 belonging to the London and India Docks Company?—  
 Yes.

6697. I understand you now propose to give us particulars of the annual cost incurred by the Joint Committee of the London and India Docks on account of barges?—Yes, but before I go to that I may mention one or two questions that have already been referred to that want a little explanation:

6698. With reference to what?—First with regard to a question of Sir John Wolfe-Barry, who asked for the cost of dredging.

6699. I think that will come better later in your evidence. You were going to give us the particulars of the annual cost incurred by the joint committee on account of barges?—Before dealing with that, I think it would be clearer to give you the general system of dealing with barges at the entrances, and also some observations on the practice at particular docks.

6700. Very well, we shall be glad if you will do so?—Until a year ago the general plan adopted by the dockmasters was to commence by locking out barges some three or four hours before high water, the object being to clear the fairway for the ships and incoming barges, and to give the barges as much tide as possible to carry them up to town. At the St. Katharine and Shadwell entrances it was more usual to reverse the order, and admit barges before sending any out. The entrances being thus somewhat cleared, the ships were dealt with, after which the balance of barges entered, these operations frequently extending for an hour or two after high water—in many cases locking in and locking out were not alternate. I may explain that of course if you can send out a lock full of barges, and alternately with the barges going out you can bring in a lock full, you naturally save half the water. It having, however, been pointed out that to make locks from four hours before high water until high water, wasted three times the water that would be required if four hours were taken—two before and two after high water—the dockmasters have been endeavouring to shorten the hours and keep them nearer high water, with some success, but of course the bargemen do not like the change. The barges only carry one man each, but I have often seen about three men to five barges in the basins, so that any locking without assistance would practically be so slow as to become almost impossible. The Dock Company's staff therefore lend assistance in fastening the barges together with ropes and haul the whole mass through. They also supply ropes, labour, and hydraulic power. The barges, when in the docks, are frequently not properly made fast or kept under control, for instance, on one day three separate barges drifted down on the temporary dam in the South West India Dock Basin, and the contractor now has to keep a man specially to protect his dam from wandering craft. This general practice, however, has to be modified at different times and at different docks, according to the number of barges to be dealt with, the force of the wind, state of weather, and other conditions. With regard to the Royal Victoria and Albert Docks, as nearly one-third of the shipping, and more than one-third of the barges enter these docks, and the ships are of such depth that the water level must be maintained at Trinity high water, I will describe the practice more fully. About 36,000 barges enter at the Victoria end and 20,000 at the Albert end in the course of the year. At the Victoria Dock entrance barge work commences about four and a half hours before high water, and the average number to enter is 100 per diem for the year, but this number is often doubled on particular days. The number going out is not so great, as many that have entered at the Victoria Dock entrance go out at the Albert Dock entrance. The barges to go out being all collected in the basin, the gates to the docks are closed and the barges are then locked out; when the number is not very great a lock full is allowed to enter, after one

or two locks have been made with outward bound barges. When this locking is commenced the water in the river is generally 15ft. below dock level or Trinity high water. After the barges have all been locked out, a level is made in the basin, generally about 5ft. below the dock level, and then all the barges that have been waiting in the river enter the basin, the average number for the whole year being 50 per tide, but 150 per tide is not an unusual number. The lock gates are then shut and the sluices between the docks and the basin opened, and the basin level raised at the expense of the dock, with the result of lowering the dock about 6in. at neap tides, and of course less at spring tides. This loss of water has to be made good by pumping for six hours per tide, or 12 hours per day for 45 tides per mensem, in order to maintain the level, the pumps, as a rule being able to raise the level of the docks 1in. per hour. Perhaps I ought to say it is a little more than that; they can generally manage about 15in. in 12 hours. At this entrance the Dock Company's servants do all the work, very little assistance being given by the lightermen. That is partly necessary, because over the centre of the lock there is a swing bridge for the public, and therefore any delay would cause inconvenience. At the Albert Dock entrance there are two locks, one being used almost exclusively for barges. The barges are not so numerous, but the ships being large and the available area of the basin much reduced by the ships berthed at the quays, the traffic is very much congested. The dock-master keeps a foreman and two men generally supervising the docking of barges, and assistance is given in any case of special need, but speaking generally the labour is put upon the lightermen at the entrance, and the dock staff do not render them the same assistance as at the Victoria entrance. There is no public bridge there, or anything of the kind, therefore a little delay does not inconvenience anybody at all, except, of course, that it increases the congestion of the traffic. Until last year the locking commenced at the same time as at the Victoria Dock, namely, four and a half hours before high water for the convenience of the barges that they might get the flood up to town—but for some time, I understand, the work has been commenced later, and consequently finished nearer to or even after high water, thus saving some of the water. But when there is a crowd of barges in the basin the locking commences four and a half hours before high water in order to clear the basin for ships. For although large ships are only locked in and out at the top of the tide, they have to be brought into the basin in good time or the work could not be performed. The whole dock is often so crowded with barges that navigation is almost impossible. I have been sometimes unable to get through the barges at the east end of the Albert dock in a little steam launch. At Tilbury locking can be performed at all times, and in all states of the tide. Being so far from London barges mostly arrive there near low water and like to leave at low water. The barges are generally locked out or in at any time they desire, and although the lock will take 36 barges, it is not unusual to see only two or three passed at one time. I have seen a single barge going out. Each lock at low water lets out 1,000,000 cubic feet of water, and this loss is often sustained for only a few barges. There is a middle pair of gates dividing the lock, but as they are only 150 feet from the dock end, it is not often that water can be saved. Of course that depends a good deal on the state of the water in the lock at the moment. If the water was down in the lock and a barge wanted to go out, you would lose the whole lock-full. At this dock there is plenty of room, so the lightermen can take their time and do their own work without much assistance. I think it probable also that the lightermen who go so far down the river may be more experienced men, and a little extra time on a long journey not so important. At the East India Docks there are two entrances, but being short all ships pass on a level. The locking of barges begins three and a half hours before high water, the barges are locked out,

lock after lock, and with but few exceptions all pass in on the level. The dockmasters find it necessary to do all the work for the lightermen, otherwise they could not clear the entrances. In making the level the gates are closed between the basin and the docks. With regard to the West India Docks—Blackwall entrance—these docks are pumped up about 1 foot above Trinity high water so no levels can be made. Locking commences three and a half hours before Trinity high water, and is finished at high water or an hour after high water. At this lock the barges pass in and out alternately, so no more water is lost than necessary, but as the barges for the first lock-in begin to enter the lock at low water, the sluices are opened and a full lock of water lost. The dock-master works the barges through the lock and has also often to use his tugs to clear the block. This is another case where there is a public road swing-bridge right in the middle of the lock, therefore no delay can be allowed. Even as it is the traffic is very much delayed. At the South West India Dock the work begins about three hours before high water, the locks being first made for the outward barges and then for the inward—one lock each way is generally sufficient—the others wait for the level one or two hours later. Nearly all ships and half the barges pass on the level. At the London Docks there are two entrances, one at Shadwell and the other at Wapping. The work at Shadwell commences three to four hours before high water, and continues from one to three hours after; large ships are dealt with from one hour before up to high water, and light draught ships can be dealt with from two hours before to two hours after. The practice here is different to that which obtains at most of the docks, for the first lock of barges is generally inwards, and more than half pass on the level. Blocks are common at this lock, so the work has to be done by the dock staff. No delay can be allowed on account of the public road bridge. At the Wapping entrance practically no barges are locked in; they all pass in on the level into the basin, but barges are locked out about three hours before high water. Here again all the work has to be done by the dock staff. At both these entrances the barges have to be locked a second time from the basins into the dock, which is kept at a higher level by pumping. Then the St. Katharine Dock. Most of the work at the St. Katharine entrance is done on the level, but a few barges are locked in and out from two to three hours before high water.

6701. Will you give us now the particulars of the annual cost incurred by the Joint Committee on account of the barges?—Exclusive of any proportion of general expenses, and also of any interest or depreciation on capital value, except in the case of dredging and pumping plant, the annual cost incurred by the Dock Company in consequence of the number of barges entering the docks exceeds £50,000—divided under the following heads:—

1. Dredging and pumping	£ 32,760
2. Interest and depreciation on value of dredging and pumping plant	4,725
3. Repairs at entrances, etc.	5,250
4. Hydraulic power	4,500
5. Wages of oilers, oil, rope, stores	2,100
6. Barge searches	761

Total - - - - - £50,086

With regard to the first item:—Dredging and pumping.—The water in the Thames below London Bridge contains a large amount of matter in suspension. This matter is maintained in suspension so long as the water is in motion, but when the water is allowed to be at rest the matter settles and forms a light mud, which in process of time consolidates into a compact mass. When, therefore, river water enters the docks the mud in suspension is deposited so that the water becomes comparatively clear. In the process of locking, this comparatively clear water is let out into the river, to be replaced at the next high water, or by pumping, with river water full of mud in suspension. It makes no difference whether the water to re-fill the docks is taken in through the locks on the rising tide, or whether it be pumped in, as the incoming water contains practically the same amount of mud in suspension. The amount of mud that comes in, and, therefore, the amount of dredging, is directly governed by the loss of water. The pumping is required to make good the loss of water when the tide is insufficient to maintain the level of the docks. Pumping is carried on at the Victoria and Albert Docks, the West India Docks, and the London Docks, since the size of the ships using these docks

will not permit of any loss of water; but at Tilbury, the East India Docks, the South-West India Dock, and the St. Katharine Dock, there is at present a sufficient margin, so the loss is only made good by the following flood tide. In addition to the mud that is blown out of the basins and locks by steam blowers and drags, between 600,000 and 700,000 tons of mud are annually dredged and sent to sea.

6702. Can you tell us where that mud is deposited?—In Barrow Deep. It has to be deposited beyond a line drawn east of the Maplin Lighthouse and the Girdler Lightship.

6703. Is it far enough down to prevent the possibility of its being washed back by the flood?—I think it is fifty miles down the river from the docks; it is in what are called the Barrow Deep. Taking the figures for 1898, which I adopt for the purpose of my evidence because I was myself responsible for the figures of that year as Engineer-in-Chief of the Joint Committee, 667,000 tons were so removed. That figure is also the average of the last five years. The cost was £31,618 exclusive of interest and depreciation on the capital value of dredgers or other plant employed. From this I deduct £1,600, the cost of clearing the entrances outside the lock gates, leaving £30,000 as the cost of removing the mud from within the gates. The cost of pumping to make good the loss of water in the Victoria and Albert, the West India and the London Docks was £6,400 exclusive of interest and depreciation. The pumping and dredging together, therefore, cost £36,400, partly due to ships, and partly to barges. A return of the barges and ships locked in and out and passing on a level at each entrance during a week when 5,555 barges and 253 ships used the Joint Committee's docks, shows that:—(a) Sixty-four per cent. of the barges were locked, and 36 per cent. were dealt with on the level at high water. (b) Fifty-six per cent. of the ships were locked, and 44 per cent. passed on the level at high water. (c) The average number of barges to a lock was:—St. Katharine, 3.36; Wapping, 3.85; Shadwell, 5.11; East India, 4.28; Blackwall (West India Dock), 9.78; South West India Dock, 6.11; Victoria, 12.58; Albert, 16.3; Tilbury, 9.44; and taking all the locks together the average was 8.9, say nine barges per lock. Those figures show that the locks are frequently not nearly full, for the St. Katharine Dock could take 4 or 5; Wapping could take 4; Shadwell, 12; South West India, 6 or 8; Blackwall (West India Dock), 18; East India (upper), 6; and lower, 3; Victoria, 16; Albert, 28; and Tilbury, 36. In 1898 the number of loaded vessels that arrived from foreign ports was 2,743; of these 300 discharged in Tilbury Basin, so 2,443 only entered. In addition, 1,988 light ships entered to load or lay up, their average tonnage being under 500 tons. Also 1,552 coasters, many not larger than barges, entered; these latter can hardly be considered as ships, but to be on the safe side, I will count them all as ships, each requiring a whole lock, although in many cases two or more passed in one lock. We have therefore:—

Ships from foreign ports with cargoes	2,443
Light ships to load or lay up	1,988
Coasters under 500 tons	1,552

Making a total of - 5,983

Of these 5,983 ships, 44 per cent., or 2,633, passed in on the level at high water, and 56 per cent., or 3,350, were locked in, and, as I said before, I will assume that they required 3,350 locks. The number of barges was 142,217; 36 per cent., or 51,198, passed in on a level at high water, and 64 per cent., or 91,019 were locked in. I have already shown that the average number per lock was nine. So they required 10,124 locks. This number is three times the 3,350 locks required for the ships. I may here refer to a document which was prepared for the use of the Commission, giving particulars of the docking and undocking in the several docks belonging to the London and India Docks Joint Committee for the week ending 14th January, 1900; I do not know whether you have it before you. (*The Witness handed in return. See Appendix, 19th day, No. 1.*) In 1898 I had observations taken at the Albert Dock entrance to the levels of the water in the river every hour, night and day, for a period covering spring and neap tides. I found the average level of the water in the river at each hour, before and after the highest level of the day, to be:—At high water, 9in. below Trinity high water mark. At one hour before or after high water, 2ft. below Trinity high water mark. At two hours before or after high water,

Mr. H. C.  
Baggallay.  
15 May 1901.

Mr. H. C.  
Baggallay.  
15 May 1901.

5ft. below Trinity high water mark. At three hours before or after high water, 9ft. below Trinity high water mark. At four hours before or after high water, 14ft. below Trinity high water mark. At five hours before or after high water, 18ft. below Trinity high water mark. At six hours or at low water, 19ft. below Trinity high water mark. Six hours before or after high water is not always dead low water, as the tide ebbs for a longer time than it flows, and varies with the amount of fresh water coming from the upper reaches of the river, and also with the wind. Excepting at Tilbury, where the river is deep, and there is an outer basin which facilitates their entrance to the lock, ships endeavour to enter and leave the docks at or near high water. They come up the river on the flood, and go to sea with the ebb. For most large ships there would not be sufficient water over the lock sills unless they took advantage of high water, and some of them would run aground in the upper reaches of the river unless they did so. It is also difficult for ships of any length to enter the locks which are at right angles to the stream when there is much current running, so for safe locking it is desirable that they should enter the docks on the top of the tide when the water is deep and slack. It is further desirable that large ships should be locked a little before high water, while the tide is still rising, and not on a falling tide, so that in case of an accident causing delay they would have time in hand, and not run the risk of being stranded. At the St. Katharine, Wapping, and East India entrances, all ships enter and leave at high water on the level. But the barges leaving the docks want to go up stream to London, and are, therefore, anxious to be let out as soon after low water as possible, so that they may have the flood with them. They accordingly crowd in the basins round the locks, and often cause a complete block, while the barges that want to enter, having come down from town on the ebb, are crowded outside waiting to be let in. It is, therefore, necessary to clear the blocks before the ships can be dealt with. The large number of barges to be dealt with makes it necessary that the locking operations be commenced several hours before high water, so that the fairway may be cleared. At the Victoria Dock these operations commence four and a-half hours before high water, when the tide is 10 or 12ft. down. Now, were it not for the barges causing blocks and delays, the ships could, with few exceptions, all be dealt with within an hour of high water, for at most of the locks the ships do not average more than one per tide. The loss of water per lock, therefore, is many times greater than it would be were the barges in moderate numbers, but I will only claim that it is three times as great, although in reality it is about six times as great. Taking it, then, that three locks are made for barges against one for ships, then, as the extended time for locking requires three times the water per lock that would otherwise be used, the barges are responsible for 90 per cent. of the loss of water. The quantity of mud to be dredged, and the quantity of water to be pumped increase in direct proportion to the loss of water. Ninety per cent. therefore, of the cost of dredging and pumping is caused by the barges, and only 10 per cent. by the ships. Ninety per cent. of £36,400 amounts to £32,760, due entirely to barges. As a matter of fact, the amount due to barges is even greater, because when only a small quantity of mud has to be dealt with a longer time elapses before the accumulations are sufficient to cause obstruction to the shipping, so the mud has more time to get solid before it need be dredged. As the ships get larger this becomes more serious, as a foot or two will prevent a ship reaching its berth, so the mud has to be removed before it has had time to solidify, with a result that the stuff raised by the dredgers contains a large proportion of water which costs as much to dredge and send to sea as solid matter. That such is the case can be stated from observation, it being often necessary to dredge a berth where the mud is quite fluid. The following figures indicate how the quantities have increased:—

	Average dredging.
	Tons.
During the four years 1886-9	- - 415,000
During the four years 1890-3	- - 570,000
During the four years 1894-7	- - 610,000
During the two years 1898-9	- - 660,000
And for the year 1900	- - 675,000

The mud at the end of last year amounted to 2,000,000 tons, equal to three years' dredging, but most of this could not be removed because it was in too liquid a state. These figures show that during the past ten years the quantity of dredging has increased by 50 per cent., although the number of ships and barges has only increased about 15 per cent., and they indicate also that the quantity or rather bulk of mud to be removed is increased by the impossibility of giving it sufficient time to consolidate owing to the accumulations being so rapid, which would not be the case but for the barges. Again, in the case of the pumping, the loss of water by locking ships at high water is so little that in most cases no pumping would be required, except, possibly, at low neap tides, but for the barges. Were they not so numerous locks outward and inwards could be made alternately and the loss of water reduced, but under existing circumstances this cannot be done at many of the locks. Now with regard to interest and depreciation on value of dredging and pumping plant, the value of the dredging plant is over £20,000, and the cost of the pumping stations over £64,000. I may point out that these figures are very low for the plant, because all the carriage is done by contract, therefore we have nothing to do with the capital value of the plant. These two items make a total of £84,000. I have included no amount for the blowers and drag, as these might be required were there no barges. Allowing 7½ per cent. for interest and depreciation, the annual charge would be £6,300. I will not divide this between ships and barges in the same proportion as the dredging, namely, one to nine, as the capital expenditure would not have been reduced to that extent, but I think one-quarter would have been ample, so I attribute three-fourths to the barges, or £4,725. Now as to repairs at entrances, etc. The next item that is fairly chargeable to barges is a portion of the repairs of lock gates, sluices, gate machinery, pier heads, lock walls, capstans, moorings, and swing bridges. The cost of maintaining these amounts to £7,076, which sum does not include repairs to tugs and floating plant, as these are not practically affected by the barges. A steamship passing the locks is properly provided with fenders, she hauls herself in with her own winches, comes in slowly, and does little or no damage, and if she does any she pays for it, and it is not included in the cost of maintenance, but nine barges in a lock, on the contrary, bump against the walls and piers with their sharp square iron-bound bows, cut deep holes into the brickwork or masonry, break the timber sheeting and wallings, and knock the gates about. A lock full of barges does much more damage than a lock with a ship in it, but I will only divide the £7,000 in the proportion of the number of locks, or as three to one. £5,250 is therefore due to the barges. Then hydraulic power. The fourth item is the hydraulic power used in connection with the traffic at the locks. With few exceptions all gates, sluices, capstans and bridges are worked by hydraulic power. The Dock Company spend £24,000 per annum (and now that coal is increasing in price will spend more), in fact, last year it was £25,000, in working the hydraulic engines which pump this power, exclusive of any charge for interest and depreciation on capital cost, which I have also excluded, as the outlay would probably not have been much less had there been no barges—although it is a fact that a new engine had recently to be added at the Albert Dock and another at the West India Dock on account of the insufficient supply at locking hours. It has been found that 25 per cent. of this power is used by the dockmasters. Three-fourths of one-fourth, or three-sixteenths, is therefore due to the barges, that is to say, £4,500. Then wages of oilers, oil, rope, stores. The wages of attendants for oiling and keeping in order the hydraulic machinery at the entrances amounts to £1,200, and the cost of the rope, oil and stores £1,600, making a total of £2,800. This should be divided in the proportion of the locks made, though the cost is almost entirely due to the barges. £2,100 is therefore chargeable to barges. The Committee also spend £10,000 a year in repairing hydraulic machinery, but I have not charged any of this to barges, because it is very difficult to arrive at a fair valuation. Then wages of barge searchers. The last item I propose to charge to barges is the wages of the barge searchers at the river entrances which amount to £761. The foregoing items bring up the total to £50,096, without including any amount for general supervision,

See  
6824-30.

or for interest and depreciation on capital value, except in the case of the dredging and pumping plant. The salaries and wages of the dockmaster's staff at the entrances amount to £23,566. The watching of ships and barges by police costs £2,348. The gas and electric light at the pier heads represents £1,121, and the assistance rendered by tugs at the entrances to the barges is estimated at £930. Some portion of these expenses, amounting to about £28,000, would certainly be saved were there no barges, but I have not charged the barges with any portion of that sum, as I have preferred to confine my figures to those more directly influenced by the barges. The cost of the barges is thus shown to be equivalent to 5 per cent. interest on a million, which would be sufficient to make a new dock extension to hold twenty of the largest ships. It has been said that the dock companies have done nothing for the barges, so have no right to expect anything from them, but that is not by any means the case, for quite apart from the £50,000 per annum which, as I have just shown, is spent by the dock companies on account of the barges, many millions of capital are represented by the water areas, and by the excavation and cost of river locks, quay walls, and bridges and interior locks, all of which are necessary to the water areas. The cost of water areas being the principal item in the cost of docks, it is important that as many berths as possible, or the maximum length of quay should be obtained for a given water area. At ports where it is unnecessary to provide for large numbers of barges, the length of quay obtainable per acre is much greater than in London, where barges are numerous. I am not certain what the figures are to-day, but a few years ago, when the Tilbury Dock (the most recent) was being built, Mr. Vernon Harcourt published the following figures: Lineal yards of quay per acre; Liverpool, 108; Hull, 113; Leith, 116; Dublin, 149; while in London, Millwall, only 87; Surrey Commercial, 53; and of the Joint Committee docks, London and St. Katharine, 110; East and West India, 80; Victoria, 75; Albert, 62; and Tilbury, 83. With the exception of the London and St. Katharine Docks which include a number of short quays, the lengths of the quays in the docks of the Port of London are about 40 per cent. per acre less than those of Liverpool, Hull, and Leith. A large sum of money might have been saved had it not been necessary to consider the area required for the barges, and to enable the business to be carried on without the traffic being congested. The Albert Dock is a very good illustration. The main dock is 6,500 feet long by 490 wide. When the London Company constructed this dock 20 years ago, they need not have made it so wide had not their experience with the Victoria Dock shown them that with a less width the dock would be unworkable on account of the barges—even now at times it is absolutely impossible to pass down the dock on account of the block of barges. But for these 60 per cent. of the width or about 300 feet would have been ample for dock purposes. At Tilbury the central branch is only 300 feet wide, and the side docks from 300 feet to 200 feet, as there is plenty of room away from the quays for barges in the main dock. The cost of excavating the Albert Dock was £252,000; had it been only 300 feet wide a saving of £100,000 would have been made, as it would only have cost £150,000. Thirty acres of land now worth £30,000 would also have been saved. That it was not necessary to make the Albert Dock 500 feet wide for the shipping to pass through to the Victoria Dock is proved by the canal at the east end of that dock, which is 1,000 feet long and 200 feet wide, and by the fact that the Suez Canal is only 72 feet wide, the Amsterdam Canal only 88 feet, and the Manchester Ship Canal 120 feet wide. I believe that a very large sum might have been saved on the water areas but for the barges.

6704. Will you now tell us what works and improvements have been carried out by the Joint Committee during the years 1893 to 1900?—During the seven years ending December, 1899, the Joint Committee have spent no less than £627,000 out of capital in improving the docks and adding to their equipment. At the end of last year there were works in hand amounting to £188,000. At the West India Docks the most important structural improvement carried out cost £210,000. This consisted of a new entrance lock 480 feet long by 60 feet wide, having a depth of 30 feet on the sill, furnished with three pairs of gates. New passages were also cut 60 feet

wide and 30 feet deep from the basin into the import and export docks; these entailed the lengthening of the railway swing bridges. In addition to this the north quay of the import dock, which is 2,600 feet long, has been greatly improved by the addition of a false quay on piles driven in front of the old quay walls, thus enabling deeper water to be obtained from the ships, and this year a new quay at the west end has been made 500 feet long at a cost of £6,000. Pumping engines have been erected at the entrance so that the level of the water is maintained a foot above Trinity high water, and larger ships can use the dock. At the East India Dock another important improvement on which £35,000 was spent has been carried out—a new passage with gates has been made between the basin and the export dock, 60 feet wide and 30 feet deep on the sill, while the old passage had a caisson and was only 50 feet wide and 23 or 24 feet deep. A false quay 500 feet long was also built on the north side, and piles driven the whole length, so that the dock could be dredged to a depth of 28 feet. At the South West India Dock £45,000 is now being spent in lengthening the lock from 300 feet to 480 feet, and in deepening it to 29 feet, the original depth being only 27 feet in the centre and 25 feet at the sides. The sections of ships now being square instead of the old curved lines the alteration of nearly all the dock entrances in course of time becomes necessary. In the Victoria Dock a new quay 1,000 feet long with two double floor sheds has been constructed, making two additional berths, at a cost of £30,000. At the Albert Dock an additional shed has been erected on the south side of the dock at a cost of £16,000. As ships grow larger more powerful tugs are required to assist them in traversing the docks, so two new tugs have been added to the fleet at a cost of £20,000, and two more have been ordered at another cost of £10,000 each. These tugs are 850 h.p. About £7,000 has been spent in laying additional sidings, and five new locomotives and 45 trucks have been purchased. Large sheds for teaks have been erected at a cost of £27,000 at the wood wharves in the West India Dock, and another is now being erected at a cost of about £6,000. The electrical installations have been increased at the Victoria, West India, and London Docks at a cost of £25,000. For the improvement of the frozen meat trade a new store at West Smithfield was built at a cost of £76,000, and £40,000 was spent at the West India Dock in insulating a warehouse and providing the machinery; while at the Victoria Dock £57,000 has been spent in extending the stores and converting the machinery to the ammonia system. £35,000 has also been spent in connection with the grain trade. The old pontoon property on the south side of the Victoria Dock was purchased and let to the Grain Elevator Company, who are erecting four elevators on the American principle. Plans have been prepared and sanctioned for grain silos at a cost of about £22,000. With regard to the cranes, about £40,000 has been spent on additional cranes, and £22,000 on additional hydraulic power. The figures I am about to give include a certain amount for what was ordered in 1899, but not completed in that year. Since the strike of engineers a few years ago the joint committee have experienced the greatest difficulty in obtaining quick delivery of machinery of all kinds. During the seven years the additions to the cranes have been as follows:—

Quay Cranes for Working Ships.		
30-cwt. moveable hydraulic cranes	-	62
30-cwt. moveable electric crane	-	1
5-ton moveable steam cranes	-	2
3-ton moveable steam crane	-	2
30-cwt. fixed hydraulic cranes	-	2
Hand crane	-	1
Quay cranes total	-	70
Hydraulic cranes on warehouses	-	15
6-ton electric travellers for timber	-	23

Some of the electric travellers were converted from hand travellers, others were new. In addition, a large number of hydraulic capstans and jiggers have been purchased. The 70 additional quay cranes are sufficient to supply 600 ships with three cranes each, allowing each ship a fortnight, which is a liberal allowance. The number of ships using cranes has not increased by 600 during the past seven years. Some time ago

See 6831-4.

Mr. H. C.  
Baggallay.  
15 May 1901.

I made a point of counting the number of cranes in use, and the number not working in the Albert Dock when I visited it, and I never found more than half in use; often only one-third were employed. At many ports where cranes are provided the ships use them continuously until their cargoes are discharged, but at the docks of London so much cargo goes overside into barges that the cranes are required most irregularly, causing considerable loss to the joint committee at some of the docks. A 30-cwt. crane must be used 1,000 hours per annum to pay its expenses, and 1,000 hours is about 20 hours per week, not much more than two nominal working days, yet many of the cranes are not worked even to that extent. With regard to the patterns of the cranes, those now made by the best makers are practically the same as those supplied 25 years ago; small improvements may have been made in minor details, but the main features of the cranes supplied when the Albert Dock was built are the same as of those now being supplied. I mention this, as it has been said that the cranes are not up to date. To supply the power for the additional hydraulic cranes and machinery additions have been made to the engines. At the Victoria and Albert Docks a new engine to pump 400 gallons per minute, at the West India Docks one to pump 500 gallons per minute, and at the London and St. Katharine three, to pump together 1,000 gallons per minute, have been added to the pumping stations at a cost of £22,000, and there should at present be no difficulty in maintaining the necessary power. Then with regard to improvements to quays and sheds, at Tilbury Dock the quays at seven berths have recently been concreted; this is a great improvement and facilitates trucking to the sheds. The quays, like those at the Albert Dock, could not be concreted when the dock was constructed, as the ground was marsh land and has continued to sink under weights up to the present time, but it is now thought that the settlement will not be sufficient to injure the concrete. In addition to the improvements that have been carried out at the cost of capital, many improvements are made and properly paid for out of revenue. For example, the Albert Dock was constructed on marsh land like Tilbury, so wooden quays were laid down. As these wooden quays decay they are replaced with concrete, which is much better and cheaper. During the last seven years 26 out of the 34 berths at the Albert Dock have been concreted, also two sheds have had the wooden floors replaced by concrete and four at Tilbury; in time, as repairs become necessary, all the wooden floors will be replaced by concrete. In many similar ways improvements are being made. The maintenance of the docks, including dredging, working expenses, and coal for the hydraulic, electric, and pumping engines, etc., amounts to £200,000 per annum, one half of which represents the cost of repairs and renewals. The total cost of maintenance, including improvements, representing capital expenditure, amounts to about £300,000 per annum.

6705. Will you now proceed to the schemes of dock construction that have been suggested, and the reasons why, in your opinion, they are not adapted to the Port of London?—Unless your Lordship wishes me to do so, I do not think that matter of sufficient importance to go into now. Very little has been said about the type of our docks. The statement of my evidence was prepared at a time when there was a great deal in the papers, saying that the docks were wrong, and we ought to have river quays, but I will give that part of my evidence if your Lordship wishes.

6706. Unless you have any particular wish to give it in I do not think you need do so?—I have no particular wish to give it. It merely shows you that quays in the river and other schemes are not feasible.

6707. Do you wish to make any remarks in connection with the supplemental evidence given by Mr. Scott this morning?—I am prepared to answer any questions that may be put to me.

6708. But do you wish to make any remarks?—Not unless your Lordship wishes to ask any question.

6709. (Sir Robert Giffen.) I wish just to make it quite clear about the number of barges that are locked. You have given in your evidence that the average number of barges per lock is 8·90?—Yes.

6710. That is based upon the experience of one week in particular?—Yes.

6711. Have you verified that figure by taking some other week or two or three other weeks, so as to check what the average is?—I have not taken any weeks but I have taken the particular locks by themselves and watched them, and formed my opinion of each lock, and made estimates for each lock, and I have also taken out how many they would hold, and how many I find practically get in. I have checked it in that way only.

6712. But you have not ascertained as a matter of fact that nine barges per lock all the year round would be a fair average. You have not checked it in the way that you have arrived at the figures for this particular week?—No.

6713. You say that of 5,555 barges, 64 per cent. were locked?—Yes.

6714. What number would that be?—3,555.

6715. At the average of 8·9 that would give you about 400 locks in that particular week?—Yes.

6716. Multiplying that by 52 you would get about 20,000 locks in a twelvemonth if that week was a fair average?—Yes.

6717. But I think you have told us that the actual barges locking required 10,124 locks in the year?—Yes.

6718. So that to some extent that particular week would not be a fair average?—No. But I have checked the numbers in each lock by taking the locks by themselves, and what the dock masters tell me is the average number they have found in practice that they take through. I have done that without taking any particular period. I have not taken any period, but in going down to the docks and seeing the dock masters I have ascertained from them, and we have other figures which confirm my figures, which show that that is the average number that practically go through the locks. See 7481.

6719. The average differs very much at each particular dock?—Yes. And therefore I take the number of barges for the year that enter a particular dock and take the number of locks at that particular dock.

6720. But I suppose in arriving at that figure of 8·9 you took the total number of barges locked in that particular week and divided it by the actual number of locks?—Yes, the number of locks made.

6721. That was about 400?—Yes. The number of locks made during that week.

6722. In applying it to the general average, did you allow for the different number of locks at each particular dock in using those other figures where you made the comparison?—Yes. Take, for instance, a dock that has 10,000 barges only in the year. I have taken out the number against that particular dock, and I have found the number of locks made at that particular dock only.

6723. So that although the number of barges, and possibly ships, dealt with in that particular week that you select was more than the average number for each week of the whole of the year, yet the average number is quite correct for the purpose of calculation?—Yes. I have taken each dock separately, and worked them out separately.

6724. I presume the average loss of water per lock varies at the different docks where the lock takes place?—Yes. The amount of water lost is in proportion to the difference in level inside and outside. As you will find if you compare the number of barges in a lock with the size of the lock, which is the number they will take; it makes no difference whether you take a lock that would hold 20, and you put in 10, or whether you take a lock that would hold 6 and you only have 3 in it. It is the depth of water that we lose.

6725. But you compare the loss of water per lock of barges with the loss of water per lock of ships?—Yes.

6726. And you assume that in each case the loss is the same?—I assume that the loss is greater in the case of barges, because no ship goes in when the river is down 15ft.

6727. But apart from that, barges cause the greater loss of water, because it is taken at a different time?—Yes.

6728. You assume that in each case the loss is about the same?—It entirely depends on the hour at which

See 6771.

the locking is done with regard to high water. It makes no difference whether a ship is in, or whether it is one barge or 100 barges; practically it comes to the same thing. The change of water is equivalent to the area of the lock multiplied by the difference in the height of the tide.

6729. But still, on the average, you compare the locking of ships and barges—apart from that limit of time?—Yes.

6730. Would it not be the case that ships are mainly locked out and in of one or two docks, and barges are mainly locked out or in at some other docks? I wish to know whether there is any difference?—That would make no difference at all. You might have a dock without any ships at all, but it would be just the same thing. You could compare a ship going into one dock with barges going into another dock.

6731. The locking of ships takes place mainly at Tilbury and at the Victoria and Albert Dock?—Yes. And at the West India Dock.

6732. Would you say the same for barges—that the locking takes place at those docks?—The locking takes place at nearly all the docks except the Victoria Dock, where a special level was made for barges. I have taken no credit for that. That is to say, we lower the water in the basin some 5ft., and let the barges all come in in one lot. That is the only case in which it would be different.

6733. You have stated that about one-third of the barges went into the Victoria and Albert Docks?—Yes.

6734. But you have not given any proportions of the barges to the ships entering any of the other docks?—I can give you those.

6735. I think we ought to have it on the notes, what it is at the other docks?—The ships are given in Appendix 8 of the 2nd day.

6736. I think I know the ships, but I should like to know about barges?—That is in Appendix 33 of the 16th day.

6737. Will you read out the figures?—Shall I give you 1898, the year I am dealing with?

6738. Yes?—The London and St. Katharine Dock, 29,983; the East and West India Dock, 42,708; the Victoria and Albert Dock, 56,689; and the Tilbury Dock, 12,837.

6739. These would give you proportions not quite the same as the proportions in the case of ships?—No, not quite the same; at some of the docks the ships pass on the level—at the East India Docks, for instance.

6740. (*Sir John Wolfe-Barry.*) I suppose with regard to letting barges out of the locks the two subjects are, on the one side, economy in preventing more pumping than necessary?—Yes.

6741. And on the other side the alternative is clearing the dock as quickly as possible?—That is most important—clearing the entrance.

6742. You have then to endeavour to steer a middle course between those two lines?—Yes.

6743. The barges, I suppose, want to get out as early as possible?—They would like to get out at dead low water, so as to get the tide up to town, naturally.

6744. That would add very much to the cost of pumping?—Yes. I have some figures with regard to that. With reference to Question 5663, which was put to Mr. Scott, I have just made these notes. The dredging amounts to 666,666 tons. The three years, therefore, come to 2,000,000 tons. The usual accumulation is a little over 2,000,000 tons. The water area of the docks is a little over 2,000,000 square yards. The dredging is therefore equal to 1ft. deep over the whole of the water area per annum. In order to be able to keep that mud away as it is absolutely impossible to dredge thin layers, it would be necessary to deepen the docks to the extent of 2,000,000 yards, which are practically tons for this purpose. That at 1s. a cubic yard would be £100,000. The rapid accumulation of mud would not then be so costly. If the dock company are called upon to assist barges in and out at all locks instead of certain locks only, where there are public road bridges, as at present, the wages of the dock-master's staff, now £24,000 per annum, will be increased, say, to £27,000, and if we only debit one-third of this to barges the amount would be £9,000. The account would then stand (without the new dock):—

Cost of barges as already shown, £50,000; less 10 per cent. for barges used by the dock company, £5,000, leaving £45,000. Then add £9,000, being one-third of the dock master's staff, £27,000, that will come to £54,000. If the barges were permitted to enter and leave at any time they pleased, even at dead low water, the dredging may be doubled. Some restriction would be necessary to prevent a single barge demanding entrance at low water. That is supposing they had the right to go in and out at any time they pleased; it would cost about double the dredging.

6745. At any rate, your estimate now is on the present condition of things?—Yes.

6746. And if greater facilities were given to the barges, it would cost, according to your view, so much more?—Yes.

6747. Do you find any improvement in the quantity of mud in suspension of late years?—No; it depends a great deal upon the season; about two or three years ago we had a very hot autumn; the mud increased enormously then, because, instead of the large quantity of fresh water coming down the river which carried the stirred-up mud away, I think it was reduced to something like 40 million gallons that came over Teddington Lock for some little time, and we found that the actual quantity of mud in the water we looked at was nearly double what there was in the winter time, when there was a lot of water coming over Teddington Weir.

6748. What you want to see is the fresh water preponderating as much as possible?—We do.

6749. When you come to deal with the question of the allocation of the cost of pumping, I want to ask this question. Could the docks be used by the ships under the present conditions without pumping?—Some could and some could not.

6750. Apart from barges?—Apart from barges a certain amount of pumping would be necessary at the Victoria and Albert Docks, because by pumping we keep the water up to Trinity, and there is only 24 or 25 feet over the tunnel between the Victoria Dock and Albert Dock. If we did not pump we should lose about 3 feet, therefore no ship over 21 feet could get into the Victoria Dock at neaps. Now they are much deeper than that, and, therefore, it would be necessary to pump at neaps for a short time the Victoria and Albert Docks. I do not think it would affect the other docks in any way, because, although pumping is done at the West India Dock I do not think it would be necessary to continue it there, because the entrances are deep, and the passages have all been deepened to 30 feet, and it is only a question of dredging the docks a little deeper to get the extra depth.

6751. You can only get the addition of the necessary depth of water either by dredging out the docks or pumping?—Yes.

6752. Does the question of dredging the docks involve the deepening of the walls?—What we have done in one or two docks is to put a false quay in front. That is the cheapest way of doing it. We put a line of piles some 10 or 12 feet from the walls and put a concrete decking.

6753. You would have to incur capital expenditure if you did not pump?—Yes.

6754. For ships alone?—Yes.

6755. Would it not be fair to allocate some of the expenses of pumping more equally between the ships and the barges?—I have in the proportion of three to one, the number of locks, which is loss of water only; I have not done it in the proportion of nine to one, but three to one, the number of locks made, and, therefore, the quantity of water that has to be pumped.

6756. But you would have to pump in any case for the ships?—But only one-third of the quantity.

6757. The wages would be the same, would they not?—Yes.

6758. And the interest on machinery would be the same?—Yes. I have allowed for that.

6759. Then it is a fact, is it not, that you must have the pumping, whether you have the barges or not?—We should have to have the pumping at the Victoria and Albert Docks to a certain extent.

6760. But the cost of pumping would be very much less?—Yes.

Mr. H. C.  
Baggallay.  
15 May 1901.

**Mr. H. C. Baggallay.** 6761. You have given us the average cost of dredging from 1886 to the present time. Are you dealing there with exactly the same depth of water in the docks?—  
15 May 1901. Yes, the same docks.

6762. None of that dredging is in the improvement of the dock?—No, that is charged to capital. If we were told to deepen the dock that dredging would be charged to capital. This is dredging of mud only.

6763. Then you continue the dredging at a greater depth?—Yes; but that does not increase the quantity to be dredged. The quantity to be dredged is only what comes in.

6764. None of this is in the nature of a permanent improvement?—No.

6765. It is all absolute siltage?—Absolutely. Any dredging done for deepening or enlargement is charged as recently in the Victoria Dock separately to capital.

6766. With regard to what you said about the width of the Victoria Dock and the modern docks, was not the width to a great extent arrived at from considerations of the larger ships, and having to turn them?—No, because we never turn ships in the docks in London, and they never have been for many years. Ships always go out backwards.

6767. Then do you consider that it was only for barges?—Yes. Originally, at the Albert Dock it was only intended to make a quay with 200 feet of water, and it was not contemplated to make any greater width until they decided to make the whole dock at once, and then they fixed 500 feet as the width which would be certainly unnecessary but for the barges, because Tilbury afterwards built a dock which is only 300 feet wide.

6768. Tilbury Docks have a large place for turning ships?—They never turn.

6769. But Tilbury has a large place where they could turn?—They could turn, but they never do in practice.

6770. Now just a question with regard to that part of your evidence in which you considered amongst other things the practicability or otherwise of open quays in the river. It deals also with other proposals which have been put forward for dock construction?—Yes.

6771. I think it would be well that we should hear that?—Certainly. It has been said that the general design of the existing docks is not suited to the requirements of the Port of London, and that the dock companies have not kept pace with the times by making improvements in accordance with modern progress. Again, the system of enclosed docks has been unfavourably compared with other systems which work well at other ports. One suggestion is that enclosed docks are not required, as a proper system of riverside wharves would be much better and more convenient, saving as they would do all the difficulties and delays consequent on locking from the river, and passing the many sets of interior locks and gates as well as the swing bridges, and that future extensions should take that form. Another idea is that half-tide docks would avoid the delays and be more convenient. The following systems again have all been advocated:—(a) Large tidal floats or pools that can be entered at all hours. (b) Similar large floats without quay walls, but to be entered by lock gates. (c) Jetties in the river after deepening the river. (d) Tidal cuts or canal berths at right angles to the river. (e) Weirs across the river with locks at some point down the river, so that the water should be maintained at a suitable level. None of these suggestions if carried out would be so suitable as the present system, but, of course, any extensions would be made with a view to accommodating larger and deeper ships. It may be admitted at once that the Dock Company's present docks are not actually perfect for present and prospective shipping requirements, and that the 62 pairs of gates, the 36 swing bridges, and the 257 sluices to be worked do cause delay to the shipping and barges and expense to the dock companies. But it is also true that since their original construction new and larger entrances have been added to the London Docks, the East India Docks, the West India Docks, and the Albert Dock, and the entrance lock of the South West India Dock is now being lengthened and deepened. Hydraulic and electrical machinery has been introduced at all the docks, and many of the berths have been deepened. The dates when the docks were constructed are:—

	Commenced.	Completed.
The West India Docks -	1799	1802
The London Docks -	1800	1805
The East India Docks -	1803	1806
The St. Katharine Docks -	1825	1828
The Royal Victoria Dock -	1850	1855
The South West India Dock -	1866	1870
The Royal Albert Dock -	1875	1880
The Tilbury Docks -	1882	1886

Before considering whether the existing docks have been improved with the times, and sufficiently provided with shed accommodation, cranes and other accessories, I will endeavour to show that the general system is sound, and that it would not be advisable to alter it as suggested. First as regards open berths or wharves on the river side, without counting the Surrey Commercial Docks and the Millwall Docks, or the many small docks belonging to railway companies and private owners, the quays of the Joint Committee's docks alone would extend over 20 miles in length, or from the Brunswick Wharf at Blackwall to beyond Tilbury Dock, if placed on the north side of the river. And all the docks in London, if extended on both sides of the river would occupy the whole of the frontage not yet built upon down to Gravesend, while the width of water area required to accommodate all the ships and barges would be 175ft. on either side of the river. No scheme for extensions would be desirable that did not contemplate ultimately doubling the accommodation of the port, so if a system of river-side wharves be adopted the port will have to extend on both sides of the river to a point 25 miles or more from London Bridge. Such an extension would add immensely to the difficulties of the Custom House officers, the dock officials and the police. But it is not only on these grounds or on the ground of the cost of construction (which would be far greater than the present system) that I think the proposal undesirable, but rather for the following reason:—The ordinary tide in the river is about 19ft., but on occasions is as much as 22ft. below Trinity high water. To accommodate ships drawing 30ft. therefore the river bed must be dredged to 52ft. below Trinity high water, and this dredging would have to be carried out at once for the whole distance from Galleons to beyond Purfleet, about ten miles, and for the whole width of the river to high water mark in those portions of the river in which it may be intended to construct the wharves. Even supposing this were done it would be quite impossible to keep a berth in front of these wharves free from mud, if dredged below the general surface. The Dock Company know this from their futile attempts at Galleons, Royal Albert Dock. But apart from the dredging which would be an almost prohibitive expense the quay walls would cost three times the cost of quay walls in a dock, even if they could be built without cofferdams. To increase the sectional area of the river to such an extent as this proposal contemplates, might have very serious effects on the river banks through London. The Thames Embankment and the Houses of Parliament would probably be flooded as it would be impossible to increase the sectional area of the river above London Bridge. Then with regard to half tide docks. In the existing docks less than one foot of water per tide is lost in locking, but it costs £30,000 per annum to remove the mud due to this comparatively small loss of one foot. With half tide docks the loss of water would be ten times as great, and the consequent dredging amount to £300,000 per annum. The cost of locks would be practically the same, the cost of excavation would be 25 per cent. more, and the cost of the quay walls double. It will be seen, therefore, that the cost of dredging alone would be prohibitive. Dealing with the other suggestions that have been made:—Large Tidal Floats or Pools that can be entered at all hours.—In a system of this kind the quantity of mud to be dealt with would be enormous, and if the area of the floats were equal to the existing docks it would cost £600,000 per annum to dredge the mud, but having no gates I believe a number of blowers, if constantly employed, would be able to stir up the mud on the falling tide sufficiently to prevent large accumulations, though a certain amount would have to be dredged. The amount would depend upon the extent to which the depth of the float exceeded the river at its entrance. There would be a saving in having no quay walls, lock

Mr. H. C.  
Baggallay.  
16 May 1901.

gates, etc., but the excavation would be 70 per cent. more on account of the increased depth, and another 30 per cent. more for increased area, to accommodate the same number of ships, as ships cannot lie moored in a float touching each other as they do when made fast to bollards on a quay. It is true the cost of constructing the float would be about half the cost of a dock, but all the goods would have to be put over the side into barges. This might suit a certain class of import, but not the export, and would be most inconvenient for general or mixed cargoes, and, in fact, would be impossible for big ships from foreign ports. (b) Large floats without quays walls but with lock gates.—This proposal involves all the present delays of locking, coupled with the disadvantages of the last proposal; the only saving would be the cost of the dock walls, which only represent 25 per cent. of the cost of construction. (c) Jetties in the river.—The river at present is so narrow that jetties could only be adopted if the river were widened; also the river would have to be deepened to 52ft. below Trinity high water to take ships up to 30ft. in depth. Ships are now increasing in length. A jetty to take a ship 700ft. long would have to encroach on the river 500ft., if at an angle of 45 degrees, a width equal to the width of the Albert Dock. To widen the river would cost more than the excavation of a dock, and a large ship across the stream would be in a dangerous position. Moreover, all the other disadvantages applying to the open quay system would apply in an equal degree to this scheme. (d) Tidal cuts.—These would be better than the last proposal, only it would be almost impossible to keep them free from mud. At the South-West India Dock entrance, where there is at present a temporary dam across the entrance to exclude the water from the lock during the progress of the works connected with the deepening of the lock, it was found that in a few weeks the mud had silted up over 10ft. in depth, making it impossible for the divers to enter the sluices, although the dam is only 150ft. from the line of the river wall. Excepting where the shore actually dries at low water, any cut or recess in the line of the river wall accumulates mud very quickly. In fact, it would be quite impossible to keep such cuts free from mud if they were of any length or depth. (e) Weirs across the river, with locks at Gravesend or some other point down the river.—If it were only necessary to deal with the mud that comes down the river above Teddington Weir, no great difficulty would be presented, as the mud comes down from the upper reaches with the floods, and when the river is in flood 3,000,000,000 or 4,000,000,000, and occasionally as much as 6,000,000,000 gallons of water pass over the weir daily, carrying the mud quickly down to the sea. But we have to deal with the mud created by London, which is supplied to the river when the river is not in flood, and when only a few million gallons of water are coming down from the upper reaches. This mud is washed backwards and forwards past the lock gates (salt is found in the river at Richmond), and the further down the river the thicker the water gets. During the last few years we have had very dry autumns, and as the result a marked increase in the quantity of mud entering the Dock Company's Docks during those months. Now, if a weir was made down at Gravesend, it would probably be on a similar principle to that at Richmond, where, contrary to the usual practice, the water passes under the shutter instead of over it, an arrangement which is supposed to assist in keeping the bed of the river clear. Whether it does so at Richmond or not I do not know, but I have seen several rivers in India where the sluices are also on the bed of the river. These rivers are for several months short of water, with floods only during the monsoon, and it has been found that the sluices only clear the mud for a short distance above them, beyond which distance the river silts up, and the silt is not cleared away by the floods. For many weeks during these dry seasons the flow of water over Teddington Weir per diem does not exceed the water we lose in the docks in one day's locking. If a similar amount of water were to be used in locking at Gravesend (but the quantity would be much greater), there would be no flow under the weir, and there would be no tidal change of water, with the consequence that the river would become very foul, and it would be impossible to keep it in a sanitary condition, unless some additional supply of fresh water could be obtained, which seems hardly possible. There is not any to spare

in the River Lea, or the Dock Companies would have made a bid for it long ago. A salt water canal from the sea with clean water would be too costly. For these and other reasons I am of opinion that enclosed docks, such as exist at present, are the only practical system for any extensions of docks in the Port of London.

6772. Have you anything to add to that?—There is one point which I think is not quite clear. That is about my fear of widening and deepening the river too much, causing floods in the upper reaches. That would not apply to merely deepening the channel, but I am very much afraid that if you had quays by the side of the river it would be necessary to make the river so wide and deep that if you had a large body of water coming up we should have all our quays flooded. Nowadays we have sometimes to put clay round the quays at the swing bridges to prevent the water coming over. An extra foot of water would be very serious. In the London Docks we have to put iron kerbs round the quays 18ft. high to prevent the flood coming over the quays, and when the Thames Embankment was made they had to put little blocks of stone against the balustrades to prevent the water coming over.

6773. And there was an Act of Parliament passed in consequence?—Yes.

*Cross-examined by Mr. Daldy.*

(Chairman.) Will you be good enough to indicate the points upon which you wish to cross-examine?

(Mr. Daldy.) I think the question will itself indicate it, my Lord.

6774. You bring out in your evidence a figure of £50,000 odd for expenses on account of barges?—Yes.

6775. And I understand you put it that there is an undue congestion of barges in the docks?—Certainly.

6776. More barges come into the docks than are required to serve this number of ships?—I do not say that. I only say there is a congestion of barges. I do not know what they do when they come in.

6777. Have you considered how much of this £50,000 would be attributable to barges which were really required to serve, under existing circumstances, that number of ships?—I have no knowledge of what the barges do when they come in. I am only interested in getting them in and out.

6778. Now, I want to ask you one question with regard to this. You stated that during the past seven years there had been a capital expenditure of £267,000?—Yes.

6779. Then we have already in Appendix 6, Table 9, of the Second Day, a sum of £267,260 for capital expenditure during the eleven years from 1889 to 1899?—The whole of that, I believe, was spent in the seven years ending.

6780. Then the improvements referred to in the two tables are substantially the same, you mean?—Yes.

6781. But if that is correct, that leaves no improvements at all during the first four years out of that eleven?—No, not in those four years. The improvements began eight years ago.

6782. It depends whether you take the average over seven years, or eleven years?—Yes; the improvements began eight years ago, and are going on at the rate of about £100,000 a year.

6783. I have not followed that very carefully through, but I think in substance the improvements you have given us to-day are the same as are in that table?—Yes.

(Mr. Daldy.) My Lord, I do not think it will be necessary for me to ask any question on the engineering evidence. I might like to ask leave to put a question afterwards.

(Witness.) Might I say one word with regard to your question. Those figures represent the money spent in the seven years. When you asked the question I said I thought there had been nothing done then. No figures had been given to me for that period. There was a rectification of accounts which altered it. They spread them over a certain number of years, and the figures I was dealing with were only the seven years ending 1899.

6784. May I just take it in this way. There is a

Mr. H. C.  
Baggallay.  
15 May 1901.

table upon which I have previously cross-examined Mr. Scott, that is Table 9 in Appendix 6 of the Second Day—the old table?—Yes.

6785. May I take it that that table stands, and it is right? If it ought to be corrected will you just say how?—During those four years it had been erroneously charged to revenue. They had been making improvements, but they had been charged to revenue. The figures I have given you are what has been spent since 1893, and charged direct to capital.

6786. Then to get an average it would be right to divide that £627,000 by 11?—Yes.

*Cross-examined by Mr. Harper.*

6787. Referring to your statement with regard to the 5,555 barges, of which you say 64 per cent. are locked and 36 dealt with on the level at high water, I take it that the cost to the company is all incurred on the 64 per cent. that are locked?—It costs us a certain amount even with regard to the loss of water on the level, but of course you cannot very well measure that. All I can say is that the loss on a level for barges is infinitely greater than it is for ships. I have made no charge for the barges coming in at the Victoria Dock on the level, where we actually lowered 16 acres of basin 5 feet for barges.

6788. You are dealing with something which I did not ask you. I am dealing with the difference between barges that were locked and barges that were not locked. The cost to you of those that were locked is relatively greater than the cost of those that were not locked?—Yes.

6789. Have you taken out any figures to show what proportion of the 64 per cent. of the 5,555 for that week were barges that were going to private wharves on the river?—No. I know nothing about where the barges were going. I am only giving you the cost of the barges as barges.

6790. You may have it the other way about, to show what proportion of those barges were employed on the dock company's own works, and what proportion on transhipment?—Those figures have been already given by Mr. Scott. I am merely dealing with the locking of barges. These figures include the 10 per cent. for the company, and include every barge and every ship.

6791. Do I understand you are referring to the same week?—No; this week is only to explain how the proportions are got, but we have had observations made in many other ways to know exactly how many barges are locked, and how many come in on the level.

6792. You did not ascertain their destinations?—I had nothing to do with their destination at all.

6793. Now I will ask you to excuse my ignorance. I do not know what a barge pond is. Can you tell me?—Yes.

(Chairman.) Did we not settle at the last sitting that this has to do with the Bill that is now before a Committee of the House of Commons?

6794. (Mr. Harper.) I only want to know what a barge pond is. I simply want a definition. What is a barge pond—any barge pond?—It is a gap made in the quay, leading to a float behind the sheds, where barges can lie and receive goods out of the sheds without interfering with a ship lying at the quay.

(Mr. Cranstoun.) My Lord, I should very much like to see my clients on this evidence before I put my questions. I have only a few questions to ask. I do not know whether it would be inconvenient to put them on Monday instead of to-day?

(Chairman.) I think it would be inconvenient. Are you referring to Mr. Baggallay's evidence?

(Mr. Cranstoun.) Yes, on barges. There are a good many statements upon which I should like to see my clients.

(Chairman.) It would be inconvenient to us to recall the Witness. We feel that the progress will be very slow if we do that.

(Mr. Cranstoun.) If your Lordship pleases. I did not know whether another Witness could be taken to-day.

(Chairman.) I think it would be most inconvenient to do that.

*Cross-examined by Mr. Cranstoun.*

6795. Now, referring to your particulars of the actual cost incurred by the Joint Committee on account

of the barges, there is an item there of £761 for barge searchers. Would you mind telling me what barge searchers are, or what their duties are?—They have to see to the barges leaving the docks, in the same way that the police at the gates prevent a man going out with anything that he has no business to take away.

6796. Do you mean that they are a species of detectives?—I should say a species of police.

6797. Are they separate from your police?—They are on the police establishment.

6798. The lightermen do not require them?—No.

6799. We do not want to pay for these. Now with regard to the damage, you also mention here repairs at entrance £5,250. I think you allege that a considerable amount of this damage was done by the barges at the entrance?—Certainly.

6800. That is so?—Yes.

6801. Is not all damage done by barges charged by the dock company against the barges?—Only when they do any specific damage. But you cannot charge a barge if it merely rubs the sides, dents the gates, or cuts holes in the brickwork. You cannot charge any particular barge for that.

6802. (Chairman.) Why?—It would be so small. A lot of barges in a lock bump against the wall, and the iron head cuts it away.

6803. You told us in your evidence that when a ship comes in she does little or no damage, but if she does any she pays for it?—Yes.

6804. Is it always so?—Ships are brought in with great care; they put down fenders and so on.

6805. Can you tell us why the barges do not do any damage?—It is really wear and tear, you may call it. Any wilful damage they would, of course, be charged with.

6806. (Mr. Cranstoun.) I understand you to say that it is done by the iron head of the barge?—Yes.

6807. That is a dent made by the barge?—Yes.

6808. That is what you mean to convey?—Yes.

6809. Are not those damages claimed against the individual barge owner and pressed for payment?—Certainly, if they do a damage that you can measure.

6810. Then do I take it that this item only refers to ordinary wear and tear?—Certainly, wear and tear caused by these rough barges.

6811. But you do not allege that barges have not got fenders, do you? Do you allege that a bargeowner allows his barge to cut and bump against the wall?—Yes, I do.

6812. And damages himself thereby?—Yes.

6813. Seriously, do you say that barges have not got fenders?—I do not say that no barge has a fender, but as a rule they have not. The manager will be able to answer those questions better than I, but in giving these figures as to the repairs I mean what is caused by the wear and tear at the entrances; and a certain proportion of these repairs I charge to barges, because the barges are more numerous than the ships, and do more damage.

6814. Then you have said this. The number of barges was 142,217; 36 per cent. or 51,198 passed in on a level at high water, and 64 per cent. or 91,019 were locked in. Can you give me any idea how many of the barges that you are speaking of in this question carried in coal?—No.

6815. Are they included?—Yes, they are included. They are all the barges of all sorts.

6816. And even where ballast is taken in by barges that is all included in this number?—Yes.

6817. And I may take it that they form a very considerable proportion?—Yes. The figures have been given, I think.

6818. And do they also include barges that take off the goods landed on the quays under the American bill of lading?—They include all barges.

6819. For all purposes?—All purposes—every barge and everything.

6820. Now there is a repetition of my first question with regard to damage. You have stated that: "Nine barges in a lock, on the contrary, bump against the walls and piers with their sharp square iron-bound bows, cut deep holes in the brickwork," and so on, "and knock the gates about." Is not any of that damage that is

See 6703.

directly caused by the barges brought about by the careless handling of the hydraulic winches?—No, certainly not.

6821. Do you know that of your own knowledge?—I do. I do not mean to say that I am always standing there, but I have never seen any damage done in that way.

6822. But is it possible that the damage could be done in that way?—Of course it could. That would be incidental to working the barges, would it not.

6823. And that would be the act of the dock company's own men?—Yes.

See 6703

6824. Then you said: "Some portion of these expenses, amounting to about £28,000, could certainly be saved were there no barges, but I have not charged the barges with any portion of that sum, as I have preferred to confine my figures to those more directly influenced by the barges." That is a repetition again. Do you include in that paragraph the barges that take the goods from off the quays under the American bill of lading?—I do not quite follow you.

6825. The salaries and the wages of the dock staff at the entrances?—I have not charged anything for that. I am only mentioning that we should charge a certain proportion of that to barges, but I have not done so.

6826. You have not reckoned that in?—No.

6827. When was this evidence drawn up?—I think it was August last.

6828. It was not drawn up for the present purpose, was it?—It was drawn up for the Royal Commission.

6829. For this present Commission?—Yes.

6830. Does that mean that the whole of it was drawn up for the purpose of the Commission, or was it drawn up for some Bill and adopted for the present purpose?—This was not drawn up for the purpose of these Bills. I do not say that I did not study the subject for the Bill, but the whole of it was drawn up for the purpose of this Commission.

See 6704.

6831-2. And then you stated: "The old pontoon property on the south side of the Victoria Dock was purchased and let to the Grain Elevator Company, who are erecting four elevators on the American principle." Were not any of those elevators erected long ago?—They are completed now, but they were not completed when my evidence was compiled last August.

6833. Not in August?—I do not think so.

6834. Were they not working in August?—Certainly they were not completed. Two were completed a year before. The dock company had started some piles as well.

6835. Then you stated that "the dock master keeps a foreman and two men generally supervising the docking of barges," and so on?—That is at the Albert entrance only.

6836. Is it not a fact that for some time past the dock company have refused to render any assistance to barges going out?—We never render assistance unless it has been necessary at the Albert Dock. The custom varies at all the entrances.

6837. In the Albert Dock you render no assistance?—At the Albert Dock we do not render assistance.

6838. Then there is no expenditure for that?—We have these men that I mention here generally supervising it and ordering the barges where to go, but we do not use our hydraulic machinery and assist them in and out as we have to do at the entrances where there are bridges.

6839. This is bearing on the point of congestion of traffic. Do you say that at the Albert Dock no assistance is rendered?—Not as a rule; it is occasionally.

6840. And the bargemen have to do the best they can to get in and out?—Yes.

6841. There is no control exercised by the governing body?—There is a great deal of control. These men are specially put there to control it to the best of their ability.

6842. But within the last twelve months have they exercised any control?—Certainly.

6843. Is it not a fact that they have expressly refrained from rendering assistance?—No. They do not render assistance; they do not give them ropes;

they do not use their hydraulic capstans to haul them in. But they control them; they tell them when they may come in and go out, and they do the locking.

6844. Where is it that you lend assistance to the barges?—I may say, at all entrances where there are public road bridges, and where, if we did not hurry the barges through and render them every assistance, we should be causing great inconvenience to traffic along the roads. The Blackwall instance is a good one; if we did not get the barges through quickly there, we should get miles of traffic on the road blocked; therefore we use our capstans and all the machinery we have, and put a tug there to help them through. But we do not do that at Tilbury, where there is no public inconvenience. If a man takes an hour coming in, it does not really affect us very much.

6845. At all events, at the Albert Dock, have not the bargeowners complained to you, times without number, of the want of assistance that the dock company should give them?—

(Chairman.) Is not that a question that should be put to the manager? It is hardly a question for the engineer.

6846. (Mr. Cranstoun.) If your Lordship pleases. (To the Witness.) Now one more question. Could not a good deal of this accumulation of mud be prevented by pumping more?—The pumping is exactly the same as I have already given in my evidence. The mud that comes in with pumped water is exactly the same as the mud that comes in with the tide.

6847. Could not that be rectified?—No.

6848. Could not you pump in more of the surface water?—No, because we have to pump when the tide is so low. Besides that, I have taken specimens of the water at different times, and had them examined to see how much deposit there was. It makes no difference. You cannot tell. Sometimes at the top of the tide the water is muddiest, and sometimes at low water it is muddiest.

6849. You can answer me this question. Is not the top of the tide less muddy by far than it is, we will say, about 15ft. down?—No, it is not.

6850. Is it as muddy at the top?—Quite.

6851. Then are there any periods when the water on the top of the tide is less muddy than at others?—Not at the docks.

6852. I mean outside?—Yes, in the river. When a tug at an entrance stirs up the mud at the bottom, and you open the lock gates, of course at that moment a great deal more comes in; but if you take the water in the river generally, apart from the entrances, it makes no difference whether you take the water from the top or the bottom. I do not say an inch or two from the bottom, but a reasonable distance from the bottom.

6853. At all events, a considerable amount of the accumulation that is caused by opening the lock gates may be diminished if you pump more?—No. I maintain that every gallon of water that we pump in brings in as much mud as the water that comes in through the locks on the tide.

6854. The barge itself being flat-bottomed, cannot itself stir up the mud?—We do not accuse the barges of stirring up the mud. It is merely that the water in the river contains a certain quantity of mud in suspension which, when it becomes still in the docks, deposits.

6855. How do you propose to prevent it?—We do not propose to prevent it. We only want to be paid for taking it out.

6856. Then if this tax which you want goes on the barges, the same state of affairs will still be, only you will have more money to get rid of the mud?—Yes, we shall have more money.

6857. There is to be no alteration in the congestion of the traffic?—Yes. Supposing we were paid a liberal price for locking barges in and out, and were paid for all this work, we should not object. Then the barges would be cleared away over the whole 24 hours instead of only certain hours just when the ships want to come in, which would stop the congestion very considerably.

6858. Has not complaint been made by the barge owners of the length of time they are kept outside the locks? For instance, if they are just a little too late

Mr. H. C. Baggallay.

15 May 1901.

**Mr. H. C. Baggallay.**

15 May 1901.

at high water the barge is kept waiting for ten hours, is it not?—Yes.

6859. Is not that one of the causes of the congestion of the traffic in front of the docks?—Yes. Probably if we locked for the whole 24 hours there would not be really the same congestion. If we locked for 24 hours, and did not only lock within two or three hours of high water, naturally there would not be the congestion of traffic round the entrances, but it would cost us double the amount in dredging.

*(Adjourned for a short time.)*

6860. (Mr. Cranstoun.) You have spoken of the increase of dredging. Have your docks been deepened since they were built, or are they at the same depth now as they were when they were built?—No dock has been deepened. The entrances, the locks, have been deepened, but not the docks.

6861. Can you give me any idea of the average depth of ships during the years 1886 to 1889—the draught of water, I mean—as compared with 1898 and 1899?—No, I am afraid I could not.

6862. Is it a fact that the increase of dredging has been caused by the increase in the draught of the ships?—I think I have said so—that as ships get bigger and deeper it is necessary to keep the docks absolutely clean, and not allow the mud to collect for some years, and then dredge it out in a solid form; therefore, the ships getting larger has necessitated our dredging right down to the very bottom.

6863. In fact, a deeper depth of water has to be kept in the docks now?—Certainly, and that has caused this enormous increase of 50 per cent. in dredging.

6864. So that dredging and pumping have both increased, not owing to anything the barges have brought about?—Not pumping.

6865. But have you not also to pump more water into the dock?—No, we have not to keep the water any higher; but as the docks are deepened we have to keep them cleaner. It means that we cannot allow the mud to accumulate and dredge it in a solid form, but we have to dredge it in a slushy form, and that has caused this increase.

6866. When you talk about the average dredging being 415,000 tons during the four years 1886 to 1889, and increasing until for 1900 it is 675,000 tons, that has been caused by the increase of the ships?—No, I do not put it that way at all.

6867. I mean a great part of it?—No, not a bit of it. I only say that in the olden days the barges, however numerous they might have been, were not so troublesome to us with regard to dredging. Now that it is necessary to keep the docks clean, the mud brought in by the locking of barges becomes a regular nuisance, as we have to clean it out in a slushy form.

6868. I know that that is your contention, but I suggest to you that no more mud gets into these docks now than got in ten years ago?—If you will, I will admit that; but that does not alter the fact. We have to take it out in a slushy form, which means more carriage to sea, and more dredging.

6869. Is it not a fact that the water in the Thames is much clearer now than it was 10 years ago?—I should certainly say not.

6870. Has the improved system of removing the sewage had no effect upon the state of the river?—I cannot very well answer that question with regard to sewage, because, although they may have reduced the amount of solid matter put into the river in the form of sewage, other things have caused the water in the river to become much dirtier. There is more mud in the river now I maintain, than there was 10 years ago, and the more they reduce the quantity of water coming down the river the more it will increase.

6871. Now, I want to ask you about the pumping at the London Dock. Where do you get the water from at your London Dock that you pump in?—We get it from two places.

6872. What are they?—We get the water from the river and from the basin.

6873. By the basin do you mean the old Shadwell basin?—The new Shadwell basin and the old Shadwell basin adjoin. They are all practically one.

6874. But the Shadwell basin that you refer to is practically unused, is it not?—No.

6875. There is not the amount of traffic in it for places up to London?—Yes, it is very much used indeed. It is the main entrance to the London Docks.

6876. I think we are at issue, perhaps. Are you speaking of the old entrance?—We do not use the old entrance at all.

6877. That is my point. You do not use the old entrance at all; but do you not pump the water out of the old entrance?—No, we pump the water out of a basin which is made up of the new Shadwell basin and the old Shadwell basin; but they are practically the same; there is no division between them. The water is pumped out of the new Shadwell basin and is pumped into the dock, and the great advantage of doing that is that we do not pump so much mud, because instead of the water being locked out of the basin into the river, we pump it into the dock, and it is a saving in mud.

6878. Do you do 10 per cent. of the dredging at that dock that you do at the other dock?—I can give you the actual figures. You mean dredging at the London Dock?

6879. I am referring to the main dock. I am not separating the dredging in the main dock from the other parts of the London Dock. That is all under one figure?—I do not know what you call the main dock. The London Dock is a series of docks.

6880. Suppose you take the London Dock as a whole; the main dock I am talking of?—Do you mean the Western Dock. There is a Western Dock, an Eastern Dock, and Tobacco Dock.

6881. The main dock is the part of the dock that is kept at high water mark?—Yes, that is, the Eastern Dock, the Western Dock, within the inner locks.

6882. That is the main dock, is it not?—You may call them so. There are a series of docks.

6883. Is not all that kept above high water mark?—Certainly it is kept very often 2ft. above Trinity. There is very little dredging done there, because we pump out of the basin, but we have to do the dredging in the basin instead. That is only transferring the clean water out of one part of the system into another. That does not alter the amount of dredging in the dock. If we take clean water out of the basin and put it into the dock, we have to do the dredging in the basin instead.

6884. Then if you took the whole of the water out of the river you would not have any dredging at all?—Yes, we should have exactly the same dredging as I have already pointed out in my evidence to-day.

6885. For locking?—Of course we have exactly the same amount of mud in pumped water as we have in water that comes in through the locks. The mere fact of taking water out of one basin and putting it in another basin or enclosure within the locks does not affect the dredging in any way.

6886. With regard to the Albert Dock, where do you get your water from there?—We take it from near the upper entrance—Galleons entrance.

6887. Do you get it through the chain hole?—No, we get it through a special culvert made for the purpose, but it is very near what you may call the chain hole.

6888. By the chain hole I mean the chain that is connected with the lock gates very low down?—No, there is no chain there, but, still, I know what you mean—it is near the entrance.

6889. You know what I am referring to when I talk of the chain hole?—Yes. There is no chain there, but the culvert is near the entrance of the lock.

6890. That is low down, is it not?—Of course, it is put low down, because we have to pump until the water is 19 feet below Trinity to get the quantity. We have to pump 12 hours.

6891. At all events, it is a fact that it is close to the land, is it not?—Of course it is, because we have to pump for so many hours, and we cannot afford to stop pumping until the water actually runs away from this hole.

6892. But you are not always pumping?—We pump six hours every tide, and then the water is down about 15 feet, I think.

6893. Then about three hours before and about three hours after would do it?—Exactly; that is what we do.

6894. At high water?—Yes; we go on pumping until the pump sucks air. It is placed at a level that is necessary to give us that quantity of water.

6895. The last question I have to put is with reference to the Tilbury Dock. Is it a fact that the water down there in the flood is muddy?—Yes.

6896. But comparatively clear on the ebb in the basin?—I do not say that it is different on the flood from the ebb; it varies in such a way that I cannot account for it. We have taken samples of the water at different states of the tide, and they give such totally different results that we cannot form any theory upon

it at all. Of course, it makes a great deal of difference whether it is summer or winter. When there is a large quantity of fresh water coming down the river, hundreds of thousands of gallons, the mud of the river is swept to the sea quickly. In the summer time, when very little water comes down, the mud goes backwards and forwards for a certain number of miles for weeks and weeks before that mud gets into the sea. But you cannot find any fixed amount of mud at different periods of the year that you can form any theory upon.

6897. You do not agree with the suggestion that I put?—No.

Recalled 7481.

Mr. THOMAS HARDY called and examined.

6898. (Chairman.) You are one of the Joint Managers of the London and India Docks Company?—Yes.

6899. You are, I believe, going to give us evidence with regard to the existing practice at the London and India Docks with reference to the docking and berthing of vessels, the discharge and loading of vessels, and the manipulation of goods and system of charges thereon?—That is my purpose. With regard to the manipulation of goods and system of charges thereon, I understand your Lordship does not wish to go into any question on the subject of charges on goods, and therefore I do not propose to go into that.

6900. Will you proceed with your evidence?—As to the docking and berthing of vessels. Vessels may be divided into three classes:—(1) Regular liners with appropriated berths at the lower docks. (2) Regular liners with appropriated berths at the upper docks. (3) "Tramps," that is, vessels not coming regularly to the docks. With regard to class (1), that is, regular liners with appropriated berths at the lower docks, berths are appropriated in the lower docks to lines of vessels under special agreements, by which they have, in addition, a portion of quay and shed space allotted to them in consideration of an annual rent referred to later, which is independent of dock dues on the ship. With regard to class (2), that is, regular liners with appropriated berths at the upper docks, in the upper docks the berths are appropriated on a different system. A berth with quay and shed space is appropriated to a line of vessels in return for an inclusive rent, which covers dock dues on the vessels, though in some cases extra payment is made for every voyage beyond a fixed maximum made during the year. Power is reserved, however, in the lower docks in all cases, to the dock master to use any berth for the time being unoccupied. The shipowner who is concerned with either of the classes (1) and (2) is never under any doubt as to which system of docks he intends to occupy; it is, moreover, provided by section 59 of the London and St. Katharine and East and West India Docks Act of 1888 that shipowners have a right to select what dock they will use for the discharge or loading of their ships. Of the tonnage entering last year from home and foreign ports for the purpose of discharging, 83 per cent. came under classes (1) and (2), and as regards this tonnage the berthing of the ships is practically simple. The Dock Company know, of course, from the ordinary shipping lists, and from information which the shipowners themselves supply, what ships are expected to arrive. This information is immediately transmitted to the dock master, who makes provision accordingly. These vessels are attended to by the dock master and his staff at the entrances, and, if required, tugs are supplied for the purpose of assisting the vessels from the entrance to their berths, a charge being made for the use of the tugs.

6901. Have you anything to tell us with reference to the sufficiency of these tugs in the docks?—As regards the sufficiency of the tugs, the company quite admit that, as regards some of their tugs, they are old and they require replacing, and they are now building two new tugs of very much greater power, and they have already built two, which will put us in possession of four new tugs with ample power of dealing with the shipping. As time goes on, new tugs will be one of

the things the company will provide if they get such relief as they are applying for.

6902. You have, no doubt, in mind the evidence of Mr. Jacobs which was given at question No. 3725?—I remember Mr. Jacobs gave some evidence as regards the lack of tugs for towing barges, I think—the failure of the Dock Companies to provide sufficient tugs.

6903. The answer to question No. 3725 is this: "The failure of the Dock Companies to provide sufficient tug power for towing barges within the dock water, and refusing to allow barge owners to keep tugs in the docks for the purpose of rendering such service?"—I suppose that, taking the answer as Mr. Jacobs gives it, it is true that we do not allow barge owners to keep tugs in the docks for the purpose of towing barges; but if the suggestion is that we do not allow tugs to go into the docks for the purpose of towing barges, that is altogether untrue. Mr. Jacobs himself has the right to send his tug into the dock, and does send his tug into the dock. He pays a commuted sum of only three guineas a year for that privilege.

6904. He told us that he had made an application to keep a tug in the dock, and that was refused?—I do not remember Mr. Jacobs' proposal, but a proposal has been made to the Dock Company to allow a particular lighterman to keep a tug in the dock and to tow barges. To that proposition the Dock Company did not assent, because they thought it not prudent in the interests of the trade generally that a particular lighterman should have the right to tow everybody's barges. Naturally he would give the preference to his own barges, and it was our view that we ought to do the towing ourselves, unless it was done by some perfectly independent person who would tow indifferently, and without giving preference to anybody, all the barges that may be in the docks.

6905. In any case, I understand, you are removing any defect that there is?—We are removing that defect so far as the defect existed. Then as regards class (3), that is tramps. In each dock system some berths are always kept unappropriated for tramps. Although the shipowner has the right to choose which dock he pleases, it is generally a matter of mutual arrangement between him and the Docks Company, having regard to the nature of the cargo and the circumstances at the time, as to the dock at which his vessel can be most conveniently dealt with. Assistance at the entrances, that is the use of tugs, and so on, is the same with regard to these vessels as in the case of vessels having fixed berths. London is, however, essentially a liner port, and the tonnage of tramps entering the docks of my company is comparatively small, the docks being chiefly used by liners. Now, as to the discharging and loading of vessels. As regards discharging, when the shipowners do not directly employ their own labour, they employ master-porters, who work at fixed tonnage rates and employ their own men. About 27 per cent. of the discharging work is done by master-porters, and about 55 per cent. of the work is done by the employment of men by the shipowners direct. The discharging done by the docks company amounts to about 18 per cent. of the whole of the foreign and colonial tonnage. Coasters are invariably discharged by the shipowners. In the Tilbury, Victoria and Albert, West India and St. Katharine Docks, the shipowners generally employ their own

Mr. H. C.  
Baggallay.

Mr. T.  
Hardy.

Mr. T.  
Hardy.  
15 May 1901.

labour, either direct or by master-porters for the discharge of their vessels and also for the work upon the quay in connection with landing, sorting and delivering goods to lighter. The whole expense of these operations falls in London on the shipowner, and not as in other ports upon the consignee; excepting, however, that the bill of lading used by the North American lines overrides the London practice. In the London Docks, and to a small extent in the St. Katharine, East India, South West India, and Tilbury Docks, the Docks Company undertake the work of discharging ships by arrangement with the shipowner at certain tariff rates for the labour performed. The rates, where the discharge is done by the Docks Company, include the use of cranes and a separate charge is made according to the tonnage of the goods, in cases where, incidental to the discharge, the quay shed is used for the purpose of landing and sorting overside cargo. In the case of berths appropriated to regular liners a charge is made for the use of the quay space for overside goods at a rental of 3s. or 3s. 6d. per square yard per annum, and berths with quay and shed space are also temporarily appropriated to "tramps" at the rate of 4s. 6d. per square yard per annum when desired. As regards loading, berths are appropriated to ships that require the use of a quay for taking in cargo from the shore, and in these cases no charge is made by way of rent for the use of the quay, the docks company being remunerated by the wharfage and porters' rates which they get on the goods passed over the quays for shipment. These rates include the service of receiving goods from railway truck or van, putting them in the shed, bedding to ports, and subsequently of trucking out to the ship's side when the ship is ready to receive the goods. The operation of loading the ship, that is, taking the goods from the side of the ship and stowing in the hold, is in all cases performed by stevedores working for the ship. It is estimated that on an average about 80 per cent. of the cargo loaded into ships is brought alongside in craft. The Dock Company get no revenue of any kind from such craft goods. With regard to the manipulation overside of goods, in the Port of London the shipowner's contract, in the absence of anything to the contrary in his bill of lading, does not end until actual delivery has been taken by or on behalf of the consignee. The consignee has, by the practice of the port, the privilege of taking delivery by lighter direct from the ship's side, in which case he pays no dock dues, or if the shipowner, for his own convenience, lands and sorts the goods on the quay the consignee can claim delivery of them from the quay into craft exactly as if the quay were part of the deck of the ship. If, however, the consignee is not in attendance with his lighter and all clearing documents within the time limited by the bill of lading, not exceeding in any case 72 hours after the ship's report, the shipowner is entitled to land these goods on the quay, and so subject them to dock charges, in which case the shipowner's liability ends there. There is no limit of time within which overside goods have to be removed from the quays, though theoretically the process of delivering such goods should be continuous and simultaneous with the discharge. No less than 75 per cent. of the import goods entering the docks are delivered on overside conditions and escape all dock charges. The shipowner to give despatch to his ship lands on the dock company's quays, at his own expense, a large proportion (in some cases the whole) of this 75 per cent. It is for this reason that the shipowner enters into the quay and shed space agreements before mentioned, as he finds it better worth his while to pay extra for the despatch thus obtained than suffer from the delay which the practice of direct delivery overside would entail. For this use of their quays and sheds the Dock Company, as regards regular liners in the lower docks, charge the ship rent at the rate of 3s. or 3s. 6d. per square yard per annum. A tramp vessel which is desirous of being rid of the delay caused by delivering direct into barges can hire temporary quay and shed space at the rate of 4s. 6d. per square yard per annum, the ship performing all labour. Hydraulic cranes are let to shipowners doing their own work at the rate of 2s. per hour per crane. When the docks company land and sort overside goods on the shipowner's account—that is, where the discharge of the ship is undertaken by the docks company—a charge is made according to the tonnage of the goods dealt with for the use of the

quay and the labour of landing, sorting, and delivering the goods. The whole of the overside goods landed on the quay are, after being sorted by and at the expense of the shipowner, delivered to craft free of all expense to the consignee. But in no case do the docks company get any payment except the rent or other charges referred to, though the statutory exemption in favour of lighters and goods does not actually apply to goods taken off the quay. The rent and charges referred to bear no comparison with the landing charges under which the goods would otherwise have fallen, and, of course, are insignificant compared with the charges made by the Docks and Harbour Board at Liverpool, which, in addition to the rent paid by the vessel for its shed accommodation, gets a very large sum in dock and town dues from the goods, in respect of which no labour services are rendered by the dock trust. For this proportion of the cargo (75 per cent.), therefore, London is an absolutely free port so far as the goods are concerned, as they pay nothing to either the port or dock authority. This must be qualified as regards shipowners in the North American trade, who have combined to put a clause into their bills of lading entitling them to put the whole cargo other than grain on the quay, and to charge the consignee a minimum rate of 1s. 9d. per ton weight for delivery. This charge is collected by the shipowners and retained by them as compensation for the labour of landing and sorting the cargo. In the case of grain there is a charge paid by the goods for the cost of discharging. This also in every case goes to the shipowners, except in very rare cases, in which the docks company still do the discharging. The delay against which there is so great an outcry is due simply and solely to the lighterage system. While the ship is alongside the quay the barges cannot in many cases obtain a berth, and even where a berth can be provided there is a certain amount of confusion in cross trucking first from the ship into the shed and then from the shed to lighters. On an average, and with respect to large ships, it may be said that it takes 18 days from the date of the ship breaking bulk before a shed is cleared of the cargo. The result of this to the docks company is, of course, that their docks cannot be used to the full extent to which other docks of equal size and accommodation are used where deliveries are being made from the back of the shed simultaneously with the discharge of the ship. It comes in effect to this, that allowing nine days as a very full time in which a ship's cargo should be disposed of, the dock property is used for nine days by the ship which pays, and nine days by the lighters and overside goods, which pay nothing. I hand in a table showing the number of hours that some of the larger ships which use the Tilbury, Albert, and Victoria Docks took to discharge their cargoes on various occasions in the year 1900.

*(The witness handed in a statement showing the actual time occupied in discharging some of the larger vessels frequenting the Tilbury and Albert and Victoria Docks of the London and India Docks Joint Committee during the year 1900 and also the average number of tons of goods discharged per hour. See Appendix, 18th day, No. 2.)*

I also hand in a table showing the average number of days that all the vessels entering the docks of my company during one month of 1900 remained there, and showing separately the average number of days such vessels were engaged in discharging, waiting, or loading.

*(The witness handed in a statement showing the average number of days vessels entering the docks of the London and India Docks Joint Committee in one month (23rd July to 21st August 1900) remained in dock from first date of entering to finally quitting, showing separately the number of working days vessels were under discharge waiting or loading. See Appendix 18th day, No. 3.)*

There are, of course, many reasons why some vessels take longer to discharge than others, and when the time occupied in the discharge is stated in terms of days it should be remarked that a day may be anything from 8 to 24 hours, according as the shipowner may find it to his interest to work, having regard to his other engagements with respect to his ship. Then I wish to say something as to the adequacy of the existing quay space of the docks company to accommodate all the cargoes on the quay, if the Liverpool system of cartage of goods from the quay within 72 hours for

Mr. J.  
Hardy.

15 May 1901

steamers and 48 hours for sailing vessels were adopted. The suggestion that the want of despatch so often complained of in the Port of London should be obviated by the simple expedient of abolishing the London practice, and so allowing the shipowner to end his liability by depositing the whole of his cargo on to the quay, has been met by one or two witnesses with an objection which is based on a misconception of the true facts and figures involved, and requires to be specifically dealt with. In his evidence on the 27th November, 1900, Sir Thomas Sutherland (Chairman of the P. and O. Company) said in answer to Questions 1979: "The most rapid way would be to discharge the whole cargo into the dock warehouses as is done in Liverpool." 1980: "As a matter of fact, if we wish to discharge the whole of our cargoes into docks . . . it would be impossible to do so, because the present dock warehouses would not contain the large cargoes which are received in the port." 1981: "I am speaking now of the dock sheds." 1982: "What I say is that it would be impossible for us if we wished to do so, to put the whole of our cargoes into these temporary sheds, and therefore we are compelled, whether we like it or not, to discharge a large portion of our cargo overside." Mr. Alfred Strover Williams (Director of the Atlantic Transport Company), in his evidence on the same day said, at Question 2170: "All North Atlantic general cargo, except grain, is discharged on to quay, and is delivered thence to merchants' craft when the importing steamer leaves the quay." Mr. A. L. Jones (Senior Partner of Elder, Dempster and Co.), in his evidence on the 26th March, 1901, speaking of the Millwall Dock, said, in answer to Questions 4827: "I am of the opinion that the dock company are unable to handle any more of the imported goods than they do now." 4925: "It has not the quay space." Mr. Jones was, of course, speaking of the Millwall Docks, but I just mention it here as it bears upon the point to which Sir Thomas Sutherland and Mr. Williams referred. Both the P. and O. Company and the Atlantic Transport Company use the Albert Docks; the space appropriated to them being—to the P. and O. Company, 31,413 superficial yards, and to the Atlantic Transport Company, 27,530 superficial yards. In the six months ended 30th June last, the Atlantic Transport Company's general cargo, other than grain, discharged at the Albert Docks berths amounted to 99,984 tons weight. This was all placed on the quays or in the sheds, and works out at the rate of 7.26 tons per superficial yard per annum. During the same period the P. and O. Company discharged at their appropriated berths 124,111 tons of goods. If this had all been put into the sheds the space would have been required to accommodate at the rate of 7.90 tons per superficial yard per annum, or little more than the quantity actually accommodated for another line of steamers in similar sheds in the same docks. But the goods brought by the Atlantic Transport Company are more bulky, weight for weight, than those brought by the P. and O. Company. It is perfectly clear from these figures that there would be no physical difficulty in placing the whole of the P. and O. Company's cargoes in the sheds, though it must be acknowledged that under existing conditions of delivery to barges, by which goods are detained in the sheds for a week or ten days the sheds would sometimes become congested, and that some additional shed accommodation would have to be supplied, which could easily be done. In connection with this matter it should be remarked how little use is made of the shed space in London even where whole cargoes are placed in the sheds. The Atlantic Transport Company use the quays and sheds to the extent of 7.26 tons per superficial yard per annum, and the sheds are used to their maximum capacity for that class of cargo under existing conditions of delivery to barges. What I mention now is from information with which I am perfectly satisfied. I have some documents issued by the Mersey Docks and Harbour Board, and from them I have gathered that in the year ended June, 1899, the Tixteth and Harrington Docks in Liverpool dealt with about 1,234,500 tons of goods from overseas vessels. The area of quay and shed space available for overseas tonnage in these two docks is 89,710 superficial yards. This works out at 13.76 tons per superficial yard per annum, or nearly 90 per cent. in excess of the London quantity. And this could be done in London were it not that deliveries are protracted under the lighterage

system. At the Cockerill berth at Tilbury, 15 tons per superficial yard of space are annually dealt with, and the berth is capable of accommodating a far greater business. In this case the goods are not kept about on the quays, but are loaded away into trucks simultaneously with the discharge of the ship. If every ton of goods discharged at the Albert Dock were put upon the quays, those quays would, under the system of barge delivery, only be worked to the extent of 7.26 tons per superficial yard per annum, whereas a well-equipped dock, such as the Albert Dock is, ought to be able to deal with at least 14 tons per superficial yard per annum, as is done at Liverpool. This, again, shows the injustice under which the Docks Company are labouring; for, assuming that the Tixteth and Harrington Docks in Liverpool were in the year referred to worked to their maximum capacity (which is not quite the case, because owing to a change in trade from dock to dock, due to reconstruction, some 14,000 superficial yards of shed space in the Tixteth Dock were not fully used), the Docks Company's docks would be able, if worked on Liverpool conditions, to accommodate about 90 per cent. more tonnage of both shipping and goods than they do to-day. This means that nearly one-half of the capital expenditure and of the up-keep expenses of the Docks Company's quays and sheds is due to the requirements of barge delivery in London, while no revenue is derived from either the barges or the goods. Appendix No. 1 which I have handed in shows the actual time occupied in discharging some of the larger vessels. It will be noticed that there is a great difference in regard to the average tonnage discharged per hour. One particular ship discharged as much as 176 tons per working hour, and others as little as 50. We have here the "Minnehaha" discharging at Tilbury on the 2nd October. That is one of the very large vessels of the Atlantic Transport Line. She got out 11,091 tons weight of goods in 63 hours, whereas in the same dock at similar sheds, and with similar appliances for discharging cranes, and so on, the "Inaba Maru," which is a steamer of the Nippon Yusen Kaisha Line, discharged only 51 tons per hour. This great difference would arise from circumstances entirely beyond the control of the Dock Company. There is no question of better accommodation to the one or the other.

6906. What reason do you suggest for this difference?—Probably the Nippon line boat was not in a great hurry to get her cargo out, and there would be differences also as regards the class of cargo. In all probability, too, the Nippon boat did not put everything on to the quay, but discharged a good proportion of her cargo into barges, whereas in the case of the Atlantic Transport Line they invariably discharge every ton of the goods other than grain on to the quays of the dock, and so get the ship out in comparatively short time. Appendix 2, which I have handed in, has been prepared really at the wish of Rear-Admiral Hext. I think when he visited the docks some time ago he wished to have a statement prepared showing the average number of days that ships occupied the dock. We took the whole of the ships entering the docks of this company for one month, and traced them through to the time of their leaving the dock, and this is the result. They are classified according to the ports from which the vessel arrived, and also whether they discharged only or discharged and loaded, and sailing ships are distinguished from steamers.

6907. It would be useful for us to have from you the answer to a question which I think one of the learned counsel put to Mr. Baggallay, whether more barges came into the docks than are strictly wanted for discharging purposes?—Certainly; many more barges come into the docks than are strictly required if they only came in for the purpose of discharging the ship. They do not come in for the purpose of discharging the ship. The ship would be glad to see the back of the barges in many cases; they are not in any way in the service of the ship. They come in for the purpose of collecting definite parcels of goods; if they were there merely for the purpose of taking cargo from the ship, and taking it somewhere for the purpose of sorting, comparatively few barges would be required.

6908. I mean to ask you whether the congestion could be remedied without any detriment to the discharging of the ships?—I do not think that the practice of the port will admit of fewer barges being brought into the docks than come in now, except, of

Mr. T.  
Hardy.

15 May 1901.

course, that barges sometimes come in for the purpose of harbourage, in which case they pay.

6909. (Sir Robert Giffen.) Will you tell us with reference to Appendix No. 1, what the average number of hours per day would be? You give the hours of discharge?—The average working hours would be ten. In the case of a large ship they would probably begin at 8 o'clock in the morning, and go on to 6 o'clock at night, but in the case of many of these vessels, and certainly in the case of these huge vessels of the Atlantic Transport Line, there is no stopping at all; they go on all round the clock; therefore 63 hours in the discharge of that ship would mean 63 running hours—that would be rather less than three days.

6910. So that this table does not give us the means of seeing how many days a ship is occupied in discharging?—That table does not, but I have given in the next table the average number of days of all ships entering within a month. Of course, if a shipowner does not choose to work all round the clock, it is because he does not find it to his advantage to do so; therefore, as I said just now, if you take days, it requires to be qualified in some way, because a shipowner may work 8, or 10, or 24 hours a day.

6911. With regard to this second table, it seems almost too voluminous to give a short answer to a short question?—Yes; I am afraid it is.

6912. You give the average for ships in certain trades, and then you divide them into a great many classes. We shall have to find out for ourselves what are the important classes and the less important classes?—You will get that in a measure from the number of ships engaged in the particular trades. I give the number of ships as well as the tonnage; and also the size of the ships would be gathered from the average tonnage.

6913. There is a great amount of delay in ships from the time they go into the dock and go away again, apart from the time spent in discharging?—In some cases there is a good deal of delay. In the case of a sailing ship it will sometimes happen that a ship comes into the docks and stays three days without doing anything.

6914. How would this compare with the other harbours from which they come?—I should say that it would compare unfavourably with other harbours, because they have not this practice of overside delivery.

6915. But you have no particulars to give us in respect of other harbours from which they come?—I have no definite particulars. I think at Avonmouth there are three lay-days allowed for the consignee; but the ship does not wait those three days, and I believe in some cases bears part of the expenses of landing if the goods should be actually applied for and delivered in those three lay-days.

6916. That is a harbour with which you are to some extent in competition?—Yes.

6917. I was speaking more of harbours used in the United States and Canada?—I am not acquainted with harbours in the United States and Canada.

6918. You have two ships from the United States and Canada, which occupy an average of  $13\frac{1}{2}$  days, and you have 17 which occupy an average of 5.77 days?—Yes. I separate them because it would be misleading to include the vessels that, for some purpose of their own, remained in dock after complete discharge. That obviously could not have any reference to the work of discharging. There must have been some special reason for those two vessels remaining in dock  $5\frac{1}{2}$  days after the discharge had been completed.

6919. So that six days would be a fair average?—Yes, and I may say that is about the lowest average, I think, certainly, of ocean-going vessels. It arises from the fact that every ton of goods put upon the quay from the ship is cleared out as quickly as possible.

6920. There is a lower average. In the case of 86 vessels from the north of Europe, where the average is 1.86?—Those are little things that come in from Ostend or Hamburg. In the case of Ostend there is a daily service bringing a very small quantity of cargo, and they just come in and go away the same day.

6921. But for large ocean-going vessels, about six days is the average?—Of discharging?

6922. No; these are the total days in the dock?—They do not remain afterwards, there is very little loading done by United States vessels.

6923. (Rear-Admiral Hext.) Lord B. Talbot asked just now about the number of barges using the docks that were in excess of the requirements for unloading. Presuming the American bill of lading was in universal use in London, would that reduce the number of barges required or not?—No; it would make no difference whatever to the number of barges.

6924. It would not reduce it at all?—I do not think it would have the slightest effect upon the number of barges. There are quite as many barges hanging about American ships as there are with any other ships.

6925. But would not the fact of being able to distribute on the quays and sort them accelerate the discharging of vessels?—The practice of discharging cargo on to the quays is not confined to American lines. It is used largely by other lines. The only difference is this: Take the P. and O. Company, for instance, they would consider whether it would be better and more economical for them to put cargo overside into barges (they very often find it is), or to put it on the quay, and to incur themselves the expense of, say, 1s. 6d. a ton for handling it. In the case of the American lines no such consideration comes in, because they have under their bill of lading the right to collect from the consignees the expense of handling the cargo on the quay. Therefore, they do not make that calculation.

6926. But the unloading of the ship would be more rapid under the American bill of lading than it would be under the P. and O. bill of lading?—Certainly; this table shows it.

6927. (Mr. Peel.) You said that there was no limit of time within which overside goods had to be removed from the quays. Would you suggest that there should be some limit of time? There is a limit of time in Liverpool, is there not?—There is a limit of time in Liverpool and in Bristol, and I think in most ports. I cannot say how far it would be practicable to impose a limit of time in London. It would be unreasonable to say that goods should be taken from the quay, say within 72 hours, if a barge could not get alongside the quay in 72 hours to get the goods.

6928. A rule like that is more easy to make in Liverpool, where everything is carted off, than in a place where barge traffic prevails?—That is so.

6929. I suppose a rule of that kind would tend to increase the barge congestion in the dock?—I think perhaps it would.

6930. Do these barges come into dock just to look for business, or do they come in on contract as a rule?—There is a very grave suspicion that they do come in to look for business sometimes. They generally get business. If they do not, of course, they fall under charges. If they come into dock, and find nothing within a certain time, we should put them on charges, but I think, as a rule, you may say they have some definite purpose in entering dock.

6931. So that, with reference to that, a charge placed upon barges entering the dock as is suggested, I think, in that Bill, would not really diminish the number of barges that do enter the dock. It would have very little effect?—We are not proposing any measure that would have the effect of crippling any trade at all. We are not asking for powers to enable us to limit the number of barges or to diminish the number of barges. We quite appreciate that the custom must go on in a port like London. All that we are asking is that we should be paid for the accommodation that we afford those barges, and for the expenses that we incur.

6932. But whether or not a charge was placed on the goods or on the barges, that would really not affect the question of congestion very much. The whole point arises from London being a barge port, does it not?—It does.

6933. And it has been compared with other ports which are not barge ports, but which, like Liverpool, have the goods sent away by cart?—Quite true. That makes the comparison, of course, all the more favourable to those other ports, because, where they have none of the difficulties of the barge system, they have dues on the goods, and we who have all the trouble and difficulty of the barges get no dues either on the goods or on the barges.

6934. But, from a shipowner's point of view, the faster the vessel discharges on to the quays the greater

is the congestion in the dock at certain times by barges to take away all those goods from the quays?—I have pointed out that, after the ship is gone, we begin with barges.

6935. So that the faster the ship is discharged, the more the congestion is in the docks?—I do not think so.

6936. So long as the business is conducted by barges as it is in London?—I do not think the speed at which the ship can discharge her cargo on to the quay has any effect upon the number of barges coming in.

6937. Surely it must, because if it is all put out at the same time all the barges which were going to take goods from that ship would tend to come in at the same time?—It does not necessarily follow because under the Merchant Shipping Act the barge owner or consignee of goods has a right to demand from the shipowner 24 hours' notice of the time when he may expect to get his goods.

6938. But, of course, London must always remain a barge port. We have had pointed out some of these docks are at such distances that carting becomes impossible?—From the Tilbury Dock carting is almost impossible.

6939. Or from the Victoria and Albert Docks?—No; carting is very much resorted to in the case of the Victoria and Albert Docks.

6940. But that is almost the limit, is it not?—We think that is about the limit.

6941. So that when you have a barge port it seems to me you must always keep a smaller proportion of tonnage deposited on the quay per square yard of quay space as compared with a port like Liverpool, where everything is carted off?—I quite admit that. I say we are suffering from that practice.

6942. Your comparisons between London and Liverpool are really comparisons which depend on the natural conditions of the port rather than on the question of system?—Yes, I do not think there can be any alteration of system that would enable us to make a larger use of our quays than we do now; but I am putting it that with the system now in London we are unable to make so great a use of our quays and docks as they do in Liverpool under a different system. That is a very strong reason, I think, why we should be paid for the expenditure we incur.

*Cross-examined by Mr. Daldy.*

6943. Is a barge port a port in which the docks undertaking is very much more difficult to carry on than it is in such a port as Liverpool?—I should say so—certainly more onerous. The difficulties can be got over, of course.

6944. Will the imposing of the charges which you ask for on the ships and the barges by itself make any alterations in the practice of handling goods in the port?—It will enable the dock company, who have that difficult question to deal with, to make suitable provision for the needs of this trade.

6945. Perhaps that is part of an answer, but I want you, who are so very conversant with the practice of the port, to tell me if you can whether the fact of imposing these two charges would make any alteration in the way in which the goods are dealt with?—I do not think so.

6946. None whatever?—No.

*Cross-examined by Mr. Harper.*

6947. You told us, I think, that you discharge about 18 per cent. of the whole of the foreign and Colonial tonnage now?—Yes.

6948. Is that by your own labour?—Yes.

6949. Might I ask if it is remunerative?—Well, we hope it is slightly remunerative, certainly.

6950. What percentage of profit do you reckon there is in it?—I cannot tell you what percentage of profit we make.

6951. Is it satisfactory?—It is reasonably satisfactory.

6952. Might I inquire, then, why you gave up the 55 per cent. to the shipowners to discharge direct themselves? Why did not you keep that in your hand?—I will go over the whole thing, if you like, but the matter was very fully explained by Mr. Scott.

6953. You have nothing to add?—I have nothing to add.

6954. Now, with regard to your table. You have compared the Atlantic Transport Line with the Nippon Line. Will you take the three instances that are there of the Atlantic Transport Line—the Europe, the Maniton, and the Minnehaha?—Yes.

6955. I think you will find that the average tonnage discharge per hour of the Maniton is 69 tons, whereas the Minnehaha was 176 tons?—Yes; both vessels discharged at the same berth with the same means and the same appliances in every way.

6956. How do you account for the difference. Before, in comparing with the Nippon Line, you made suggestions that there was a difference in cargo and so on?—Quite so. There is no difference in cargo here. They came from the same port.

6957. The same conditions prevailing in every way at the same berth, they ought really in substance to have been delivered at an equal rate?—Yes, if the shipowner wished it, except that very likely one vessel may have a very much higher percentage of grain than the other. Grain can be turned out very quickly.

6958. You have no information to enable you to say that?—No, I cannot give you the details of the cargo.

6959. Do you employ the dummy system with the Atlantic Transport Company?—Yes, they have it if they wish, but they discharge their grain by elevators.

6960. But their other cargo?—Their other cargo they put all on to the quay, and therefore they do not require dummies on the quay side of the ship.

6961. Is not the difficulty this: that a line with an appropriated berth like the Atlantic Transport Line, has its vessels coming in so quickly that their cargo from one may not be cleared before the next vessel comes in?—Not wholly cleared—that does happen.

6962. And then there is considerable trouble and congestion with the barges?—Certainly to some extent.

*Cross-examined by Mr. Cranstoun.*

6963. About the congestion caused by barges, is it true that barges are required to be in attendance for many days before the shipowner intends to give delivery?—No, it is not true.

6964. Is it true that they have to be there some considerable time before the shipowner can give delivery?—They frequently are there some considerable time before the shipowner can give delivery, but as I said just now they have the right to require of the shipowner 24 hours' notice. They have that right under the Merchant Shipping Act.

6965. But they must present the barge, must they not?—Yes, they must present their barge; they can take their barge away immediately if the goods are not ready.

6966. There is the cost of doing that?—Certainly.

6967. And the risk of being locked out again a considerable time?—Yes.

6968. Which the lighterman will have to pay for?—Undoubtedly he would have to pay, but he only remains in the dock, I suppose, because it suits him better to remain in the dock doing nothing than to take his barge out and get another job.

6969. That is what you suppose, but there is no proof of it?—The proof is that he remains in.

6970. It is like your suggestion about barges going into the dock touting for work?—Yes.

6971. Will you give me a single instance where that has been done?—I said there was a suspicion of it.

6972. Can you change that suspicion into proof; can you give us a single instance?—No; I am not going to give any evidence on suspicion.

6973. Then it is nothing but suspicion?—Quite so; it may be only suspicion.

6974. How long have you occupied your present position?—My present position only since the 1st January.

6975. Well, a leading position in the docks?—Eleven years.

*Mr. T. Hardy.*

15 May 1901.

Mr. T.  
Hardy.  
15 May 1901

6976. Your suspicion, I suppose, has gone on during that eleven years?—Yes.

6977. And during that time you have not been able to furnish, and cannot now furnish us with a single instance?—I do not propose to furnish any instance.

6978. If it were found out, the penalty would be severe, would it not?—The penalty would be the tonnage dues on the barge—not a very severe penalty.

6979. But it would be to your profit?—Quite so; in mitigation of our loss, I would rather put it.

6980. At all events I think it likely, under the present state of feeling, that every effort has been made to find out such an instance as that?—When you refer to the present state of feeling, I think you must admit that we are forbearing with regard to barges and render them all the services we can.

6981. Is it not your policy, and has it not been your policy for some time, to smash the barges and the barge trade?—Never.

6982. Have you never yourself used that expression?—Never.

6983. Is it not the idea which is running through the whole of these proceedings to do the utmost you can to ruin the trade of the barges?—Certainly not. We want to get a revenue out of the barges, and not to ruin the barges. We are here for a revenue.

6984. And that alone?—Yes.

6985. Whether it affects the trade of the Thames or the trade of the country is a secondary point?—No; it is not a secondary point at all. The whole point is one. We do not propose to raise the revenue by ruining anything, and if we ruined the barge trade we obviously should not get our revenue.

6986. Is it not the rule that goods not applied for within 72 hours of the ship being ready to deliver are placed at full charges?—Yes.

6987. Is there any arrangement between the ship and the dock on the point?—The only arrangement between the ship and the dock is that in our tenancy agreements with the shipowners it is provided that goods that are not applied for within that time are to be handed over to us for warehousing. The agreement will speak for itself.

6988. But five minutes beyond that time would be sufficient to mulct the merchant in these charges?—I do not know whether we should go into a question of minutes.

6989. But a very short time?—There is a time when you must draw the line, undoubtedly.

6990. And it is a time that is very strictly marked out by the dock company?—So far as the dock company can follow it, yes.

6991. Is it not possible that a system could be arrived at under which the shipowner and the dock company could give some notice to the barge owners?—You do not want any system to be arrived at, because you have that right under the Merchant Shipping Act.

6992. But the barges come to the ship?—Certainly.

6993. I want to avoid that, because it is the fact of the barges coming that causes the congestion. Now, is it not possible for some system to be made under which information could be given to the lighterman as to about the time when the ship would be ready to actually deliver goods to the barge?—I think very likely, as a matter of contract between the barge and the ship, some system might be devised.

6994. Will not the dock companies assist in that?—

The dock company certainly would render no assistance which would make it easy for barge owners to evade payment of dues for entering the docks.

6995. It is not a question of evading dues. It is a question of avoiding this glut or congestion of barges, and helping you to carry on the work of the dock. That is the whole object. Would the dock company assist in that?—Your suggestion is that the dock company should assist in devising some plan by which they should not have any advantages upon the 25 per cent. of the goods that now become liable to charges.

6996. I said nothing at all about that?—But it comes to that; it is nothing else.

6997. It is hardly fair to put that to me when I asked you a simple question which you could answer?—I answer this. The dock company would render every assistance in facilitating any arrangement by which they would not themselves suffer.

6998. But at present they benefit by this arrangement that the barge has to be there within the 72 hours?—Yes, they do slightly benefit.

6999. And benefit very considerably, do they not?—You really cannot say there is anything very considerable in it, when we charge upon only 25 per cent. of the whole of the goods that enter the docks.

7000. According to your statement to-day, you say that on an average with respect to large ships it might be said that it takes 18 days from the date of the ship breaking bulk before the shipper is able to deal with the cargo. You get 18 days for it?—We get our dock used for 18 days.

7001. The barges are there 18 days?—Some barges are there. They have to be there.

7002. Could not some regulation be made under which that could be avoided?—We could make no such regulation.

7003. Does not one of your regulations, if the goods are not applied for or handed over to you, compel the barges to be there?—I suppose it is a necessity that barges should be in attendance for their goods.

7004. And continuously in attendance?—They should be continuously in attendance. I will explain to you how that is done. Very frequently one barge may be there for two or three parcels.

7005. But that does not matter. The barge has to be there, and as the law stands at present it has a right to be there?—A barge has to be there for each parcel, but one barge is there for half-a-dozen parcels, and the first one which turns up, whichever it may be, that barge has. Therefore, you do not have that congestion.

7005a. They have that right, and the question is whether a system could not be made to work more smoothly by the co-operation of the dock company?—The dock company will co-operate in any scheme which may be devised to limit the number of barges in the docks provided they are not going to suffer by the arrangement.

7006. (Mr. George Wallace.) Might I ask the question just to make it quite clear? The dock company have no means of knowing that the lighter will be required to take the goods away?—We have no means of knowing.

7006a. None whatever?—No.

7007. And could give no notice when the lighter would be required?—We could not give any notice.

Recalled 11657.

(Adjourned to Monday next, May 20, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTIETH DAY.

*Monday, 20th May, 1901.*

PRESENT

The Right Hon. LORD REVELSTOKE (*Chairman*).

The Hon. ALFRED LYTTETTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Sir JOHN WOLFE WOLFE-BARRY, K.C.B., LL.D., F.R.S.  
Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTOUN appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

Mr. CHARLES JAMES CATER SCOTT recalled and further examined.

7008. (*Chairman.*) I understand, Mr. Scott, that you have a correction you desire to make?—Yes, my Lord. I would like to call your attention to the part just following Question 6666, the last day on which I was giving evidence. Mr. Wallace said, "My Lord, I do not know whether the witness has got the items of expenditure of £109,000 which your Lordship asked for." Then there was a little conversation about that, and then, at Question 6667, Sir Robert Giffen said, "I think you give a return showing the maintenance of each dock. or something

of that kind?" My answer was, "No; we do not keep them separately." That I would desire to correct. On going through the evidence I find that we can give those figures separately. I ought to have known it at the time, because it is a return which from time to time comes through my hands. I am prepared to put in, if the Commission so wish, details of all the expenditure of maintenance. It is split up into a great many small matters.

Mr. C. J. C.  
Scott.  
20 May 1901.

(*Chairman.*) We shall be obliged if you will do so.

Recalled 7916.

7009. (*Mr. Harper.*) My Lord, now we have the notes of the last day's evidence before us, there is one question I should like some time to have an opportunity of putting to Mr. Hardy. It is with reference to a passage in Question 6905. I understand Mr. Hardy is not here now, but I desired to intimate this to your Lordship.

(*Mr. Rowland Whitehead.*) Would your Lordship allow me to make an application to the Commission? May I refer to Question 6565. A discussion ensued which is reported there. Your Lordship said, "I do not think anyone can claim that the terms of reference are not sufficiently wide, but I do not think your particular point comes within them." I say, "Very well, my Lord, I am very sorry, but it is a most important matter for the trader." My application is this. At that moment your Lordship stopped me when I was cross-examining with regard to the method under which the rates and charges are levied as against the trader. Your Lordship thought at that time that the particular question which I asked did not come within the scope of the

reference of the Commission. I mention the matter now to ask your Lordship whether you could consider that question as a question of general principle rather, apart from the particular question which I was then upon; that is to say, considering it as a question of general principle affecting the proceedings of the Commission, because it does raise an issue which is of very great importance.

(*Mr. Lyttelton.*) Is the method of levy the subject you wish to speak of, or is it the quantum?

(*Mr. Rowland Whitehead.*) I was asking a question at that moment as to the method, the system, upon which the charge was based. I took a particular concrete case of rice. I was dealing with the consolidated rate. I do not ask the Commission to give any decision at this moment, but I understand that my clients have communicated with the Commission in writing, making an application that the matter might be considered. The point is this. In Question 1179, Mr. Rogers said: "Above all, London has suffered by the excessive charges levied upon goods in this port,

20 May 1901. and by the insufficient facilities for conducting the trade on an improved basis. (*Chairman.*) That we should like to have more in detail." My Lord, the point is this. The Chamber of Commerce have, in response to that invitation from your Lordship, prepared evidence to place before the Commission, showing how the charges levied at the docks affect trade in the Port of London. The question I was asking was really a question in cross-examination leading up to the evidence upon that point which they propose to place before the Commission. The Chamber of Commerce feels that the matter does come within the scope of your inquiry, not only under the general terms at the beginning, "To inquire into the present administration of the Port of London," but also the words at the end, "To report whether any change or improvement in regard to any of the above matters is advisable for the promotion of the trade of the port and the public interest." All I ask at this moment is that your Lordship and the Commission would consider that point. I do not wish to raise it just as a matter between my friends and myself when I am asking a particular question, but if the Commission consider that question as a question of important principle to be decided as to the line of evidence which should be tendered before the Commission, my clients would be very much obliged. I do not understand your Lordship to shut out that line of evidence when you stopped the particular question I was asking.

(*Mr. Lyttelton.*) I wish you would point out exactly what class of evidence you want to get. I have listened very carefully to your statement, and I know you are always lucid, but I really do not quite understand what you wish to have admitted. I understand that you do not complain of the ruling of the Commission that we should not go into the justifiability of each rate. It must be obvious to anybody of your experience that that would mean a three years' inquiry.

(*Mr. Rowland Whitehead.*) I would not propose to go into every rate, but in that particular case in which I am dealing I took a concrete instance of rice with a view of testing the principle upon which the rates were based. Part of the evidence given before this Commission has been with regard to a certain charge of 1s. or 1s. 6d. a ton, and it is very difficult, if I may say so, to deal with a troublesome question as to the reasonableness of the charges made or proposed to be made by the dock company, without putting a concrete case and considering it on its merits.

(*Mr. Lyttelton.*) If you are entitled to do that in the case of rice, why would you not be entitled to do that in the case of every commodity, and if you are entitled to do that in the case of each commodity, what is there to prevent the matter being prolonged into an elaborate inquiry?

(*Mr. Rowland Whitehead.*) Theoretically there might be a difficulty in drawing the line, I admit, but it does seem to me to be a most important consideration for the Commission. My clients have no intention whatever of putting forward illustrations with regard to every article and every trade; that is not their intention, but they do submit that some of the facts bearing upon that important point should be allowed before the Commission. They understood your Lordship to invite it when Mr. Rogers was giving evidence, and have prepared a certain amount of evidence on that point. I do not ask the Commission to decide the point at this moment: I understand my clients have written to the Commission, setting forth in detail the reasons why they think it is material to this inquiry. I would ask your Lordship to reserve the point.

(*Chairman.*) We need not tell you we have no wish to unduly limit the evidence which may be set before us on the part of the Chamber of Commerce any more than on the part of anybody else, but while we allow

questions on system and method, as distinct from those with regard to the amount and justifiability, we do consider that the words to which you have called our attention in the terms of reference: "To inquire into the present administration of the Port of London," are qualified by what follow, and we can only adhere to the ruling which we gave last week, that we are not prepared to go into the question.

(*Mr. Scrutton.*) My Lord, I do not wish to be in the least disrespectful with regard to rulings that have been given, but I should like to see if I quite understand. There are two rulings given, following Question 6649. Your Lordship says: "I do not think it is within the scope of this inquiry to go into the charges which are made by the docks." Then, a little lower down: "We should like to say that we do not think the question of the charges of the docks, apart from the accommodation of vessels, does come within the scope of the inquiry." I want respectfully to point out how it appears to place my clients (the Corporation of London) and other bodies appearing before this tribunal in a very considerable difficulty if that ruling is strictly adhered to. For instance, the Dock Company are coming before the Commission putting forward a proposal by which they shall be allowed to levy certain further charges. If we are to be shut out from going into those charges it is difficult to see quite why the docks are allowed to put that proposal, that they shall be allowed to levy a charge on barges, and a charge on goods, which they are asking as their contribution to the suggestion for the improvement of the Port of London. Again, when we have to consider the adequacy of the accommodation provided for vessels, and the system of charge for such accommodation, which are the second and third matters with which the Commission have to deal, while I quite feel that the Commission cannot possibly be expected to take rate by rate, and item by item, it is difficult to see how the system can be considered without seeing how it works in some particular illustrative instance. May I take one instance to show your Lordship what I mean? It is one of the complaints which is made against London, which I hope this Commission will deal with, that when goods get on the quay there is one consolidated rate which applies to them altogether, and applies to a number of services, and if the goods owner wants much less than those services, he still has to pay the whole rate. Now, that is a matter which I should submit comes within the scope of the inquiry of this Commission, but it would be difficult if we are not to go into the charge, and take a particular rate, say, of 4s. 2d., for a particular thing and say: "Suppose I want to take that away in a cart your rate is still 4s. 2d." We must illustrate it by a particular rate. But your Lordship's ruling, as given, does seem so wide that it shuts us out the moment we mention 4s. 2d. for rice or whatever it may be. I am not pressing it with any disrespect for your Lordship, but if it were understood that with regard to the system we could go into these matters, and, for instance, with regard to the dock companies' proposals, we might ask: What do you propose to charge 3d. a ton on barges, and so on, for, we would understand it better.

(*Chairman.*) We cannot help hoping that you will be able to see your way to speak of one point without necessarily trenching on the other.

(*Mr. Daldy.*) My Lord, on behalf of the County Council, I have been asked to support this application. I do so to this extent, that on such questions as to whether the port is a cheap port or not, and whether the loss of the dock companies is really due to the delay, and any questions on goods that bear upon that, we should ask, so far as it is proper for us to ask, the Commission to go into. I need scarcely say we do not suggest to the Commission that it should hold an inquiry into a rate like the Railway Commission does.

Mr. JOSEPH GUINNESS BROOBBANK called and examined.

7010. (*Chairman.*) You are secretary of the London and India Docks Company?—Yes.

7011. You have some evidence you wish to lay before us with regard to certain Continental ports which you have visited personally?—Yes.

7012. Will you proceed with that evidence?—Under the instructions of the London and India Docks Joint Committee I visited, in September, 1900, the following

Continental ports:—Antwerp, Hamburg, Cuxhaven, Bremerhafen, Bremen, Amsterdam, Rotterdam, Havre, Dunkirk. The facts which I am about to state as regards foreign ports are all derived from my own personal ocular observation on the spot, or in cases where that was practically impossible (such as statements of depth of water) from information given to me on the spot by responsible officials at the respective ports. Judging of the relative importance of the above-mentioned ports by the amount of shipping entering to dis-

Mr. J. G. Broodbank.

charge in 1899 they would be placed in the following order:—

	Tons register.
Hamburg	7,766,000
Antwerp	6,800,000
Rotterdam	6,323,000
Bremen	2,400,000
Havre	2,200,000
Amsterdam	1,800,000
Dunkirk	1,650,000
Bremerhafen	1,460,000
Cuxhaven	Figures not obtainable.
The figures for London for 1899 are	15,400,000
And for Liverpool	9,500,000

7013. (*Sir Robert Giffen.*) I should like to understand whether this is all sea-going trade?—Yes, all sea-going trade.

7014. (*Chairman.*) Will you tell me where you get these figures from?—From the authorities at the ports mentioned in each case.

7015. (*Sir Robert Giffen.*) Did you get the foreign shipping separate from the coasting in each case?—It was described to me as the sea-going traffic; that would include foreign and coasting ships.

7016. You have not got them separately?—No, I have not got them separately. There are returns in most of these places of the traffic by barge as well as the traffic by sea-going ships. What I have here is the sea-going ships. The general conclusion gathered from my visit is that as regards present accommodation London is not behind any of the ports on the Continent. In one or two details, perhaps, London may be beaten, but London is in my opinion superior to any individual port which I have visited. Even in the matter of approaches to the port, for which the Thames Conservancy are often blamed, London stands high up in the list. Up to Tilbury the depth is never less than 24½ ft. at low water, and 43 ft. at high water. Outside the Tilbury Docks there is even at low tide a depth of 40 ft. Above Tilbury, and up to the Albert Dock, the depth is never less than 19 ft., with about 37 ft. at high water. At Hamburg—the most prosperous port of the Continent—for 25 miles below the town, and on the top of a good high tide, 27 ft. is the most water that can be found. The effective depth is only 23 ft., and if the fall in the tide of 6 ft. is allowed for it will be seen that the effective low water depth is only 17 ft. At Antwerp only vessels drawing not more than 16 ft. can be sure of coming up at low water springs, and the channel is a difficult one all the way up to the town. No recent chart of the channel to Rotterdam is published, but the "Shipping World Annual" states that vessels drawing 22 ft. can come up at any time, and those drawing 24 ft. to 27 ft. at high water. Bremen and Bremerhafen are handicapped by a bar at the mouth of the Weser, where there is never more than 33 ft. of water, and only 23 ft. at low water. Bremen can only be reached on the best conditions by ships drawing not more than 26 ft. The lock at the North Sea Canal has 28 ft. at low water, but the canal up to Amsterdam is only available for vessels of 26 ft. 2 in., so that Amsterdam is equal to London in accessibility at low water only. Then, again, the depth of water in the docks of the London and India Docks Company will be found superior on the whole to that of any of the docks I saw abroad. Contrast the 38 ft. at Tilbury, and 32 ft. and 27 ft. at the Albert Dock, and the 29 ft. at the South-West India Dock, with the 21 ft. in the deepest harbour at Hamburg, or the 20 ft. at Bremen, or even the 28 ft. at Rotterdam and Amsterdam. It is a striking fact to find at places like Antwerp, Bremerhafen, Havre, and Dunkirk, large areas of dock made within the last 50 years quite out of date, and yet to find the system of the West India Docks, made at the beginning of the last century, now able to receive vessels of almost the largest class coming to London. The docks at London appear to have been capable of adaptation to modern requirements, whilst in the case of those abroad the only way of meeting the requirements of modern conditions is apparently to build new docks, and leave the old ones idle. In graving dock accommodation London is far ahead of any of the ports I visited, and as regards sheds and cranes, whilst there may be small improvements in details in some of the modern Continental docks made since Tilbury, London as a whole is equal to any of the other ports, and in the number of cranes is relatively far superior. In the separate accounts of each port, which follow, I have given some information as to the money which is being

spent or is about to be spent on extensions. It may be well to sum these up:—

Hamburg	£2,000,000.
Antwerp...	Quay extensions probably costing £1,000,000 already in progress. Further extensions not settled, but a very large expenditure is anticipated.
Rotterdam	£800,000 authorised, but much larger expenditure contemplated.
Bremen ...	£2,500,000.
Havre ...	£3,700,000.
Amsterdam	Not settled, but very large expenditure contemplated.
Dunkirk...	£1,000,000.
Bremerhafen	£50,000.

7017. (*Chairman.*) Can you tell us from what sources the money which you say is going to be spent comes; is it from local or Imperial sources?—In the case of Hamburg it would come from the Free State of Hamburg; in the case of Antwerp the money is mostly found by the Government; at Rotterdam it is the Municipality; at Bremen it is the State of Bremen; at Havre it is the French Government; at Amsterdam it is the Municipality; at Dunkirk it is the French Government; at Bremerhafen it is the State of Bremen. It was impossible to get any reliable information as to the earnings of the dock undertakings. All of the undertakings are controlled by the town or some public authority, and it was frankly admitted that they never consider the question of yield per cent. on the money invested. The only place that claimed to make a profit was Bremen, where it was stated that 4½ per cent. was earned on the money spent, but as I point out in my report on that port, a very large capital element has been omitted from the calculation. One or two of the representatives whom I saw admitted that the dock items were purposely mixed up in the town accounts. It is a significant fact that practically all the warehousing business is in private hands. The municipalities are jealously watched by traders whose business would be interfered with if warehousing were undertaken. Two or three instances are given, as at Antwerp and at Amsterdam, where the interests of the port in this respect are sacrificed to the exigencies of individual interests. Even at Bremen, where the State have an interest in the warehousing business, a private company is employed to work the warehouses, the Bremen State only taking a share of the profits. Of the ports I visited, docks exist at Bremerhafen, Amsterdam, Dunkirk, Havre, and partly at Antwerp, whilst the open basin, or riverside quay system, is in force at Hamburg, Bremen, Cuxhaven, Rotterdam, and partly at Antwerp. A great deal of what has been stated about the river quays being preferred at Antwerp is discounted by what I ascertained at that port. At Antwerp they are spending £250 per yard in erecting the river quays. This form of construction is therefore undesirable not only from the point of view of convenience of working, but of capital outlay. This cost of £250 per yard is the cost of erecting the quay only, and includes nothing for the purchase of expensive river frontage, graving docks, sheds, railways, cranes, or any outfit of any kind. It may be noticed in this connection that the quay walls in the Thames would have to be at least 70 feet high, allowing for the foundations, rise and fall of tide, and a reasonable margin of wall above high water level. It may be well to repeat briefly the reasons for the existence of these river quays at the various ports I have visited; namely, at Hamburg there is only a variation of 6 feet in the tide; at Bremen the nature of the soil will not allow the retention of water by lock gates; at Rotterdam there is only a variation of 4 feet in the tide; at Antwerp the town have no alternative but to have river quays, there not being room for docks on the lands at present owned by them. In all cases, too, the soil in suspension in the rivers is comparatively limited, so that the amount of dredging is insignificant compared with that which would be necessary in the case of similar deep water quays in the Thames. In considering the suggestions that the trade of London has not increased in the same proportion as that of the Continental ports, it is well to look at a table which has been kindly supplied to me by Mr. Dryhurst, the Secretary of Lloyd's Register. This table shows the number of tonnage of steamers of 100 tons gross and upward belonging to Great Britain and the principal foreign countries for the years 1886, 1893, and 1900.

(*The witness handed in a table showing number and tonnage of steamers of 100 tons gross and upwards belonging to certain countries during the years 1886, 1893 and 1900. See Appendix 20th Day, No. 1.*)

Mr. J. G.  
Broodbank.  
20 May 1901.

It will be seen that although Germany, America, Japan and Norway have very largely increased their shipping, the British total is far beyond any of them, being six times as great as that of Germany, which is the first of other countries. It should, however, be pointed out that it is a comparatively small matter for a country owning a small amount of tonnage to double or treble it, whereas for a country like Great Britain to double its tonnage shows immense progress. The same principle applies to the large increases in shipping discharging at the ports on the Continent. All the ports show wonderful progress, but that of London is quite as wonderful considering that it has increased its trade from a total of 5,000,000 tons in 1850 to a total of 15,400,000 in 1899. Especially is this the case with the foreign and colonial trade of London which has increased in a far greater ratio than the trade as a whole. In 1850, this was 1,900,000 tons. In 1899 it was 9,400,000 tons. When it is remembered that the large Continental ports did not compete for the world's business before 1850, and that they are, as will be seen, subsidised by their governments and municipalities, it is creditable to the port system in London that its trade with countries outside the United Kingdom has increased five-fold. As a matter of fact, much of the increased trade at foreign ports is with London or its subsidiary ports. Then I will hand in my reports on each of the ports visited:—

(The witness handed in Reports on the Ports of Antwerp, Hamburg, Cuxhaven, Bremerhafen, Bremen, Amsterdam, Rotterdam, Havre and Dunkirk. See Appendix 20th Day, No. 2.)

I will also hand in a comparative table of facilities and accommodation at London and the chief Continental ports.

(The witness handed in the table. See Appendix 20th Day, No. 3.)

7017a. Have you any remark to make with reference to the last table?—No, except that it is a summary of what has gone before in tabular form, with the addition that I give the particulars for London as well as the ports mentioned.

7018. (Sir John Wolfe Barry.) I am going to ask you one question with regard to the very interesting detailed statement of the different ports. Did you obtain all this information by personal inquiry?—Yes.

7019. From the best sources of information you could get?—From the best sources obtainable, that is, the headquarters in each case.

7020. And subject to that qualification we may take it all as accurate?—Yes, and it has been checked.

7021. (Sir Robert Giffen.) With reference to your table showing the number and tonnage of steamers of 100 tons gross and upwards, it looks to me like a table that you would find in a return called "The Progress of Merchant Shipping" published by the Board of Trade?—That is probably obtained from the same source as that from which I obtained mine. It is extracted from "Lloyd's Register Book."

7022. I just wish to know how far it is an original

document made up by Lloyd's?—I received it from Lloyd's just as you see it.

7023. Are you quite sure that the footnote with reference to the United States is correct; as to these figures "including steel and iron vessels trading on the great lakes of North America"?—Yes. This is exactly as I received it from the Secretary of "Lloyd's Register."

7024. Are you quite sure that it includes all these vessels?—Of course I have to fall back on the source from which I received it.

7025. You have not investigated it?—No, I cannot possibly do so.

7026. (Rear-Admiral Hext.) In visiting these ports and wharves, did you notice any pontoon gates—a floating pontoon with a bridge from the pontoon to the ship?—No, I did not.

7027. (Mr. Harper.) You did not find any place where the warehousing business was mixed up with the whole of the docks?—Only at Amsterdam, and that very slightly.

7028. Now one question with regard to Appendix 1 showing the number and tonnage of steamers of 100 tons gross and upwards relative to the different countries. There has been some disturbance in those figures lately, has there not? The Atlantic Transport line has been sold, has it not?—I believe it has. I have no knowledge myself.

7029. Since 1900 there has been a transfer of some millions of tons, has there not?—I should think it was certainly not millions of tons.

7030. Is there not another line—the Atlas—which has been transferred?—Not going into millions of tons.

7031. The Leyland liners have been transferred, have they not?—If one is to believe what is in the papers they have been transferred.

7032. (Mr. Rowland Whitehead.) With regard to Antwerp, you give certain figures, showing that the registered tonnage of shipping entering that port has increased from the year 1890 to the year 1899 from 4,500,000 to 6,800,000?—Yes.

7033. Can you tell the Commission whether any large proportion of that increase was attributable to the North American trade?—I cannot tell you.

7034. You did not go into that question?—No, I did not go into that question.

7035. (Mr. George Wallace.) It was put to you as a matter of fact that the Atlantic Transport line has changed hands. Is that a fact?—I know nothing certain about that.

(Mr. Daldy.) My Lord, may I say one word? Some of this evidence may possibly conflict with evidence that has been put before the Commission by Mr. Gomme, the clerk to the London County Council. My view, subject to your Lordship's approval, is that if there is anything of that kind, it is much better for Mr. Gomme to give any explanation, if he wishes, than for me to put questions in cross-examination, which would be only labouring the thing twice over.

(Chairman.) I quite agree with you.

Mr. JOHN TROTTER recalled and further examined.

Mr. J.  
Trotter.

7036. (Chairman.) You are the chairman of the Millwall Dock Company?—Yes.

7037. You have, I believe, some statements to put in, in answer to certain questions put by the Commissioners on the occasion of your last appearance?—I put in a statement of the annual income and expenditure of the Millwall Dock Company, arranged in a particular form, as was desired in Questions 1146-7.

(The witness handed in the Revenue Account of the Millwall Dock Company for the year ending 31 Dec., 1899. See Appendix 20th Day, No. 4.)

I also put in a statement showing the estimated net tonnage of vessels entering Millwall Docks during the years 1869, 1879, 1889; and the actual tonnage for 1899, in answer to Questions 1003-4.

(The witness handed in a table showing the estimated net tonnage of vessels entering the Millwall Docks for the years 1869, 1879, 1889 and the actual tonnage for 1899. See Appendix 20th Day, No. 5.)

I have to explain that the records of the earlier years were destroyed by fire, so that they are only estimates. I also put in a statement showing the analysis of the tonnage of vessels entering the Millwall Docks during the year 1899, in answer to Questions 1008-9.

(The witness handed in the table. See Appendix 20th Day, No. 6.)

7038. Will you give us some explanation as to the crowding and delays in the Millwall Docks, of which Mr. Jones and other witnesses have complained?—I have to explain that the crowding and delays in the Millwall Docks, of which Mr. Jones and other witnesses have complained, have been due chiefly to the want of sufficient warehouse accommodation for grain, of which there has been a large quantity often afloat in barges, and also to the absence of means for moving grain and wood goods quickly from the quays and barges. The dolphins erected in the Docks, which were mentioned in Mr. Duckham's evidence, have provided the means of dis-

charging large grain cargoes rapidly; and since I last gave evidence the Millwall Dock Equipment Company has been successfully floated, by which Company an amount of £200,000 will be expended to provide (a) additional granary accommodation to the extent of 100,000 quarters, with all the most modern machinery for the rapid reception, storage and delivery of grain; (b) a new timber yard of 20 acres, with sheds, railway sidings, etc., communicating with the quay side by a series of rapid mechanical transporters, new to this country, and worked by electricity; and (c) sundry plant which will greatly add to the facilities of working the docks. It is anticipated that this outlay will enable the Millwall Dock Company to meet all reasonable requirements that may be made upon it. For example, the three pneumatic elevators to be installed at the new granary will have a capacity for discharging and housing grain at the rate of 300 tons per hour. This, as compared with hand labour, will be of immense advantage to shipowners, merchants, and the Dock Company; added to which will be the increased facility of being able to carry on the discharge of vessels continuously, both day and night, irrespective of the weather. The provision of new machinery will quadruple the output of the present pneumatic appliances, as shown in the following table:—

Present Machinery.	Capacity in Tons per Hour.	Proposed Machinery.	Capacity in Tons per Hour.	Total future capacity in Tons per Hour.	Excess over present capacity in Tons per Hour.
Pneumatic Elevators	130	Pneumatic Elevators	410	540	315·88%

Similarly the timber transporters about to be erected will enable the Company to transfer from barges in dock some 60 standards of wood goods per hour to their unused land at Cubitt Town, east of the Millwall Extension Railway and East Ferry Road, over which the transporting machinery will be carried by bridges. The quantity of wood goods landed by manual labour only with the present facilities, as compared with the quantity estimated to be landed by the proposed new elevating and transporting appliances, is shown in the following table:

At present by Manual Labour.	By proposed Machinery.	Excess by New Machinery.
Standards per hour.	Standards per hour.	Standards per hour.
14	60	46 = 328·57%.

You will see that at present by manual labour we are able to do 14 standards per hour, and by the proposed machinery we shall be able to do 60 standards per hour, showing an excess by the new machinery of 46 standards per hour, equal to 328·57 per cent., as compared with the present ability of the Dock Company to deal with this class of goods. Even as matters stand, a trade resorts to Millwall Docks which is considerably greater per acre of water area than the trade of the other docks in the Port of London, as shown in the following table:—

Net Tonnage of Vessels entered the Docks of London in 1899—Statement showing the Relation of Tons dealt with per Acre of Water Space at Millwall as compared with other Docks.

Dock.	Water Space. Acres.	Net Tonnage	Tons per Acre.	Excess at Millwall Docks.
Millwall Docks	36	940,005	26,111	13,002 = 99·18% Tons.
Other Docks	521½	6,836,428	13,109	

I was asked on a previous occasion whether Millwall Docks had any vitality, and I thought it would be interesting to show that we are really a very busy dock. Millwall Docks have a water space of 36 acres and a net tonnage of 940,005 tons, which equals 26,111 tons per acre of water space per annum. That was in the year 1899. I may mention that in 1900 we had a very much increased tonnage, namely, 30,253 tons per acre of water space per annum. So that Millwall

Dock, instead of going back, is progressive, and with the expenditure which is about to be made through the Equipment Company, we shall provide all the necessary accommodation for the two great trades which resort to Millwall Dock.

Mr. J.  
Trotter.

20 May 1901.

7039. Have you any further remarks to make with reference to the tables?—No; I do not think I have any further statement to make.

7040. You have referred in your statement to the evidence of Mr. Alfred Jones. I should like to call your attention to Question 4827, in which he stated that, owing to the continual breakdown of hydraulic cranes in the Millwall Dock, considerable loss of time and expense has been incurred. Are you aware of that?—That is perfectly accurate, as far as it goes. Millwall Dock was doing a very much increased business, and therefore our cranes at that time were strained to the utmost, and no doubt on occasions, with this intricate hydraulic apparatus, a crane will go wrong, and naturally there is some delay in consequence; but the company has under consideration the provision of some extra cranes to be worked by electricity, which will relieve the hydraulic cranes, and give us increased hydraulic power so that the cranes will be worked quicker, and which will also give us more cranes. I may also state that we have taken the very best electrical expert we can find to advise us on the question of introducing electricity for the working of lifts throughout the granaries of the company, which are now worked by the same hydraulic power that works the cranes; and when that is carried out I think there will be a very much increased power for the cranes, and they will work more satisfactorily.

7041. Now be kind enough to refer to the same question, 4827, where the witness complains of the charge of 10s. 6d. per hour paid to the company's men for working on the quay between the hours of 7 and 8 a.m.?—We do make that charge.

7042. Have you anything to say with regard to that?—It has been customary always to make it, and I do not know that there is any reason why we should not. We have to have men there watching, and we have to keep the machinery going and the engine at work.

7043. Have you received complaints from various shipowners on the subject?—I do not think we have had any from anybody but Mr. Jones.

7044. (Sir Robert Giffen.) I see from the account of your revenue and expenditure that £19,000 was spent last year upon dredging?—In the year 1899.

7045. If the other dock companies were spending in the same proportion to the size of the docks, would there not be an enormous expenditure by those companies?—I cannot answer for the other companies. I do not know whether the amount of mud which comes in at the dock gates is the same as is the case with ourselves. It differs, I believe, at various points on the river.

7046. According to your statement the other docks have about fifteen times your water space?—Well, somewhere about that, I suppose, it would be.

7047. So that if they were spending fifteen times what you spend upon dredging, I think there should be a different account of revenue and expenditure?—I think I ought to explain that in the year 1899, which was the first year after the catastrophe, we did a great deal of dredging to bring the dock, which had been much neglected in the past, into a proper state, so that is more than the normal amount.

7048. (Sir John Wolfe-Barry.) You have received £200,000 for equipment by the agency of a separate company?—Yes.

7049. Have they a prior charge, or how is the interest for that money provided?—The ground is unoccupied at present. The dock company gives them the lease of that ground, and it takes a lease from them for the same period, and agrees to pay them 6 per cent. on the outlay. They then have the security of this lease, and also the improvements, buildings, and so forth, which they place on the ground.

7050. Do they provide £200,000 which is mainly spent in the dock itself?—It is spent in buildings, and in roads and in machinery of various kinds which belong to the Equipment Company.

7051. And then do the Equipment Company get what may be called the warehousing?—No. The Dock

Mr. J.  
Trotter.  
20 May 1901.

Company lease them back from the Equipment Company and take the rent for the warehousing, paying a definite rent to the Equipment Company for the whole provision that they make of buildings, roads, and so forth.

7052. Then the Dock Company practically guarantees 6 per cent. ?—Yes.

*Cross-examined by Mr. Scrutton.*

7053. The London and India Dock Company have come forward with proposals for increased powers of charging. Do you ask anybody for increased powers of charging ?—We have not asked for any such powers yet.

7054. Neither on lighters nor on goods ?—We ask for nothing at the present time.

7055. Is increased money wanted for improving the entrances ?—No, I do not think so at the present time.

7056. Is any increased capital expenditure, say within the next ten years, wanted by your company in your view ?—We are providing for £200,000 to be spent immediately.

7057. By the subsidiary company ?—Yes.

7058. With the exception of the provision by the subsidiary company do you regard any increased capital expenditure as necessary within the next ten years, say ?—There are a great many improvements that we might make undoubtedly. We are at the present time making them out of income.

7059. (Mr. Lyttelton.) What is the term of that lease ?—99 years.

7060. If you failed to pay the guaranteed interest of 6 per cent. to the company, they would enter into possession of the demised premises for 99 years ?—Of the portion that is leased to them.

7061. Then they do get a priority over the debentures ?—The rent is part of the working expenses.

7062. (Sir John Wolfe-Barry.) Then they do come in priority over the debentures ?—As far as that rent is concerned.

7063. (Mr. Scrutton.) Now I want to ask you upon another matter. Has the charge for weighing out loose grain and working it out remained the same for the last 20 or 30 years ?—That I am afraid I cannot answer. My knowledge is only recent as regards these details. I can hardly inform you with regard to anything before about 18 months ago.

7064. Is there any gentleman coming from the Company who knows about the working of the Docks for the last 14 years ?—Mr. Duckham can tell you, no doubt.

7065. He is the engineer ?—Yes.

7066. He would not be familiar with the rates charged ?—The General Manager, of course, is not available.

7067. I am not going into the details, but you have introduced in the last four or five years considerable improvements in the way of elevators and pneumatic machinery for getting grain out of vessels, have you not ?—It is more than four or five years ago.

7068. How long is it ?—I should say it is seven or eight years ago.

7069. And no change at all has been made in the rate ?—No.

7070. The rate has remained the same as it has been for the last 20 or 30 years, has it not ?—I do not know about so long ago as that. It has not been made recently, anyway.

7071. The pneumatic machinery and other matters have been introduced ?—Yes ; not the hydraulic machinery. The elevators are pneumatic. The hydraulic apparatus was there I believe at the commencement of the Docks almost.

7072. Do you make any proposals or suggestions to the Commission as to the way in which the River should be dredged ?—No.

*Cross-examined by Mr. Daldy.*

7073. Your dock undertaking can scarcely be described now as being in a sound financial condition, can it ?—Yes, I think it can.

7074. Then may I take it that it has always been in a sound financial condition ?—No.

7075. The dock undertaking dates from the year 1864 ?—Yes.

(Mr. Lewis Coward.) The Act dates from 1864, but the dock from 1868 ?—Yes.

7076. (Mr. Daldy.) What I want to get is when this dock came into an unsound financial condition ?—That I cannot tell you.

7077. Are the craft in this Dock principally the craft of the Company ; that is, belonging to or hired, or given by the Company ?—No, decidedly.

7078. Could you give me a rough proportion as to what part of them belong to or are used by the Company ?—I could not give you an accurate account. I should say somewhere about 10 per cent. probably.

7079. The Millwall Dock Company has not got a very good land access, has it ?—Yes, I think it has very good land access. Do you mean railway access or road access ?

7080. Both ?—It has all that is sufficient.

7081. Can you tell me why it is that the Surrey Dock on the other side of the River nearly opposite your dock is so prosperous and your dock has not been prosperous ?—Simply because they do a different trade. They do a trade in timber which remains for a long time in the dock and does not go away, and we do a general trade in grain and other things which go away overside, and we get nothing for it.

7082. And you complain of the congestion of barges, which causes delay as the London and India Dock Co. do ?—Undoubtedly they cause delay.

*Cross-examined by Mr. Harper.*

7083. As I understand you express a desire not to be exterminated ?—We do not wish to be exterminated.

7084. You think there is a future for your Dock ?—I think there is a future for our Dock.

7085. I understand that in answer to Mr. Scrutton you said you do not want any alteration at the present time in the existing condition of things ?—I did not say that. I said we had not asked for any.

7086. When did this £200,000 expenditure take place ?—It is about to take place now.

7087. When was the arrangement entered into ?—In February of this year.

7088. I see you are proposing large additional granary accommodation, and that provision is to take effect whether any alteration be made with regard to lighterage or landing dues, or not ?—We shall do that, anyhow.

7089. And your belief is that your company has sufficient vitality to pay this 6 per cent. interest on this £200,000 in addition to the future you have described ?—Yes.

*Cross-examined by Mr. Cranstoun.*

7090. Can you give me any idea of the number of barges that enter your dock during the year ?—I think I can.

(Mr. Lewis Coward.) It has been given in evidence as over 40,000 barges.

(Mr. Ellis.) A good many of these points have already been gone into.

(Witness.) A table has already been put in.

(Chairman.) I was going to point out to you, Mr. Cranstoun, that a good many of these questions were asked of Mr. Duckham on the 15th November last.

(Mr. Ellis.) We heard then the whole position of the Millwall Dock Company.

7091. (Mr. Cranstoun.) Take, for instance, an average day. How many barges would you say were on an average lying in the dock ?—It varies in the most extraordinary way.

7092. Would you have as many as 500 ?—Yes. I should say some days we might have 500, some days not more than 100.

7093. How many of these would be doing your own work on an average ?—That is difficult to answer. At the present time, I think we have only got about 20, or something of that sort, doing our own work.

7094. On an average, how many of that 500 would have your own grain on board ?—It is very difficult to answer that. At some times of the year we have more than at others. In the middle of winter we have more. It might be 100, perhaps.

7095. It might be 100 doing your own work in one day?—Yes, it might be.

7096. Might I not say 300?—I do not think we have had more than 250, to my recollection.

7097. Can you give me any idea of the number of barges that you have permanently in your dock, that do not go out or come in, that are used by yourselves?—25.

7098. Is that all?—That is all.

7099. What would be the average size of these barges?—I suppose they would be 60 to 65 tons.

7100. What are they used for?—They are used for taking grain from the vessels to the shore, for unloading or putting timber on and taking that ashore—any purpose of that sort. They are used principally for grain and timber.

7101. And these are permanently in the dock?—I think it is about 25 that we have permanently engaged.

*Cross-examined by Mr. Rowland Whitehead.*

7102. One question with regard to the machinery for moving timber. Has your company the exclusive right for the use of that machinery?—For the Port of London, yes.

7103. You said that the Surrey Docks have a timber trade, and are therefore prosperous. That is what I understood to be the effect of your answer?—That is what I believe.

7104. Is it not the fact that you have had an agreement with the Surrey Dock Company?—Not since I have been Chairman of the Company.

7105. Until recently?—There was one prior to that.

7106. The effect of that agreement was—

(*Mr. Lewis Coward.*) Is not this going too far? If there are agreements they will speak for themselves.

(*Mr. Rowland Whitehead.*) This gentleman says that, as compared with the Surrey Commercial Docks they are not prosperous; that the Surrey Commercial Docks have a large timber trade?

(*Chairman.*) What is the point that is material?

(*Mr. Rowland Whitehead.*) I was going to ask this witness whether it is not the fact that this company have had an agreement until recently with the Surrey Commercial Docks Company under which the timber trade was allocated to the Surrey Docks?

(*Mr. Loehnis.*) That agreement, whatever it was, ran out some five or six years ago.

(*Mr. Lewis Coward.*) And this witness became chairman only about eighteen months ago.

(*Mr. Rowland Whitehead.*) I submit it is relevant. If this witness cannot deal with the point, I must pass from it, of course.

7107. Are you aware whether there was an agreement in existence?—I know there was an agreement some years before I became chairman, but there has been nothing of the kind since I became chairman of the Dock Company.

*Cross-examined by Mr. George Wallace.*

7108. You said in your previous evidence (question 1,134) that you considered that the barge question was a very serious one and entailed great expense and took away a very large amount of goods that otherwise would come to the dock and you get nothing for it. You have not changed your mind since you were examined on that point?—No, not in the slightest.

7109. When you say that you have not asked for further powers of charging at the present time, does not your asking for them depend upon the success of the joint committee's application?—No; we have not come to a decision on the point.

See  
8463-5.

Mr. THOMAS MCKINNON WOOD called and examined.

7116. (*Chairman.*) You appear before us as representing the London County Council?—Yes.

7117. You have been Chairman of the Parliamentary Committee and Chairman of the Council?—Yes.

7118. You are also a member of the Rivers Committee, to whom the consideration of the subject matter of the inquiry of this Commission was referred?—Yes.

7119. You now appear before us in order to state

*Re-examined by Mr. Lewis Coward.*

7110. With regard to the question of the timber, and the transporter, you put in a table dealing with the number of standards per hour by manual labour and by the proposed machinery. Have you under-estimated there what you think is the capacity of this transporter?—We have had one trial of the machinery and that one trial has considerably exceeded what we had given in this table. It was only one trial, but I think what we have given in this table will be considerably exceeded.

7111. When do you expect to have this transporter actually working?—It will be working this week.

7112. I do not know if you could in your own words at all describe it. It is a most interesting thing if any of the committee would like to see it. It is a most interesting manner of dealing with this timber. The timber is hoisted out of the barges very rapidly by means of cranes one after the other and put on the top of a slide. Then it is taken some 450 yards away so that the dock space, of course, will be very much larger in consequence when you have this timber away?—Yes, we shall be able to utilise the land on the other side of the railway, which has hitherto been used for football grounds and gardens, bringing in no income to the company. We shall be able to use the whole of the land which is not occupied for the dredging of the dock.

7113. It is a Swedish invention, I think, is it not?—It is three Swedish inventions.

7114. (*Sir John Wolfe-Barry.*) When you say you have an exclusive right to the use of this apparatus, I suppose you have purchased the exclusive right from the inventor?—We got it for a consideration.

7115. But is that how you got it, by purchase in one way or another?—In meal or malt.

(*Mr. Scrutton.*) My Lord, might I ask, as a matter of information, whether, before any evidence putting forward new schemes for the river is dealt with, we should know whether the Conservancy make any proposals? I see at Question 5567, when Sir Frederick Dixon Hartland came before the Commission, he stated that the Conservancy had not yet had time to fully discuss the proposals they would make for dealing with the river, but they were pushing on as quickly as they could. It occurs to me that it would be convenient if, before anybody put forward a new scheme, we knew what the existing authorities were proposing to do. We know now what the dock companies are proposing to do.

(*Chairman.*) We shall have Sir Frederick Dixon Hartland appearing before us after we have heard the evidence of the Corporation of the City of London.

(*Mr. Scrutton.*) The difficulty that occurred to me was this: Both the Corporation and the County Council are putting forward new schemes for dealing with the organisation of the river, and they will be putting them forward without knowing what the existing authorities propose.

(*Chairman.*) I think, if it is more convenient for your clients, we might ask the Thames Conservancy and also the Trinity House to appear before the Commission in order to give evidence with regard to their proposals.

(*Mr. Scrutton.*) The question is whether it is not desirable to have the schemes proposed by the existing authorities before you hear any of the schemes proposed by the County Council or the Corporation. We know what the dock companies propose to do, but we do not know what the authority responsible for the dredging proposes to do.

(*Chairman.*) That will not, I think, prevent us from hearing the London County Council's evidence today.

Recalled 8463.

the policy of the London County Council?—Yes, that is so.

7120. Will you kindly give us your evidence?—It is hardly necessary to dwell on the importance of the Port of London as a centre of British commerce. The tonnage of the shipping that enters the Port of London with cargo amounts to more than one-fifth of the total shipping entering the ports of the United King-

Mr. J.  
Trotter.

Wood.

Mr. T. M.  
Wood.

20 May 1901.

dom. The value of the commodities imported at the port is one-third of the total value of the imports of the United Kingdom, and the value of the exports is more than one-fourth of the total value of the United Kingdom. Liverpool, which ranks next in quantity and importance of its shipping, had in 1899 a tonnage entered of 8,282,774, against 14,682,971 for London, and a tonnage cleared of 7,458,218, as against 8,250,733 for London, excluding Cardiff, where the trade is of a more special nature; Glasgow is the next British port with a tonnage of shipping entered in 1899 of 3,034,680, and of shipping cleared of 3,415,296. Of foreign ports, New York comes first with a shipping entered with cargo and in ballast of 8,115,528 tons, or 52.7 per cent. of shipping entered into London with cargo and in ballast, namely, 15,368,228 tons; then Hamburg, with a shipping entered of 7,765,950 tons, or 50.5 per cent.; Antwerp with 6,842,163 tons, or 44.5 per cent.; and Rotterdam with 6,323,072 tons, or 41.1 per cent. In 1890 the shipping of New York was 50.5 per cent. of London, of Hamburg was 39.6 per cent., Antwerp 34.4 per cent., and of Rotterdam 22.2 per cent. It would appear that the increase of trade in several of the Continental ports, which have been developed during recent years, by the expenditure of capital by the State, or by the municipal authority, has been very remarkable. They have become very formidable competitors of London. At present the development of the Port of London is arrested. The financial position of the Thames Conservancy and the chief dock companies (with one exception) is such that these bodies are unable to raise, at any rate on advantageous terms, the capital necessary for development, and this condition of affairs is certainly placing the port at an increasing disadvantage compared with its rivals. Among improvements which are necessary, and for which fresh capital will be required, are (a) the deepening and improvement of the Thames on the lines indicated in the report of the Lower Thames Navigation Commission, and in the evidence given before the present Commission by Sir Alexander Binnie. The Council's engineer has estimated the cost at less than two million spread over several years. I think his estimate was a million and a half, and the estimate of the Thames Conservancy was a million and a half to two millions. I have taken the larger sum. (b) The improvement of the docks, their equipment and approaches. It is evident from the evidence already given by those at present responsible for working the docks that large and important improvements are necessary. The Bill promoted this Session by the London and India Dock Company proposes to raise further capital to the extent of upwards of 2½ millions. I see that by that Bill two millions of that sum are to be raised by ordinary or preference stock, and one-third of the new additional capital only by debentures. I merely wish to call attention to the fact that if the money is raised under present circumstances by ordinary stock it would be raised on very disadvantageous terms indeed. The Millwall Dock Company is making arrangements for increased warehouse accommodation by means of a syndicate to whom they are leasing land and guaranteeing interest at 6 per cent. But I do not propose to enter into any details as regards these improvements, which can only be adequately considered by the new authority. Apart from the necessity for the expenditure of fresh capital, the Council thinks that it is desirable that the future administration of the docks should not remain in the hands of private companies, but should be placed in the hands of a body whose sole object should be to serve the interests of the shipping and commerce of the port, with which those of the London ratepayers are very closely connected. Evidence has already been given by the Clerk and the Engineer of the Council that the area of the Port of London should be the same for all purposes of jurisdiction, and should be defined as extending from the tidal limit of the Thames at Teddington on the west to an imaginary line drawn from the Naze to the North Foreland, subject only to provisions similar to those in the Thames Conservancy Act 1894 (section 3 and the second schedule) with regard to charging shipping dues. The Thames Conservancy should remain with the necessary change in constitution, as the river authority above Teddington. The powers of the Conservancy below Teddington should be taken over by the new authority, which should also manage the undertakings of the following dock companies:—

East India Docks.	} Owned by the London and India Dock Company.
West India Docks.	
St. Katharine's Docks.	
London Docks.	
Royal Albert Docks.	
Royal Victoria Docks.	
Tilbury Docks.	
Millwall Dock.	
Southey Commercial Docks.	

The desirability of consolidation of the docks is clearly pointed to by the amalgamation which has already taken place in the case of some of the existing companies. A considerable saving in administration is to be expected from such consolidation. The new authority proposed is to be an unpaid body like the Mersey Docks and Harbour Board. The remuneration of the directors of the above-named dock companies, allowing for the increase provided for by the Act of 1900, section 37, together with that of the Thames Conservancy, will be between £14,000 and £15,000 per annum. The consolidation of management should result in important savings, and it is to be expected that a wise expenditure of capital on improvements and on the replacement of old equipment by modern appliances, of the necessity of which the Commission has had evidence from previous witnesses, would result in more economical working, and in obviating the delays of which the shipowners make the most serious complaint. The new authority should also have the power of appointment of pilots and the superintendence of pilotage and the regulation of watermen and lightermen, and in general should control all matters within the Port of London, including the provision and maintenance of a proper channel, the removal of obstructions, lighting and buoying, the provision of sufficient and suitably-equipped docks and quays, and means of land and river communication therewith, the regulation of the traffic, mooring, loading, and unloading of vessels, the licensing of new piers and embankments and making charges therefor, the provision of moorings, piers, and landing stages, the fixing, revising, and levying dues and charges on vessels and goods, the sanitary duties relating to the port, and the making of bye-laws in connection with the above-mentioned matters. This would mean the transfer of powers now exercised by the Thames Conservancy, City Corporation, Trinity House, the Watermen's Company, and the dock companies mentioned. In dealing with the question of the constitution of the new authority to be proposed by the Council, one of the most important considerations that have determined its decision is that of finance. There must be an expenditure of many millions for the acquisition of the property of the dock companies, and fresh capital must be raised for deepening the river and other improvements. For the management of an undertaking of this kind, which differs in its nature from that of water or tramway undertakings, I think it is most desirable that the managing body should contain a large representation of experts elected by the shipowners, merchants, and others directly interested in the commerce of the port. As the trade of the capital is not only a matter of local but also of national concern—which, I think, is indicated by the figures I have given—the Council thinks that the Government should be asked to contribute to the improvement of the port, and that representatives of certain Government departments should be appointed to serve as members of the new authority. It may be mentioned here that the Commissioners of Woods and Forests receive one-third of the amount paid to the Thames Conservancy in respect of the licences for works on the river, which the Commissioners might perhaps be asked to forego in the interests of the trade of the port. The Council has had to consider the matter from the point of view of the financial interests of London in their broadest aspect. It is necessary to bear in mind how much the prosperity of commercial London, and, indeed, of the ratepayers and the inhabitants generally, is bound up with the prosperity of the port and its adequacy for modern requirements. After much consideration I can see no method of raising the necessary capital which will be so economical as that of raising it upon the security of the rates of London and by means of the high credit enjoyed by the Council. It would be inadvisable, in my opinion, to give the power of raising money by rate to any body which had a direct interest in reducing charges on ships and goods at the expense of the ratepayer. The Council is therefore willing to undertake the responsibility of raising the capital which is necessary.

7121. Have you made any estimate of the amount which you suggest?—Of course, we have considered it, but we thought it would not be proper for us to put forward any estimate which might appear to be the sum which in your opinion we should be required to raise, because, of course, that would tend to become the minimum sum in the event of this scheme being carried out. We are the buyers, and we have, of course, considered what the Stock Exchange value of the companies is, what capital they have raised, and all those questions, and we have formed our estimates in that way, but we have not thought it right to publish any

calculation of that sort. I think that the Council should purchase the docks and properties of the dock companies already mentioned, and should retain the control of capital expenditure in order to safeguard the interests of the general body of ratepayers. Interest and sinking fund would be a charge on revenue after payment of management expenses. I do not think that it should be the object of the Council to make a profit for the ratepayers, who would reap sufficient advantage from the prosperity of the port. The Council is of opinion that repayment of capital should be by instalments spread over 100 years, on the annuity system, and having regard to the necessary provision of fresh capital, I think no more onerous terms should be imposed upon the ratepayers of the present day. Having regard to the nature of the property, I think the proposal of long-deferred repayment is sound and justifiable as regards future ratepayers. The dock companies make no provision for a sinking fund. On the proposed system the charge would be under 5s. per cent. (0.2312 per cent. on the 23 per cent table). As to management, I think that all administrative control should be left absolutely to a statutory authority, to be called "The Port of London Committee," of not more than 30 members, of whom ten members should be from the Council, two from the City Corporation, and ten should be representatives of the shipowners, merchants, and others interested in the commerce of the port, elected on the Liverpool system, by all who have paid in the preceding year £10 of port dues. We thought from the expressions which have fallen from the Commission that they would prefer a definite scheme should be laid before them, rather than something general and vague. Other members should be appointed by Government departments, one representing each of such departments as the Board of Trade, the Customs, the Admiralty, the Treasury (in case of an Imperial grant). The Trinity House should also be represented by one member. With regard to the constitution of the authority, it was felt by some members of the Council that a larger proportion should consist of members of the Council, in view of the great responsibility undertaken in regard to finance, and the necessity of protecting the interests of the general body of ratepayers. Some members thought it unnecessary to suggest the appointment of members by the Government departments. But, on the main principle that the Port Committee should contain members of the Council as representing the ratepayers and representatives of the shipowners, merchants, and others directly interested in the commerce of the port, the Council was unanimous. There would thus be a managing authority representing the various interests concerned in the development and the efficient and economical administration of the port, and the manifest necessity of arranging for capital expenditure would be adequately provided for. In the event of the income exceeding management expenses, together with the payment of interest, and sinking fund, surplus revenue should be expended on improvements of the port, and on lowering dues and charges. Of course, I have not entered into the question of laying up a reserve fund. That is a matter of comparative detail. I think that the sources of revenue of the new authority, after the necessary improvements are carried out, should be sufficient to meet all its proper expenses; but it is necessary to contemplate the case of expenditure exceeding revenue as an exceptional occurrence before the proposed improvements have become remunerative. In this event, the Council should have power to make a contribution, and the committee should with its application submit an estimate of its income and expenditure. Such contribution should be repayable to the Council out of the surplus revenue. Should the Commission approve of the general principles of this scheme, and should a bill be introduced to carry it into effect, it will be necessary very carefully to consider in detail the precise procedure to be adopted in such a case. During the debate in the Council Lord Welby expressed his opinion that, in the event of the Port Committee being obliged to apply to the Council for assistance in regard to maintenance, it would be necessary to introduce some special safeguard in the interest of the ratepayer. While I would desire to leave the largest powers of control and management to the Port Committee so long as income balances expenditure, it does seem reasonable that, if the ratepayers are called upon to contribute, their interest should be specially safeguarded. The Port of London Committee should have complete powers of

management, including appointment of officers, and should also have control of expenditure and income, subject to its obligation to repay interest and sinking fund to the Council, but it should have no borrowing powers or right to pledge the credit of London. Its accounts should be separately audited and published.

Mr. T. M.  
Wood.  
10 May 1901

7122. Do you wish to put in the report of the Rivers Committee?—If your Lordship pleases.

(The witness handed in the report of the Rivers Committee of the London County Council on the administration of the Port of London. See Appendix 20th Day, No. 7.)

7123. (Mr. Lyttelton.) Assuming that such a proposal as you make was carried out have you considered the time it would take to transfer the property of the dock companies to such a body as you contemplate?—In the event of its being considered desirable to purchase the property of the dock companies it might appear to Parliament desirable that as some of these improvements appear to be urgently necessary, some proposal such as was made in the case of the water companies of vesting the property in the purchasing body at once before the arbitration was completed—securing the interests of the shareholders and the debenture holders by a provision that the debenture interest and some dividend on the shares should be continued to be paid to them,—might be carried out and no time would be lost in that event. The property would vest within a short period after the passing of the Act of Parliament.

7124. Urgency is of course a matter that we have heard a good deal of here. It has been said that the matter is urgent and that some expenditure at any rate should at once be authorised. You have considered that point?—Of course we quite feel that that is so.

7125. The result of your consideration is that a procedure something like that proposed in the case of the water companies might be adopted?—Yes.

7126. And that the existing companies might raise capital?—No. I do not mean that. I mean this: that, instead of waiting for the transfer of the property of the dock companies until a long arbitration was concluded, Parliament might vest that property in the purchasing body at once, the purchasing body being one able to give to the shareholders and debenture holders a better security than they have at present. Parliament would look after their interest. Supposing the Council bought it they would be obliged to pay the interest on debentures and the preference shares and so on. I should say they would not be injured in any way because they would have their dividends secured to them on a better security than before. The urgency in the case of the water companies was held by us to be sufficient to induce us to make that exceptional proposal, that the property should vest before the arbitration was concluded, and that might be done in this case.

7127. It might be done if the urgency which is suggested exists to the extent that has been urged?—Yes.

7128. So far as I gather, the principle which you suggest as the foundation of the trust is a representation of the nation in the first place, through Government officials?—Yes.

7129. A representation of the shipowners and the merchants as interests peculiarly affected?—Yes.

7130. And lastly, a representation of the London County Council as the body finding the credit for the raising of money?—Yes.

7131. You do not express, I think, an opinion as to the relation of the several interests?—We do suggest the proportion on the authority. We suggest ten from the London County Council, two from the City Corporation, ten members representing trade and shipowners, and five members representing the Government and Trinity House, 27 in all. Roughly speaking, it is in thirds.

7132. You do not suggest a preponderance of anybody?—No.

7133. (Chairman.) You were speaking just now of paying interest on debentures and some dividend on shares. Is there any reason to suppose that the suggested new authority to which you make reference would be able to work the port at a profit without recourse to any new dues on goods and barges suggested by the dock companies, and without recourse

Mr. T. M  
Wood.  
20 May 1901.

to which they claim they are unable, with all their long experience, to work the port?—That would require me to give an opinion which I do not feel that I am expert enough to give as to the way the charges of the port are arranged. I have an opinion of my own on the subject, but I do not think it would be of sufficient value to place before the Commission.

7134. Would you mind answering my question? Is there any reason to suppose that this new authority would be more successful than the present dock companies?—Of course we should save something by an amalgamation. The effect of the amalgamation would mean a saving of money.

7135. The amalgamation would be practically confined to the Millwall and Surrey Commercial Docks?—Yes.

7136. It is a small matter; it is not a very big sum in question?—It is not the saving merely of the expenses of management, the directors' salaries and so on. That is a small thing. But you would have one staff of officers, and you would have no competition between the docks.

7137. You do not suggest that this economy would be sufficient to put another complexion on the face of affairs?—I look forward to the improved docks, the deepening of the channel, and giving more up-to-date appliances, bringing more trade to the docks and bringing greater revenue to the new authority.

7138. Do you consider that the new authority would be able to work the docks at a profit without having recourse to the ratepayers (which is a course I think you deprecate) and without the imposition of these new duties which are suggested by the dock companies?—I should not venture to say that no change would be made in the charges. I am not prepared to say that.

7139. You think, then, that the new authority would raise the present charges?—No; I do not think so. I think we should be able to do it without raising the present charges, but alterations in the present charges might be necessary.

7140. I believe that the present charges are not equally levied?—I do not think the incidence is equal, and I think, if preference was done away with, larger revenue would come to the dock companies; and that would happen with any public trust.

7141. (Mr. Lyttelton.) I think, in answer to the Chairman, the first ground you gave of your anticipating that you would not be obliged to raise the rates was that a greater amount of business would be done owing to your improvements?—Yes, and with those improvements one would get rid of what is the great objection at the Port of London, namely, the exceptional delay which occurs in the loading and unloading of the ships.

7142. We have heard, I think, that 76 per cent. of the goods that use the docks pay nothing for them?—That is so.

7143. It looks therefore as if a mere increase in the volume does not necessarily connote a very large increase in profits?—Yes, that is so.

7144. Therefore if the improved method was introduced, and you got a great volume of additional business, you would have to look for your profit on that additional business; on the 25 per cent. and not on the 100 per cent.?—Yes. If there were no change in the system of charge.

7145. We all know and are deeply indebted, if I may say so, to the County Council for the immense amount of labour they do unremunerated, but do you think that another burden can be laid on the public spirit of London, of a dimension such as this, without any remuneration?—I do not think there would be any difficulty in finding ten members of the Council to serve, and serve efficiently, on such a board, and I may perhaps give a reason for that. At the present moment we have six members serving on what is a body of much less power, the Thames Conservancy, and we have no difficulty in finding members. There is quite a competition among members to serve on the Thames Conservancy, and I think there would be a keener competition to serve on this much more important body.

7146. I was for a moment wishing that you would look outside that public-spirited body, the County Council, and give us your opinion with regard to the remaining members of the Trust that you suggest?—As to the members representing the shipowners and merchants and manufacturers, I have some acquaintance with

Liverpool. I have business there, and there I know that they have no difficulty in getting first-class men to serve on their Harbour Board. We propose to follow the example of their system.

7147. That is so, of course, with Bristol and other provincial towns, but is not the difficulty in London, from the enormous size of the community, that men do not have the same civic spirit that they have in the provincial towns?—I am afraid that is true to some extent. I think it is ceasing to be true to the extent that it used to be.

7148. (Sir John Wolfe-Barry.) With regard to the proposal that the Government should be asked to contribute to the improvement of the port, I should like to ask whether that proposal is that the Government should be asked to contribute to the river improvement, or to the whole scheme which you have laid before the Commission. I do not know how you interpret the words "the port"?—I am afraid we do not interpret it very exactly. We were not in a position to make a proposal to the Government, so we do not define exactly what the contribution should really be. Our general argument was simply that the trade of the Port of London is so large a proportion of the trade of the Kingdom that we thought it stood in an exceptional position, and that the Government might contribute.

7149. The reason I ask is that some of the witnesses have made a proposal that the cost of the river improvements should be dissociated from the expenditure on the docks?—Yes.

7150. Do you propose to buy on arbitration?—Yes.

7151. Would that be taking all circumstances into account?—Yes.

7152. When you talk about purchasing the dock property do you include the warehouses?—Yes. We have not been able to see our way to separate the warehouses from the quays.

7153. If that is so, and the Public Trust become owners of the warehouses, they will become a competing body with those who own the warehouses on the river?—They would on the one hand.

7154. Do you see no way out of the difficulty?—I think it must be said on the other hand that they would be bringing more trade to the port through their improvements, and that would be to the benefit of the wharves if anything like the proportion of the goods taken to the wharves continued.

7155. That might be for the benefit of the wharves if the present system of the free use of the docks was continued, but supposing the public authority considered that they were entitled to make a charge as the dock directors do, then you would be competing with the wharf property with a great advantage on the side of the public trust?—Yes. There would be a certain amount of competition undoubtedly.

7156. At present the proposal of the dock company is to lay charges which amount, I believe, in the aggregate to about £135,000, on the traffic which is barged?—Yes.

7157. On the existing traffic?—Yes.

7158. It would be important to know whether the County Council propose anything of the same kind?—I have no authority to say. The County Council have not formed any view as to whether barges ought to be taxed or not.

7159. I think you will see the difficulty from the point of view of a public trust becoming a competitive body?—Yes.

7160. Can you not give us any leading on that point?—No. There might be other ways, of course, of raising revenue besides a charge on barges. The whole thing is so complicated that these changes, it seems to me, must be left to the new authority to propose. We are hardly in a position to propose a change of that sort.

7161. That might be done by legislation?—Yes. It might be a matter to consider if a Bill were introduced for the purpose of the dock companies, but at this moment we have not sufficient knowledge to form a decided opinion.

7162. The County Council quite realise that the present position of the Port of London is quite exceptional with respect to the barged traffic?—Yes.

7163. (Mr. Ellis.) I want to ask you a few questions

on the history of this. When was that Committee appointed by the County Council. I have a paper in my hand dated the 24th March, 1896?—Yes, that is in the report of the Rivers Committee.

7164. That Committee has been sitting for a number of years thoroughly investigating the matter?—Yes, it has been investigating the matter.

7165. And they have presented a report recently to the County Council. What is the date of the most recent report?—The 17th of January of this year.

7166. That was adopted by the County Council?—Yes.

7167. You appear before us as an authorised witness of the London County Council?—Yes.

7168. There is no question about that?—No.

7169. It was a unanimous resolution?—Yes, there was no division and there was no opposition. It was carried *nemine contradicente*. Certain members made suggestions which I have embodied in my evidence as to their view that we ought to have a large proportion of members and matters of detail of that sort, but the report was unanimously adopted in principle.

7170. Your evidence is on the lines unanimously approved by the County Council?—That is so.

7171. You suggest a certain saving in salaries and the consolidation of powers and improvements?—Yes.

7172. You have been Chairman, I think, of the County Council?—I was Chairman of the County Council.

7173. Therefore you are not only speaking in a representative capacity, but you are a person of considerable experience?—I have some knowledge of the subject.

7174. You are an interested person?—Yes.

7175. You tell us the trade of the capital is not only a matter of local but also of national concern. I should like to ask you to develop that a little. When you speak of the Government, you mean the British tax-payer, of course?—Yes.

7176. Will you give me in a word why you think the British taxpayer is interested in the Port of London?—Because the tonnage of London is one-fifth of the total tonnage coming into the whole country. It is such a very large proportion of the total trade of the country.

7177. Do you wish us to infer that the interest rests solely upon that, and that exhausts the matter? Supposing that the tonnage fell to 10 per cent. owing to the improvement of other ports?—I should say I am dealing with it as a national matter in regard to the competition of foreign ports rather than of other English ports. I should hardly expect the Government to assist London as against other English ports, but if it is a question of the trade being drawn away by Hamburg and Antwerp and other foreign ports, it does become a national interest.

7178. You are aware that these questions do come up; the townspeople in Nottingham, for instance, or even Warwickshire, would want to know why they should come to the assistance of London?—Yes; I am quite aware there is a difficulty there.

7179. You rather suggest the volume of trade. Have you any other reason?—There is the consideration that London is the capital.

7180. That London is the seat of Parliamentary functions, and also of other things?—Yes; the capital of the country and of the Empire, as we are often told.

7181. Have you any other reason to suggest? I want to get at what is in your mind, because the question is sure to be raised?—I do not think that I can suggest any other reason, except that they are drawing a certain revenue, which is revenue that ought to go to the Thames Conservancy; but that is a detail, rather. The Government has contributed to the docks of London a great many years ago.

7182. We have had all that very fully. I think we have that deep down in our minds; at least I have, speaking for myself. Then you have said that the Council should retain the control of capital expenditure in order to safeguard the interests of the general body of ratepayers?—Yes. We are guaranteeing the whole of the money. In our view, we are giving an enormous advantage by this scheme of the shipowners and merchants and manufacturers of London,

because we are giving them a guarantee, a security, which enables them to raise the money on very much better terms than the dock companies can ever hope to raise it on, or than the Thames Conservancy could, or even a port authority which was not a municipal authority. I have gone into that matter with a great deal of care, and the result of my investigations is that, where you have a good port authority the difference of the terms on which they could raise money as compared with the municipal authority of the same town would be roundly  $\frac{1}{2}$  per cent. Where you have a body in the condition of these docks, it seems to me the difference would be great. If you take the proposal before Parliament this year, they would be obliged to raise money on very onerous terms indeed. That is the point in this scheme which I think dissociates it from other schemes; and it is of advantage to the commercial community of London. Of course, I do not think we should be justified in offering that advantage unless we felt at the same time that the ratepayers' interest was concerned. We think it is, because they are the consumers of the goods, and extra charges on the port means extra cost of the goods.

7183. I want to get the fact clear. In the first place, what do you mean by capital expenditure. Do you mean the provision of a new dock, for instance?—The cost of deepening the channel of the river; and the purchase of the companies' undertakings, which is the biggest expenditure.

7184. When the thing is started, do you class improvements and deepening of the dock under capital expenditure?—Yes, so far as they are defrayed out of borrowed money. Improvements which would be made out of revenue I should suggest the Council should not interfere with.

7185. To whom do you leave the determination of the question whether expenditure was capital expenditure or revenue expenditure?—I presume what would happen would be that the Port Committee would consider the matter, and if they thought they could effect an improvement out of revenue, they would do so and have the power to do so without coming to us. If they felt they required to borrow money for that purpose, then they should come to us as representing the ratepayers.

7186. You appreciate my question; it is a very serious point?—It is a very difficult thing, of course, to give the Port Authority sufficient powers, and yet secure the interests of the ratepayers. That is the thing one has to be careful about.

7187. I am coming to the Port Committee in a moment. I understand that the County Council, in your proposed scheme, would retain in its hands the control of any expenditure that the statutory authority, to use your term, could not make out of income?—Yes; any expenditure that required the raising of a loan.

7188. That would not come out of income?—That is so, otherwise a certain section of the port has a natural interest in cheapening, and any improvements that would tend to cheapening charges, and no direct interest in the rates.

7189. You have never considered, for instance, statutory bodies who hand out to another statutory body—the School Board, for instance?—I think that would be dangerous. It is a very large sum to add to the indebtedness of London; it is doubling the indebtedness of London.

7190. (Mr. Lyttelton.) With reference to the answer you gave to my honourable friend, I want to be quite sure whether I understood it. It was with regard to the question of capital expenditure. Supposing your trust was constituted, you would first have by your ten representatives on the Port Authority a voice as to whether that capital expenditure should take place?—Yes.

7191. Then supposing they decided, you having a third of the say on that question first, they have to come to the County Council, and there would be a separate decision to take as to whether that capital expenditure should be undertaken?—Yes.

7192. (Mr. Ellis.) Now, passing to the statutory authority, you say that here would be no difficulty in finding persons willing to perform these functions without remuneration?—That is so. I appeal to experience on that point. We do not find a difficulty.

7193. And you instance the Mersey Docks and Harbour Board?—Yes.

Mr. T. M.  
Wood.

20 May 1901.

Mr. T. M.  
Wood.  
20 May 1901.

7194. Of course, you are aware that the Mersey Docks and Harbour Board has nobody controlling its purse strings?—No, nor has it any guarantee from or any power over the rates or any guarantee from the Corporation.

7195. But it can do what it likes in the way of improvements out of its own resources without going to any man?—Yes.

7196. Then you think that the granting of the credit of the London County Council, whatever value it may be (and of course you rate it highly), demands that they should have this provision of veto if necessary on any capital expenditure?—Yes.

7197. In other words you do not trust this statutory body with its own power to say, "We think that the River must be deepened to this extent; we think that the docks must be extended," without another body coming and revising that?—I do not think it is right to give the power of spending the rates to any body which is not representative of the ratepayers, and which cannot be called to account by the ratepayers. Therefore, though I would give them the fullest power of management, and the fullest power of spending money within their income, when it comes to a question of capital expenditure I think the representatives of the ratepayers must be consulted.

7198-9. You do not think the ten of the thirty members of the Board would be a sufficient protection to the ratepayer?—No, I think not. I think one must adhere to the principle of the representatives deciding on the expenditure of rates.

7200. You can hardly trust your ten members?—I trust the ten, but then they are only ten out of 27. Supposing you had a proposal coming up from the Port Committee carried by a large majority, it would be extremely invidious for the County Council to refuse to carry out a suggestion like that. I think as a matter of practice the pressure would be that way and not the other way. The County Council would be very reluctant to refuse the recommendation which was carried by a strong majority of the Port Committee as in the interests of the port.

7201. You think as a matter of practical working the statutory authority would be a body of such power and influence and reputation that it would carry weight in the County Council?—I think so.

7202. I notice you suggest that the Government should put a member on in case of an Imperial grant; but not otherwise, I suppose?—That was only in the case of the Treasury; I do not make a great point of that.

7203. In what form would you make what you call the Imperial grant—what I should call dipping into the Exchequer. Would it be on application by the body?—I thought really, to be quite frank about it, that it was a matter that we ought to put before the Commission for their consideration not in too much detail. I thought it was a matter that the Commission would consider, but we might suggest that Government might assist us with the deepening of the channel of the river. It is a matter which would affect them as a Government; it is a matter important for them from an Admiralty point of view for instance. That is the most definite suggestion I think I can make about that.

7204. I gather that your wish would be that this Port of London Committee should be a body of great power and reputation such as is the Mersey Docks and Harbour Board?—Yes.

7205. You think if its functions were of that character it would attract to it men of capacity and high position?—Yes.

7206. You have very little doubt of that?—I have very little doubt of that.

7207. (Mr. Peel.) You have said that the representation of the Government on the Board rather depended upon the contribution?—Only in the case of the Treasury.

7208. In the case of the other Government members, if there was no Government contribution, you would still say the Government should be represented by those members?—Yes, I think it would be useful to have representatives of the Board of Trade, the Customs, and the Admiralty.

7209. If there was no contribution you would make no further change in the position of the Board which you suggest, beyond withdrawing the member representing the Treasury?—I should not make any very

great point of that. If the Government thought it was desirable to have a representative of the Treasury, I certainly should not oppose it. There did not seem to be any special reason for it if there were no grant.

7210. You rather suggest that the Council should make no profit at all?—No, I think not.

7211. And that any surplus of the revenue should go to lower the charges?—Yes. My own idea is that it should build up a reserve fund first and then lower the charges.

7212. I was going to ask you in the case of a deficiency in one year would you suggest that the Board should go to the Council and ask for a rate in aid?—I hope that will not be necessary, but it might be necessary in the event of large improvements being carried out quickly. There would not be time to reap advantage of these improvements and there might occur an occasion of that sort and, therefore, I thought it was franker in bringing up this report to put this case. I think in that case the Port Committee should bring up a budget statement and give a report to the Council of their receipts and expenditure and that the Council should have power to assist towards the maintenance.

7213. That is to say possibly in the case of some improvements being made out of revenue?—Yes.

7214. Of course, all these new improvements would have to be fully considered by the Council themselves. If the Board came up to ask for powers to borrow largely they would go into the question of how the proposed money had been laid out?—Certainly it would be in their power to do so.

7215. It would lay a very great labour on the Council in addition to its other labours?—I do not know that it would, because the Port Committee would have gone into the matter thoroughly, and would have the reasons for its own action drawn up in some accessible form, and the Council would be able to consider that, and would lean very greatly on the authority of such a Port Committee as we propose; it would be a body of great weight.

7216. With reference to putting rates on goods; in looking at Mr. Gomme's report there is a comparison, I believe, of the expense of the Port of London as compared with other ports?—I believe there is.

7217. From that report I think one sees that the charges on shipping are heavy in London, as compared with other ports?—I do not know that that is so.

7218. Supposing we admit for a moment that they are. The great principle of managing a Trust, I think, it is generally admitted, is to attract the shipping, and to make the rates on the shipping as low as possible?—Yes, you want to attract the trade.

7219. So that really one of the first things to do would be to lower the rates on the shipping, would it not, to attract the trade?—It does not follow that by lowering the rates on shipping, if you proportionately raise them on goods, you would attract the goods. A shipowner is not entirely independent as to where he will bring his goods.

7220. If you lower them on shipping you would probably have to make up the deficiency by raising them on goods?—Yes.

7221. But the great way in which you expect economies to be made is by the less amount of money that you would have to pay in interest?—That would be a serious saving. My difficulty is to see how the necessary improvements are to be carried out unless you can raise money on better terms than at present; it seems to me impracticable.

7222. Perhaps you have seen the scheme which has been proposed by the City Corporation as to the composition of a board to manage the shipping of the Port of London?—Yes, I have seen that.

7223. I think on that board it is not suggested that the London County Council should have any representation at all?—No, it is not.

7224. That, I suppose, would hardly commend itself to the London County Council?—I would not put the objection on that ground; I should put it on the ground that it fails from a financial point of view.

(Chairman.) I think we will not criticise that, because the scheme is not at present before us.

7225. (Mr. Peel.) You say this proposal of the County Council was carried without a division and without contradiction?—Yes.

7226. Would it be fair to suggest that it was so carried only on the understanding that evidence was to be tendered to the Royal Commission on those lines?—Certainly.

7227. And that really a large portion of the Council deferred expressing a considered opinion at that moment?—Certainly. It was a recommendation that the Council authorised the Rivers Committee to arrange for evidence to be given before the Royal Commission of the Port of London on the following lines, stating them; but it does not pledge the Council in the event of a Bill being introduced to particular details. It is the general principle really.

7228. It was a recommendation of the Rivers Committee?—Yes.

7229. You can hardly call it the considered opinion of the whole body of the London County Council?—Well, it was agreed *nemine contradicente*, and that is a very strong thing with the County Council.

7230. I want to ask you about this proposal of Lord Welby with regard to maintenance. What is the safeguard that he suggested?—I do not think that he suggested an actual safeguard in detail, but his suggestion was that the matter would be very carefully considered. A question was raised, for instance, whether the Council should have any power over the dues on goods or the port dues. For my part I think that would be very unfortunate; I should not like to take away from the independence of the Port Committee. I do not think Lord Welby suggested that—I think that was suggested by some other member. I think we ought to leave as much power as possible to this Port Committee, subject to the expenditure of capital.

7231. The Council would be able to control it by refusing the rate in aid?—Yes. What was felt was if there was a deficiency in maintenance the Council practically would be obliged to make a grant in order to make up that deficiency. That would be necessary as a matter of practice, and, therefore, there should be some safeguard in the interest of the ratepayers. For my part, I should be prepared to trust a Port Committee, and I think that is the best safeguard. I think you get a body of high personnel, and personally I should be prepared to trust them and ask for no more safeguard.

7232. (Rear-Admiral Hext.) Your answer virtually covers what I was going to ask, namely, if the Port Committee was constituted they would not be interfered with by the London County Council except when they wanted more money for their capital expenditure?—Certainly.

7233. (Sir Robert Giffen.) With regard to your suggestion of the appointment of Government officials on the Port Committee, do you think that the Customs and the Board of Trade are adequately represented by one member upon it, considering the magnitude of their interests in the Port of London?—I thought so. We did not wish to make too big a body, and it seemed to me that that was proper. Of course, they would be influential out of proportion to their numbers if they were taking a serious interest in the work.

7234. The Customs have a great deal to do with the actual administration of the Port of London?—Yes.

7235. And questions are continually coming up in which they are immediately concerned?—That is so.

7236. Still, I suppose all that was before you when you made the suggestion about numbers?—Yes. It might be quite possible to put two members on from the Customs if that was thought an advantage.

7237. I am suggesting there might be a case for the larger representation of the official element on account of the interest of these two bodies in the actual daily administration of the port?—Yes.

7238. Is it not the case, to mention a small point, that as far as concerns the Customs, they are not altogether an independent body, but are entirely dependent on the Treasury?—Yes.

7239. So that the appointment of Customs officials to some extent would be an appointment of the Treasury?—Yes; so that we really should have two appointments of the Treasury.

7240. Are you aware of the legal position, that in the House of Commons the Treasury always answers for the Customs, and the Customs is a department of the Treasury?—Yes; I was aware of that.

7241. Then with reference to the list of docks which

you give that ought to be amalgamated and consolidated, and taken over by the Port Committee, there are one or two minor docks as to which I should like to know what your opinion is. There is the Poplar Dock, and the Regent's Canal and Dock?—The Regent's Canal and Dock we have considered. Our difficulty with regard to that was, that it is not a dock undertaking pure and simple. The larger part of it is a canal undertaking, and therefore we have not put it in, but it is certainly a case which would have to be considered again, and a conclusion arrived at about it, before a Bill was introduced into Parliament. But the dock is so mixed up with the canal that I am not prepared at the moment to say that it should be bought out, as is clearly necessary in the case of the other docks.

7242. That is a matter which we should have to consider as a Commission?—Would you like us to come to a decision about it, and tender further evidence about it, because, of course, we will do so if you desire it.

7243. I think that is to some extent a matter for yourselves to consider. I bring the point before you to elicit what your opinion is, whether you think it is in your interest to assist us on that point?—The Poplar Dock is in a different position; it is the private property of a railway company. We rather regarded that as in the position of the private wharves than a public dock.

7244. But they are subject to that exemption clause of which we have heard so much, are they not?—Yes, I believe they are.

7245. At any rate, we should have to form an opinion as to whether the Poplar Dock was to be taken over along with the other docks, possibly?—We have not formed an opinion.

7246. Have you considered the question as to the extent to which you would interfere with the business of wharfingers, if you take over this business. I think you told us that you were quite prepared to say that this Port Committee should be established, and should have all that business in spite of its interfering with the trade of the wharfingers?—I think so. I should not think it would be the object of the new authority to interfere with that trade in any way otherwise than must happen by the competition, but it is a competition which exists at present.

7247. Would you not interfere to a large extent, also, with the business in the nature of dock business carried on by other people; I mean all the private companies and docks which exist upon the river?—Yes; we should be in competition with them in the same sense as the dock companies now are, but of course with the rates behind us; I quite admit that.

7248. Are you aware of any case of any harbour which is now in a similar position, so that you could give us an illustration of the working of it, where there is a central port and river authority, and where there is such a miscellaneous business going on beside it?—No; I do not think there is anything so large an extent, at any rate. There may be some things like it in kind, but nothing like it in magnitude.

7249. So that that is really a somewhat unusual condition, which would have to be faced in constituting a Port Committee for London?—Yes; I think it is.

7250. You are not in favour of the idea which some have supported here, that the whole river frontage should be bought up, and the whole placed in the hands of the Port Committee?—No, I do not propose that.

7251. You still think that you ought to go on with all that miscellaneous competition after you acquire the business?—It would be a proposal of enormous magnitude to suggest buying up all the wharves of London. I almost think it would break the back of any legislation. I have had some experience as Chairman of the Parliamentary Committee, and one has to be practical. I should not like to place the Bill before Parliament.

7252. You are not afraid of any evil consequence resulting from the competition of the State in this particular business?—No. I am not afraid of that. I do not think that a port authority would have any inducement to build dock warehouses that would render the wharves unnecessary. And the advantage to the port, I think, would counterbalance the disadvantage.

Mr. T. M.  
Wood.  
20 May 1901.

*Mr. T. M. Wood.* tage of competition, of which I can quite understand the wharves are afraid.

20 May 1901. 7253. Have you considered the question, looking at the amount of private business that goes on in the Port of London, whether the Port Committee, after it acquired all these docks and the other business, might not lease or give up part of the premises to be dealt with in a similar manner to the way in which the Poplar Dock is now dealt with?—Let them to railway companies and other people—millers and people like that? No, I have not considered that. I think that was a matter really for the new authority to consider, not for us at this stage.

7254. Still you might have some suggestion to make about it which would facilitate our consideration of the matter?—I do not think we could sever the warehouses from the quays. I do not think we could assent to that proposition.

7255. You do not think there can be any disposal of the warehouse business now carried on by the dock companies by the new Port Committee?—I do not think it is advisable.

7256. (*Mr. Lyttelton.*) The importance of this question is the reason I want to ask again about it. Do you agree with the opinion which I think was expressed by the late Lord Farrer, that ratepayers' interests are not necessarily harmonious with dock companies' interests?—With private dock interests?

7257. Or even public dock interests. The first consideration, as a rule, with a ratepayer is to get the rates down, is it not?—Yes.

7258. On the trust which you are proposing you are proposing to have ratepayers' representatives, shipowners and merchants?—Yes.

7259. Therefore you have trade interests and ratepayers' interests?—Yes.

7260. And the ratepayers' interests *qua* ratepayers may be opposed to the commercial interest?—Yes, it may be.

7261. It is for that reason that you propose, quite fairly, the representation of the trading interest as well as the ratepayers' interest, notwithstanding that you would have the credit of the London County Council?—Yes, and to get the expert knowledge and the experience which is necessary.

7262. Are you not, by placing a veto upon all improvements from capital expenditure in the hands of the Council, obtaining the representation of the ratepayers twice over. First, getting the ten members on the statutory authority, and then putting into the hands of the ratepayers, whose interests you have admitted to be antagonistic, as a whole, the power to veto the entire expenditure. I do not say you are doing this, but I am suggesting it to you?—I think it is necessary, on the principle I have ventured to lay down, that you ought not to give the right to spend the ratepayers' money to anybody over whom the ratepayers have no control. The ratepayers ought to be able to call to account those who spend their money.

7263. Do you put that proposition as far as a case where as to this very expenditure the ratepayer is represented to an extent of more than one-third of the whole?—Yes, I think even that is insufficient.

7264. I rather understood, in answer to a question of one of my colleagues, that you said personally (I should like to know if I heard accurately) that you would be content to leave that matter to the statutory authority, you being so represented?—I was not speaking of capital expenditure then at all. I was dealing with quite a subsidiary point. The question which Mr. Ellis was asking me was a question as to a temporary excess of expenditure over income and a grant in aid.

7265. I must take you then as adhering firmly to the opinion that not merely do you want ten representatives on the statutory authority, but you want in respect of capital expenditure, an absolute veto to the Council?—Yes.

7266. (*Mr. Ellis.*) I want to take you for a moment or two back to the report of this Rivers Committee; I have omitted to ask you one or two questions which I intended to put on that. I believe the London County Council have by the Thames Conservancy Act of 1894 a representation on the Thames Conservancy of six members?—Yes.

7267. What we have known before this Commission as the Wolfe-Barry Commission reported on the 26th March, 1896?—Yes.

7268. And made certain recommendations as to the deepening and improvement of the channel of the Thames?—Yes.

7269. That was considered by the Thames Conservancy, was it not?—Yes.

7270. On the report of their Lower River and General Purposes Committee?—Yes.

7271. That Committee of the Thames Conservancy Board suggested a modification of the Wolfe-Barry Commission proposals, did it not?—Yes, I believe so.

7272. When that was considered by the Thames Conservancy, what was the action of your representative six?—They first of all proposed that the recommendations should be carried out.

7273. I think we had better have the terms of that?—“That, having regard to the representations mentioned in the report as made to the Commission by the London Association of Shipowners and Brokers, who are stated in the report to practically represent almost the whole of the large steam vessels trading to and from the Port of London, and to the representations of the agents of the shipowners, representing the most important lines of steamers, trading to various parts of the world, as to the necessity of a navigable channel of a depth of about 30 feet, suitable for vessels of the largest draught, at least up to Gravesend, and to the concurrence expressed in paragraph 35 of their report by the Commissioners in that scheme, and in the views of the shipowners, and to the findings of the Commission in paragraph 37 of the Report, that the present channel might be easily and cheaply deepened to the extent of providing a channel sufficient for the passage of the largest vessels trading to the Port of London, at all states of the tide, and that such improvement could be maintained at comparatively small expense, this Board is of opinion that the channel up to Gravesend should be of a navigable depth of about 30 feet, and that any lesser depth will not satisfy the requirements of so important a port as London.”

7274. Was that moved and seconded and supported by your representatives, with the authority of the County Council?—I should think there was no resolution of the Council.

7275. But it was in fact the action of the London County Council representatives on the Thames Conservancy Board?—It was.

7276. What was the fate of that?—That was lost, and another amendment was then moved and seconded by two other members of the Council (*Mr. McDougall* and *Mr. Strorg*) to the effect that the works proposed by the Committee should be undertaken merely as the first instalment of the larger scheme.

7277. What was the fate of that?—That was lost. All the members of the Council, I believe, voted for it, but it was lost.

7278. That may be taken for what it is worth, as an indication that your representatives on the Thames Conservancy did their very best to support the Wolfe-Barry Commission?—Yes, certainly.

(*Mr. Daldy.*) My lord, I represent the same interest as this witness; perhaps your Lordship will allow me to ask him a question or two at the end?

(*Chairman.*) Yes.

(*Mr. Lewis Coward.*) I do not know what course your lordship would like to adopt with reference to this witness?

(*Chairman.*) Will you settle it among yourselves, gentlemen. Perhaps you would like to proceed with the cross-examination?

(*Mr. Lewis Coward.*) The evidence of this witness is largely opinion, and I do not know how far the Commission would desire cross-examination to be directed to matters of opinion?

(*Chairman.*) Could you point out any question of fact with reference to which you would like to cross-examine.

(*Mr. Lewis Coward.*) I should just like to ask perhaps one or two questions if I might put them now?

*Cross-examined by Mr. Lewis Coward.*

7279. Have you here at all the constitution of the County Council, that is to say, what the representatives

consist of—their various avocations?—I have not it here, but I could easily get it.

7280. A most valuable document was put in within my recollection, during the proceedings of the London Water Commission, showing the various avocations of your Body, and I think it might interest the Commission to know what your members really consist of?—We have a very large proportion of business men on the Council, and really all classes are represented.

7281. There are, I think, a very large number of members of the Bar and members of Parliament?—We had a very large number of candidates from members of the Bar, but we have very few members of the Bar on the Council.

7282. I think I may say without fear of contradiction that the election was conducted on purely political lines?—Certainly not.

7283. What! not the last election of the London County Council?—No, it was conducted on non-political lines, and I think the result proved it.

(Chairman.) This is a little wide, I think, of our inquiry.

(Mr. Lewis Coward.) There was a question asked by Sir John Wolfe-Barry as to whether the ten gentlemen, who it is suggested should be on the Committee, would be able to give their time to it. I do not want, of course, to follow up matters that the Commission may think unnecessary.

7284. You told Sir John Wolfe-Barry that your proposal was that the purchase should be on arbitration terms?—Yes, if we did not come to an agreement, of course.

7285. Would you amplify a little what you mean, because we are familiar with the ideas of the London County Council of what constitutes arbitration terms. For instance, the history of arbitration clauses as regards the question of Water Companies was such, I think, that you did in every way endeavour to guard against an arbitration conducted on ordinary terms under the Lands Clauses Act. Do I understand you to say, first, that your proposal was that the whole of this property should be conveyed to you without any of the purchase-money being paid?—No. I was asked the question whether improvements were not urgent in this case, and whether it would be possible to get over the difficulty of the long delay that would occur in purchase, and I gave a suggested way in which that delay might be obviated; that was all.

7286. It is a scheme, I understand, that you simply gave on the spur of the moment?—Certainly. I was asked how the delay could be avoided, and I gave that answer.

7287. When you say arbitration terms I want to understand are those going to be Lands Clauses Act terms?—I think I should be satisfied in this case with the terms that were laid down by the Royal Commission in regard to water. The Royal Commission laid down certain principles of arbitration which I think were entirely satisfactory. They said an arbitrator would take the income of the companies, and he would decide how far that income was stable, and then fix a number of years' purchase, and that it was not a case in which the customary allowance under the Lands Clauses Act should be given.

7288. I want to appreciate your idea. The Commission on water never suggested what you suggested a short time ago, namely, that the property should be conveyed to you before the purchase-money had been paid?—I do not suggest that unless it is considered by Parliament to be to the advantage of the port.

7289. I will accept certainly the decision of Lord Llandaff's Commission on the question of the terms of purchase, but is that what you intended to convey?—I may say at once that we are not now bringing in a Bill for the purchase of the Dock Companies, and that therefore we are not going into the details of the purchase scheme at all or pretending to do so.

7290. I do not know if your scheme is abandoned at present as regards the purchase of the water companies, but that is a scheme on which you expect to spend some 40 millions of money, is it not?—Not quite so much as that, I think.

7291. That is the figure. Mr. Dickinson put it at 30 millions?—That is less than 40 millions.

(Mr. Daldy.) Does your Lordship think we ought to go into this.

(Chairman.) I do not think this is relevant.

(Mr. Lewis Coward.) Only in this way, my Lord. Of course, if this large sum is to be raised by the County Council, and I believe the argument is they could do it cheaper than it could be raised in any other way, it seems to me to be material.

(Chairman.) I think not; I think we must hold that these questions are too general; you must restrict yourself more to matters of fact.

(Mr. Lewis Coward.) There are no matters of fact at all to cross-examine upon if I am stopped in regard to this.

(Witness.) You are only substituting one security for another.

7292. What were you referring to when you spoke about preferences?—Preferences as to charges.

7293. But what preferences?—I think it is in evidence—the admission as to agreements for special charges.

7294. That is what you were referring to?—That is one thing I was referring to.

(Adjourned for a short time.)

Cross-examined by Mr. Scrutton.

7295. You have mentioned the Mersey Docks and Harbour Board as the very efficient body which you had in your mind when you proposed this scheme?—Yes.

7296. The Mersey Dock and Harbour Board have six-sevenths of their body elected from the dues payers?—That is so.

7297. Your suggested body has only one-third elected from the dues payers. Can you tell the Committee why you make the difference of six-sevenths in Liverpool and one-third in London?—Because in Liverpool they have no power of drawing on the rates, and they have no guarantee from the rates. It is an entirely independent body.

7298. In Liverpool they are able to pay their way and make large improvements solely by dues on ships and goods. You propose to go on the rates. Do you not think that London might do it on ships and goods?—Ultimately, I do. The difference is in the origin of the body. Now we are face to face with urgent improvements in the river, on which money must be spent. The facts are different in the two cases.

7299. Then I am right, am I not, that the key to the change of constitution which you propose, and the large representation which the County Council asks on the body is the fact that you intend to come on the rates instead of on the dues on the ships and goods?—Not to come on the rates, but to use the rates as security.

(Mr. Lyttelton.) You mean with regard to representation on the port authority?

(Mr. Scrutton.) Yes, and as to the constitution of the port authority, and as to the fund from which the port authority has to get its funds.

7300. If a scheme can be devised which does not require the security of the rates, the reason for the large representation of the County Council is gone, I take it. As it is, at Liverpool, the Corporation has no representatives on the Mersey Dock and Harbour Board?—No.

7301. For the reason that the rates at Liverpool are not liable?—I do not know whether that was the reason, but that is a sufficient reason.

7302. And, if the same reason existed in London, you would not be able to suggest such a large representation of the County Council?—If the thing could be managed without the security of the rates, with equal economy, then I should not suggest the same representation.

7303. Now I just want to ask you with regard to two other matters of fact. Am I right in saying that, if a member of the County Council attends his committee meetings and does his work, it means about two and a half days a week?—Afternoons, not mornings.

7304. Do you mean five afternoons?—No, it does not mean that. Most of our committees meet in the afternoon.

7305. Assume the member does his work and attends his meetings?—He will expend three afternoons a week.

7306. Do you tell the Commission that you think

Mr. T. M.  
Wood.  
20 May 1901.

*Mr. T. M. Wood.*  
20 May 1901. you can rely upon getting gentlemen in addition to that to take the share of work that would be required to manage a very extensive dock?—We should have these members released from the Thames Conservancy at once

7307. But with much more work added to them?—More important work. It does not necessarily take more time.

7308. Now one other question. Have you considered the difficulty of a publicly-elected body which might have a large constituency, managing an undertaking which employed a large amount of labour, in the case of strikes?—Yes.

7309. Do you think it is a serious matter?—It is a very important matter.

7310. In the time of the dock strike it would have been a serious matter, would it not, if the dock had been managed by a publicly-elected authority?—Yes. Of course I cannot tell what might have happened. They might not have had a strike.

7311. It is a serious consideration?—It is a serious consideration, but I am not advising that the County Council should be the authority.

*Cross-examined by Mr. George Wallace.*

7312. Have you yourself done much business with the docks?—Yes, I have done a certain amount of business.

7313. In what way: as a merchant or shipowner?—A merchant.

7314. In what trade?—Importing goods from America and Australia. I have a house in London and a house in Liverpool.

7315. What goods are they?—All kinds of preserved provisions, canned goods, and things of that sort.

7316. Can you give us roughly an idea of the amount of your goods that come through the docks of the dock companies in a year?—No.

7317. No idea at all?—No. I have not come at all to give evidence as a trader in the matter. I have merely come to represent the Council. I have not gone into that matter at all.

7318. You are not speaking at all from the point of view of a trader in the evidence you have given?—No, certainly not.

7319. Then I pass from it. Is the evidence which you have given (which I see corresponds fairly well with the report of the Rivers Committee) based really on the information given to you as a member of the Rivers Committee?—Yes.

7320. And that is the evidence you had a resolution on, on the 24th March, 1896?—Yes.

7321. Just let me draw your attention to that. On the 24th March, 1896, the Council passed a resolution that it was to the best interests of London to get improved and cheaper dock accommodation?—Yes.

7322. When the County Council came to that resolution had they any evidence of any kind before them or was it a mere matter of opinion expressed by the members in debate?—I was not a member of the Rivers Committee at that time nor for some years afterwards. I could not answer that.

7323. That purports to be a resolution of the Council?—You are asking whether the Council had evidence before them?

7324. Yes?—They had not.

7325. Upon that that was the opinion of the Council which they came to, in debate, in 1896?—Yes.

7326. And upon that there was an instruction to support that resolution, was there not?—Yes.

7327. Mr. Gomme is your statistical officer?—No, Mr. Gomme is not statistical officer.

7328. I know he is not now?—I do not know that he was then. I am not sure.

(*Mr. Lewis Coward.*) Yes, he was?—Yes, I believe he was.

7329. (*Mr. George Wallace.*) Then Mr. Gomme's duties were to get evidence to support that resolution?—Certainly not; to get evidence on the subject.

7330. General evidence on the subject?—Yes; not necessarily to support the resolution, if it was a mistake.

7331. Has anybody said that it was a mistake?—No.

7332. Not in the Council?—No; I think not.

7333. Can you give me any instruction, or give me the reference to the instructions that were given to Mr. Gomme, as to what evidence he was to prepare?—No; I have not them here.

7334. Are they in writing?—Not that I am aware of.

7335. Who gave the instructions to Mr. Gomme to get his evidence and his figures?—The Rivers Committee, I presume; but I was not then a member, and I cannot tell you.

7336. Would you tell me when you became a member of the Rivers Committee?—About fifteen months ago, I think.

7337. Quite recently?—Yes.

7338. Was that after Mr. Gomme's evidence was before the Council?—Some of it had been prepared, and some of it, of course, has been prepared since especially for this Commission, a good deal of it.

7339. But I gather that the Commission have had before them from Mr. Gomme the whole of the evidence which has been before the Council?—No.

7340. Or the Rivers Committee?—No; all the evidence that was pertinent to the reference to the Royal Commission; not necessarily all the evidence that was before the Council.

7341. Perhaps the Council were very strict as to what was evidence and what was not. I can only deal with the resolution at present. The resolution was as to improved and cheaper dock accommodation, which is only one part of this inquiry?—That is so. That was in 1896. I am dealing with the evidence. Mr. Gomme prepared very comprehensive information to enable us to deal with this reference.

7342. Has Mr. Gomme given us here all of that information which is relevant to the present Commission?—Yes; I should think so.

7343. Then the Commission are in a position to decide for themselves upon the same information as that which was before the Council?—No; because, of course, we could only give evidence that could be given by our witnesses of their own knowledge. The Commission would not have received a great deal of evidence that might be good enough evidence for the Council to consider, but which it was not for them to give as witnesses.

7344. The Commission have a great deal more evidence of facts which Mr. Gomme did not give, but have they the benefit of all Mr. Gomme's relevant evidence before them?—No, I do not know that.

7345. If not, what evidence has Mr. Gomme got that is material to this inquiry now that has not been given?—Of course, a great deal of information has been before the Rivers Committee which it has not been their duty to lay before the Commission. It was not for them to lay it before the Commission. There is a good deal which would be opinion, which was more proper to be given by other witnesses. I think we must distinguish that point. For instance, we have had here a good deal of opinion given by the dock witnesses which had not been given to us at all.

7346. I asked just now where you got the information from, and you said you got it from Mr. Gomme, and I referred to the page of your Rivers Report Committee, so that you would see. You acted on that resolution, and you instructed the statistical officer to obtain the information. Had you any other evidence before you except Mr. Gomme's?—Yes, other officers have reported, and we have had several members of the Committee who had a good deal of knowledge themselves of the practical working of the docks.

7347. Would you kindly mention the names?—There was Mr. McDougall, the present Vice-Chairman of the Council, who was chairman.

7348. What is he?—He was a miller at one time.

7349. Where?—I believe he had large premises in the Millwall Dock, and there was Mr. Matthews, who gave evidence before the Commission, and other members.

7350. The evidence that has been given by Mr. Gomme has been seen and approved by the Rivers Committee or the Council?—Yes.

7351. I think Mr. Gomme told us, if I recollect rightly, that he came here accredited on behalf of the London County Council, or something to that effect?—Yes; he is Clerk of the Council.

7352. On behalf of the Rivers Committee, do you now rely on Mr. Gomme's so-called facts and figures?—I have no reason to do otherwise.

7353. In your view, then, Mr. Gomme's suggested facts and suggested inferences from figures are really the reasons for the scheme which you put forward?—No, not exclusively. I will not be taken to say that. There were other reasons in our minds besides that particular class of evidence.

7354. Will you kindly tell us the reason?—I have done that to the best of my ability in examination.

7355. No, there is no reason given in this report whatever for the alteration except that I give you credit for one thing—a small sum that would be saved by the cost of amalgamation—some directors' fees, I think?—It seems to me the reason for dealing with the private dock companies and the Thames Conservancy and handing over the management of the port and docks to a new public authority is stated very clearly in my evidence. The reason given is that all these bodies with one exception are financially at the end of their tether; they are not capable financially of carrying out the improvements which are necessary in the port and docks.

7356. That is your reason?—Yes.

7357. The reason is that the present dock authorities cannot raise a sufficient revenue. Is that the reason?—They are not in a position to carry out the necessary improvements. It is not a question only of revenue.

7358. Do you mean they are not in a financial position?—That is my opinion.

7359. Does that mean, or does it not, that they have got sufficient revenue at present?—I suppose it means they cannot offer sufficient security for the public. It comes to pretty much the same thing.

7360. Do you, in fact, say that there has been any mistake in the present management of the docks?—No, I am not here to do that. I have not pretended to criticise the management of the docks. It is quite enough for me that the fact is as I have stated.

7361. You have also spoken of many improvements that are wanted?—Yes.

7362. Have you any list or schedule, or have you considered the improvements?—Yes, we have.

7363. Specifically?—Yes, some of them very carefully. Some of those improvements are not improvements that the dock company can be expected to carry out. For instance, the deepening of the channel to 30ft. That is one of which we have had a careful estimate from the engineer.

7364. I will try to confine myself altogether to the dock company's case. I do not want to ask you other questions. I mean as regards the amalgamated dock company, if you please?—As regards the dock company, the evidence has been given before the Commission as to those improvements. I have not a list here, although I have carefully perused it. I see that the London and India Dock Company consider a new dock is necessary, and have a Bill in Parliament for that purpose. It is not for me to say what improvements should be carried out by the dock company, and I do not pretend to do so, but that we have considered that there are improvements proved to be necessary, and that we have considered those improvements in detail, I do assert.

7365. You have considered specific improvements in detail?—Yes, we have considered them, certainly.

7366. Before or after the evidence of Mr. Scott?—That depends upon the particular improvement you are referring to. We knew a good many of them beforehand.

7367. You knew of the Albert Dock extension?—Yes, and we knew what the Millwall Dock were doing.

7368. Will you please keep to my company—the London and India Dock Company?—I thought you were dealing with all the docks.

7369. Then the Albert Dock is the only one that you can specify as far as my company is concerned?—Of

course we had to consider generally what in our opinion were the necessary improvements.

Mr. T. M.  
Wood.

7370. Will you kindly mention what in your opinion were the necessary improvements as far as the docks of my company are concerned?—No, I think I would rather not.

20 May 1901

(Mr. George Wallace.) My Lord, I ask the witness to answer the question.

(Witness.) I do not pretend to be an expert on dock management. All that we have to deal with is the fact that improvements are necessary. I cannot prove that here.

(Chairman.) We would rather the witness was not asked engineering questions.

(Mr. George Wallace.) My Lord, if there is somebody else coming who will give us this information, I am quite content. I have to deal with witnesses as I get them.

(Chairman.) This witness is admittedly a witness as to questions of policy. I do not think specific alterations of particular docks come within his scope.

(Mr. George Wallace.) The point was this: I do not want to argue it, but just to put it quite shortly to your Lordship. They say if they had got this trust they would be able to carry out the improvements necessary for the port. As regards my company I want to ask somebody (I do not care whether it comes from Mr. Wood or not) what improvements it is suggested ought to be carried out, and to find out whether we are prepared to carry them out. I do not wish to say that no improvements are necessary. My case is, that improvements are necessary. That is the position. But if some other witness will tell us what improvements are suggested, which we have not suggested, I could ask him.

(Chairman.) In any case I do not think we can take Mr. Wood, who has been good enough to give us his evidence to-day, as a witness on technical detail.

(Mr. George Wallace.) My Lord, I accept your Lordship's ruling.

7371. Have you, in fact, considered the proposals of the dock companies—my company, I mean?—Do you mean the proposal in the Bill, or the proposals before the Commission.

7372. It is the same—the proposal to tax barges and the goods in barges?—That was before us, but as I have already told the Commission, the Council and the Rivers Committee have not come to any decision on the matter. They felt they would require to have more information before they could come to a decision on the matter. It is a matter for the new authority to decide, not for the County Council.

7373. Do you suggest, or not, that the new authority should pay its way with, first of all, the present charges?—I really must decline to give an opinion about present charges, or what is the necessary change.

7374. Have you considered that question?—Yes; I have considered that question to this extent. We find that there is a revenue under the present charges of a certain amount—I think it is £654,000, and we have considered what could be done with that revenue. We have considered it to that extent.

7375. Then have you come to a conclusion or not, whether your proposed Trust body would pay its way with the present charges?—It seems as if it would be able to do so, as far as our calculations have gone.

7376. I think you said that at present the charges are not equally distributed or equally levied, or something of that kind?—I was referring merely by way of illustration to reasons why I thought a public body would have a somewhat better revenue than the private docks.

7377. I beg your pardon; that was not the reason. The reason you gave for the better revenue was that, with your improvements, you would bring increased trade to the dock?—Yes; that was one reason.

7378. That hinges on the improvements again?—Yes.

7379. But, if the docks carried out the improvements, the revenue should be the same, so far as it turns on the improvements?—Yes; if the docks carried out the improvement economically. Of course, there is the whole point. If the docks carried out the improvements as cheaply as the new body, they would

Mr. T. M.  
Wood.  
20 May 1901.

reap the same advantage, but if it cost them twice as much to carry them out, of course they would not reap the same advantage; that is obvious.

(Mr. George Wallace.) My Lord, I suppose I must not ask as to the cost of carrying out the improvements by the County Council?

(Chairman.) You have already asked the question.

7380. (Mr. George Wallace.) Have you considered the present system of charging?—If you mean am I prepared to criticise the present system, I am not.

7381. Have you considered it yourself?—Yes, I have considered it.

7382. It was in reference to that, was it, that you said the charges were not equally distributed, or whatever the phrase was?—Yes.

7383. Was that with reference to the fact that more than three-fourths of the goods paid no dues or rates at all?—No, I am not expressing an opinion upon that point either one way or the other.

7384. Have you an opinion one way or the other about it?—I have no opinion as representing the Council, which has not come to any conclusion on the subject.

7385. I think Mr. Gomme has told us he found on his figures that the proportion of the trade of the Port of London was diminishing. I am sure, if I may say so, and Sir Robert Giffen will remember it because there were some questions by him on the point?—The proportion as compared with certain other ports.

7386. No; as compared with the ports of the United Kingdom?—Yes.

7387. At Question 3360 what Mr. Gomme said was See 7891-915. this: "The statistics relating to shipping pointed in the direction, if they did not absolutely prove, that the trade of London was suffering from the condition of its port, and I pointed out that other ports of the Kingdom which have developed their docks and harbours, have secured an increased proportion of the trade of the Kingdom." Then he went on: "I think it would be hard to resist the correlative conclusion that the proportional falling back of London is due to the want of corresponding development and attention in the docks and port—"

(Chairman.) We hope to hear Mr. Gomme himself as to foreign ports; he is the next witness; perhaps it would be more convenient to ask him the question?

(Mr. George Wallace.) It may be that if I mention it now I may get the information exactly in good form from Mr. Gomme.

7388. Mr. Gomme has taken out and given us figures showing that the proportion of the trade of London to the trade of the United Kingdom has decreased in the last few years. Has he in point of fact taken out a corresponding table for the trade of the docks of London?—I will ask him that question.

7389. I understand that you do not propose that the trust should take over anything but the docks mentioned in the list that you have given?—Subject to the consideration of the cases mentioned.

7390. Leaving other things open for argument?—Yes.

7391. That is as far as you are prepared to go at present?—Yes.

7392. You have taken, as I understand it, no figure at all, and you have no figure to put before the Commission as to the cost of this?—If I had I should suggest that it was not proper to put it forward.

7393. May I ask you whether or not you have considered the figure of what it would cost?—We have done so to the best of our ability for our own information.

7394. That is a figure including those docks you have mentioned and nothing else?—Yes.

7395. There is no provision for anything outside?—Not in this figure that we have considered. Of course, if we take over other docks we should also take over the revenue. If we take over the Regent's Canal and docks we should be taking over their revenue.

7396. Does that include the up-town warehouses of the dock company?—Yes, it does.

7397. The whole of their property of every kind?—Yes, this particular calculation did. Of course, that does not prejudice the question one way or the other of whether we should take over the up-town warehouses;

that is a matter for consideration. I am explaining that we have calculated in such a way that it would include that.

7398. All the information you wish to lay before the Commission is simply that it is an expenditure of many millions. You do not wish to give any further information?—Of course, it was a very controversial matter in regard to water, and the Royal Commission justified us in that attitude on that question. It is a dangerous thing for a public body which may be a purchaser to name a price; it immediately becomes a minimum, and it does not seem to be wise business so to set up a price against ourselves.

7399. "It is nought, said the buyer"?—We are not saying it is nought; we are not expressing an opinion.

7400. In the duties that you are enumerating you give the provision of sufficiently equipped docks and quays. Had the Rivers Committee formulated any dock provision at the time?—No, not in the sense of having a detailed scheme. We had not gone further than to satisfy ourselves that more docks or quays were required. We had no definite scheme.

7401. When did the Rivers Committee first come to the conclusion that more docks were required?—I think they came to that conclusion when they had to consider seriously what the evidence was that they had to give before this Commission. They may have done so before, but I was not a member then.

7402. Do you suggest that the docks have been full until quite recently?—I can only answer that question from evidence given before the Commission; I do not myself know.

7403. You refer to the provision of suitably equipped docks and quays and improvements of land communication therewith. What do you mean by land communication with the docks?—Suitable roads with approaches and communication, perhaps by light railways. I will say railway communication. I am not suggesting that there is not considerable railway communication now.

7404. The road approaches are at present under the hands of the local authority?—Yes, partly inside London and partly outside.

7405. Then how do you propose to deal with that? How far is the road accommodation to extend under the new authority? Is it from the docks to London or from the docks to where?—It is merely road accommodation to facilitate the traffic, whatever that traffic may be.

7406. Take Tilbury. Do you propose to have a road from Tilbury to London?—I should not like to say that traffic could come from Tilbury in that way; it is a very great distance. I should think it would mostly come by barges.

7407. Would you say from the far end of the Albert Dock?—There is road accommodation at the Albert Dock.

7408. But you propose that the new authority shall take it over?—You are asking me to give you a lot of information as to what the new authority would consider, and what it would be absurd for us to consider, because there never may be any new authority. I could not give you any details as to what the new authority would do.

7409. You say road accommodation. What about the railway accommodation. Take Tilbury, for instance, Do you propose that the new authority should take the London, Tilbury, and Southend Railway from Tilbury to London?

(Witness.) Perhaps it would save time, my Lord, if I mentioned in connection with these questions which counsel is asking that in response to a letter from the Commission, we have prepared a plan and a statement as to the improvements that have been made in connection with access to the docks, and as to the present position of railway communication, and perhaps it would be most useful to give that information in that way. See 7750-55.

7410. (Chairman.) Do you propose to put it in?—The plan is almost completed, and the London County Council will put it in.

7411. Perhaps it would be more useful if it is put in before the appearance of the County Council witnesses. Do you propose to put it in after the gentlemen who represent the London County Council have given their evidence?—Yes.

7412. Then counsel would have no opportunity of asking questions upon it. I am afraid it would duplicate the appearance of witnesses?—It would be a very short statement.

7413. Would you like the Commission to call the engineer in reference to the question?—I think perhaps it would be well. We will hand in the statement and the plan, and then your Lordship could decide. The engineer would be a great deal more able to give information as to these roads than I can.

(*Chairman.*) Perhaps that would be the better plan, Mr. Wallace.

(*Mr. George Wallace.*) I quite accept that, my Lord.

7414. You talked about having gone fully into the matter of the charges, and I think your phrase was that when you have a good port authority the port was prosperous, or successful, or something of that kind. It was in answer to Mr. Ellis, I think?—I think I was speaking then of the rate of interest at which money could be raised as between the port authority and the Corporation.

7415. Will you mention to me what you consider as a good port authority; what was the good port authority you referred to?—I was speaking of authorities like the Clyde Navigation Trust and the Mersey Docks and Harbour Board.

7416. Any others?—The Tyne Commissioners I have some particulars about, and the Swansea Harbour Board, also.

7417. When you spoke of a good port authority, I want to know what authorities you were referring to?—I did not mean the word in any invidious sense; I merely meant that, where you had a financially strong port authority, you still paid a higher rate of interest for money raised by that authority than if it was raised on the security of the rates by the Corporation of the same town.

7418. You have not, have you, an instance of a municipal port which is a financial success?—We have hardly any municipal ports. There is Bristol.

7419. Then you have got one which is a financial success?—I was not talking about municipal ports.

7420. (*Mr. Lyttelton.*) Bristol is not a municipal port, is it?—Bristol is a municipally-managed port.

7420. (*Mr. George Wallace.*) Have you any port?—

(*Mr. Ellis.*) What does it matter what he has got? We know all these other ports; we can form our own opinion upon them. It does not affect my mind for a moment, with all respect to Mr. Wood, what he tells us. We know from first hand about these ports; we have got it in evidence; I must submit that these questions are quite irrelevant.

(*Chairman.*) It would seem to us that the witness has been careful to limit his evidence to financial and general considerations, without any questions either of detail or municipal interest in other ports. Perhaps, Mr. Wallace, you could limit your questions to the general and financial part.

(*Mr. George Wallace.*) One question will dispose of it, my Lord.

7421. Can you tell me of another port which gets charges out of one-fourth of the goods only that come into it?—No, I cannot.

*Cross-examined by Mr. Harper.*

7422. Are you the father of the scheme which has been propounded here to-day, or do you merely support it?—I am one of the members of the Committee who drafted the scheme.

7423. You know the interest that I represent—the Wharfingers' Association?—Yes.

7424. You have read the evidence, I suppose, if you did not hear it—that the capital invested in 1899 of the wharves which made a return was about 8 millions?—Yes.

7425. And the total number of wharves was about 320. I suppose I shall not go far wrong if I put the capital invested in wharves and warehouses at about 10 millions. As I understand, you leave out of your scheme entirely the whole of that interest?—Yes.

7426. You ignore it as a thing that is not worth consideration?—Oh, no.

7427. Just let us see. Firstly, on your supposed representation, you do not propose that there should be a wharfinger on your Board?—No.

7428. Why? Is it because you are going to compete with them?—We do not exclude wharfingers, of course, but as such we do not put them on.

7429. But you are going to compete with them. Is not that what was present to your minds?—Yes, I suppose we are going to compete with them.

7430. And therefore you left them out?—They are not interested in the management of the docks. I do not think as wharfingers they are specially qualified to be on the Dock Trust. Of course, they might get on it by the ordinary process of election.

7431. Through your Council?—They might get on through the Council, or they might get on through the election of the payers of dock dues. They might be large payers themselves possibly.

7432. That would be because they were either shipowners or merchants, not because they were wharfingers?—That is so. As wharfingers they are not put on.

7433. You would have within certain limits the right of varying your charges?—Yes.

7434. Within your Parliamentary limits?—Yes.

7435. And your business would, of course, consist of the two things which, except for the accident of their being together now, could be separated, namely, warehousing and docking?—Yes.

7436. In regard to the warehousing part of it, if it could be separated you would be direct competitors?—Yes.

7437. Could not you so alter your charges as to penalise the outside wharfingers, and take business from them into your own warehouses?—It could be done, no doubt.

7438. You know Mr. Holland's memorandum and his phrase, which has almost become classic now: "It is the warehousing business that pays." It would be a strong temptation to you, or such portion of you as were business men, to foster the particular branch of your business which pays?—I think a public authority of the kind proposed would take a broad view of the interests of the port.

7439. But the public authority has excluded from its constitution all the other people in the same interest. That is what it has begun by doing. Do you suggest that, having excluded them, it would be likely to make concessions in their favour—that is, to rival traders?—No, I do not think they would make any concession in their favour, or have any particular interest for interfering with their business. There is plenty of business in London for all the docks and wharves, and there is more business than there appears to be accommodation for. All I mean to say is, that technically there is competition, but as a matter of practical business I do not see that this public authority would necessarily damage the wharves at all. It might do them good.

7440. As I understand, you put on the shipowners and merchants because you wanted the leaven of the practical element?—They are not put on as shipowners or merchants in the Liverpool scheme; they are put on by the constituents who are the payers of dock dues, who may appoint whom they please so long as they are qualified. Our proposition is the Liverpool model, so that they may be wharfingers, or barge-owners, or shipowners, or merchants, or anything.

7441. You say that administrative control should be left to a statutory authority, of whom ten members should be representatives of the shipowners, merchants, and others interested in the commerce of the port, elected on the Liverpool system by all who have paid in the preceding year £10 on port dues?—Yes.

7442. Port dues are ship dues are they not?—If you had an amalgamated authority covering the docks the dock dues would come in there, but the Liverpool system is different to ours.

7443. (*Mr. Lyttelton.*) You do not suggest that your authority should not consist in part of shipowners?—Certainly not.

7444. You have not the slightest doubt that it would consist in a large part of shipowners?—I hope so. I think we should have shipowners and merchants of all classes.

(*Mr. Harper.*) My point is that I cannot see the word there which would enable a wharfinger to be elected. I cannot see that the wharfinger pays port dues.

Mr. T. M.  
Wood.  
20 May 1901.

Mr. T. M.  
Wood.  
20 May 1901.

(Mr. Lyttelton.) As I understand the witness wishes to say that he does not see any words which include shipowners and merchants.

7445. (To the witness.) Is that so?—They are not put on as shipowners but the electors would be largely of that class and, of course, would put on members of their own body, I should hope.

7446. (Mr. Harper.) They are put on as payers of port dues?—Through the electors of course.

7447. Then who pays port dues now, because this is your scheme and you must know about that?—Under that new authority certainly the shipowners would pay the new dues and the merchants who imported or exported would also pay port dues.

7448. Is that inclusive; it is nobody else?—Anyone may pay port dues, but he is not on the Board *qua* wharfinger.

7449. It is because he is something else?—Yes.

7450. With regard to your suggested one-third representation of your Council you do not suggest that members of your Council have any special qualification to enable them to assist in the management? You put them as a sort of check upon the proceedings of the Port Committee because you are finding the finance?—Some of them would, judging by past experience, have qualification.

7451. I understand that you propose to retain an absolute veto *quo ad* any capital expenditure.

(Mr. Ellis.) We understand about that.

7452. (Mr. Harper.) I was going to lead up to this with regard to current expenditure, if there was any deficit do you propose that there might be a rate in aid?—As an exceptional occurrence, yes.

7453. Do you propose a veto of the Council as to what the Port Committee might do on that?—Certainly if they got a rate in aid they would have to get it through the Council.

7454. You propose identically the same veto with regard to anything that is required for further capital and what is required for current expenses?—My idea is that there should be no claim for a rate in aid. The thing should be self-supporting.

7455. But if it were necessary the Council should have the same veto?—That is so.

7456. What then is the object of having any representation at all of your Council upon the Port Committee itself if the Council is allowed to retain the veto on both branches of expenditure?—The whole basis of this scheme is that the inhabitants have an interest in the port. If they had not there would be no justification for claiming this credit. As representing their interests we ought to be on the Committee.

7457. Are you proposing that your initial capital expenditure should be raised on the security of the London County Council?—Yes, in our ordinary stock.

7458. Is that charged upon the City at all in any way?—Yes; there are exceptions; some accounts are not chargeable to the City.

7459. For this particular purpose would the City be chargeable with its proper proportion of the sum raised?—Yes, the rateable value of the City would be part of the security.

7460. What is the rateable value of the City as compared with that of the Municipal County of London outside?—I cannot give you the latest figure, but it is something about one-eighth of the whole roughly.

7461. You have never considered any question, supposing your proposals should have a harmful effect upon the wharfingers, as to what compensation would be due to them?—No.

7462. There is such a thing as first depreciating a man's property, and then buying it cheaply?—Yes.

7463. And if the docks were on that basis to start with, the wharves might follow?—There is this check upon that, that we should be calling on the ratepayers, and I think the ratepayers would have a very strong word to say on that subject. I do not think you need fear that this authority would try to make the port not self-supporting. Certainly the County Council portion of the authority would be most anxious to avoid coming on the rates, because our ratepayers far from the neighbourhood of the docks

would be very critical in this matter, and would blame us very much if we put a charge upon the rates.

7464. Have you considered at all supposing a rate were made to meet any deficit, what proportion would fall upon the wharfingers' industry?—No; it would not be a very large proportion.

7465. At Question 2464 it is put by Mr. Marten Smith that there are 124 wharves, with a total rateable assessment of £197,057. At any rate, there would be a considerable sum falling upon them. It is valuable wharf property, is it not?—Yes; it is a very small portion of the rateable value of London.

7466. But, *quo ad*, any rent they had to pay, they would be paying to set up a competition against themselves?—Not to set up a competition.

*Cross-examined by Mr. Loehnis.*

7467. The Surrey Commercial Dock is the one exception, in your view, I believe?—Yes.

7468. In taking over their property you told the Commission that you had taken the Stock Exchange figures. You have made your calculation on the Stock Exchange value, I think?—We have taken the Stock Exchange value.

7469. That is hardly fair, is it? Have you not to take into consideration what is the present value of the land and warehouses belonging to the various docks?

(Mr. Daldy.) I think my friend is rather going into a question of value, which is beyond this inquiry.

(Mr. Loehnis.) I only want to know on what basis the County Council have gone; I do not want to ask any figure.

(Chairman.) Has not the witness already told us that he proposed to appeal to arbitration?

(Mr. Loehnis.) It was only with reference to a figure which they had been considering. I suggest that a proper view to take of the properties they are going to take is not the Stock Exchange value of the stocks, but the actual present value of the land and warehouses, which in my account stand at what they were purchased at something like 50, 60, or 100 years ago.

(Mr. Daldy.) The witness only said that the Stock Exchange value was one way of looking at it.

(Mr. Lyttelton.) The arbitration would consider all the circumstances, and this is only an element.

7470. (Mr. Loehnis.) Do you suggest that the Surrey Commercial Docks have not been properly and economically managed?—No; I have made no hostile suggestion to any of the docks.

7471. Do you suggest that the body which you are going to appoint to manage the various docks will be a bit better fitted to deal with the timber trade of London, which at the present moment is managed by the gentlemen in the timber trade?—No; we do not. We take a much larger view of it. It is a question of the port as well as the docks—not of one particular trade.

7472. (Chairman.) I think you told us just now that you preferred not to mention any figure with reference to the amount of capital which might be expended in relation to this new authority?—Yes.

7473. Would you give us an idea of what rate you think would raise it?—Our last loan was raised a few days ago; 3 per cent. at 98. The amount was two millions, and that was subscribed three times over, and the thing was closed within two days.

7474. You call it many millions?—The year before we raised five millions, and I think that amount was subscribed five times. This would be a much larger sum.

7475. The only thing that one can go by is what you have lately raised money at for two millions in the money market?—Yes.

7476. Do you suggest that the stock should be a redeemable stock?—Our stock is redeemable at the option of the Council.

7477. But not at the option of the holder?—Not at the option of the holder. Some of our stock is redeemable at a fixed date, but we have an irredeemable stock in the last three or four years which we may redeem after 1925. Of course we have raised money on very much much more advantageous terms. Our 2½ per cent. stock

stood considerably over par when the money market was easier. Of course, I propose to have a sinking fund on the annuity system spread over 100 years.

(*Mr. George Wallace.*) My Lord, I wish to say on behalf of my friend Mr. Claude Baggallay, who appears for the Thames Conservancy, that he has been unfortunately kept elsewhere. Would your Lordship allow him to ask any questions that he might think fit later, if the Witness happens to be here?

(*Chairman.*) I am afraid we can give no promise to that effect.

(*Mr. George Wallace.*) If the Witness is here perhaps your Lordship would allow him to ask a question? I do not want to ask the Witness to attend specially.

(*Mr. Lewis Coward.*) With regard to the question that was put just now, may I say what the Manager of the Stock Exchange said when the question arose on the Water Commission of the raising by the County Council of 40 millions?

(*Chairman.*) Who is the Manager of the Stock Exchange?

(*Mr. Lewis Coward.*) Mr. Banbury. This is the finding of the Commission: "He informed us that the 2½ per cent. stock of the London County Council was now issued at a minimum of 93, and if they wanted to borrow as much as 40 millions they would probably have to issue it at 86 per cent.

(*Chairman.*) That is a question of opinion on the part of the Manager.

(*Witness.*) I should like to say this: In this case of purchase the greater part of the capital we should have to raise would be merely in substitution of other securities. We should be substituting one security for another; we should not be putting a fresh loan on the market, and, of course, the matter might be capable of adjustment with the owners of dock securities.

7478. (*Chairman.*) You mean to suggest that so far as the dock capital is concerned, this would be a conversion scheme?—It might be.

*Re-examined by Mr. Daldy.*

7479. This omission of the wharfingers from your board was not for the purpose of facilitating competition with them or anything of that sort?—No.

7480. Have you considered a public authority of the kind you suggest, specially competent to deal with such questions as these; for instance, the provision of communication in the various docks?—Yes. There is no subject to which we are giving more attention now than the question of communication.

7480a. The change of system in the practice of the port, if a change is called for. If the port, for instance, required diminution of the barges or anything of that kind, would that be much better considered by a public general authority of this sort, than by a number of separate private interests?—Yes, I should think so. Of course, there would be absolute equality with the public authority necessarily. There would be no special arrangements.

*Mr. T. M.  
Wood.*  
20 May 1901.

(Adjourned to Wednesday next, May 22, at 11 o'clock.)

# ROYAL COMMISSION ON THE PORT OF LONDON.

## TWENTY-FIRST DAY.

Wednesday, 22nd May, 1901.

### PRESENT :

The Right Hon. LORD REVELSTOKE (*Chairman*).

22 May 1901.

The Hon. ALFRED LYTTTELTON, K.C., M.P.  
The Hon. WILLIAM ROBERT WELLESLEY PEEL, M.P.  
Sir ROBERT GIFFEN, K.C.B., LL.D.

Rear-Admiral Sir JOHN HEXT, K.C.I.E.  
JOHN EDWARD ELLIS, Esq., M.P.

CECIL OWEN, Esq., *Secretary*.

Mr. BALFOUR BROWNE, K.C., and Mr. GEORGE WALLACE appeared on behalf of the London and India Dock Company.

Mr. LEWIS COWARD, K.C., appeared on behalf of the Millwall Dock Company.

Mr. H. W. LOEHNIS appeared on behalf of the Surrey Commercial Dock Company.

Mr. T. E. SCRUTTON, K.C., and Mr. J. B. PORTER appeared on behalf of the Corporation of the City of London.

Mr. F. F. DALDY appeared on behalf of the London County Council.

Mr. CLAUDE BAGGALLAY, K.C., appeared on behalf of the Thames Conservancy.

Mr. R. W. HARPER appeared on behalf of the Wharfingers' and Warehousekeepers' Association.

Mr. JAMES CRANSTON appeared on behalf of the Association of Master Lightermen and Bargeowners.

Mr. ROWLAND WHITEHEAD appeared on behalf of the London Chamber of Commerce.

(*Chairman.*) Before we proceed with the business of to-day, I should like to be allowed on behalf of my colleagues and myself to express our deep sense of regret at the sudden death of Sir Courtenay Boyle. Those among us who had the privilege of his acquaintance can appreciate the services he rendered the country in the office he filled with such ability, while the fact that this Royal Commission has been appointed under the auspices of the Board of Trade, in the affairs of which he played such a conspicuous part, renders us more

particularly sensible of the loss we have sustained. I feel confident I am expressing the sentiment of my colleagues, of the learned Counsel present, and all who knew him, when I venture to give utterance to these few words of sincere regret.

(*Mr. Claude Baggallay.*) My Lord, I am sure that we on this side of the table all share in the regret which you have expressed on behalf of the Commission at the loss which the Board of Trade and the country have sustained through the death of Sir Courtenay Boyle.

Mr. H. C.  
Baggallay

Mr. HENRY CHARLES BAGGALLAY recalled.

7481. (*Chairman.*) You desire, I believe, to make some correction in your evidence?—Yes. In reply to Sir Robert Giffen, at Question 6718, in which he asked me whether to some extent that particular week would not be a fair average, I replied, "No." The fact was Sir Robert asked me to make certain calculations which seemed to prove that the number of locks were over 20,000 instead of the 10,000 that I had given. I thought I had made a mistake from these figures, and therefore I accepted the correction, but I find on referring to my evidence it was not so, for I stated that the number

of barges in and out in that particular week was 5,555, and from that I got my averages; but when I came to deal with the actual figures of the year I gave the number of loaded vessels that arrived and the number of barges that entered. Therefore, naturally, the figures were only one-half. Every barge which came in had to be locked out again. Therefore that would give the 20,000 against the 10,000. In dealing with the figures I merely took the actual figures of the barges of the year, so that that week was an average week, and not as I stated at the time not an average week.

Sir F. D.  
Dixon-  
Hartland,  
Bart., M.P.

Sir FREDERICK DIXON DIXON-HARTLAND, Bart., M.P., recalled and further examined.

7482. (*Chairman.*) You appear before us in order to state the financial proposals of the Thames Conservancy?—Yes.

See 5460

7483. Will you give us them?—As you are aware the Conservators have furnished the Commissioners with an estimate prepared by their engineer, which shows that the cost of deepening the river to 30 feet at low water of ordinary spring tides up to the Royal Albert Dock, allowing for the necessary training walls between Canvey Island and Shoeburyness, would be £1,649,838, and that the cost of providing new moorings in the positions indicated on the chart which was handed in by the Secretary of the Conservators would be £45,000,

making a total of £1,694,838. The consequent increased expenditure on revenue account is estimated to reach at least £100,000 per annum, and this would of course be further increased if the cost of the above-mentioned new works is from any cause exceeded. This amount added to the average expenditure, on that account of £75,000 for the five years to the 31st December, 1899, will bring the total annual sum to be provided to about £235,000.

7484. Have you any details to give us as to why a larger expenditure is required?—The difference is the interest and sinking fund, on the 1½ millions added to the cost which we already expend. The average

receipts of the Conservators on revenue account for the past five years amounted to £87,000, which, deducted from the above-mentioned sum of £235,000, leaves a balance of £148,000, say £150,000, per annum to be raised, that is if the estimates are kept to. As stated in the evidence given by their secretary the Conservators are empowered to demand tonnage dues in respect of vessels entering and leaving the port, as follows: To and from coastwise ports and foreign ports north of Ushant, one halfpenny per registered ton. To or from all other ports three farthings per registered ton, subject to the exemptions mentioned in Section 155 of the Thames Conservancy Act, 1894. The Conservators have not power to levy dues on vessels for use of moorings for loading or discharging cargo in the river, nor have they power to charge dues on goods. When the ships load and discharge in the river they get off without any payment whatever. The Conservators have power to charge for use of moorings in respect of vessels not paying tonnage dues, but they have no power to charge dues on the latter class of vessels for the use of the river except on those trading above London Bridge. The Conservators have carefully considered the subject of the provision of the necessary funds to meet the additional expenditure on revenue account which would be entailed by the carrying out of the proposed additional works. They would suggest for the consideration of the Commissioners that the amount could be obtained as follows:—(a) By increasing the tonnage dues on vessels. We should increase the tonnage dues from a halfpenny per ton register on those coastwise to three farthings; and from three farthings per register ton foreign to a penny. By these means, taking the average amount received for tonnage dues in the five years ending 1899, £24,000 additional revenue would be provided. (b) By the abolition of the exemption from tonnage dues of certain vessels mentioned in Section 155 of the Thames Conservancy Act with the exception of fishing boats. The number of vessels under 50 tons—the lowest classification—registered at the various Custom Houses in the local districts which principally trade with the port is 2,293, of a total tonnage of 73,287. Deduct 140 vessels between 45 and 50 tons, which pay dues as per returns furnished by Customs, which leaves 2,153 vessels; also deduct 500 yachts and tugs, and it comes down to 1,653, or, say, 1,600 vessels of average tonnage of 40 tons, and making, say, 20 voyages each per annum—that is,  $1,600 \times 40 \times 20$ , making 1,280,000 tons per annum. This at a halfpenny a ton would give £2,666. Then vessels bringing in corn coastwise I estimate at 1,133 vessels of a total tonnage of 103,115 registered tons at a halfpenny a ton, say, £250. Then vessels plying to outports for passengers only, which should pay the same as cargo vessels, would bring in, say, £1,000. That makes £4,000 per annum. Then (c) By the imposition of dues for use of river and moorings by vessels not paying tonnage dues. This would bring in £10,000. (d) By the imposition of dues on vessels for the use of moorings for loading or discharging cargo. That is, we consider it most unjust that these vessels should use the buoys and use the river in this way, and pay nothing for it. We consider that as they use it as a dock they should pay for the use of those moorings for loading and discharging cargo. That will bring us in about £15,000. Then there only remains this. We are, I believe, the only river where no dues are paid for goods, and we see no reason why, if the goods have the advantage of the port, they should not be obliged to pay something for the use of the river. We propose to put in a tariff which would be about one-fifth of what is charged in the Tyne. Of course, there are various things that come into London which are rather different from what go into the Tyne. This is only just an idea as showing how we can get a charge on goods without any detriment to the trade of London. We propose to put on about one-fifth of what is charged in the Tyne. At the Tyne rates the dues would come at the present moment to £553,500. That you see would bring in on the same principle as that which has worked so well there, about £100,000; that would make the two sides balance, and we should be able then to carry out the works if the Commission order us to do so. I may say that we are quite willing to carry out these works. We have always thought they should be carried out if we had the money to do it, and we are prepared to do it, and consider that we should be able to do our duty as well in the future as we have done in the past. There is one more remark if your Lordship will allow me to make it. This is my own idea. It will naturally occur that if

the ships and the goods are to pay an increased taxation, they should have something to say with regard to it, and personally I should think it would be a fair thing that we should double the representation of the shipowners, and give the merchants another six too, so that they will be both there to watch their own interests in carrying out this scheme which we have the honour to lay before you.

7485. (Mr. Ellis.) I wish to ask you a few questions with reference to the Parliamentary attitude. Will you refer to Questions 1612 to 1624 in the evidence which you gave when we had the advantage of seeing you before. These proposals that you now place before us would require further Parliamentary powers, would they not?—Clearly, if you recommended them.

7486. That is exactly what I am wanting to get at. They would require a Bill in Parliament?—Yes.

7487. Do you propose to promote that Bill?—It would be useless our trying to promote it. It must be a Government Bill.

7488. These proposals stand in the same relation to the procedure you recommended or suggested at Questions 1612 to 1624 as your own proposals; that is to say, you would go to the Government and ask them to promote a Bill?—Yes, we should do that; but if you were good enough to strengthen our hands by recommending this scheme, then naturally we should have the advantage of going to the Government and saying, "The Commission recommend this. Will you take it up?"

7489. You want us to help you, in fact?—Yes, certainly.

7490. It would not be a private Bill; it would be a public Bill?—We would not mind a private Bill; but it would be perfectly useless.

7491. But you do adhere to the position you took up?—Yes, we are quite willing to do everything if we can get the money. It must be done by this Commission, or in some such way, so that we have some power behind us.

7492. (Mr. Peel.) You said that this new arrangement would give you £160,000 a year more?—Yes, about.

7493. I only wanted to know whether in that estimate you take into account the increased charge of keeping the river channel at that further depth as well as of making it?—Yes, we do. That would come into the yearly sum. We have provided a sum for keeping it in repair when it is once done.

7494. (Rear-Admiral Hext.) Provided the river was deepened to the extent that you have suggested here, would this sum of money still be required to keep it deepened after it had been done?—The sum of money is to form the dredging works. When they are once made there would be only the expenditure of keeping it in order by our regular dredgers and things. We have provided a sum of money for keeping it up after it has once been done.

7495. Would this sum of money that you say you require per annum go on after it was actually completed?—Not after the sinking fund had been paid off. It is wanted for interest. We should have to raise this £2,000,000 of money or something like it, and we have to pay the interest and the sinking fund upon it. It would last as long as the interest and sinking fund were required.

7496. (Sir Robert Giffen.) Could you give us any idea of what the increase on the tonnage dues on vessels would be under the first heading?—It would be an increase of from a halfpenny per ton register coastwise to three farthings; and from three farthings on the foreign register to one penny. That will produce £24,000.

7497. What would be the effect of the abolition of the exemption under your heading (b)?—£4,000.

7498. Then by the imposition of dues for the use of river and moorings by vessels not paying tonnage dues?—We ought to get £10,000 by that. We have worked it out.

7499. And by the imposition of dues on vessels for the use of moorings for loading or discharging cargo?—That would leave about £100,000, which we should get by charging about one-fifth of what the Tyne charge upon all goods coming into the river. I have here a list of charges on the Tyne. Our Secretary was Deputy Secretary of the Tyne for a great number of years before he came to us, and he is thoroughly up in the working of how the tax upon these goods is obtained.

Sir F. D.  
Dixon-  
Hartland,  
Bart., M.P.  
22 May 1901.

Mr F. D.  
Dixon-  
Hartland,  
Bart., M.P.

22 May 1901.

It would work on the principle of about one-fifth of what the Tyne charge is.

7500. Is that put upon all goods coming coastwise as well as from foreign countries into London?—We have not been able to get the coastwise figures on the Thames, but we should charge coastwise too. At any rate, we should make it as light as we could so long as we got £100,000.

7501. Your object is to get a sum of £100,000 by dues of some kind?—Yes, by dues on goods. We want £160,000 to pay our interest, sinking fund and working expenses.

*Cross-examined by Mr. Daldy.*

7502. Are those proposals your own, or are they fortified by a resolution of the Thames Conservancy?—They are all resolutions of the Thames Conservancy, with the exception that it was my own suggestion that it seemed fair if these gentlemen were taxed that they should have some representation. That was an idea of my own.

7503. The resolution as to raising money is a recent resolution, I suppose?—Yes.

7504. Have you considered at all what the effect of putting this extra charge on goods of £100,000 a year would be as regards foreign ports?—It has been brought to my knowledge (I do not know whether I can give the exact facts) that, being the only river which has no charge on dues whatever, it would not be more onerous to people using this river than it would to any other place.

7505. You do not mention anything about raising capital funds?—We should naturally have to raise capital funds, and this money that we get is, firstly, to raise the capital fund and to pay interest on it, and to pay off a sinking fund, and the balance is to keep up the works that are carried out by this money, so that they may always be effective. We raise it naturally on the security of the dues the same as we have done before.

7506. I suppose there is some information as to the rate at which you have raised loans before, and the rate at which you would be able to raise money?—Last time we were very lucky. It was done very well; we got £107 at 3 per cent., but I am afraid we shall not do it so well this time. I think we shall not get it so well as that.

7507. You cannot raise it on the same terms as the County Council?—I think we could, but we have based our calculations on a 4 per cent. loan in order to have a good margin.

7508. About how many years would the improvement that is mentioned here be spread over in your programme?—I should think about ten years, and it would be a great advantage in doing it in that way, for this reason. I dare say you are aware that retaining walls are very important on the Essex coast. They broke down, causing half Essex to be overflowed in the time of Queen Anne, were put up again then, and those walls are naturally not so strong to-day as they were then. So we shall have to take it gently, so as not to upset the whole of those walls; but in ten years we should be able to do the whole thing. We should begin at once if we had the powers.

7509. How do you propose to collect the principal portion of the river dues? Would it be by means of the dock companies?—We must work it in what would be the best way; I do not know yet; I have not worked that out; but in many places going up river we have to do that collecting. We take the tolls as they pass. We would work out some system which would be no impediment to trade.

7510. If you raise this £100,000 and the dock companies get a further charge in order to do the necessary work at their docks, there would be a very substantial increase in charges on goods?—Ours is very small, and I cannot say what the docks are proposing, or what the Commission will say with regard to the docks. We are only getting sufficient to do the dredging, which we consider we ought to do.

7511. Your proposal, then, is not with reference to any alterations in the docks at all?—No.

7512. You stand entirely independent of that?—Entirely.

7513. You leave that out of your estimate altogether?—Yes.

*Cross-examined by Mr. Porter.*

7514. You propose to give shipowners and merchants increased representation?—That is my idea.

7515. I wanted to know whether it was your idea or that of the Conservancy?—It is simply in this way, that I thought if the Commission were good enough to approve of the scheme they might say: "We think if we give you this extra taxation you ought to give a little extra representation." I only put it as an idea of my own for the consideration of the Commission.

*Cross-examined by Mr. Harper.*

7516. I understood that so long as you get the sum which you have named by tonnage dues and in other ways, you are not very particular from whose hand it came?—I do not quite understand you.

7517. Whether you collect it yourself, or whether the dock company or other body collect it, does not matter to you?—I have never said that.

7518. Would you collect it yourself?—I like to collect my own money.

7519. Where would you take it in the case of a foreign ship going out?—We have no objection to make an arrangement with another body in any way whatever, but we should like to have power over our own purse. I dare say we should be quite able to come to a very amicable arrangement with the docks, so that there would be one collection, and there would be no difficulty of any sort.

7520. Have you considered the question whether it is at all desirable that the docks should be under one authority?—Yes.

7521. Have the Conservancy, as a body, considered that?—Yes.

7522. What resolution have they come to in regard to that?—We wish to be left alone to do our work as well in the future as we have done it in the past; we do not want to interfere with anybody else.

*Cross-examined by Mr. Whitehead.*

7523. With regard to the proposed dues on goods, I did not gather from you whether you proposed to confine that to imports or to include exports as well?—All.

*Re-examined by Mr. Claude Baggallay.*

7524. With regard to the separate authority, would that have any direct bearing upon the upper river navigation?—On the lower river it would have an immense bearing. If the upper river were to be separated from the lower river they have no interest in allowing the water which is so important to the lower river to come down. All their interest would be to get as much income as they could, because they are a very poor body. They get nothing worth speaking of from the pleasure traffic and barges. Almost the whole of their income is derived from water companies, and if they were separated from the lower river their interest would be to get as much as they could from the water companies, and not to send water down the lower river. It will also become a very serious question, because if Parliament should decide that water was to come from any other source besides the Thames, of course, the water companies or the body who succeeds them would not then be anxious to pay for both sources of supply.

7525. Putting it shortly, it comes to this, that it is very inadvisable to consider the separation of the lower navigation from the upper navigation without considering fully the bearing it would have upon the position of the upper navigation and the relations of the two bodies covering the two parts of the river after a separation took place?—It was thoroughly threshed out in the Bill of 1894, and it was brought up in the House of Commons again about three years ago, and Mr. Ritchie said it had been so thoroughly examined that he utterly declined to entertain it.

7526. There was one point referred to by my learned friend, Mr. Daldy, with regard to raising capital. At what price was your existing Thames Conservancy stock placed?—At 107, I think.

7527. I think it was 107 and a fraction?—Yes.

7528. That is a three per cent. stock, is it not?—Yes.

7529. Do you happen to know what that stock is standing at to-day?—There are no transactions in it, I think. Everybody considers it so good that they hold it.

7530. It is a stock which has been purchased to hold?—Yes.

7531. There are practically no dealings in it?—There are practically no dealings in it.

7532. That was issued at over 107?—Yes.

7533. It was Three per Cent. Stock?—Yes.

7534. And it is redeemable in either 50 or 60 years, I think?—Under the Act it is 60 years.

7535. You are putting aside a sum at the present time for the redemption of that, which works out to something under 5s. per cent.?—We are putting by a fund which will redeem it, as a matter of fact, in 50 years.

7536. You do not anticipate, I take it, that you could issue another three per cent. loan at the present moment on such favourable terms as over 107, but still your borrowing powers have been shown to be easily exercisable in the past?—I think at 98 we could easily float a three per cent. loan.

7537. Your existing borrowing powers under the Act of 1894 are not exhausted, I think?—There is £100,000 left.

7538. Do you happen to know the date when that loan was placed. Was it either January, 1895, or January, 1896?—It was January, 1895, the year I became chairman.

7539. As to the promotion of any Bill which might have to be promoted, supposing this Commission recommended a Bill, I take it in the first place you would consider it necessary that a Bill which increased taxation on shipowners frequenting the port and coming from all parts, and upon goods belonging to owners in

all parts, should be a public Bill rather than a private Bill?—Clearly. We could not pass it.

7540. If it were a public Bill do you see any hope of being able to pass such a Bill, unless it were promoted by the Government?—No. I do not know whether Mr. Ellis would help us.

7541. If this Commission recommended it, would you do your utmost to help the passing of such a Bill?—Clearly, and I would take charge of it in the House if the Government wished it.

(Mr. Lyttelton.) You suggested, Mr. Baggallay, in a question which you put to the witness, that it would be necessary before considering any Trust, which you know is one of the proposals the County Council have made, that the relations between the authority of the upper and lower river should be thoroughly considered.

(Mr. Claude Baggallay.) That is my suggestion.

(Mr. Lyttelton.) And you further suggested that that had been fully considered in 1894.

(Mr. Claude Baggallay.) It was considered to a certain extent in 1894, when there was a proposal to separate the portions of the river, and place them under different authorities.

(Mr. Lyttelton.) What I wish to ask you is, whether you propose to adduce any evidence here as to those relations, or whether you propose to comment upon the matter in a speech.

(Mr. Claude Baggallay.) I think it is quite sufficient to comment upon it. Until a definite proposal is made I would not care to take up the time of the Commission with it.

(Mr. Lyttelton.) If you thought it important you would reserve the right to comment upon it.

(Mr. Claude Baggallay.) Quite so.

Mr. ROBERT PHILIPSON re-called and further examined.

7542. (Chairman.) You are secretary to the Conservators of the River Thames?—Yes.

7543. I understand you wish to draw attention to several matters that have been referred to by witnesses who have appeared before the Commission?—Yes.

7544. Do you wish, in the first place, to refer to the subject of charges for services in mooring and unmooring vessels at public moorings where buoys are not provided?—Yes, that is referred to at Questions 2334, 2369 to 2381, 3434, and 3532.

7545. Will you tell us where those moorings are situated?—These moorings are situated as follows:—South side: Battle Bridge, Upper; Battle Bridge, Lower; Mill Stairs; East Lane, Upper; East Lane, Lower; Fountain Hole; Platform; King's Stairs, or Prince's Stairs, Upper; Prince's Stairs, Middle; Prince's Stairs, Lower; Church Hole; Mill Hole, Upper (or Hanover Hole); Mill Hole, Lower. North side: Alderman's; Hermitage, Upper; Hermitage, Lower; Union Stairs, Upper; Union Stairs, Lower; Tower Stairs, Upper; Tower Stairs, Lower; Bell Wharf; Stone Stairs; Ratcliff Cross. To moor a vessel at these tiers the ground chains, put down by and at the expense of the Conservators and maintained by them, have to be picked up and the ship made fast to them by means of bridle chains. I have a sketch here which I can hand to the Commission. (The witness handed in a sketch of a mooring, ground chain, and bridle chain.) The Conservators have never undertaken the work of making vessels fast to the groundwork of the tiers. For the last sixty years or more this service has been performed, and the necessary chains, lighters, and anchors and boats provided, and the ships berthed by men not in the employment or pay of the Conservators. The names of the persons at present engaged in this work are as follows, and the whole of the men have been appointed by the Conservators on the recommendation of the Harbour Master to take charge of the various moorings during pleasure:—T. Laws, Battle Bridge, Upper; S. R. Walker (employs two hands), Battle Bridge, Lower; J. W. Rooke (employs two or three hands), Mill Stairs; A. J. Lloyd (employs two or three hands), East Lane, Upper; G. Voas (and two hands), East Lane, Lower; R. Deal (employs two or three hands), Fountain Hole, Platform, King's Stairs; G. Rugg (and four hands), Prince's Stairs, Middle; Prince's Stairs, Lower; Church Hole; Mill Hole, Upper; Mill Hole, Lower; Bell Wharf; Stone Stairs; Ratcliff

Cross; S. Griggs (and one hand), Tower Stairs, Upper; Tower Stairs, Lower; C. Gowens (and four hands), Alderman's; Hermitage, Upper; Hermitage, Lower; Union Stairs, Upper; Union Stairs, Lower. There does not appear to be any uniform scale for the services of the men and the use of the requisite plant. The following charges have been furnished to me by the principal mooring man as being those generally made, namely:—

For steamers regularly trading:—

An all-round charge of 1*l.* irrespective of tonnage.

For steamers casually using the moorings:—

	£	s.	d.
Up to 900 tons burden	-	-	1 0 0
900 tons and up to 2,000 tons	-	-	1 10 0
2,000 tons and upwards	-	-	2 0 0

For sailing vessels:—

Up to 70 tons burden	-	-	0 7 6
70 tons and up to 150 tons	-	-	0 10 0
150 tons and upwards	-	-	0 12 6

These charges (in the fixing of which the Conservators do not appear to have had any part) are made irrespective of the time the vessel remains at the moorings, and uses the bridle chains, and are not for the use of the moorings, as is erroneously stated on the form of account of some of the men. In rendering the account some of the men have used the expression "for use of moorings," but that is not so. This form of account has now been altered to read, "For services in mooring and unmooring *Ss.* \_\_\_\_\_, and supplying bridle chains for the purpose." The nature of the work renders it necessary for the men to be afloat on each tide, and for the charges mentioned every vessel has to be moored both head and stern, and also cast off when leaving the moorings. No objections to the charges made have been received by the Conservators except from one firm. The Harbour Master reports that it would not be practicable to provide buoys at the moorings, as, if this were done, barges would constantly make fast to them, to the inconvenience and possible exclusion of ships. The number of vessels using the moorings in question, between the 1st August and 31st October, 1900, was 647, with a net registered tonnage of, say, 348,000 tons. As I stated in my previous evidence (Question 19), the only power the Conservators possess for charging a mooring rate is in Section 157 of their Act, and this power has not been exercised by them. The levying of a charge was some years ago fully discussed, but after consideration it was not thought desirable to go on with it. In connection

Sir F. D.  
Dicon,  
Hartland,  
Bart., M.P.  
22 May 1901.

Mr. R.  
Philipson.  
22 May 1901.

Mr. W. F.  
Malcolm.

22 May 1901.

to which you allude?—I was asked by Sir John Wolfe-Barry at Question 1753, "Do you know of any vessels in the wood trade at present which go to other ports in preference to London in consequence of there being a greater depth of water at those ports. Do they go to Hull, for instance?" I cannot ascertain as a fact that any vessels engaged in the wood trade have actually been prevented from coming to London in consequence of the depth of water, nor can I say definitely that other ports have had a preference on that account. London is so much the largest wood-importing port that I think steamers specially adapted for wood loading would scarcely be built of dimensions unsuitable for London. Then I was asked by the late Chairman of the Commission at Questions 1766 to 1769, as to whether a tax upon goods should be applicable to the whole port, or only to the docks? I am of opinion that lighters taking cargo from steamers in the river, and the goods loaded in those lighters, should be subject to dues. It seems to me that the vessels discharging in the river, and the goods they carry, get the benefit of the accommodation afforded them in the river, and that dues upon lighters loading from vessels in the river, and the goods loaded into these lighters, would afford a source of revenue to the Thames Conservancy, or to whoever may be the authorities for the river. In connection with this answer I may state that I think vessels discharging in the river might very fairly have to pay heavier dues than at present. No doubt many coasting lines of steamers, and also many of those in the near foreign trades might fairly be placed on better terms than tramp steamers which discharge in the river. At Question 1816 I was asked by Mr. Ellis as to how much of our income arose from rent. I answered that, speaking from memory, our total receipts from rent were about £80,000. I have since ascertained that our total receipts from rent in 1900 were £87,902, after deducting £546, the amount paid for insurance on grain, as the rent we charge upon grain includes also fire insurance to be effected at our cost. With regard to Question 1839, asked by Sir John Wolfe-Barry, as to the cost of dredging the docks, which I stated roughly to be £5,000, I find that for the last ten years the average has been £5,710.

7579. I think that is a question of detail; it is hardly necessary to go into any small details like that; after all, your answer there was practically correct?—The only other points I have are points arising out of evidence which has been given by others since I gave my evidence, and which I consider to be inaccurate.

7580. Do you wish to correct some statements you have already made?—No, not that I have made, but statements made by other witnesses.

7581. We have the privilege of hearing you to-day in connection with the particular matter of the exemption of lighters; I think it would be well for you to confine yourself to that?—Under the provisions of the dock company's Act of Parliament lighters and craft entering the docks to deliver to or receive goods or ballast from vessels in dock are exempt from the payment of rates. The clause in the Surrey Commercial Dock Company's Act of 1864, which provides for this exemption, is as follows:—(Sec. 117.) Provided always, that all lighters and craft entering the docks to discharge or receive ballast or goods into or from any vessel lying therein shall be exempt from the payment of any rates so long as such lighter or craft is *bonâ fide* engaged in discharging or receiving such ballast or goods; and the ballast or goods so discharged or received shall be exempt from the payment of any rates. Similar clauses are inserted in the Acts of the other dock companies. See Sec. 136 of the London and St. Katharine's Act of 1864; the East and West India Dock Act, 1 and 2 William IV., Ch. 52, Sec. 83; the Millwall Docks Act, 27 and 28 Victoria, Ch. 255, Sec. 59. In order to understand the position of the dock companies on this question it is desirable to refer to the origin of this exemption. The exemption clause first appears in the Act 39 George III., Ch. 69, which provides for the establishment of the West India Docks. This Act gave the West India Dock Company a monopoly of the West India trade. Sec. 87 provides, that for the term of 21 years from the completion of the docks, all ships from any port of the West Indies arriving in the River Thames with a cargo of West India produce shall unload and land the whole of their cargoes within the docks, and by Sec. 90. the Commissioners of Customs are empowered to order that all ships arriving in the River Thames from any other part of

the world than the West Indies, having West India produce on board, shall unload and land so much of their cargoes as shall consist of such produce within the said docks. By Sec. 137, the rate of 6s. 8d. is to be paid to the company by the ships using their docks. These provisions gave the company extensive and lucrative privileges in compensation for the enormous outlay they incurred, and the public benefit derived from the construction of the docks. The wharfingers and lightermen of the port naturally opposed the granting of these privileges, which adversely affected their interests. The wharfingers were compensated for their loss of business by a heavy money payment, and in the interests of the lightermen the clause was inserted in the Act which gives them free access to the docks, and the right of delivering goods and ballast and receiving goods and ballast from ships in the docks free of dues. In plain terms, the bargain between the Government and the dock company was to this effect: We will give you powers to compel ships to enter your docks, but you shall not levy charges on lighters coming into dock to take goods to or receive goods from these ships. The term for which the special powers were granted expired. The Act above referred to (39 George III., Ch. 69) was repealed by 2 William IV., Ch. 52, the company's monopoly was determined, but the exemption of lighters and craft from charges was continued. The case of the East India Dock Company was similar. They, too, had exclusive privileges granted to them by their Act in respect of East India produce, but when their privileges expired the restrictive clause was re-imposed. It is to be observed that while the original Acts exempted lighters from charges, the goods which the lighters conveyed were not exempt from dues, but this exemption clause in subsequent Acts was extended to the goods as well as to the lighters. Having regard to the fact that in the first instance the reason for granting the free use of the dock waters to lighters and craft was the compulsory diversion to the docks of certain shipping, which had previously had the right to discharge in the river, it is surely a reasonable contention, that when the provisions of the Act compelling vessels to discharge in the docks were withdrawn, the right of access to the docks free of charge, which was conceded to the lightermen by way of compensation for the dock monopoly, should also have been abrogated. Since the expiration of the dock privileges the fiscal changes of the past half century have limited the number of articles liable to Customs duties, and almost all kinds of goods can now be landed at private wharves and warehouses, whereas formerly they could not be landed to any extent except at the docks. For instance, until the repeal of the duties on timber, the Surrey Commercial Docks, in respect of the wood business, had the advantage of bonded privileges. It is manifest then that the circumstances under which this exemption was originally created by the Legislature in favour of the wharfingers and lightermen no longer exist, and that the dock companies have now no exclusive privileges to compensate them for the loss and obstruction which is imposed upon them by the free access of lighters to their docks. The docks have been constructed at an immense outlay of capital, and are maintained at a heavy and increasing expense to the company, yet the lighters and craft not only appropriate, free of charge, the advantages and facilities the docks provide, but owing to the work imposed upon the company in docking, undocking and regulating the craft, they add materially to the company's expenditure. The serious nature of the burden imposed upon the company is clearly shown by the following figures:—In 1899, the number of ships received into dock was 1,274, with an aggregate tonnage of 907,547 tons register. During the same year 22,050 barges were docked of a tonnage estimated at 882,000 tons (taking the average barge using these docks at 40 tons register). I put in a table showing this:

(The witness put in a statement showing the number of craft entering the Surrey Commercial Docks each year from 1890 to 1899. See Appendix. 21st Day, No. 3.)

The number of barges was thus seventeen times greater than the number of vessels, and the barge tonnage more than 97 per cent. of the total tonnage of the vessels received into dock. Of these 22,050 barges, 5,770 passed through the docks on their way to the canal. After deducting these there remain 16,280 barges of an aggregate tonnage of 651,200 tons, or 71.75 per cent. of the total shipping tonnage. In respect of the shipping, the company received dues and charges amounting to £54,500, but for docking and undocking

these lighters and craft with a tonnage nearly equal to that of the shipping tonnage, they received no payment. Not only do the lighters pay nothing in return for the accommodation and facilities afforded them by the docks, they are the direct cause of increased expenditure, and seriously hamper the dock business. In the busy season, when it is most important to keep the dock entrances clear for the passage of vessels, the numerous craft so obstruct the basin and entrances that it is absolutely necessary for the dockmaster to assist them with men, appliances, and tugs. Further expense is incurred in docking and undocking these lighters owing to their numbers; sometimes as many as 100 have to be locked in and out at one entrance on one day, and it is impossible to defer the locking until high water. To do so would make the entrance inaccessible to the shipping and, in order to get through the work, the dockmasters are obliged to turn out their men and begin locking out the craft four or five hours before high water. I hand in a table with regard to this.

*(The witness handed in a statement showing times of attendance before and after high water and number of barges docked and undocked at the Surrey lock of the Surrey Commercial Docks in the months of August, September, and October, 1900. See Appendix 21st Day, No. 4.)*

It is sometimes necessary to make as many as seven locks before the basin is cleared of craft, and the vessels waiting to enter dock can be admitted; and after the vessels have been docked the admission of lighters often occupies two or three hours after high water. The level of the dock water is, of course, lowered every time the lock is emptied. Comparatively clear water is withdrawn from the lock and replaced by an equal quantity of muddy water from the river which settles in the docks and has to be removed at considerable expense to the company. There can be no question that this incessant locking before and after high water considerably increases the cost of mudding, which is a heavy item in the dock company's expenditure. The increased size of the lighters now employed is a further source of difficulty and expense to the company. It may be taken that 50 years ago the carrying capacity of the average barge did not exceed 40 to 50 tons. Now it is no uncommon thing to dock craft with a carrying capacity of from 100 to 150 tons, and even larger than these are not unknown. It is worthy of note in this connection that when the exemption clauses came into operation the average tonnage of vessels engaged in foreign trade did not exceed 200 tons. The average tonnage of vessels of all classes entering the Commercial Docks from 1810 to 1840 was 243 tons and the average tonnage of grain-laden vessels during the same period was 152 tons. I hand in a table showing this.

*(The witness handed in a statement of the number and tonnage of vessels of various classes which entered the Commercial Docks from 1810 to 1840, and the average tonnage of these vessels during that period. See Appendix 21st Day, No. 5.)*

On this shipping the company were entitled to take dues of 2s. per ton. Now the company are required to receive into dock, free of charge, lighters of a tonnage equivalent to or exceeding that of the ships upon which the Legislature empowered them to take dues. Additional labour and expense is involved in docking and undocking these large lighters, it being impossible for the lightermen in charge to handle them without considerable assistance from the company's staff aided by the company's appliances. It not infrequently happens that there is only one man to attend to two or more craft, and without the assistance of the company's servants, and the tugs and hydraulic machinery provided by the company, it would be impossible to cope with the numerous craft which seek admission to the docks, even when the tide work is extended for some hours before and after high water as above explained. It is difficult, if not impossible, to accurately estimate the proportion of the expenses which the company incur in consequence of the use of their docks by lighters and craft, but it is evident that the expenses of the dockmaster's staff, the cost of mudding, the wear and tear of plant and machinery consequent upon the frequent lockings, are all increased, and that the additional expenditure thus incurred is a heavy charge upon the company's revenue. The hardships imposed on the company are, however, not confined to those before reviewed. The clause which exempts the lighters and craft from dues also exempts the goods they carry. The company suffer a double grievance,

inasmuch as the lighters and craft are for the most part engaged in taking goods direct from the ship's side and diverting from the docks to the private wharves and warehouses goods, some portion of which might at any rate remain with them and contribute to their revenue, but upon which when so removed they are precluded from levying any charge whatever. It is true that all the craft frequenting the docks are not employed for this purpose. The several purposes for which they are employed in the docks may be briefly summarised:

—(a) To take delivery of goods direct from the ship's side; (b) to deliver goods for export, coals, and ballast to the ship; (c) to take goods from the company's quays, yards, and warehouses, which have been landed with them either by the merchant or for account of the ship. It is clear that lighters employed for the purpose named in (a) and (b) are by the exemption clause free of dues, but there is nothing in this clause which precludes the company from making a charge on lighters engaged as in (c). It is surely an anomaly that the company should be prohibited from making any charge upon lighters taking delivery from the ship of goods which contribute nothing in return for the protection and accommodation afforded by the docks, whilst at the same time they are allowed the right to levy a charge upon lighters engaged in taking from the company's wharves, quays, and warehouses goods which have contributed their quota of charges to the company. Of the 16,280 lighters docked in 1899 (excluding from the total 22,050 the 5,770 passed up the canal), 10,220, or 62·7 per cent., were employed in taking goods direct from the ship's side. As before stated, the wood and grain trades form the chief part of the company's business. With respect to the wood trade, the growth and extent of the overside deliveries is shown in a table I will hand in. It will be seen that the overside de-

*(The Witness handed in a table showing the quantities of sawn wood goods delivered direct from the ship to craft from 1890 to 1899, and the percentage of these quantities to the total quantities of these goods received into the Surrey Commercial Docks. See Appendix, 21st Day No. 6.)*

liveries, which in 1890 were equal to 49,900 standards, or 18·9 per cent., of the total sawn wood goods landed and delivered overside, had increased in 1899 to 123,769 standards, or 40·5 per cent. of the total quantity landed and delivered overside, and on this large proportion of the wood goods received into their docks the company were precluded from making any charge. This enormous increase in the overside deliveries, which is a comparatively modern development, could not have been anticipated when lighters and craft receiving goods from the ship and the goods so received were first exempt from charges, and it may be asserted that when the Schedules of Rates on shipping and goods were fixed by the Legislature, it was never contemplated that nearly half the total quantity of goods received in the docks would be delivered overside and removed for storage elsewhere, without contributing anything to the company's revenue. The present Schedules of Rates were framed to meet the conditions which formerly existed, but the methods of business and the description of goods imported have materially changed; the cost incurred by the company in handling the goods, the increase in the labour charges, and other expenses, has considerably increased, and the rates prescribed by the existing Schedules are now inapplicable and inadequate. Turning to the grain business. I will also hand in a table with regard to that.

*(The Witness handed in a table showing the quantities of grain delivered direct from ship to craft from 1890 to 1899, and the percentage of these quantities to the total quantities received into the Surrey Commercial Docks. See Appendix, 21st Day, No. 7.)*

It will be seen that whilst there has been no increase in the proportion of the overside deliveries such as marks the wood business, the quantity of grain delivered overside for the ten years shown averages 46 per cent. of the quantity landed in the company's warehouses. Inasmuch as the exemption from the payment of rates of lighters and craft, and the goods they carry, was originally granted for reasons which no longer exist, and under conditions that have entirely changed, it is submitted the continuance of this privilege is inequitable; that it entails a great expense and heavy burden upon the Dock Company, delays and hampers the conduct of the business, and by taking from them a legitimate source of revenue to which they are justly entitled, deprives them of the means of continuing to make the important and costly

Mr. W. F.

Mr. W. F.  
Malcolm.  
22 May 1901.

improvements which from time to time become necessary, to enable them to deal successfully with the increasing volume of business and the alterations in the conditions under which the trade at these docks is carried on.

7582. *Has* you any further remarks to make with reference to the tables?—I have no special remarks. I might draw attention to the table showing the quantities of sawn woods delivered direct from ship to craft from 1890 to 1899. That shows the enormous increase which takes place almost annually in the extent of overside deliveries of timber.

7583. (*Mr. Ellis.*) Let me ask you one general question with regard to this celebrated exemption clause. Do you wish us to infer that all the grievances that the other docks have detailed before us with respect to that apply broadly to you?—Broadly, they do, but in our dock the great grievance is the quantity of wood goods taken away overside.

7584. That is your special grievance?—That is our special grievance.

7585. Then do you put before us that all the arguments, of which we have heard a great deal, against this exemption clause from the dock companies, apply to you also?—I have read Mr. Scott's evidence very carefully, and I agree with the remarks that he has made on the subject.

7586. You fall into line with the other docks on the subject of exemption?—I fall into line with the statement made by the chairman of the London and India Docks. I may add that with regard to the rates upon barges and cargoes loaded therein, the figures which have been stated by the chairman of the London and India Docks would be accepted by us.

7587. Have your docks ever been to Parliament to claim exemption from this. Have you ever promoted a Bill in Parliament?—No, never.

7588. (*Mr. Peel.*) With regard to your table showing the number and tonnage of vessels which entered the Commercial Docks from 1810 to 1840, does that apply to vessels of various classes; does it mean all—coastwise and foreign vessels as well?—You will remark that this is a very old statement. It is from the year 1810 to 1840. It is put in more to show that many of the vessels which we received into our docks at that time were actually not larger than many of the lighters that come to us to-day.

7589. Does it apply to all classes?—Yes.

7590. Is there any special reason for this large increase in the percentage of overside deliveries in the last eight or nine years?—I think I have dealt with that in my previous evidence.

*Cross-examined by Mr. Daldy.*

7591. I do not think you have been asked about it, but could you tell us whether by far the greater portion of the goods coming into your dock do not come in for consumption in the London area?—Yes, the greater portion do.

7592. For example, timber coming into your dock would go either into the London district or only so far from London as it is profitable to take timber?—Not exclusively so, but a very large proportion would come in that category.

7593. Again, take the case of grain. A very large portion of the grain coming into your dock is consumed in the London area?—The same answer would apply to that as to timber; the larger proportion would be.

7594. As regards goods coming in that way you can really almost defy competition?—I do not quite catch the effect of your question.

7595. I mean other ports cannot supply London. Goods for London must come to a London dock?—Yes. In a very large proportion of our trade we have not the competition to fear.

7596. I want to ascertain whether you owe your favourable financial position as compared with other docks to that?—I do not admit that our financial position as compared with other docks is solely to be attributed to that.

7597. I do not say solely, but you do concede that is an element?—Undoubtedly.

7598. Could you in any way separate the quantity

of goods that go overside to warehouses and yards competing with your own from the rest of the goods that go overside?—That would be impossible.

7599. Could you give us any idea in the shape of a percentage. It might be one thing for you to put a charge on goods going overside to competing warehouses and another thing to put a charge on goods that are merely going overside in the ordinary course of transit?—We have no figures on that point.

*Cross-examined by Mr. Scrutton.*

7600. Am I right in saying that for the last three autumns there has been a very great block in your docks?—Last autumn there was a great congestion in our docks. In the other two years I do not admit that there was anything very special.

7601. Was it very common for steamers coming with wood to have to wait three or four or five days at Gravesend before they were brought up the river?—In the year 1900 that was the case.

7602. Was it not also the case in 1899 to a less extent. You issued a printed circular, I think, to all ships, which was handed to them at Gravesend, saying that they were not to come beyond Gravesend until they got orders from you to come up?—Are you speaking of 1899?

7603. I am speaking first of 1900, as to which year you say it was the case that there was congestion?—Yes, it was the case in 1900.

7604. I have next to speak of 1899?—No, certainly not.

7605. Were not ships kept in the same way in 1899, though to a less extent, than in 1900?—No.

7606. Having got to your dock was not there an extra delay in the time of discharging vessels compared with previous years?—Last year was an exceptional year. By figures which I have here it is shown that the amount of tonnage which arrived in our docks in the month of August of last year was double the tonnage which we are accustomed to receive in that month. That caused a state of congestion in the docks from which it was very difficult to recover afterwards. In the months of September, October, and November we still continued to receive larger quantities. This following on the back of the previous unprecedented large arrivals in August continued the congestion, and we did not get rid of it till the month of December. To be added to that there was the fact that there was a strike of lightermen in the river at that time.

7607. What was the reason of this large increased import. Is it a permanent increase or a temporary increase as far as you can see?—The increase in the import arose last year in this way. At the beginning of the season freights were very much higher than the wood importers had been accustomed to. They hoped they would come down, and they delayed their chartering. Instead of that they found that the freights weekly got worse and worse for them, and at last, as is usual in these cases, they came in all of a rush and chartered the steamers all at once, which in an ordinary way they would have chartered over perhaps three months. The whole fleet got loaded in the various timber loading ports at one time, and these arrived in our ports in an overwhelming mass together.

7608. That state of things resulted to your knowledge probably (certainly to the knowledge of your manager) in a very large number of claims for demurrage, which have been fought out in the Law Courts?—I believe there are a certain number of claims for demurrage.

7609. Was not there the same sort of thing in 1899—a number of claims for demurrage coming up, because the dock was very full—not so many, I agree, as in 1900, but still some?—There were a certain number of claims.

7610. And there were some in 1898. For the last three years the Surrey Commercial Dock has been very good to the legal profession, has it not?—I do not know that that is particularly the case.

7611. You said your timber and grain went largely to the London district. You are putting a very wide meaning on the London district, are you not. For instance, large quantities go down to the River Medway and to Kent from your docks?—Some do.

7612. By "London district" you mean a very wide

area—the Home Counties?—I mean the district that London would serve more conveniently than any other large port.

7613. For instance, the Medway District and Kent?—Anything between Ipswich on the one side and Southampton on the other.

7614. It is rather larger than the jurisdiction of the County Council, for whom my friend, Mr. Daldy, appears?—Yes.

*Cross-examined by Mr. Cranstoun.*

7615. Which are the busy months for your work?—We generally begin to be busy in July; September and October, as a rule, are our busiest months. Last year, as I pointed out, the congestion began in August, when we received 129,000 tons of wood-laden tonnage as against 60,000 tons in August of the previous year.

7616. How were you able to deal with this glut of traffic, as I might call it?—We did the best we could.

7617. What was that best? Had you quays to land it at to stack the timber?—We spent an enormous amount of money in lighterage. We got all the lighters we possibly could and discharged the deals into them. We had at one time 480 lighters in our employment in the docks.

7618. Have you not had as many as 530 at one time in your own employment in the docks?—That I cannot say. I have no record of the fact.

7619. I am basing my question on an answer that was given by one of your assistant superintendents in the High Court. Do you dispute the fact?—No. We have 45 private lighters of our own, which I did not count in speaking of 480. We had 480 on hire besides our own 45.

7620. All these were in the dock at one time?—They were.

7621. How long would the timber that was placed on those barges be on the barges before it was sorted on the quay?—It would vary in each different case.

7622. May I take it that sometimes the importer had to wait for three months before he got his landing account?—Yes, the importer might have to wait for three months before he got his landing account. But it is not to be inferred from that that deals were three months in the barge. After they are discharged from the barge there is a very long, intricate, and difficult process of sorting and piling the goods to be gone through.

7623. But, at all events, before the importer is able to sell his timber he must get this landing account?—Practically so.

7624. So that for three months a particular merchant—that is, an importer—would have to wait before he was able to sell a particular consignment of the cargo that he had had come into your dock?—That must not be taken as a general rule. In certain special circumstances, and in a year like 1900, that would be the case.

7625. Is it not the fact that that being frequently so, merchants prefer to hire private wharves to which they can take their timber at once?—I do not think that that is the case. I am not aware of its being so.

7626. You may not be aware of it, but is it not probable that a merchant, instead of waiting for three months before he could dispose of his timber, would take it away in lighters to some other wharf that he acquired for the purpose?—I only know this with reference to last year's business, that we had a great many parcels of wood goods forced upon us that we would rather not have had. But people who had intended to take them away, owing to the strike of lightermen, could not get the lighters for them, and so they said to us, "Land them in the docks the best way you can."

7627. But you had great difficulty, had you not, in landing them at all?—They did not take that into consideration.

7628. You do not know that, I think; but you had a great difficulty in landing?—We had a great difficulty in getting many of the goods landed in proper time.

7629. So that that was the case even before this strike? I will put it in another way. Was not the state of affairs similar in 1899?—By no means similar.

7630. Had the dock as much to do as it could possibly manage in the year 1899?—Yes. At certain seasons of the year in the wood trade we always have as much to do as we can manage.

7631. So that it is necessary, as a matter of convenience to you, that the importers should take away large quantities of their timber?—Not at all. We should not object to their taking away large quantities of timber. Every man has a right to do as he pleases; but we do object to their bringing it in by steamers to our docks as part cargo and delaying these steamers by the goods going away overside into the barges which took them away, and we have no compensation for that whatever.

7632. You have suggested that the proportion of goods taken away overside by barges is much greater now than it was some years ago, and is increasing?—Yes.

7633. You admit, I think, that the quantity of timber brought into the Port of London is much greater now than it has ever been, but you do not get so much of it?—I do not think there has been a very marked rise. Last year was a very heavy importation.

7634. Let me refer you to Question 1780, which makes it clear. "(Q.) In the following Appendix 14 you show that the percentage of sawn wood goods landed in your dock compared with the total import into London, is now about 54 per cent., which is a smaller percentage than the 75 per cent. in the previous Appendix? (A.) If you will remark, Appendix 13 represents the tonnage of the wood-laden vessels received into our docks; Appendix 14 represents the percentage of sawn wood goods landed into our docks." Then the next question, 1781, is, "So you may receive more goods into the dock than are landed." Now on that point, is it not a fact that a new trade has sprung up in the Port of London connected with America and Australia?—I do not quite follow your question.

7635. Is not timber of a particular kind brought from Australia and America that is not dealt with in your dock at all, but elsewhere?—Timber is brought from Australia—wood-paving timber, Jarrah wood, which is, as a rule, not dealt with in our docks. We have had vessels with cargoes of that timber on board in our docks, but as a rule it suits better to land it elsewhere.

7636. So that the total timber that is brought in you cannot deal with?—I do not say that we cannot deal with it. I say that it suits the receivers of the timber better to take it elsewhere, and as they are whole cargoes they certainly have the right of ordering their vessel to discharge wherever they please.

7637. Could, for instance, American steamers that bring it across get into your dock?—No. Many large American steamers could not get into our dock at present.

7638. So that all the American trade that I am speaking of cannot be dealt with in your dock?—A considerable part of the American trade, I understand, is in hardwood timber—walnut and various woods of that kind which does not find its way to our docks; but the great bulk of the North American wood which arrives in London does come to our docks.

7639. But, at all events, a large quantity of it cannot arrive in your docks?—That is so.

7640. Does not that somewhat account for the difference in the percentage?—No; our table does not refer to these goods at all. Our table only shows the sawn goods: deals, battens, boards.

7641. And when you speak of the total imports into the Port of London, so far as timber is concerned, are you only speaking of sawn goods?—The table shows the number and tonnage of vessels wood-laden entering the Port of London and the Surrey Commercial Docks from 1880 to 1899, exclusive of vessels from the East and West Indies, showing the proportion of wood tonnage entering the Surrey Commercial Dock.

(Mr. Ellis.) I do not quite understand. Is the learned Counsel trying to bring home to one's mind that there is undue delay?

(Mr. Cranstoun.) I am coming to that. The other point is as to the apparent increase of this particular overside delivery. Mr. Peel asked whether there was any reason for it.

Mr. W. F.  
Malcolm.  
22 May 1901.

Mr. W. F. Malcolm.  
22 May 1901.

(Mr. Peel.) The witness said he had answered it before, and I see it has been practically answered at Question 1845.

7642. (Mr. Cranstoun.) Now with regard to this question of undue delay, your company is not only a dock company, but a canal company as well?—Yes.

7643. How many wharves would you say are on the canal?—Do you mean wharves connected with the wood trade, or wharves generally?

7644. Generally?—Possibly 50.

7645. Is not that very much below the mark?—I have sailed up the canal several times, but I cannot say I took any particular note of the number of wharves.

7646. I have a plan here which shows that there are at least 79 wharves?—That is quite possible.

7647. And you have the Gas Company up there?—Yes.

7648. How many barges does the Gas Company employ, do you think, in its traffic, taking coal up, and so on?—If you ask the question with reference to figures we have given of barges entering our docks to go up the canal, the coal barges are not included in that number.

7649. So that the exclusion of coal barges refers to a very large number of barges, does it not?—Our total supply of coals in a year, if I recollect rightly, is about 280,000 tons going up the canal.

7650. That would represent a great number of barges?—Yes.

7651. So that the estimate you have given of the number of barges is nothing like the number of barges that actually use your dock?—The statements that we have given were of the number of barges entering our docks. These barges do not enter our docks at all.

7652. So that all that you have taken is the barges that enter your docks?—Yes.

7653. And I suppose those are the barges that actually enter and go away in a short time?—Very often in a short time, but sometimes they are a much longer time than we wish.

7654. But you have barges of your own that might enter once a year that we may say might remain in the dock a whole year?—Our 45 barges.

7655. What about those that you hire for your own goods—the 445. They would remain in for months, would they not?—No. It is generally a matter of a few weeks that we require to hire a large number of barges for.

7656. May I take it that 450 barges in your own employment doing your own work might be lying in these docks for three or four weeks at a time?—Last year that may have been the case, but as a general rule we have nothing like that number.

7657. Now I have another question as to the size of these barges. What is the average size of the barges that go along the canal?—They are small barges. I think that will be found in my previous evidence.

7658. You say 20 tons to 30 tons?—Measurement tonnage.

7659. Is it not a fact that barges much larger than that do go up and down the canal?—A certain number may probably do so. We are limited by the depth of water in the canal.

7660. But have you not seen barges of 100 tons burthen in the canal?—I have not seen them personally. It is possible they may have been there.

*Cross-examined by Mr. Harper.*

7661. Do you associate yourself with Mr. Scott in the desire to place these charges on goods delivered overside?—We do.

7662. As far as I gather from the examination by Sir Robert Giffen at the previous hearing, when I was not here, you are now paying six per cent. of which one per cent. is attributable to canal, and to rents of property, the rest being revenue earned by your dock undertaking and warehouse?—Our dividend last year was only 5 per cent.

7663. What made the profits go down when the dock was so congested?—As I have explained, we had to incur very heavy expenses indeed in the hiring of

barges to endeavour to deal as well as we possibly could with the congestion.

7664. Now just let me go back to the early history. Your company in the original formation of it was a canal company, was it not, with a small dock attached?—That goes beyond my memory.

7665. You have seen the Act of Parliament?—I have reason to believe that there were two docks: the Grand Surrey Canal and Dock and the Commercial Dock.

7666. You have no reason to suppose that the Act of Parliament is incorrect?—No.

7667. Was there any monopoly given by the original Acts to either the Grand Surrey Canal or to the Commercial Dock similar to that given to the East and West India Dock?—There was no monopoly given, but at that time when there was a heavy duty upon timber the privilege which we had of keeping wood goods in bond was a great point in favour of the dock.

7668. And the same with regard to the legal quays?—You cannot land timber at quays.

7669. Before those docks were established how did timber come to London?—It came into London in floats, I presume.

7670. And was delivered overside into barges?—No. At that time the timber which came into London was, as a rule, hewn timber, which had to be cut up here into deals. At one time in my recollection the duty upon sawn timber was double the duty upon hewn timber, and therefore a very much larger proportion came in hewn timber than sawn timber; the hewn timber was discharged into the water.

7671. Do you suggest that you have a monopoly given by Parliament?—I do not suggest that.

7672. Then you originally started your business in competition with outsiders who could take the same class of work?—That is going back to ancient history which I have no knowledge of.

7673. You put in a long statement with regard to these Acts of Parliament, and I want to know what you know about it. Have you considered the Act yourself?—Yes.

7674. There was no 21 years' monopoly as there was in the case of the East and West India Docks?—No.

7675. You started and went on, and I think you have uniformly earned a dividend throughout your career. Have you not?—I cannot speak from personal knowledge, but I believe that one of the component parts of our present dock was in very low water indeed at one time.

7676. And I daresay you bought it up at a very low rate?—No, not at all. The companies amalgamated.

7677. But was it not like the lion and the lamb lying down, the lamb lying down in the lion's interior?—No. It was mutual consent.

7678. You have continuously had this exemption clause put upon you as we have heard. Have you since 1864 spent somewhere near half a million of money upon fresh works since that clause was imposed upon you?—Yes, I see we put in a statement showing that we have spent £484,000.

7679. (Mr. Harper.) My Lord, I have a little difficulty in following the proceedings. Apparently some statement of revenues and profits was handed in to the Commission which so far as I can find has not been included in the Appendices. It is dealt with at Question 1794 of the Fifth Day.

(Witness.) That was nothing more than the balance sheets of our company that we furnished to the Commission.

7680. Would you mind my having one?—I will give you one. (A copy of the balance sheet was handed to the learned Counsel.)

(Chairman.) The Witness has already given a very full statement of that.

(Mr. Harper.) If I may respectfully say so, that is the difficulty we are placed in. While we were not here evidence was taken upon matters which we understood were non-controversial. The witness makes a statement, and because he labels it "non-controversial" we can hardly be expected to be bound by it.

(Chairman.) You are now on the balance sheet.

(Mr. Harper.) Not on the figures *per se*, but on the explanation of them. They may throw a different light

upon it. The difficulty I feel is this: We shall come hereafter to address you upon matters which we are told are uncontradicted, and we can only put our gloss upon them.

(Chairman.) We wish to give you every facility we can.

(Mr. Harper.) I am sure you do.

(Chairman.) Do you challenge any statement in this particular balance sheet?

(Mr. Harper.) I have not seen it until this moment, and I want to ask a further question or two upon matters which have already been partially dealt with.

(Sir Robert Giffen.) I think counsel ought to be aware that these documents are in a sense public property. The balance sheets are published in various ways. I think he can hardly plead that he is not acquainted with them.

(Mr. Harper.) May I be forgiven for saying that I find tables mentioned in the evidence, and when I turn to the Appendices I find they are not quoted.

(Chairman.) It has been already said that the table referred to is nothing more than the balance sheet which you have in your hand at the present moment, and which is public property.

7681. (Mr. Harper.) You find no difficulty, as I understand, from this balance sheet, in separating the different branches of your business?—We can separate them roughly.

7682. I mean, this is not a mere separation for the purposes of the Commission, but it is actually your system of keeping your books?—These balance sheets have been made out on the same system as long as I can recollect.

7683. You divide it into "wood," "warehouse," and "dockage." Do you also work ships in your docks?—Grain ships we work, not timber ships.

7684. Is the working of grain ships profitable?—We probably should not continue to work them unless we found we had something out of it, but the profit is very small.

7685. You have pointed out that you are earning something like 5 per cent., or say 4 per cent., as the usual earnings of the dock company?—Yes.

7686. Are you coming here before the Commission with any proposal similar to that which Mr. Scott made for further works in consideration of the extra charges which you are seeking to get the Commission to report you should be entitled to make?—We have had very large new works in hand for some years, which are now drawing towards completion. We hope, when they are finished, that we shall have adequate accommodation for all the work that comes to our docks. If we find it necessary afterwards to still further enlarge them, undoubtedly we shall do so, but we have no plans in view at present.

7687. That capital has been expended on these works and has come into charge against revenue, has it not, already?—You are not speaking of the £484,000, are you?

7688. I am speaking of the heavy works which you say you have had in hand for some years. You, of course, have had to raise capital for them, and pay as you went on?—Yes.

7689. And you have had charges on your revenue for these new works?—Yes.

7690. And in spite of that, last year you still had 4 per cent. as your dock earnings?—We get the advantage of a certain portion of the works. For example, we have one large dock basin quite complete which we use, but a very considerable portion of the money expended is still unremunerative.

7691. Now one question with regard to barge traffic. Have you separated at all as Mr. Scott did the proportion of barges that would be free from charges under your proposal. Coal, I understand, is not to be charged; and your own barges are not to be charged?—We propose to charge only on these goods which are loaded into barges, on which the dock company has received no remuneration.

7692. I understand that, but I want to know what proportion of the total barge traffic of your docks would that charge be leviable upon, including in the total traffic your own traffic and your canal traffic. I do not

know whether your engineer is coming, or anybody who can give us these figures?—You want to know the number of barges which would be subject to dues?

7693. Yes, the total number making use of your docks?—I have taken it out as 10,221.

7694. Those are barges?—Yes, barges taking goods overside and passing into the river.

7695. Passing out into the river?—Yes.

7696. That is out of a total number of about—what?—22,000. It might be convenient if I furnish you with a detailed answer, which I have here in the form of a table.

Statement of the number of Barges which entered the Surrey Commercial Docks in 1899 to take goods overside, to load from the Company's Quays and Warehouses, or to pass up the Canal.

Barges taking goods overside.

	No. of Barges.
Deals, patterns, and boards-	5,495
Other wood goods	1,891
Grain	1,187
General	1,648

Total overside - 10,221

Barges loading goods in Quay or Warehouse.

(Estimated.)

Wood goods	4,350
Grain	1,708

16,279

Entered for canal - 5,774

22,053

7697. Does not the same difficulty occur very often with regard to grain that you have with regard to warehousing accommodation?—No.

7698. Was it not congested last autumn, for instance?—We have never had our granaries full for the last three years.

7699. What proportion of storage had you left?—At least one-third.

7700. One-third of your total granary capacity?—Yes. Of course, I am here to explain the matter to the Commission as well as I possibly can, and I may explain that we may have had occasion to refuse to receive a grain steamer at a certain time into our dock, because the dock in which alone we can conveniently discharge the grain steamers was full at that moment; but we had room in our granaries, and if the steamer would have waited a very short time she could have got into our dock.

7701. You have only a limited berthing accommodation?—While the new works are going on. When our new works are completed we shall have, I may say, accommodation for as much as is very likely to come to us.

7702. And those new works were being carried out while you were going to Parliament to repeal this exemption?—We felt that we must carry out those new works.

7703. It is the fact, is it not?—Yes.

Cross-examined by Mr. Rowland Whitehead.

7704. I want to ask you a few questions with regard to the system of unloading timber at your docks. First, I will ask you a question with regard to a statement in a Report made by the Board of Trade in the year 1900. It is called "Report on Standard Piece Rates of Wages and Sliding Scales in the United Kingdom." I give you that reference so that you may understand what I am going to read from. It is page 264. Can you tell me whether this statement is true or not: "Timber porters—London.—The work of landing, sorting, and piling timber and delivering it into barges or land carriage in the Surrey Docks is performed by gangs of labourers, consisting of (1) Contractors, who take the work at piece prices." Is that so?—Yes.

7705. "(2) Day labourers (termed 'strappers'), who are employed by the contractors at a time rate of 1s. per hour."—Substantially, that is so.

Mr. W. K.  
Malcolm.  
22 May 1901

**Mr. W. F. Malcolm.** 7706. "The gangs consist of a varying number of men, according to the size of the vessel, and other conditions."

**May 1901.** (Chairman.) You must be careful not to touch on any labour question.

(*Mr. Rowland Whitehead.*) Yes, my Lord, I am not going to, but I think this is the shortest way of doing it.

7706A. "The contract piece rates (which are for labour only) are settled every year between the representatives of the men and the Dock Company." Is that the representatives of the contractors and the dock company?—The contractors settle with the dock company, and agree the prices, but certainly they do not do so without the concurrence of the general body of men.

7707. Then it goes on: "The following list of piece rates in force is dated April, 1898. The terms used are for the most part easily understood, and require no detailed explanation." Then the report sets out a series of charges. I am not going into it in detail. I only just want to test the principle on which the charge is based. I will take one illustration. "Scantlings 6in. and under in width." Then there is a charge first of all for "landing, sorting, piling, and placing under cover when required." I daresay you can tell me from memory whether that is a charge of 3s. 3d. Have you ever had this report before you?—No, I have not.

7708. Then I will not take you actually through the amounts, but I will ask you—is this the system of charging. First of all, a charge for landing, sorting, piling, and placing under cover when required?—Yes.

7709. Then there is a charge for "delivering into barges or land carriage"?—I have not been prepared with the information which would enable me to answer the questions you put to me.

7710. I will take it in this way. Do you know what is described in the timber trade at your docks as a "prime rate"?—Yes.

7711. There is a prime rate at the present time, is there not, of 7s. for scantlings 6in. and under in width?

(Chairman.) You will be very careful, Mr. Whitehead, please. What I suggest is that you should not ask any question as to the reasonableness of the rate. As to the system or method we are quite with you.

(*Mr. Whitehead.*) I am going to confine my question to that.

(*Witness.*) May I say that we can put in our book of charges, which speaks for itself?

7712. Take the prime rate, that is the rate which you pay to the contractors—the 7s.?—That is the rate we charge to the merchant.

7713. What rate do you pay to the contractors?—It is impossible to give an answer to a question like that which would be applicable to all cases. I may say that as the result of our charges, as I have already pointed out to the Commission, we make little or no profit at all upon the handling of goods. Our profit arises almost exclusively from rent.

7714. On the warehouses?—Yes.

7715. With regard to the question of warehousing, you are at the present time building new storage sheds for the timber trade, are you not?—We are not building any at present. We have some recently completed.

7716. Is that to meet the existing trade in timber, or is it to meet an expected increase?—We like to endeavour to keep well ahead of the trade that is to be expected, when we can.

7717. You have not answered my question. Am I to infer from that that it is to meet an expected increase?—My answer to that is that as far as regards accommodation for timber under cover, the proportion which merchants wish to have put under cover seems gradually to increase, and our shed accommodation is scarcely adequate to overtake the increased demand.

7718. Now will you turn to Appendix 6, which shows the quantity of sawn wood goods delivered direct from ship to craft. Take the first column. That shows the sawn wood goods actually landed in your docks?—Yes.

7719. The first figure for the year 1890 is 213,792 standards?—Yes.

7720. Then the figure falls fairly substantially for the next year; then it goes up and then down, follow-

ing an irregular course—sometimes up and sometimes down?—Yes.

7721. But so far as regards the actual amount of timber landed there is no tendency to a gradual diminution, is there? Take the year 1898. There you have 208,000 standards as compared with the year 1895, where you had 162,000. I have taken the average of those ten years, and I find that the average is about 185,000 standards. If that is correct, in the year 1899 you are very close to the average of the ten years. I understand your argument with regard to the proportion which you set out in the fourth column, but I am dealing now with the actual amount landed. There is no tendency to diminution is there?—No, not at present.

7722. Now with regard to payment for new works out of revenue, you made a statement when you were before the Commission previously, and you put in two Appendices—Nos. 10 and 19 of the 5th Day. In No. 10 you set out sheds for the storage of wood goods?—Yes.

7723. You have there some 22 or 23 different yards and sheds referred to?—Yes.

7724. Have the bulk of those been paid for out of revenue?—Not the bulk; a number have.

7725. I have compared it with Appendix 19, where you give a schedule of works charged to capital account. I see there that 15 out of the 23 are not referred to in the schedule of works charged to capital account?—It would require a very considerable time to pick out those that we have executed out of capital account and those that we have built out of revenue.

7726. I will not ask for it in detail. Can you give any figure to show how much in pounds, shillings, and pence you have spent out of revenue upon sheds for the storage of wood goods, say, during the last ten years?—I could not do that without ticking it all out, which would be a slow process.

7727. Now, passing to the question of the congestion in the docks, you have told the Commission that you have larger steamers coming to the docks to-day than you have had in the past. Are all these steamers able to get to the dock side?—No steamers that we have wanted to take to the quays of our docks have we been unable to take there.

7728. Is it not a fact that some of the steamers are unable to get to the quays of your older docks, and are obliged to discharge into berths?—Not to my knowledge. A number of our large steamers from the Gulf ports, bringing pitch pine timber, discharge their cargo in the basin. They lie in the basin, and do not require to come alongside the quay at all. They discharge into the water.

7729. Is not that for the convenience of the dock company?—Certainly not. Floating timber is never landed on to the quay.

7730. Are not your quays often blocked in consequence of goods not having been removed before fresh cargo comes up to be landed?—Our superintendent strictly forbids that being done. The goods of one steamer are cleared off the quay before the goods of another steamer are put there, but last year we were under desperate circumstances, and we had to adopt desperate remedies.

7731. So that with regard to last year it is true, but you do not regard it as the normal state of things?—It is by no means the normal state of matters.

7732. You told me a moment ago that you regarded the warehousing as an important source of your revenue?—The rent.

7733. With regard to the rent and your warehousing charge, does not that commence, generally speaking, from the moment of breaking bulk?—In a certain class of goods it does—goods to be put under cover; but with regard to the class of goods to be left in the open it will be found, on referring to our dock charges book, that it does not do so.

7734. So that there is no pecuniary interest of the dock company which would urge them to expedite the removal from the barges or from the ship?—Considering that the cost of the barges is probably six times what we gain in rent and goods, we have every object in expediting discharge from the barges as much as possible.

7735. Can you tell me what is the rent you receive, say, per acre, for the piling of the goods?—I have never calculated it out in that way.

7736. Your accounts do not show that?—No; they do not show that.

7737. Have you made any effort to get mechanical appliances, such as those referred to by the Millwall Dock Company, for dealing with timber?—We have considered the question very often, but we stand in quite a different position from the Millwall Dock Company. This piece of ground which they intend to occupy for wood goods lies at a very considerable distance from the place where the vessels discharge, and the mechanical means are adopted for the transport of goods from one part of their dock to the other. After they arrive there, they must still go through the process of piling and sorting, and all those processes which are necessary before a return could be rendered. Our docks do not stand in that position. We have no part of our docks at such a great distance from the vessel to the place where the wood goods are piled requiring these mechanical means. At the same time, we have always had under consideration the idea of using mechanical means as much as could possibly be done, but where we are baffled is this. In a cargo of wood goods there may be a million pieces of a thousand different sizes, which no machinery can deal with, so that it must ultimately come to the handling for picking out the different sizes and piling them away separately.

7738. And at the present moment you rely entirely on hand labour?—We do not rely entirely, but practically we do rely on hand labour.

7739. There is no direct railway communication with your docks, is there?—We do not rely upon railway accommodation for the working of our docks in any way.

7740. Have you endeavoured to secure railway communication?—We have had that under consideration for a long time. The difficulty is that the cost and the value of the ground which the railway communication would require is more than the benefit we should get from it.

7741. Now one general question?—Do you think it desirable that you should have this increased power of charging goods which is proposed by the London and India Dock Company?—Yes.

7742. Do you think that there should be a uniform scheme throughout the Metropolis in that respect; that it should apply to all docks?—I think it would be decidedly preferable if there were.

7743. Both those that exist to-day and any future docks that are constructed?—That is a question I have not considered.

7744. But if it were not made universal in London, those docks which had the power of charging would obtain a monopoly, so to speak, of that particular power?—I think that those docks which did not charge would be more likely to attract business from the docks which did charge.

(Mr. Harper.) My Lord, may I ask one question?

(Chairman.) Yes.

Further cross-examined by Mr. Harper.

7745. I understood you to tell me that your dividend last year was 5 per cent. Will you look at the last paragraph of the report you handed to me. "The directors recommend that a dividend of £2 10s. per cent. be declared on the Ordinary Stock, and on Preference Stock A"—

(Chairman.) That is the balance-sheet for the year 1899.

(Mr. Harper.) "Making with the interim dividend of £2 10s. per cent. paid in October last £5 for the year." That is on both stocks is it not—ordinary and preference?—Ordinary and preference "A."

7746. "And in addition a bonus of £1 per cent. all free of income tax"?—The balance-sheet of which year are you reading from?

7747. From the one you handed to me—1900?—That was put in last year, but our Report for 1900, which came out in March last, shows that the dividend was only 5 per cent., and there was no bonus.

7748. You handed me a document which purports to bear date February, 1900?

(Chairman.) As I pointed out just now, that is the balance-sheet for the year 1899.

(Mr. Harper.) I beg your pardon.

(Chairman.) At Questions 1748-51 you promised a table of the number of vessels that have been detained from entering the Surrey Commercial Docks in consequence of the depth of water in the river. Have you given us that?—I think our engineer, Mr. Gaskell, who gave evidence after me, explained that I had given the answer to Question 1748 under a misapprehension.

7749. (Mr. Ellis.) Now, will you turn to Question 1835. You promised a statement of how much of the 907,347 tons consisted of vessels drawing more than 22ft. ?—That statement was put in by the engineer at Question 1928.

Sir ALEXANDER RICHARDSON BINNIE recalled and further examined.

7750. (Chairman.) You are, as we know, the chief engineer of the London County Council?—Yes.

7751. We have had some complaints as to the insufficiency and narrowness of the thoroughfares in the neighbourhood of the docks. You have, we understand, prepared a plan in connection with the access to the docks, and showing the present position of the railway communication therewith?—Yes.

7752. Will you kindly hand in the plan and tell us what you have to say on that subject? (The witness handed in plan).—The functions of the London County Council and its predecessors have more to do with through arterial communications, which may be considered of a metropolitan character, than with the widening of smaller streets, which are generally considered to be matters pertaining to the local authorities. An inspection of the map of the docks which lie within the County of London will show that on the north side of the river all the principal docks are situated to the southwards of Commercial Road East, East India Dock Road, and the West India Dock Road, which form a system of communication of the very best description. The Council and its predecessors, the Metropolitan Board of Works, have from time to time carried out, or are carrying out, street improvements, bridges, tunnels, etc. In the lists which I give will be found fifteen works which the Council has carried out or for which it has power to construct, and which works are proceeding. The total actual and estimated cost of these works is £4,965,237. There is attached to the plan a table and also numbers

of each of the works. The improvements already completed or in course of execution are as follows:—

No. on Map.	£
1. Sandys Row, Bishopsgate - - -	53,426
4. Old Gravel Lane Bridge widening - -	14,000
5. Preston Road bridge, widening - -	68,774
6. Lincolns entrance bridge, widening - -	
7. City Arms bridge, widening - -	
8. Manchester Road bridge, widening - -	66,900
9. Evelyn Street, Deptford - - -	
32. Barking Road bridge - - -	44,680
35. Blackwall Tunnel street improvements and approaches - - -	1,380,532
36. Woolwich Free Ferry - - -	182,775
	1,811,087

Then I give a table of the works proposed to be carried out. These are works for which we have obtained powers, and some of them are actually in course of construction.

Works proposed to be carried out.	£
2. New street, Tower Hill to White-chapel - - -	216,500
3. New street. Tower Bridge to Old Kent Road - - -	394,000
10. Long Lane, widening - - -	190,400
33. Rotherhithe Tunnel and street improvements - - -	2,198,250
34. Greenwich Tunnel - - -	155,000
	3,154,150

Sir A. R. Binnie.

22 May 1901.

See 2271; 5184.

*Sir A. R. Binnie.* Besides the above, the Council has contributed to works executed by the City of London the following amounts:

	£
11. Widegate Street, Bishopsgate - -	29,875
12. Upper Thames Street, widening - -	12,500
13. Lower Thames Street, widening - -	50,000
14. Mansell and Middlesex Streets, widening - -	52,750
	<hr/> 145,125

It will thus be seen that the Council have constructed works, or contributed towards those constructed by the City, £1,956,212; and have obtained Acts for, and are carrying out or about to carry out, works to the value of £3,154,150. Then I have a list of works carried out by the predecessors of the County Council—the Metropolitan Board of Works:—

Street improvements carried out by Metropolitan Board of Works.

	£
15. Southwark Street improvement - -	366,070
16. Burdett Road improvement - -	38,204
17. Commercial Road extension - -	202,225
18. Wapping High Street, widening - -	216,533
19. Shoreditch High Street, widening - -	121,816
20. Bethnal Green Road, widening - -	196,509
21. Great Eastern Street, widening - -	276,012
22. Tooley Street, widening - -	378,089
23. Jamaica Road and Union Road, widening - -	71,173
24. Tower Hill, widening - -	80,435
25. Great Tower Street, widening - -	500,000
26. Canterbury Road Bridge, Greenwich - -	5,670
	<hr/> 2,450,736

Then the Metropolitan Board of Works also contributed towards works carried out by the City. The following is a list of the street improvements to which the Metropolitan Board of Works contributed:—

	£
27. Aldgate High Street - - - -	10,497
28. Lower Thames Street - - - -	916
29. Upper Thames Street - - - -	15,975
30. Leadenhall Street - - - -	9,884
31. Fenchurch Street - - - -	60,340
	<hr/> £97,612

We thus have works already executed by the London County Council or its predecessors to the value of £4,504,560, and works proposed, partly constructed, or about to be constructed, £3,154,150. These together make a total of £7,658,710. It should be noticed that beyond the county boundary (coloured green upon the map), the London County Council have no jurisdiction. The map also shows by black lines the railway communications and depots of the different large companies situated near the various docks.

7753. Are we to understand that the whole of this amount of 7½ millions is to be or has been expended on the improvement of public thoroughfares leading to the docks?—Directly or indirectly leading to the docks.

7754. Is that so?—It is all in that eastern part of London.

7755. It all gives benefit to the docks?—Yes. In fact, during the last eleven years all the improvements with which I have been connected that are shown upon that map, have been brought before the County Council primarily by the local authorities on the plea that they would give the required accommodation.

7756. Do you mean to tell us that the whole of this expenditure will benefit the docks?—Undoubtedly, it has benefited, and will benefit them.

7757. Not indirectly, but directly?—Yes.

7758. You told us just now that you had powers for such and such works. What do you mean by that?—Parliamentary powers. There are no works here for which we have not obtained Parliamentary powers.

*Mr. G. L. Gomme.*

7769. You are, as we know, Clerk to the London County Council?—Yes.

7770. You now appear before us to give evidence with reference to certain foreign ports?—Yes.

7771. It is evidence which was asked for at Question 3362?—Yes, and again at Questions 3385 to 3394 it was referred to.

7759. As far as the financial part of the question is concerned, you have not as yet, I suppose, borrowed the money?—Part of it must have been expended. I have mentioned among the works proposed to be carried out a new street, Tower Hill to Whitechapel, and a new street, Tower Bridge to Old Kent Road. That is partly expended. I know part of the works are already carried out, and a great deal of the land is already bought; and in the same way with Rotherhithe Tunnel. A large amount of the land, I know, is purchased. Greenwich Tunnel is nearly finished.

7760. (*Sir Robert Giffen.*) Will Rotherhithe Tunnel be of much benefit to the docks?—Yes, a very great benefit, because connected with it are street improvements at both ends. Perhaps you will allow me to point it out to you on the map? (*The witness explained on the map to the Commission.*) Starting from London Bridge along the red line the Metropolitan Board of Works widened Tooley Street. Another widening took place, and in continuation of the Tooley Street widening there are several other widenings, making a direct communication between London Bridge and the Surrey Commercial Docks. The Rotherhithe Tunnel improvements on the Surrey side of the river near the docks not only involve the construction of a tunnel, but the widening of the streets leading to the Surrey Commercial Docks. In the same way on the north side of the river, besides the tunnel, there are large works of improvement of the streets in the neighbourhood of the Regent's Canal Dock and of the Borough Fish Market at Rotherhithe. For instance, works 6, 7, 8, and 9 have been constructed within the last few years. No. 6 embraces the street improvement and a bridge over the entrance to the West India Docks; 7, and in the same way, 8 and 9 were all very important improvements not only as giving facilities for the passage to the docks, but the streets were widened in the vicinity of the docks to facilitate traffic for the whole of the Isle of Dogs.

7761. (*Mr. Peel.*) When you say "proposed," I suppose you mean sanctioned by the County Council?—Yes, sanctioned by the County Council and sanctioned by Parliament, and part of the money expended. I have not brought into the account anything for which Parliamentary powers have not been obtained.

7762. (*Mr. Ellis.*) I think we have it clearly from you that this has arisen out of the docks?—This has arisen out of the docks and the accommodation necessary to connect the docks with London.

7763. In other words, if the docks had not been there most of it would not have been required?—I do not think it would have been required.

*Cross-examined by Mr. Scrutton.*

7764. The City contributes about one-eighth of the rate substantially?—Yes, about that. It is one-eighth of the valuation, at all events.

*Cross-examined by Mr. George Wallace.*

7765. Do you suggest that these improvements were improvements carried out with reference to the docks alone?—Not with reference to the docks alone, because you cannot dissociate the docks from the population who live in the neighbourhood of the docks.

7766. You would not suggest that works done at Leadenhall Street were for the accommodation of the docks, would you?—It accommodates traffic going to the docks.

7767. That is cartage traffic going to the docks and also the cartage traffic going to the East End of London?—Of course, you cannot accommodate one without the other.

7768. You have not attempted to separate the dock cartage traffic from the other traffic, have you?—That would be impossible. It would only be a matter of statistics at the best.

*Mr. GEORGE LAURENCE GOMME* recalled and further examined.

7772. Will you kindly give us that evidence?—In accordance with the request made by the Commission in the course of my evidence on the 13th December last, I have prepared a memorandum relating to the chief Continental ports on the North Sea and English Channel. These ports are eleven in number, as follows (in order from north to south):—Hamburg, Bremen-Bremerhaven, Amsterdam, Rotterdam, Ant-

werp, Dunkirk, Calais, Boulogne, Havre, Rouen, and Cherbourg. The information is, as far as possible, summarised from the reports of the British Consuls at the ports. For this purpose the reports relating to each of these ports have been examined since 1863, when they were first published in their present form. In that year reports were published relating to several of these ports, the first reports being either for the year 1861 or 1862; all the eleven ports were covered by the reports in the years soon after 1863. The extracts from these reports, upon which the memorandum is founded, I will hand in. These extracts have appeared to me so valuable and instructive, as indicating the circumstances of each port from time to time, the considerations which led to the effecting of port improvements, and, in fact, as so well serving to illustrate the question of port accommodation as a whole, that I have thought it best to have them printed at length. The history outlined by these extracts leads up to the present position of the ports in all respects, and this is dealt with in the valuable special report, "Commercial, No. 5 (1900)." To complete the history I have also included extracts from that report, converting the figures where given in foreign measure into English measure, so that the information may be more readily useful. In order to place before the Commission such a memorandum on the subject as they desire I endeavoured to supplement the information on various points in the reports of the Consuls by particulars from other sources. I accordingly applied to the Consuls at these ports for information on particular points, and I wish to acknowledge their invariable courtesy and the readiness with which they supplied me with information as far as they could do so. On the question of the proportion in which the cost of port improvements has been borne by the State and by the port authorities, and the proportion in which the cost of maintenance is met by port dues and charges, general municipal rates, or contributions from other sources, I have not been able to obtain anything like complete information. It appears, in fact, that such particulars are not always readily available to the authorities themselves. On this part of the subject I can only present such particulars as can be gleaned from the Consular reports. The question of dues and charges at the ports I deal with separately, with the object of getting, as far as possible, a comparative statement for these ports and for the Port of London. I will now hand in the memorandum and the extracts from the Reports of the British Consuls.

*(The witness handed in a memorandum on the principal points of information obtained from the British Consular reports relating to the chief Continental ports on the North Sea and English Channel. See Appendix, 21st Day, No. 8.)*

*(The witness also handed in extracts from the reports of the British Consuls at the chief Continental ports on the North Sea and English Channel relating to port administration, improvements, and accommodation. See Appendix, 21st Day, No. 9.)*

7773. If there is anything in your memorandum to which you particularly desire to call our attention will you please do so with regard to each port?—First, with regard to Hamburg. The whole of the port and port arrangements, with the exception of certain warehouses, which belong to a company or companies, and one quay let to the Hamburg-American Packet Navigation Company, are (according to the Commercial Report, No. 5, 1900) the property of, and controlled by, the Hamburg State. The quay administration provides equipment and labour for the loading and unloading of goods. Then, on the question of port improvements and accommodation. The history of the present condition of this port begins on the 1st October, 1888, the date of the incorporation of Hamburg with the German Customs Union, or, more correctly, with the completion of the arrangements for that incorporation, commenced some six or seven years earlier. In the years from 1880 to 1888, the Port of Hamburg was transformed by one vast scheme of improvement, carried out in connection with the incorporation. Then, I give the main points of that scheme, which included the clearing of a great part of the old town, involving "upwards of 1,500 houses and buildings, tenanted by 15,000 persons," providing a building area for warehouses of 10½ acres, and for a canal 27½ yards wide to be cut through it, and the cutting of a canal 2½ miles in length, 49 yards wide, and 49 feet in depth, from the upper port to the inner one, and the

construction of the necessary warehouses and sheds along the quays. The cost of the whole scheme was (according to the report for 1887) "not less than some £6,000,000." In the report for 1882 it is stated that towards the estimated cost of £5,000,000, the Imperial Government would contribute £2,000,000, while the annual payment of £250,000 then made by the State of Hamburg to the Imperial Treasury for exemption from the Zollverein would cease.

7774. And was the original estimate found insufficient, in fact?—It was found insufficient in fact, but I am not able to state whether the Government contribution was increased in consequence. The next important point, I think, is that referred to in the 1897 report, which states that two public warehouses, costing £300,000, were then being erected, and the last available portion of ground for building warehouses had also been acquired by the Hamburg Government, at a cost of about £500,000, whilst, according to the report for 1899, scarcely any space remains for providing more harbour accommodation, and "the question is being at present considered of modifying the existing arrangements which have been made for river craft, so as to gain more room for sea-going ships." The accommodation as it now stands (according to the special report of 1900) is about 957 acres. Then, in the report for 1900, there is a very valuable summary of the conditions of Hamburg, which says that "the quays are under the administration of a Board, are well furnished with sheds for receiving the goods, suitable steam cranes, and railway facilities, and lighted with electric light. The quays and receiving sheds are models of practicability. Strongly built, roomy, and accessible in every way, they afford the best possible means for the rapid loading and discharging of vessels. These operations are usually carried on by means of cranes, which on the quays are both movable and stationary. Generally for each hatchway one crane, with the necessary workmen, is provided by the Quay Administration. There are railway tracks on all the quays and behind all the sheds, upon which merchandise and coal can be transported to the vessels' sides. Behind each row of sheds runs a well-paved street for the transport of goods by vehicles. The loading and discharging of river vessels is performed under the same conditions. Goods arriving and being dispatched by rail are discharged and loaded by the Quay Administration. Vessels having to load or discharge heavy goods weighing more than 2 tons can do so at special cranes, and have only to pay for the usual crane dues for hoisting and lowering such heavy goods, but no space dues." Then the deepening of the Elbe is a very important part of the condition of Hamburg. A paragraph in the report for 1870 says that thirty years ago "All vessels drawing more than 17 or 18 feet of water are compelled to discharge a part of their cargo into lighters at Stade, about 20 miles below Hamburg, the expense of which falls upon the ship, and gives rise to frequent disputes." Then in various reports, between that date and 1898, improvements in the Elbe are noted until, in the report for 1898 it says that large sums had been spent by Hamburg and Prussia in deepening the river between Hamburg and the sea, but "the rapid growth in the dimensions and draught of sea-going ships has at times outrun the efforts of the engineers employed in providing a sufficient depth of water for the same. During the past two years, however, extensive works for regulating and correcting the course of the Lower Elbe, and thereby deepening the navigable channel, have been actively carried on, and will be brought to an end in the year 1900; the costs contributed by Hamburg alone towards these works being £350,000." Then I give a summary of the cost of these various improvements, as they are quoted in the Consular reports, amounting to £8,790,000; but this is evidently incomplete, and does not contain the whole cost, as is proved by Question 5497 by Mr. Pogson, who stated that the total cost was something like £15,000,000, so that the whole of the items are not included in the Consular reports. Then I would direct the attention of the Commission to the table relating to shipping entered at the Port of Hamburg, where I have given the total shipping entered, and opposite each year I have put the various improvements as they have occurred. It will be noted that, where improvements occur, very considerable improvement in the tonnage also occurs. I have treated each port in the same manner as I have treated Hamburg. With regard to Bremen-Bremerhaven, the deepening of the Weser is an important part, showing what a large pro-

ject had to be carried out for the purpose of improving this port. That was first dealt with in the report of 1880, where it was stated that it has been proved that if the scheme of deepening suggested were carried out more than one-half of the imports of the Weser could go direct to Bremen. The scheme involved a deepening of the river to provide for a draught at Bremen of 16·4ft. at high water and 13·1ft. at low water, and was estimated to cost a total of £1,463,750. It appears that Bremen contributed the whole cost of the deepening. At first it looked to the other states interested taking a part in the work, but in 1884 it had "become more and more evident that the deepening of the whole channel of the river Weser from Bremen to the mouth, a project of vital importance to this city will have to be carried out by the Bremen State alone," and that was so carried out. Then there were various improvements at Bremen amounting to £4,287,000. I have no doubt that those are not really the complete figures.

7775. (Mr. Ellis.) When you say these figures are incomplete, in what respect are they incomplete?—They are only the figures that are actually quoted in the various consular reports, and I cannot help thinking that there are other figures to be added to those if enquiry were made.

7776. They are not inaccurate; they are only incomplete?—Yes.

7777. You will be very careful about accuracy, of course?—Yes. I suggest that they may be incomplete, but they are not inaccurate as far as they go.

7778. You will be careful about that, because this is not first-hand evidence?—Yes. Then I give the same kind of table for Bremen-Bremerhaven that I give for Hamburg. I give the shipping entered at Bremen-Bremerhaven, and I draw attention to the fact that there again, after the big schemes are completed, the increase of shipping goes on. Then the next port is Amsterdam. The State is the proprietor of the North Sea and North Holland canals and one dock, the Railway Dock. It formerly owned another dock, the Entrepôt Dock, but this has been acquired by the municipality. The municipality owns the harbor and docks (with the exception of the Railway Dock), having purchased the Petroleum Harbour from a private company and the Entrepôt Dock from the State. Various improvements in accommodation have taken place at Amsterdam. This quotation from the report of 1899 is perhaps the most important: "Amsterdam has done its best to keep pace with the other northern ports of Europe in providing accommodation for shipping visiting the port, and as the whole of the docks are in the hands of the municipality, which has always of late years made cheap and ample accommodation its chief aim, the port has become one of the cheapest in Europe . . . Dock and quay accommodation are sufficient for a very large trade. . . . A new entrepôt dock will now shortly be completed, which will bear comparison with the best installation yet known." Then there was the construction of the North Sea Canal, which was a very important event in the commercial history of Amsterdam.

7779. When you say "quotation from the report," what do you mean?—I am referring in every case to the Consular reports on which this memorandum is based.

7780. The British Consular reports?—Yes. Then the table of shipping entered at the port of Amsterdam is constructed in the same way to show how the improvements affected the trade.

7781. (Chairman.) Then you refer to Rotterdam?—Yes, the next port I mention is Rotterdam. There, with the exception of private warehouses, the whole of the arrangements of the Port of Rotterdam appear to be in the hands of the municipality. The port improvements and accommodation perhaps may be summed up in the words of the report for 1894, where it is stated that "the increasing demand for shipping berths has resulted in the Town Council voting £50,000 towards making a second harbour at Katendrecht," and "in addition to these works, it is contemplated building a larger dock lower down the river, and the necessary funds for this purpose, amounting to £750,000, were recently voted by the Town Council." I saw that harbour myself when I was at Rotterdam. The total sum mentioned in the reports, in connection with the Port of Rotterdam, amounts to £3,666,000. Then the table

showing the shipping entered at Rotterdam shows considerable increase following on the improvements that are set out there. Then as to Antwerp. The municipality is the port authority at Antwerp, and the whole arrangements, with the exception of the private warehouses, are in its hands. In consequence of the Government having contributed part of the funds for the construction of the quays along the river, it receives through the hands of the municipality a certain proportion of the dues. Very considerable improvement in accommodation has been made at Antwerp, but, in spite of that, in 1895 it was stated that "the crowding of the port constitutes a serious question." That is the port where the great quay system is adopted, and information is given as to that. Then there is a corresponding table given showing the great increase of shipping following on the improvements.

7782. Then as to Dunkirk?—At Dunkirk, as at all other French ports, the docks are the property of the Government, the administration of all port matters being in the hands of the Chamber of Commerce. Then I give an account of the improvements which have taken place, and the depth at which vessels could come into that port; and there is a similar table showing the shipping entered at Dunkirk at various dates, with the dates of the improvements affixed. Then as to Calais the same information is given. The port is in the hands of the Government of France. Very considerable port improvements have taken place, and it is very important there to notice that in the report of 1897, after reciting the accommodation and facilities of the port, which make it "a port of which the Municipality and Chamber of Commerce have good reason to be proud," it is stated that "a very different and long-past state of things" still placed the port at a disadvantage, as the old prejudice, created by the lack of accommodation, had not been removed. Then a table showing the increase of tonnage is given, and it is a considerable increase for Calais, which is not a very important port. Then the same information is given for Boulogne. There is nothing to distinguish this port from other French ports with regard to administration. The improvements are given in detail, and the total amounts to £1,154,950. Then the shipping is given in a special table, showing the improvements alongside. Then Havre is the next port to deal with.

7783. Do I take it that at Havre the docks are not the property of the Government?—Yes, they are the property of the Government under the Chamber of Commerce.

7784. So the same administration applies to Havre?—Yes, the same administration applies. There the question of the depth of the entrance of the port was a matter of considerable moment. That has been dealt with by constant dredging. It was originally 20ft. 2in. at neap tides, and now it is 25ft. 4in. They have established hydraulic lifts and sheds for the protection of goods on the quays, and carried out a very great deal of improvement at a cost of nearly £3,000,000, as set out in the table that I give in detail. The shipping there has grown very considerably, following the improvements which have taken place. At Rouen the administration follows the same course. Very considerable improvements have taken place there, which I have given in detail. Certain difficulties arose between the Government and the Municipality as to the lighting of the quays. The difficulties were ultimately settled, the State doing something and the Chamber of Commerce and the Municipality doing the rest. Dredging is an important part of the improvement of this port, and that has been done at considerable expense. It is important to note a paragraph in the report for 1895, which states that "this work, together with the others I have mentioned, are all details of a general plan, the governing idea of which is the removal of every hindrance to the free inflow of the flood tides." The total cost that I have been able to ascertain from the reports comes to £2,068,000. The shipping entered at the port is given, as far as I am able to give it, comparing it with the improvements. Then the next port is Cherbourg. There is nothing particular that I wish to draw the attention of the Commission to in regard to that port. Now if your Lordship will allow me it may be convenient to summarise the most important points revealed by the consular reports dealt with in regard to the administration and improvement of these ports. These points appear to be the following:—(1) That with few

exceptions the accommodation for shipping has been provided within the last 40 years, and for the most part within the last 30 years. Bremerhaven, Amsterdam, and Rotterdam are the chief exceptions, the rule applying to all the others, and, of course, to these ports in great measure as well. (2) That great natural difficulties have had in all cases to be overcome, and that a large part of the energies of the responsible authorities has been devoted to the carrying out of extensive and costly works for the removal of these natural difficulties. It is only necessary to mention the following: The shallow state of the Elbe to Hamburg, necessitating a large scheme of dredging; the shallow state of the Weser to Bremen, necessitating a large scheme of dredging; the long and shallow approach to Amsterdam by either the Zuyder Zee or the North Holland Canal, necessitating the cutting of the North Sea Canal; the difficult and tedious approach by the Brielle to Rotterdam, necessitating the cutting of the Hook of Holland Canal; the accumulation of sand banks in the Scheldt, necessitating extensive rectification of the river banks to facilitate the approach to Antwerp; the depth of the harbour and approaches at Dunkirk, Calais, Boulogne, and Cherbourg, necessitating extensive dredging; the condition of the Seine, necessitating continuous dredging and extensive dyking in the interests of the ports of Havre and Rouen. (3) That when many of these extensive schemes of improvement were undertaken the shipping was of comparatively small dimensions in view of the cost of the improvements proposed. (4) That accommodation has been provided to a great extent with a view of inviting fresh trade rather than of accommodating existing trade. (5) That the anticipations as to increase of shipping with which improvements have been undertaken have on the whole been fulfilled. (6) That the principle of providing for ships of the greatest draught from time to time appears to have been kept steadily in view.

7785. (*Mr. Ellis.*) Before you pass from this summary, I wish to ask one question. In the first place, have you been out to these places?—Not to all of them. I have been to four of them, Hamburg, Amsterdam, Rotterdam, and Antwerp.

7786. Can you tell me if, with regard to Germany, Holland, and Belgium, or France, or any of them, the naval aspect of the matter has entered into the expenditure of this money?—I think not, except perhaps, as far as Cherbourg is concerned; certainly, in all the ports I visited the commercial element was the only element in the consideration of which this expenditure was made.

7787. Then you think we may take it for granted that the money was spent *qua* commerce and not war?—I think so.

7788. (*Chairman.*) Now will you hand in your memorandum on the subject of port charges?—I only put these figures before the Commission with the idea that they constitute a proper comparison, although I can understand that in one or two cases they may not be quite complete.

(*The witness handed in memorandum on the subject of Port Charges. See Appendix, 21st Day, No. 10.*)

7789. Do these figures also come from the British Consular reports?—Yes, checked by any other information that I have been able to get; I do not rely only on the printed reports. I am satisfied that they are really good figures to put before the Commission. I first of all give a few details as to the system of charging in each port, which I think perhaps I need not trouble the Commission with, as it is all in detail in the memorandum, but I will come rather to the question of the comparison in the table of "Total port dues per ton net register paid by the shipowner." In that table the whole of the port dues are set out, the ports being arranged in order of amount of dues per ton net register from the lowest to the highest. And I have added at the end the corresponding figures for London, showing for all these different purposes the charge at the several ports. Of the broad results shown by these figures there can, I think, be little doubt. These results divide the ports into three groups:—(1) The ports of Amsterdam, Rotterdam and Antwerp, where the charges are exceedingly low, partly owing to the fact that the Imperial Government in each case has largely contributed to the cost of improvements, and has foregone all Imperial dues, and to the fact that the municipality, acting as the

port authority, has made it its object to keep the charges on shipping at the lowest point. (2) The ports of Hamburg and Bremen-Bremerhaven, where the Imperial Government has not come to any great extent to the aid of the municipality in meeting the cost of the extensive improvements that have been carried out. The port of Hamburg levies a considerable tax on the shipowner in the shape of a quay due to meet the cost of the improvements, whereas the State of Bremen levies a tax on the goods, which accounts for the difference in the charges on the shipowner at the two ports. (3) The French ports, where both the Imperial Government and the local authorities levy very considerable dues on the shipowner to meet the cost of the extensive improvements that have been carried out. This comparison, so far as it goes, can be made with almost absolute certainty. It must, however, be borne in mind that the figures are in nearly every case subject to modifications according to a variety of circumstances, such as the port of sailing or destination of the vessel, the number of voyages made in a year, the nature of the cargo carried, the proportion of cargo discharged, the fact as to whether the ship cleared with cargo or in ballast, and others. The charges in this table are the higher limit for each port, and may generally be taken as applying to an oversea steamer discharging a full cargo (but not taking into account dues in respect of deck cargo in London) and leaving in ballast. To pursue the comparison through these modifications would be difficult and uncertain, so that I keep to the one standard. The table does not include the dues on a steamer discharging at London in the stream, for the reason that the class of vessel to which this table is applicable would not discharge to any considerable extent in the stream, but would in nearly all cases have to go into the docks at London. Applying these dues to a vessel of 2,000 tons net register the charge would be as follows:—

	£	s.	d.
Antwerp (quays) - - - - -	26	5	0
Amsterdam - - - - -	30	0	0
Rotterdam - - - - -	31	5	0
Hamburg (stream) - - - - -	33	6	8
Antwerp (docks) - - - - -	43	15	0
Bremerhaven - - - - -	47	3	4
Cherbourg - - - - -	114	15	0
Havre - - - - -	126	11	8
Calais - - - - -	131	6	8
Boulogne - - - - -	141	13	4
Dunkirk - - - - -	159	1	8
Rouen - - - - -	167	18	4
Hamburg (Government quay) - - - - -	217	13	4
London (docks) - - - - -	120	3	4

7790. (*Mr. Ellis.*) Are you quite satisfied that you are comparing like with like all through?—I am absolutely certain, as far as I am able to judge, and I challenge any question on that. I have been very careful on that point. The second division of the port expenses borne by the shipowners, namely, that of charges, may be conveniently considered under two heads:—(a) Charges in connection with the navigation of the vessel, namely, pilotage and towage. (b) Charges in connection with the cargo, namely, loading and unloading, tallying, agency, brokerage, and minor expenses. The brokerage at French ports is a special item, which I describe. The pilotage is also a matter which is different with regard to each port. I have taken care to set out in the table the part that is compulsory, and the part that is optional.

7791. (*Chairman.*) You give us a comparison with London?—Yes. The estimate for London pilotage would be: In (Dungeness to Albert Dock), £16 10s.; out, £8 10s.; making £25; equal to 3d. per ton.

7792. You have been careful again to compare like with like?—Yes. Then, with reference to the discharging of vessels. The last of the main heads of the expenses borne by the shipowner is the cost of discharging the cargo, which consists in passing it from the vessel to the consignees' men, or those receiving it on his behalf on the quay, or in the lighter or at the ship's rail. Then I give some facts from the 1900 report on that on the different ports, showing the wages of the dockers for those purposes. I give a table showing the cost of discharging cargo per ton on different selected items. Then putting all these charges together, I give a summary of shipowners' expenses under the chief heads per ton net register at the various ports, showing London to be the dearest. Converting that into a charge for a steamer of 2,000 tons net register, it shows the charge

*Mr. G. L. Gomme.*  
22 May 1901.

Mr. G. L.  
Gomme.  
22 May 1901.

at Amsterdam to be £119 18s. 4d., and the other ports ranging higher until we come to London, where the charge would be £354 3s. 4d. I have not been able to give figures for some of the ports, because the information is not available.

7793. (Mr. Ellis.) Have you any doubt as to the accuracy of these figures?—I have no doubt.

7794. It would be a serious thing if we were to wade through all these figures and then their author throws any doubt on them?—I have no doubt, in my own mind, that they are correct; but, of course, when you are examining a large number of printed documents, which are not prepared for this special purpose, it may happen that in one year the information is not given on exactly the same basis, or in exactly the same way, as in another year, and in that way some small error might have crept in. I do not think it has, because I have compared it with the comprehensive report of 1900, which summarises this for the Government, and in that way I have been able to check it, I think, sufficiently to satisfy myself in my own mind that the figures are correct.

7795. You place them before us with a sense of responsibility?—Quite so.

7796. (Mr. Peel.) You have compared these ports in respect of the charges on the shipowner only?—Yes, that is so.

7797. You have no comparison as regards the different expenses on the goods?—No. That is so extremely difficult to get. It differs in each port. Some part of the charges which are thrown upon the shipowner in one port may be thrown upon the consignees in another port, and so on.

7798. I quite understand that. Of course, as regards the consumer, the important thing really is to know the whole of the charges?—No doubt that is so.

7799. Whether they are paid on goods or paid by the shipowner as shipping dues?—I think that is so undoubtedly.

7800. To make a satisfactory comparison from that point of view it would be necessary to take all those charges into account?—I think it would be necessary to take the whole of the charges until the goods are in the consumer's warehouse.

7801. As you say, in one case certain charges might be paid by the shipowner, and in another case they might be paid by the consignee or paid, as we say, on the goods?—That is so.

7802. (Sir Robert Giffen.) With reference to the figures you have given as to the cost of discharging, I see that in London the cost of discharging is given in the form of a tariff of the London and India Docks Company?—Yes; I have taken the tariff of the London and India Docks Company.

7803. But that would not apply to goods that are delivered overside, which the dock company have nothing to do with?—That is so. It would only be goods delivered on the quay.

7804. And that is a small part of the merchant trade of London; it is not the largest part?—No, it is not the largest part, but it is the only available information that I had for the purposes of comparison. The other charges would be a charge for lighterage and wharfage.

7805. In this case the expense borne has not much to do with an official charge in the shape of dock dues. A merchant receiving goods pays a competitive price for doing something, and it is not an official charge; it is a matter of regulation?—Yes, that would be so, no doubt; it is a charge for services rendered.

7806. And not an official charge in the shape of a tax?—No, it would be a charge strictly for services rendered.

7807. If you separate that item from the others, you can hardly say that London is the dearest port by any means. Take the dues, for instance. You find Hamburg, and Boulogne, and Rouen, and Dunkirk, and Calais are all as high as or higher than London?—That is so, taking the port dues as taxation. But that is only one part of the question.

7808. I am merely wishing to separate the element of taxation, which is the more particular one that we have to deal with, from the other elements?—Yes, that is so.

7809. I should like to ask a question with reference

to those statistics of shipping entering at the different ports (I think I mentioned this to you when you were here before), namely, whether you can separate the shipping entered in the foreign trade at these different ports from the shipping entered in the coasting trade. Before you answer I should like to mention the reason of my putting the question. If you give us the figure as to the shipping entered in the foreign trade, we have a figure which is strictly comparable as between the ports of this country, including London, and ports in foreign countries. It is all a question of the foreign trade. But if you give a figure of the coasting trade, we do not know that the mode of entering the vessels is precisely the same at all the different ports. I mention this particularly because in London two years ago the figure was taken one way, and last year the figure was taken another way, because a certain part of what used not to be the Port of London has now been included in the port. And these entries of shipping which used to be entered in the coasting trade are no longer entered. If these foreign figures are subject to qualifications of a similar nature one would like to know about them, and I ask whether you have any information to give upon the subject?—I am quite aware of the distinction which you make in the London ports. I have not been able to separate the foreign trade from the coast trade in all these ports. It could be done; in fact, I have material for one or two ports, but only for a few years, not for a series of years. With reference to whether there has been any change in the figures in the foreign ports, I do not think that is so, because all these figures are compiled in the first instance not by me, but by His Majesty's Consuls, and I take it they would not compare unlike quantities without giving a note to that effect.

7810. I do not like to question the value of the information given by His Majesty's Consuls, but I should like to know whether any of them have drawn attention to points of that kind?—No, they did not do so; I have been careful to note any change that has taken place.

7811. Apart from changes from time to time it would be very important to know that when a certain foreign port gives so many ships entering in the coasting trade, the mode of entering and the way in which the ports in the coasting trade are treated is much the same as it is in this country. It might be quite possible, for instance, that a particular port would put down a vessel as coming in in the coasting trade which in London would not be entered because we consider it to be practically in the same port?—I am aware of that possible difficulty. My only answer to it is that there is no indication in any report that any change of system has taken place.

7812. Apart from tonnage I am very anxious to know what the system is—whether we get precisely the same figure or not?—I am unable to give that information, but I should like to point out that occasionally in the Consular Reports where there is a change of any kind which makes a distinction between the figures of one year and another year it is indicated. I have in one or two places noted that there is a different system of reckoning which is duly noted.

7813. Yes, I noted that?—So that as it has been noted in some instances, I have assumed that it is noted wherever a different system is introduced.

7814. That would not cover the case of a custom in our country being to omit entering a vessel which comes from the same port, no matter from how distant a place in that port, so long as it was legally from the same port, although the practice in another country might be quite different. That might make a serious difference, might it not?—Yes; I quite follow that it might.

7815. You cannot give us any idea, therefore, taking for instance the large case of shipping entered at Hamburg, what particular parts of the world that shipping has come from?—No, I cannot. In some of the reports there is information given as to particular increases or decreases in certain shipping, and it is a very important thing to know that in 1892, for instance, the plague was at Hamburg, and there was a decrease in the shipping there; and the same applies to Antwerp, too. There was a very considerable decrease. That decrease is due principally to the South American trade leaving Hamburg at that particular time, and it was followed immediately by a very considerable increase in the London shipping. That rather confirms the point that I put before the Commission in my evidence-in-chief, that if there is a difficulty in a port, the shipping of

that port will go elsewhere, just the same as an improvement in the port will attract shipping to it. That seems to me to be one of those concrete cases that I have been anxious to quote.

7816. Is it not the case that the chief trade of these ports of Germany, Holland, Belgium, and France, which you have been giving, is trade with the United Kingdom, so that if they had been increasing so much, the trade of the United Kingdom must also have been increasing?—It is no doubt to a considerable extent trade with the United Kingdom, and to that extent of course you get corresponding increases. But in the instance that I have just now given, where there is a very large falling off of a particular trade, the South American trade, because of a difficulty at the port, I come across, I think, one of the most telling examples of where a difficulty at the port (in this case the plague) takes away the foreign trade and that foreign trade has to seek its outlet somewhere else.

7817. The entries of shipping at Hamburg from South America at any time would not be very large, and would not account for very much of that eight millions of entries which you have given?—No, it would not account for very much. I am only giving you that as a sample of what occurs.

7818. I find looking at our own navigation returns, that there is a comparative table for five years. The clearances of shipping to Germany in 1895 were just under four million tons; in 1896 they were 4,118,000 tons. Then in 1899 they were 4,489,000 tons. That would be a very large part of the shipping that was afterwards entered in Germany, would it not?—Yes, I think so.

7819. Then turning to the other side, entries of shipping in this country from Germany, I find that they increased from 4,206,000 tons in 1895 to 5,188,000 tons in 1899?—Yes.

7820. A very large increase, and showing a very large proportion, I should imagine, of the whole of the shipping trade of Germany?—Yes, that would be so.

7821. So that practically in these figures of shipping at the Continental ports, and then at our own ports, we are practically dealing very much with the same figures?—To some extent no doubt that is so; to the extent that the trade of Germany is coming to Britain, and the trade of Britain is going to Germany, no doubt that would be so.

7822. I really wished to bring out the point that it was a rather important hiatus in the information, that we have no view of where that shipping entered at Hamburg and the other places comes from, or where the clearances of shipping go to?—No.

7823. It would have been a very important addition to the information?—It would.

7824. And it is rather a pity that we have not got it. Whether we shall get it before the close of the inquiry I am not sure, but it would be an important matter?—Yes, very important. I might perhaps say that although the shipping from Germany to Britain would be as you have reminded me, it is not only the question of the shipping from Germany to Britain, but it is the question of the shipping from Germany to London that I am now concerned with before this Commission. In comparing that we find that London is not receiving so much per cent. of the total as other ports in the kingdom are, and that is the point that I lay stress on, rather than the fact that a good deal of this shipping is a matter of commerce between Germany and Britain.

7825. A large part of that also would be a part of the short sea voyage trade, a good deal of which would not go into the docks?—No doubt that would be so. I am not speaking of the docks—I am speaking of London as a whole. My previous answer did not relate to the shipping that went into the docks, but rather shipping that came into the Port of London.

7826. Still, as that trade is of a kind that does not go into the docks very much, it would not affect the prosperity of the docks very much?—Not of the docks, but of the port, yes.

7827. (Mr. Ellis.) Have you any maps with regard to this?—I have put in all the maps that I had on my previous examination.

7828. (Mr. Daldy.) Have you put in the table that you have prepared showing the comparative increase

in the tonnage of the shipping. You have a separate table for that, I believe?—I was referring to that just now. Shall I put in the table?

(Mr. Daldy.) I think the Commissioners would like to have it. I should like to have it put in.

(Chairman.) We should like to have it.

(The witness handed in a table showing the comparative increase in the tonnage of the shipping entered at the ports of London, Hamburg, Rotterdam, and Antwerp in the years 1889 to 1899. See Appendix, 21st Day, No. 11.)

7829. (Mr. Daldy.) With reference to the evidence given by Mr. Scott, I think it was examined in your department and you had a memorandum prepared upon it. Of course, I am not asking you to comment on it in any way, but if there are any matters of fact in it which you think it is important to dispute, it might be well to mention them if you have the memorandum before you. I do not know whether that may be so, but if you will just look at it I think it is convenient now, before you are cross-examined, if there is anything you want to say about that?—I should only like, perhaps to put it in this way, that I have read very carefully through Mr. Scott's evidence, and although some of that evidence appears to me to be suggested by my own, yet after consideration of that evidence I have not seen occasion to alter either any of my figures or any of the deductions which I drew from those figures. I do not know that I need go into it further than that, unless, of course, the Commission wish me to.

Cross-examined by Mr. Scrutton.

7830. In your evidence, is there anywhere any reference to the effect on the figures you give of shipping, of the large subsidies that Governments have been giving to foreign shipping?—No; the only things I have given are subsidies which the Governments have given towards these port improvements.

7831. For instance, the large subsidies that the German Government have given to the North German Lloyd, the Hamburg and South American, and other lines, and its effect of increasing German trade. There is no reference to that?—No.

7832. The fact that the Government are subsidising steamship lines to a large extent will, I suppose, probably account for some of the increase at the various ports?—It would account for something. I suggest that even subsidies cannot direct commerce.

7833. Subsidies may run ships, though they may not put the goods in them. I think I am right in saying that, in the table you have given of shipping entered at the port of Rotterdam, Rotterdam shows a very remarkable increase?—Yes.

7834. I think in the last five years Rotterdam has added 50 per cent. to its tonnage of shipping?—Yes, it has.

7835. Is the impression that you got from your researches that Rotterdam is one of the most dangerous competitors for foreign trade?—I think it is recognised as such.

7836. A large amount of transshipment trade which used to come from the east and other parts to the Continent through London, left London at the time of the great dock strike?—Yes; I think that is so.

7837. And apparently has not come back. Apparently that trade has gone directly to the Continental ports instead of coming to London as it used to?—I think that is so.

7838. I want to ask you about some evidence given when counsel were not present. At Question 3171, you said, "Whatever the authority under which the City Corporation exercised jurisdiction over the river prior to this stage, there would seem to be no doubt in the first place that that jurisdiction was not definitely theirs by statutory right." I do not want to anticipate the evidence of the Corporation, but you had not found, when you said that (perhaps you have not found yet) that there are four statutes conferring jurisdiction on the Corporation?—I know that, but I think before the statutes there was a prescriptive right, and it is rather that that I referred to.

7839. Four statutes long before the period of which you are speaking—in the year 1605?—Yes.

7840. I do not quite understand why you said it was not definitely theirs by statutory right if there were

Mr. G. L.  
Gomme.

22 May 1901.

Mr. G. L.  
Gemmie.  
22 May 1901.

four statutes. It does not, of course, matter very much. It looks as if you were not aware of those statutes at the time that evidence was given?—I think I am aware of all the statutes that confer powers on the Corporation.

7841. Then I do not understand how that statement came to be made?—Just at the moment I am afraid I do not; it is some time since I looked at this particular question.

7842. Now, another question which is possibly more germane to the inquiry of the Commission. This is at Question 3215. You put in a table at Question 3213, showing the ports at which large ships were registered?—Yes.

7843. In your answer to Question 3215 you said, "It cannot but be regarded as of some significance that even as a port of registry London, with its great trade, holds such an inferior position in respect of the larger class of vessels." You obviously at that time did not know the explanation. Have you found it out since?—I knew it was a very small point.

7844. Do you know the explanation now of the small number of vessels registered at London?—Simply because their owners do not live in London.

7845. That is the only reason yet that occurs to you that you know of?—I really have not concerned myself very much about that.

7846. The table was put in, I suppose, that the Commission might draw some inferences from it, from the small number of vessels registered in London?—The table was put in in this way—

(Mr. Ellis.) It turns on compulsory pilotage.

7847. (Mr. Scrutton.) It turns on compulsory pilotage; I do not know whether you knew it?—Yes, I know that.

7848. Ships that are registered in London are exempt from compulsory pilotage, and therefore liable to pay the full amount of any damage they do by collision?—Yes.

7849. Ships that are not registered in London have compulsory pilotage and are therefore exempt from any damage done by collision?—Yes.

7850. I do not think you knew that at the time you put in this?—No, I did not.

7851. It rather shows the danger, does it not, of drawing inferences when you do not know the facts?—I did not attach much importance to this particular question.

*Cross-examined by Mr. Harper.*

7852. You have made a statement in your evidence that the wages of dockers in London are 6d. per hour?—Yes.

7853. Then you say the London and India Docks Company hire out labourers to work under the direction of the officer of the ship at 9d. per hour?—Yes.

7854. That is a profit of 50 per cent. on that labour?—The information is obtained from "Turnbull's Port and Dock Charges," which is a very well-known authority, based on the dock companies' tariffs.

7855. I wanted to know if you knew it yourself. We have had statements here that the discharging of ships is not a profitable occupation in London?—I only got it from the tariff of the company myself.

*Cross-examined by Mr. Cranstoun.*

7856. Is not the barge traffic both at Antwerp and Hamburg very great?—I believe it is.

7857. Especially at Hamburg, where there are thousands of barges in port lightering the goods from the ships to quays?—Yes.

7858. I understand the system there is the open-quay system?—Yes.

7859. Is the system of cranes there a highly efficient system? Is it not the overhead system?—I am not an expert on cranes.

7860. But you have been at two of the places?—Yes, I have been to Hamburg.

7861. Do you know how they are placed?—No; I cannot say I do.

7862. Can you tell me whether the size of the cranes is such that goods can be discharged into barges on one side of the ship, while goods are being placed on the quay on the other side of the ship?—I do not know that as a matter of detail; I only know this:

that the Hamburg authorities have the best system of cranes and are perfectly satisfied with that system.

7863. What is called the luffing crane?—I am not an authority on cranes.

7864. But you know what I mean—a crane with a jib which moves up and down?—Yes.

7865. Have you seen that system at work there?—I cannot say that I have. I did not notice that particular detail among all the details that I noticed.

*Cross-examined by Mr. George Wallace.*

7866. You would, I am sure, be the first to confess that you are not a shipping expert yourself?—No, I am not.

7867. And those suggestions of cranes that reached from the shore right over the deck of a ship to the far side and put things into barges are things you have never seen, in point of fact, and you will not offer an opinion with regard to them?—I do not know that I have never seen them.

7868. Have you. I should be much surprised if you had seen them?—I have seen so much in this way that I would not like to charge my memory to say that I have not seen them.

7869. You would not like to say that you have seen a crane on a quay which had an arm which would stretch right up in the air and put goods over the ship to a barge on the other side?—Well, I have seen some wonderful things in the way of cranes.

7870. I understand you now stand to your figures and your inferences in your former evidence?—Yes.

7871. Which Mr. McKinnon Wood told us had been seen and approved by the County Council?—Yes.

7872. You have been asked about Mr. Scott's evidence; may I direct your attention to the evidence of Mr. Jones at Question 4831. Have you read Mr. Jones's evidence since?—Yes; not so closely as I have Mr. Scott's, but I have read it.

7873. At Question 4831 Mr. Jones put in some tables showing the port charges. These are shown in Appendices 4 and 5 of the 14th day. He referred to it afterwards at Question 4836. He said that he had prepared tables showing the cost of handling modern cargo vessels, speaking from his experience as a shipowner. I want to ask one question only with regard to that, because I am sure the Commission would not like me to go through too many.

(Chairman.) I think the witness has been already asked a question as to this particular point.

(Mr. George Wallace.) No, my Lord; I do not think that what Sir Robert Giffen put was upon this particular matter that I am going to put to the witness.

7874. Bremerhaven is not a port of which you have any personal knowledge whatever?—No.

7875. You have prepared a table in your evidence showing the dues at Bremerhaven on a steamer of 2,000 tons net to be £47 3s. 4d.?—Yes.

7876. 5,000 tons would pay just about two and a-half times as much?—Yes.

7877. Say about £125?—Yes.

7878. Now, will you kindly turn to Appendix 5 of the 14th day, and see what he says. He says Bremerhaven dock and quay dues £310?—Yes.

7879. That is against, on your own showing, roughly £125?—Yes.

7880. Have you any explanation to offer of that?—No, I cannot be responsible for Mr. Jones's figures. I may just mention that I did notice that difference, and in order to see that I had not made some stupid mistake I went over the figures again.

7881. But you did not call the attention of the Commission to it just now?—It did not occur to me. It is just possible that there may be some exceptional charges.

7882. Did you not, in answer to Mr. Ellis, say that your figures were all correct?—Yes; I say it now.

7883. You have not been to Bremerhaven?—No, I have not.

7884. You have only got a piece of information from somebody?—Forgive me, I have not only got a piece of information from somebody; I have got information from a Government return, and I have converted the information from that Government return to this particular ship.

7885. Have you an explanation now?—No, but I am reminded of a fact in connection with Bremerhaven. Not having visited it, and feeling that one might make a mistake in this case, I wrote specially to Bremerhaven giving them my figures, and I had them confirmed from Bremerhaven.
